FOR "THE FRIEND."

Incidents and Reflections.—No. 159.

Among the instructive incidents which show that the Almighty is sometimes pleased to rescue his servants from impending danger, by the impressions which He makes upon their minds, is the striking narrative of the remarkable preservation of James Dickinson and Jane Fearon, when travelling on a religious visit. It occurred during a visit to Scotland in the latter part of the 17th century. The account was preserved by Sarah Taylor, an eminent minister belonging to Manchester Meeting, to whom, when a young woman, it was related by the parties concerned, who were then quite aged. It has been widely circulated among Friends; and the narrative was read to Sarah Taylor, at Lindley Murray's of York (England) in 1790, about fifty-six years after it was first told her; and she confirmed its accuracy. So far as known it was first printed in *The Annual Monitor* in 1816, as follows:—

After they had been travelling on a very rainy, tempestuous day, evening coming on, they inclined to stop at a little public house, in order to lodge there that night; but a guide they had hired, discovered, as far as they could understand his Scotch manners and dialect, his unwillingness for them to stay there; informing them there was a place about three miles further where they might conveniently lodge, and whither he wanted to go; and that if they stayed, he would go on himself. But they, being wet and weary, concluded to stay; so, discharging the guide, he went forward, being only hired for the day.

After they had been a short time in the house, their minds were struck with painful apprehension that the people of the house had a design upon their lives; and notwithstanding they behaved to them with apparent kindness and attention, the painful apprehension continued and increased.

Besides the landlady there was another woman or two in the same room with them, who appeared to belong to the house; the Friends also saw three men in and about the house, who were frequently in the same room observing them; but in what capacity these men were, or what proper business or employment they had there, they could form no judgment.

Jane Fearon also heard the men say one to another, "They have good horses and good

bags." To which another added, "Aye, and good clothes." The lonely situation of the house, and these appearances, which the painful feelings attending their minds led them to observe, tended to increase the apprehensions they had of these peoples' wicked design; which the Friends endeavored to conceal from each other, each concluding not to discourage the other.

James Dickinson having seen the horses taken care of, and their saddles taken off, they then inquired for beds, and were shown into a room where were two beds. After shutting the door, Jane sat down on the bedside, being no longer able to contain, and broke out into tears, saying, "I fear these people have a design to take our lives." Upon which, James, after walking some time across the room, came toward her and said, "They have mischief in their hearts; but I hope the Lord will preserve our lives." He also endeavored to encourage Jane, and after some pause, said, "I hope the Lord will deliver us, but if so we must run."

Upon this, Jane replied: "Alas, how can we run! or whither shall we go!"

Then James Dickinson, taking the candle, and carefully examining the room, discovered a door, which he opened; and, on searching, perceived a pair of back stone stairs that led to the outside of the house. Upon this discovery, putting off their shoes, they went softly down, leaving the candle burning in the room. On going down stairs, James saw through an open place in the stairs a woman with a candle in her hand.

After running for a considerable time, they met with an outbuilding, into which they went; but when they had stopped a short time, James Dickinson said to Jane Fearon, "We are not safe here; we must run again." To which Jane replied, "I am so weary I think I cannot go any further;" but James pointing out the necessity, she endeavored, and they ran again till they came to a river near the South coast.

They going a little further along the side of it, they came to a bridge; but on attempting to go over it, James Dickinson felt a stop in his mind, and said: "We must not go over this bridge, but must go further up the river side; which they did, and then sat down. After some time, James Dickinson grew uneasy, and said: "We are not safe here, we must wade through the river."

Jane Fearon replied: "Alas, how can we cross it, and know not its depth;" also adding, "Rather let us wait here, and see what they are permitted to do. It will be better for them to take our lives, than for us to drown ourselves;" apprehending the river to be exceedingly deep.

James replied, "Fear not, I will go before thee;" upon which, they entered, and got safe through. Walking some distance, they came to a sand bank. Here, again sitting down, James said to Jane Fearon: "I am not yet easy, we must go further;" upon which, Jane said, "Well, I must go by thy faith, I know not what to do."

Then going a little further, they found another sand bank, wherein was a cavity, where they sat down. After awhile, James said, "I am now easy, and believe we are now perfectly safe, and feel in my heart a song of thanksgiving and praise."

Jane replied: "I am so far from that, I cannot so much as say, the Lord have mercy upon us."

When they had been here some time, they heard the noise of some people on the other side of the river; upon which, James Dickinson, finding Jane alarmed, and thence fearing they should be discovered, softly said, "Our lives depend upon our silence." Then attentively hearkening, they heard them frequently say: "Seek them, Keeper;" and believed they were the men they had seen at the house, accompanied by a dog; that the dog refusing to go over the bridge, had followed the scent of their feet up the river side to the place they crossed.

Stopping at this place, the people again repeatedly cried, "Seek them, Keeper!" which they not only heard, but saw the people with a lantern. They also heard one of them say they had crossed the river; upon which another replied, "That's impossible, unless the devil took them over, for the river is brink full." After wearying themselves a considerable time in their search, they went away; and James Dickinson and Jane Fearon saw them no more.

When daylight appeared, they saw a man on a high hill at some distance, looking about him every way, apparently with an intent of discovering something, and they apprehended it was them.

They continued quiet in their retreat till some time after sunrise, when, upon taking a view of their situation, they discovered that under the first sand bank from whence they had removed, they could have been seen from the other side of the river; and that the place they continued in shaded them from being seen on the opposite side; which they had been insensible of, as they could not make the observation the night before.

Upon considering what they should do to recover their horses, saddle-bags, &c., James said, "I incline to go to the house." But Jane proposed to go to a town, in order to get assistance to go with them to the house; to which James Dickinson observed, that the town from whence assistance was likely to be procured, was about ten miles off; that they were strangers; their reasons for taking such precaution in returning to the house, implied a high charge which they might not be able to prove; that thence occasion might be taken to throw them into prison by magistrates; and might afterwards the civil power to seek occasion against them, than to search into the cause of their complaints, or redress their wrongs.

Jane still hesitating, James said, "I still incline to return to the house, fully believing our clothes, bags, &c., will be ready for us, without our being asked a question; and that the people we saw last night, we shall see no more."

Jane said: "I dare not go back." James re-

plied: "Thou may'st, Jane, safely; for I have seen that which never failed me." Upon which, they returned to the house, and found their horses standing in the stable, and their bags upon them; their clothes dried and ready to put on; and saw no person, but an old woman sitting in a nook by the fireside, whom they did not remember to have seen the night before. They asked her what they had to pay, discharged it, and proceeded on their journey.

Some time after, James travelling that way, made some inquiry respecting the people of that house, and was informed, that upon some occasion the people had been taken up, and the house searched; that a great quantity of men and women's apparel was found in some parts of the house, also a great number of human bones; that some of the people were executed, and the house ordered to be pulled down; which then remained a heap of rubbish.

There has been some discussion within a few months past in *The London and British Friends*, as to the exact locality where these Friends were placed in such peril. Some of the writers incline to the opinion that it was about twenty miles south of the border of Scotland, at Gilsland, near a watering place near the railway, about half way between Newcastle and Carlisle. A Yorkshire Friend writes that the front of the house, still called "Mumps Ha'," has been taken down and altered, but the back part left much as it was; the steps still there that J. D. led J. F. down at night; and they were then very near the river Irthing, on the banks of which are many sandbanks, and one of them still called by the country people the "Quaker's hiding-place." The family that lived there at the time was the Carrick family, well known to be a bad set. She adds that her servants came from Gilsland; and their grandmother had told them about these bad men having been executed, either four or five of them.

The Irthing River may generally be easily forded, but it rises very rapidly after heavy rains. "Mumps Ha'," or Beggars' Hall is supposed by archaeologists to have been an old border keep or fortress, but the windows and roof have been removed and modernized. The story of its having been pulled down may easily have arisen from the alterations which have been made in it. One of the letters describing a visit to the place, says:—

"There were three lodging rooms at the front of the house, one of which was over the kitchen. On entering we noticed that this room had closets filling up at each side of the fire-place.

We opened that near the window and were about to do the same at the other side, when the landlady, who was with us, hastily interposed, saying, 'No, you cannot open that.' We subsided for the time, secretly determining to know what was behind the scenes. Accordingly, when alone, we found a door fastened with a nail, which, when opened, disclosed a flight of stone stairs leading down to the level of the kitchen underneath, and which might open either into the kitchen or the barn. We could not pry further, but it struck us very uncomfortably to think there was access from without to the room in which visitors slept."

William Douglass, of whose ancestors, James Dickinson was a connection, in *The British Friend* for First Month, mentions some circumstances which confirmed him in the belief that this incident could not have happened to James Dickinson at Mumps Hall. He says, "The fact that two rather desolately situated houses, in

widely different parts of the country, are pointed out as the scene of the adventure, tends to confirm the suspicion that a not uncommon legend has, perhaps with some slight foundation, become attached to James Dickinson and his friend."
J. W.

FOR "THE FRIEND,"
Notes on Hayti.

BY THOMAS SCATTERGOOD.

Having paid in the Third and Fourth months last, a short visit to this important island, about which so little is generally known concerning its people, products and trade, I have been engaged to furnish for *THE FRIEND* some observations thereon. Inasmuch as my stay was short, and the places visited few, other sources of information must be availed of, to supplement my own knowledge.

The geographical position of the Republic of Hayti is well known—comprising as it does rather less than the western third of the island—the eastern portion being the Republic of Santo Domingo. The island is the second in size of the West Indies, and is about thirty thousand square miles in area; the surface is traversed by three distinct ranges of mountains, some of which attain an altitude of seven to nine thousand feet. The coast line generally, except that of the southern central portion, is bold, the surf beating with violence at the foot of high crags. Where there is a littoral, however, it is fertile and frequently sandy. The valleys are also fertile, and yield an abundance of the products of the forest. The population is variously estimated at 580,000 to 750,000; but there is no accurate knowledge attainable on this point, probably the Haytian Government itself is ignorant of the exact population, as there does not appear to have recently been any systematic attempt at a census. It may be said that the people are all blacks, or colored, as the few whites resident in Hayti are foreigners whose stay is more or less temporary.

Hayti has had a varied experience in the matter of its Government. Having been discovered by Columbus in 1493, the entire island was, until 1665, under the dominion of Spain; during the latter year the French obtained a footing, and made the western portion of the island the most flourishing of the West Indian colonies until 1790, when the blacks revolted, and in 1800 proclaimed their independence. During this period the awful massacre of the white inhabitants occurred, from which very few escaped.

It is worthy of note in passing that it was in this time of terror, when the French inhabitants knew not whither to flee, that many of them placed their portable property of value on such ships as were in the harbor, doubtless intending to take refuge thereon themselves with their families; but whether they fell victims in the general slaughter of the whites which occurred, or whether the vessels made sail before they could get aboard, many of them failed to accompany their property, which accordingly fell into the hands of others. Among those who were thus enriched was Stephen Girard, who owned several vessels trading to Hayti at that eventful period. It is well-known that Girard devoted to the uses of the public the greater part of his vast fortune, which he admitted was not rightfully his own, thinking that although the real owners were unable to enjoy it, neither himself nor his heirs were entitled to it.

The French were finally expelled in 1803;

the noble Toussaint l'Ouverture was treacherously seized and taken to France by order of Napoleon I., where he died from exposure and neglect consequent upon a cruel and rigorous imprisonment. Since then the country has had many vicissitudes, and many revolutions have occurred, involving great loss of life and property, and resulting in a thorough unsettlement of the people, with a slumbering but intense hatred existing between the *blacks*, which comprise nine-tenths of the population, and the *whites*, who, while numerically so inferior, are possessed of more wealth and intelligence.

The present Government is nominally Republican, but really it is a military despotism, the President (who is elected by a vote of the people) residing in Port au Prince, the capital, where also the General Assembly, consisting of an elective Senate and House of Representatives, meets to transact the legislative business of the nation. The corruption existing in all departments is notorious, so much so that one is almost ready to believe that the main purpose of the Government is to afford facilities to a favored few to plunder the people. The revenues of the Government are mainly derived from export and import duties—the former are levied in the most liberal manner upon the already low-priced products, and are a most onerous tax upon the native labor. The collectors are mostly extremely corrupt, and make a constant habit of compromising with the merchants upon the amounts due the Government. Occasionally these vicious practices are exposed and the merchants are compelled to make restitution or compromise with the higher officials, while the unfortunate sub-officers are also compelled to disgorge and be supplanted by a fresh instalment, who forthwith, in the most unblushing manner, pursue the same course.

As there is so little confidence felt in the stability and honesty of the Government, the people do not trust their moneys to the care of the National Bank, which has its headquarters in Port au Prince, and branches in several of the chief towns. There being, therefore, no banking facilities, the merchandise bought and sold is paid for in actual cash. This is furnished by the Government (in 81 and 82 notes and in silver currency considerably debased) and as compared with American gold (in which coinage all duties are compelled to be paid) is generally at a discount of from 20 to 40 per cent; the price of exchange being fixed by a favored few, who manipulate it to suit their own views, and of course make large profits by the fluctuations.

Within a few days the American papers recorded the return of the United States steamship *Yacht* from Hayti, whither she had gone to protect the interests of American citizens. Full particulars of the cause of this sudden and unannounced expedition are not published, but it is stated that a considerable unsettlement in Port au Prince was occasioned by an impending outbreak, under the leadership of one of President Solomon's Cabinet, which however did not amount to an actual breach of the peace. It is

Since the above was in the hands of the printer, accounts have been published of incendiary fires having occurred early last month, by which several hundred houses in Port au Prince, near the Public Buildings, were destroyed, involving losses stated at three million dollars. The accounts state that the Chamber of Deputies was burned, and the President's palace was in great danger. These fires are evidences of incipient revolution, and private advices from the north side of the island show great uneasiness there, also, with the conviction that another revolution, or attempt, at once, is imminent. T. S.

privately asserted that the President's wife, who is a French woman, is desirous of returning to Paris, and is influencing her aged husband to abdicate and spend the rest of his life in that metropolis.

The trouble is to settle upon a successor acceptable to all, or more properly to arrange the conflicting ambitions of the many aspirants, each of whom thinks himself the proper one to be President. Just how the matter now stands has not transpired, but as Solomon is 82 years old, it is probable that his administration cannot last much longer in any event. When the change does come there is every probability of another revolution.

The climate is tropical, and in the less elevated parts is unhealthy to foreigners; during the dry season, which lasts from the Eleventh to the Fourth months, there is a great scarcity of rain, except in the mountainous parts, so that most of the springs and water courses are entirely dry; but during the remainder of the year heavy showers are very frequent, and the dry river beds are filled with rushing torrents. Earthquakes and hurricanes are frequent and often very destructive.

In 1816, Stephen Grellet visited the southern part of Hayti on a mission of gospel love, during which he had a most serious attack of fever (the result of climatic influences) so nearly fatal that directions for his funeral were given. During his extreme illness (Ninth Mo. 18th), a violent earthquake and hurricane took place, by which great devastation of property and loss of life occurred, and added to his distress both from exposure of his own person to the torrents of rain, (the house he was in having been partially destroyed) and from the distress he felt for the destruction around him. His recovery was promoted by sailing for home on the 4th of Tenth Month, where he arrived on the 26th. During this visit Stephen Grellet was impressed with the true greatness and religious sensibility of Alexander Petion, who was at that time the President of the southern side of Hayti (the northern portion having revolted, was governed by Christophe,) but we do not find much in his Journal which would indicate that the religion of the people at large was very deep. His biographer, however, remarks that he "was cheered by anticipations that the progress of civilization and the realization of liberty would overcome the disqualifying influences of slavery;" and while they were then "still suffering from the effects of long continued struggles for political liberty, it is no disparagement to the African race, that by the side of the most cultivated nations their advancement in the arts and habits, as well as the enjoyments of civilized life should be comparatively slow and fluctuating;" but what has been already realized in their attempts at self-government, during the short period of their independence, is enough to encourage the hope that through the Divine blessing upon persevering efforts in a right direction, a still brighter future awaits the free children of Hayti.

Alas! seventy years having passed, it surely cannot be said by even the most ardent friends of the black race, who are acquainted with the present condition of Hayti, that these hopeful anticipations of a "brighter future" have been realized; may it not be because there have not been "persevering efforts in the right direction" by successive governments, and because there has been a mournful lack of devotion to the public good by the various rulers, that the present condition of the Haytian (with the exception of a few in the larger towns) is little in ad-

vance of the barbarous tribes in Africa from whence their ancestors were brought, and shows an unmistakable retrogression from the civilization of one hundred years ago.

(To be continued)

FOR "THE FRIEND."

It is gratifying to observe the active efforts of the Yearly Meeting's Committee to fulfil the objects of their appointment. Their arrangements can scarcely fail to stimulate our own members to a more earnest life, and to awaken the interest of others in the Society and its distinguishing views.

But while thus working for the good of our own larger gatherings, and for the public, it has seemed to me that there is another branch of the service which may be somewhat overlooked. There are many small meetings, where from week to week, and from month to month, no new faces are seen, no voice heard, no outward sign manifested that they are had in remembrance by their friends in more favored places, and to all appearance their light is in danger of utter extinction. The Monthly and Quarterly Meetings may break the monotony occasionally, but they occur at long intervals, and are soon lost sight of.

Now if the members of this Committee could feel it their place to come in and sit down in these small companies, singly, or at most in couples, without formal notice, I believe the good effects would often be evident, though there might be no vocal service; and by such subdivision of their number, these visits might be extended to many meetings without adding materially to their labors in the aggregate. I take it for granted that the services of the Committee are not expected to be completed within the year—perhaps not in two or three.

It may easily occur, also, that the benefit to the visited may be enhanced by such subdivision. The average audience can scarcely follow with advantage, within the space of a short meeting, the presentation of important truths in a variety of forms, through different instruments; and the exercises of one or two minds may be more likely than a larger number to induce serious thought, and to make an enduring impression.

Our Saviour sent forth his disciples, "two and two before his face, into every city and place whither He himself would come;" and as his servants in these days follow this plan in simplicity and faithfulness, I believe we should often recognize also the accompanying blessing of his presence.

A LOVE of study or a love of knowledge is of advantage as a means to an end; but in itself it has no more value than a love of money-getting or a love of money. All gettings and all possessions have their true worth in the purpose of their applying, not in their mere achieving. That a man wants knowledge, and that he is willing to work for its obtaining in order to its use, but that he desires to study simply for the purpose of gaining knowledge, is only one phase of the spirit of curiosity; and the wish to have knowledge simply for the satisfaction of having it, is merely a form of mental miseries. Much knowledge is worth no more than much flesh, unless its possessor makes it worth something by its using. It is better to have little flesh or little knowledge, while making it all effective for the advantage of others, than to be full-fleshed and learned without helping others through one's flesh.—Selected.

FOR "THE FRIEND."

The Tree of Life.

It is written by inspiration, that in the beginning, God made man in his own image, and gave Him dominion over the works of his hands. He also planted a garden in Eden, and put the man in it, to dress and to keep it. And out of the ground He made to grow a variety of trees for food. And in the midst of the garden was there the tree of life; and also the tree of knowledge of good and evil. And man had privilege to freely eat of every tree except the tree of knowledge of good and evil. But a positive and solemn warning was given, that in the day he eat of it he should surely die. But Adam listened through his wife, to him who was a liar from the beginning, an enemy to all righteousness.

How is it with us now? Are we not too much inclined to listen to the deceiver through deluded instruments, whom we may esteem as our bosom friends? But we must obey the voice of the Lord our God, and Him only we should serve.

But when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit thereof and did eat; and gave also unto her husband with her, and he did eat." So God said to Adam, "Because thou hast hearkened unto the voice of thy wife, and hast eaten of the tree of which I commanded thee, saying, thou shalt not eat of it; cursed is the ground for thy sake; in sorrow shalt thou eat of it all the days of thy life; thorns and thistles shall it bring forth unto thee; and thou shalt eat the herb of the field, &c.," instead of the fruit of the garden of Eden.

And the Lord drove man out of the garden, lest he should take also of the "tree of life," and He placed cherubims with a flaming sword to keep the way to it.

My main object in writing on the tree of life, is to attempt to bring to view the analogy between the tree of life, and Christ the bread of life. The tree of life was for man before the transgression; and before the curse came upon the earth. But now as we have to look to the earth for earthly food, so we must look to heaven for heavenly food. And as the trees and vines of the earth, bring different kinds of fruit, so the tree of life yields a variety of fruit; such as "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance," &c. But no wild or sour grapes among them. For they that are Christ's, and feed on Him the bread of life, have crucified the flesh with the affections and lusts; so that "all bitterness, wrath, and anger and clamor and evil speaking are put away." And there shall be no more curse, for his kingdom has come and his will is done, here on earth as it is in heaven. And his servants serve Him. So "blessed are they that do his commandments, that they may have right to the tree of life, and may enter in through the gates into the city." But we must first get the victory over the lusty nature in all its forms, (See Rev. xv. 2). Then the promise from Christ is, "to him that overcometh will I grant to sit with me in my throne, even as I overcame and am set down with my Father in his throne." And "to him that overcometh will I give to eat of the tree of life which is in the paradise of God."

I have for a long time been sorrowfully convinced that the fruit of the tree of life, and the fruit of the tree of earthly knowledge, were sadly mixed in the religious elements of the world, making discord and confusion. And that the mixture will remain until we more fully submit, individually, to the purifying baptism of the

Holy Spirit, and that fire which burns inwardly, as a oven. And this purifying baptism is only performed by the power of Him whose fan is in his hand, and who will thoroughly purge the floor of the heart, until that which is light and chaffy is removed, and that which is vital and substantial, comparable to pure wheat, alone remains. Then we shall be free from the mixture of good and evil, and wise only unto salvation; and again have right to the tree of life.

But before we enjoy the tree of life, we have to pass under the crucifying operation of the flaming sword, which turns every way upon the transgressing nature within, until every defiling thing which separates us from infinite purity, is cut off and burnt up, or destroyed. Then our ministry, whether from male or female, would have the savor of life unto life, and our religion would not be periodical, or fitful, according to surrounding circumstances, but like the tree of life, yielding fruit every month, even the peace-floors of right-ousness; whereby we grow strong in the Lord. And our work for Him, will be in the power of his might, to whom the glory belongs, and not to poor erring fallible man, who is but a spared monument of Divine mercy.

D. H.

DUBLIN, IND., Sixth Mo., 29th, 1888.

Palatine in the Time of Christ.

RABBIS AND SYNAGOGUES.

The doctor, from his high seat, muttered his teaching into the ear of an interpreter, who repeated it aloud to the whole assembly. This curious practice explains the words of Jesus: "What ye hear in the ear, proclaim upon the housetop."

The teaching was often given in parables. R. Meir says: "One-third of the teaching was tradition, one-third was allegory, one-third parable."

The rabbis uniformly claimed the first place for themselves. They took it at all feasts to which they were bidden. In the synagogue they sat in the foremost rank, and in the streets their disciples were expected to salute them, bending to the ground.

Every city and village possessed one or more houses set apart for public meetings, for the reading of the law, and for prayer.

Tradition ascribed to Ezra the institution of these "assemblies," and this is no doubt correct. This great man realized the absolute necessity of periodical gatherings in which the people might hear the law read and explained. They needed to be educated nationally and religiously, and to be taught their faith and duty to God.

The synagogue must not be confounded with a church. It is a lay institution, in which the priest has no official priority. The chief man in the synagogue is the doctor, that is the man competent to teach.

The Pharisees, the true successors of Ezra, much favored the establishment of "houses of prayer" in opposition to the priesthood and the Sadducees. These could not live apart from the temple. They were lost in its downfall in the year 70. But the Pharisees continued, because wherever they went they opened synagogues and instituted meetings for reading and public prayer.

The number of these synagogues was considerable in the first century. The city of Jerusalem alone had from 460 to 480. They might almost be said to touch one another. There were several in every street.

ST. MICHAEL THE WEIGHER.

BY JAMES HINSELL LOWELL.

Stood the tall Archangel weighing
All man's dreaming, doing, saying,
All the failure and the pain,
All the triumph and the gain,
In the unmingled years,
Full of hope, more full of tears,
Since old Adam's conscious eyes
Backward searched for Paradise,
And, instead, the flame-blade saw
Of incorable Law.

In a dream I marked him there,
With his fire-gold, flickering hair,
In his blinding armor stand,
And the scales were in his hand:
Mighty were they and full well
They could pose both heaven and hell.
"Angel," asked I humbly then,
"Wighest thou the souls of men?
That thin office is, I know?"
"Nay," he answered me, "not so,
But I weigh the hope of man
Since the power of choice began
In the world of good or ill?"
Then I waited and was still.

In one scale I saw him place
All the glories of our race,
Cups that fit Ishbazzar's feast,
Glebs, the wonder of the East,
Kubla's sceptre, Cesar's sword,
Many a poet's golden word,
Many a skill of science, vain
To make men as gods again.

In the other scale he threw
Things regardless, outcast, few,
Martyr's ash, arena sand, a strand,
Of St. Francis' cord a strand,
Beechen cups of men whose need
Fasted that the poor might feed,
Disillusions and despairs
Of young saints with grif-grayed hairs,
Broken hearts that break for man.

Marvel through my pulses ran
Scars then to the beam of time,
Swiftly on this hand decline,
While Earth's splendor and renown
Mounted light as thistle-down.

SILENCE.

BY PROFESSOR UPHAM.

When smitten, thou didst feel the rod;
Be still and leave thy cause with God;
And silence to thy soul shall teach
Far more than came with outward speech.

When secret arts and open foe
Conspire thy peace to overthrow,
In silence learn the hidden power
Which saves thee in that bitter hour.

Doth not thy Father take thy part—
Doth He not know thy bleeding heart;
And when it seems that thou wilt fall,
Doth He not feel it—bear it all?

Make no reply, but let thy mind
In silent faith the triumph find,
Which comes from injuries forgiven,
And trust in God and strength in Heaven.

"The Good Shepherd Layeth down his Life for the Sheep."—It is still true in the East that the faithful shepherd may be called to lay down his life for the sheep. Van Lennep says: "On the line of the desert, and on the borders of the territory overrun by the Koordish and Turken tribes, not a little danger arises from the habits of these highway robbers, who, not content with driving away the flocks, also frequently kill the shepherds on the principle that 'dead men tell no tales.' * * * These robbers do not show themselves in the towns and villages, but depend for their subsistence on the provisions they take from the helpless shepherds."

Old Men.

NICHOLAS MEERS died in Wilmington, Delaware, in 1761, at the age of one hundred and eleven years; being born in 1650, under the government of Cromwell, about the time the Society of which he became a member (Friends) first appeared.

He lived through eventful periods, was the subject of ten successive sovereignties, including the two Cromwells. He saw Pennsylvania and Delaware a range for the buffalo, deer, and panther. He lived to see them a fruitful field, "a garden enclosed," "a refuge and an asylum for the persecuted."

JOSEPH CREEL, probably the oldest man in the world, died in Caledonia, Wisconsin, First Mo., 27th, 1866, at the age of 141 years! was born of French parents in Detroit, 1725; the record of his baptism in the Catholic Church in that city establishes this fact beyond a doubt. He voted for Washington, and had always voted the straightout Union ticket. He had no bad habit except that he was an inveterate smoker. The last year or two of his life he frequently remarked with an air of sadness, that perhaps "Death had forgotten him;" but would always add with, more cheerfulness, that "he felt sure God had not."

He attained an age greater by 20 years than that enjoyed by the next oldest man of modern times, JEAN CLAUDE JACOB, a member of the French National Assembly, who was called the "Dean of the human species," and who died at the age of one hundred and twenty-one (121).

JEAN SCHLAGENWEIT, of Vienna, died 1865, aged 117 years.

ANGELIQUE DOYER, Quebec, died 1865, aged 113 years.

LOUISA MARIA DE OLIVEIRA, Louza Portugal, died 1865, aged 107 years.

RABELLO DE PANAFEL, Portugal, died 1865, aged 106 years.

Two children were lost in the woods. When they found that they had missed their way and that night was coming on, one of them began to cry bitterly. But the other said, "Don't be afraid, sissy; as soon as they know we are lost, all the folks will come with lanterns and hunt for us." And they did. Just because the children were feeble and helpless, every man in the neighborhood rallied to try and find them. This is the spirit that the Gospel inspires. It is the spirit of Christian civilization. In Bible lands we have hospitals, asylums and infirmaries, because we recognize the claims of the poor on the rich, of the sick on those who are well, of the homeless on those who have homes. There is a power in want and suffering which we appreciate and obey, and sufferers who are conscious of their power appeal to their fellow-men, expecting to be heard and helped. One of the glories of our land and age is that the weak rule the strong. We build palaces, not for kings and princes, but for the poor, the aged, the sick, the widow, the orphan, the deaf and dumb, the blind, the insane.—*Exchange.*

MANY persons never make serious business enough of life to learn what real rest is, for rest implies work. He whose whole time is leisure finds life a weary and burdensome thing, because there is nothing in his life to add relish to his leisure. But when leisure means recuperation from work and for work, it then exists for something higher than itself. It acquires a dignity and use which gives the whole being a keen enjoyment in it. *Schedt.*

The Russian Bogomolozt.

BY S. S. KRIDELSKY.

"It is never too late to repent," is the motto of the religious Russian peasantry; and accordingly hundreds and thousands of men, women and children from various zones of the vast Russian empire may be seen, during the months of April and May, on their way to Kief,—oldest of the Russian capitals, and mother of the Russian cities.

The city of Kief, remarkable for its many churches, monasteries and historical monuments, is probably as much idolized by the Russian peasants, as is the "Promised Land" by the orthodox Hebrew. It is here that Vladimir the Great laid the foundation for Christianity, which soon led to the downfall of paganism. It is here that all the idols were formally destroyed, and here was the first Christian church erected,—which is preserved to this day.

But to the *bogomolozt*, or pilgrim. His long and weary journey, which often lasts for months, is accomplished on foot, and no one would be considered as doing justice to his mission if he were to adopt the modern modes of travel. He is upon a pilgrimage for prayer and devotion. He has a desire to follow the example of those who have suffered in the interests of the salvation of mankind.

I remember having once met such a party of pilgrims. It happened in June. The day was exceedingly hot. Not a breeze in the air. The heavy dust, raised by the numerous peasant *telegi* (wagons) which were loaded with hay and vegetables for the market, made breathing almost impossible. As I crossed the lot, which leads into the forest adjoining the *bratsky*, or brotherly monastery, my attention was attracted by a group of men and women, evidently of the Little Russian type, resting upon the grass under the shadowing branches of an old oak. They were partaking of their humble meal, which consisted of coarse rye bread, salt, and water. I could scarcely withstand the temptation of giving a rest to my weary limbs; and, remembering that hospitality, or a hearty welcome to either friend or stranger, and the Russian peasant are inseparable companions, I joined the party, without making the slightest attempt to introduce myself in any of those formal ways which generally obtain among civilized people. I was soon informed, by one of them, a communicative little fellow, that they were all *Chersontzi*—that is, inhabitants of a village in the government of Cherson,—and that they were about to start for home. Every one of them carried an *ikon*, or image of some saint or other, purchased in Kief; and some of them, in addition to the *ikon*, had a picture representing the evil spirits rejoicing at the sufferings of the sinners in the bottomless pit.

It was evident that my new friends were most satisfied with their journey, as well as with their experience in Kief. Their faces bore the expression of that rustic simplicity and kindness, which excludes hatred, malice and envy, and which may only be comprehended by those who happen to come in contact with the Russian peasant. Among them there was one who attracted my special attention. It was an old man of sixty. The grave, almost stern, expression of his face, his eyes as well as his general bearing, plainly indicated that some sorrow had preyed upon his mind. My curiosity as to the history of this individual was aroused, and a few facts

which I succeeded in learning about his past may prove interesting.

As long ago as 1859, at the time when slavery in Russia held full sway, a thought occurred to his mind to rid himself of his intolerable bondage. One early morning in September, when the inhabitants of the village were in the land of dreams, he left his hut with the intention of taking refuge in the forest, till the first excitement was over. His plans were, however, never destined to be realized. A party of "hunters," headed by the proprietor himself, were soon on his trail; and before the day was over the fugitive was captured, taken back to the village, and locked up in a stable. What followed further can easily be imagined. Heart-rending cries, supplications, threats, groans, filled the air. It was one of those dreadful scenes, which, common though they were at that memorable time, would generally lead to very grave results, especially if the much-abused serf happened to be of a revengeful nature.

It was a dark, rainy and cheerless night, when the return of the proprietor from the city was anxiously awaited by his young and faithful wife. The clock strikes ten, eleven, twelve. Not a soul is to be seen or heard. The clock strikes one, two, and with each successive hour her anxiety and fear increase more and more. Morning dawns at last. The clouds disperse, and the beautiful sun in all its grandeur makes its appearance. The day promises to be bright and cheerful; but the young proprietress, who looks as pale as death, is anticipating great trouble.

But here she hears a knock at the door. A moment later, and the mutilated body of her husband, carried by two robust-looking peasants, is brought in.

Fifteen years of hard labor in the Siberian mines was the punishment our old bogomolozt received for his dreadful deed. At the time I met him, ten years had elapsed since he regained his freedom; but he was still striving to atone for the great crime which he once committed. He knew no peace, and, like Cain of old, he was hunted by the blood of his victim. He was twice in Jerusalem, and three times in Kief. Bread and water kept his soul and body together, and the bare, often damp, ground gives a rest to his old bones. This is, however, an exceptional case. To tramp hundreds and thousands of miles, to live on bread and water, to sleep upon the hard ground, and to put up with all sorts of inconveniences for the sake of offering prayer,—all this has its special charm for the Russian pilgrim. In the words of the peasant, "it is to make the body suffer, in order to save the soul."

The number of *bogomolozt* in to be seen during the spring and summer seasons in Kief reaches into thousands. As hotels or ordinary lodgings are things not to be thought of, many content themselves with leading a life that may only compare with that of the ascetics of old. Bread, salt, and water make up their menu; and the bare ground on the outskirts of the city or around the church takes the place of a comfortable bed. From sunrise to sunset they are "on the go." No church, no chapel, or monastery, is missed.—*Sunday School Times.*

The Nile below Khartum consists of one undivided stream; but at El Damer, about one hundred and seventy geographical miles down, it receives the waters of a great tributary, the Atbara, descending from the highlands of Abyssinia. This river undergoes the most extreme transformations. During the early months of

the year the waters are so reduced as sometimes to form only a series of great, stagnant pools, in which are collected, in very close quarters, all the aquatic inhabitants, consisting of fishes, crocodiles, and huge tortoises. The banks, through a long line of country at the base of the mountains, are formed of masses of mud and silt, easily undermined and liable to fall into the waters on the rise of the river. About June, tremendous thunderstorms, accompanied by deluges of rain, break on the Abyssinian highlands. The waters of the Atbara rise with extraordinary rapidity, and descend with a roar like that of distant thunder, giving warning of the approaching deluge. Soon the channel is filled up with the flood, the banks of mud are undermined, and fall down in large masses into the waters, where they are speedily broken up and converted into silt, the finer portions of which, being carried along, finally enter the Nile, and impart to its waters much of the turbid character for which they are known in Lower Egypt. A good deal of sediment is also brought down by the Bahr el-Azrek, or the Blue (dirty-watered) Nile, some of the sources of which also are found in the Abyssinian highlands. The river now becomes a great fertilizing agent, and when allowed to flow over the cultivated fields imparts the necessary moisture; so that, under the influence of a powerful sun, two or three crops can be annually gathered off the land; giving rise to an extraordinary amount of natural wealth. That this sediment originally ceased Lower Egypt to be reclaimed from the Mediterranean Sea, was known to Herodotus, who called this country "the gift of the Nile."

Carrying his Illustration farther than Intended.—Writing of the late Henry B. Stanton, his wife gives the following incident in connection with one of his temperance addresses:

"When speaking before an audience, he was very quick to turn to account any unexpected occurrence. On one occasion he was delivering a temperance lecture on a platform covered by a thick oilcloth that protruded two or three inches over the edge of the boards in front. In the midst of one of his most eloquent passages, he was comparing the inebriate's downward course to the falls of Niagara, and the struggle with drink to the hopeless efforts of a man in the rapids. Just as he reached, in his description, the fatal plunge over the precipice, he advanced to the edge of the platform, the oilcloth gave way under his feet, and in an instant he went down headlong into the audience, carrying with him desk, glass, pitcher and water. Being light and agile, he was quickly on the platform again, and immediately remarked, with great coolness: 'I carried my illustration farther than I intended to. Yet even so it is that the drunkard falls, glass in hand, carrying destruction with him. But not so readily does he rise again from the terrible depths into which he has precipitated himself.' The whole house cheered again and again."

At Southwark Meeting. O! how I did desire that we might not be a superficial people, nor be satisfied with a nominal religion, but that we might in sincerity, humility, and earnestness, seek and find Jesus of Nazareth, the crucified Saviour of the world; the Redeemer and Mediator, by whom alone we can draw near to the Father. O! how important a truth; how it presses upon my spirit in meetings and in many companies. I fear it is not sufficiently pondered in the heart.—*Mary Cupper.*

Natural History, Science, &c.

The Smallest Flowering Plant.—The smallest known flowering plant is said to be the *Wolffia microscopica*, a native of India, and one of the Duckweed family. It consists of a simple leaf, which floats on the surface of the water, with a rootlet depending from it. It multiplies rapidly by sending out similar leaves or fronds. An American species about one-twenty-fifth of an inch in diameter, has been collected near Philadelphia.

Restoration of a Ceylon Reservoir.—About the last of the Second Month a festival was held at Kalawena, in Northern Ceylon, to commemorate the restoration of a great reservoir or tank which had long been in ruins. It was originally constructed in A. D. 1400. It covers an area of 4,125 acres, or about 7 square miles, and a contour of 30 miles. On all sides but one it is surrounded by high ground; on the remaining side the water is retained by an enormous wall 6 miles in length, with a breadth of 20 feet at the top, and an average height of 60 feet. It now supplies towns and villages over a large area of country, some of them more than 50 miles away. The colonial government has been for several years engaged in the restoration of the ancient irrigation works.

The Palolo.—The Palolo is a very curious thread-like sea-worm, found in the Navigator Islands, appearing in the reef-phenomena once a year, only for the single hour immediately before sunrise. On their arrival the natives assemble in their canoes and scoop them up in bailers of all sorts, esteeming them immensely as an edible delicacy.

The Samoans can calculate when their arrival is due, by observing the juxtaposition of the moon with a certain star. However, should they not appear on that day, they can safely calculate upon to arrive that same day four weeks.

This fishing, one of the romps of the season, is looked forward to by both young and old. When collected, the natives send the Palolo all over the island post-haste, as complimentary presents to one another, in the same manner that presents of game are made in the old country.

William B. Churchward, the British consul at Samoa, describes his visit to the fishing grounds as follows:—"Before daylight we were aroused, and soon in the boat en route for the passage in the reef where the Palolo were expected to assemble in their millions for their annual single hour's outing, either that morning or in four weeks time.

"After an hour's slow rowing in the dark we arrived somewhere, at what particular spot it was impossible to tell; but judging from the heaving of the boat, we knew that we must be where the sea had an uninterrupted passage through the reef, whose immediate presence was announced by the deafening boom of the breakers dashing on it.

"We were soon aware that we were not the first arrivals, for, lying on our oars whilst the mysterious change heralding the approach of light was taking place, we could catch occasional glimpses of canoes swiftly and noiselessly gliding about, ghost-like in the murky gloom. It was the hour, just before daylight, when the darkness clings and seems reluctant to leave the ink-like black waves, only just to be distinguished in blunt outline against the scarcely less discolored sky.

"A huge smooth oily swell was setting in through the reef-opening, giving the canoes, as they rode over it, the appearance of leaping aloft right out of the water, a sight most bewildering. As soon as there was sufficient light, we found

that we were in the company of quite fifty canoes of all sorts and sizes, prettily and lightly balancing themselves, for a moment at a time, on the summits of the swell as they suddenly rolled in both sides by an expanse of seething water, where the interrupting coral bars the onward course of the ever-persistent billows.

"As the light grew apace every one there, scoop in hand, prepared alike for business and for a practical joke, which here consists in upsetting one another's canoes; and each one determined, with light heart devoid of all care, to make the best of the most cherished though shortest annual festival.

"The canoes now scattered about in all directions, the occupants anxiously scanning the water as they flitted here, there and everywhere in search of the game, but with no result. The little animals had evidently determined upon availing themselves of the four weeks' grace that nature, in obedience to some inexplicable law or in some freak, had granted them."

A month later he again went in company with a dozen or more canoes in search of the Palolo.

"Spread all about the passage, this time quite smooth, we examined the water on all sides, in which to some depth nothing at all could be discerned; but suddenly, as if let loose at the one exact time, were to be seen wriggling and writhing up from the nethermost depths, billions upon millions of long thread-like worms of many colors, all seeming to be racing at their topmost speed to arrive at the surface and make the most of the short time permitted them for their annual exhibition. Up they came in myriads until the surface was thickly covered with one solid vermiculating mass of living animals.

"Shouting and laughing, every one now plied his or her scoop as busily as possible, baling up the writhing delicacies at top speed, to make as good use of the short time available as could be.

"No sooner had the sun thrown his first ray on the water than as if by magic, with the same common accord with which they had risen to the surface, they all disappeared, sinking lower and lower to the depths below, until not a single sign of their presence was to be observed in the very spot where, a moment before, the water was perfectly muddy with animal life.

"Our share of these doubtful delicacies was three great painful of an almost solid mass of repulsive colored worms, writhing and twisting about in slimy embrace, in anything but an inviting manner for creating an appetite.

"This, however, did not prevent our young lady, and such of the crew as were not paddling, from indulging freely in them, by plunging small sticks into the wriggling mass, and swallowing with great gusto all that they could fish out hanging across them.

"As soon as we arrived on shore, all hands set to work making the Palolo up into little parcels wrapped in banana leaves, which, at the top speed of the messengers, were immediately sent off to their various friends, even to great distances all over the island, as highly valued and complimentary presents.

"Although I tried hard to harden myself to tackle this forbidding-looking tit-bit *in nature* with a piece of stick, I could not manage it; and our hosts, seeing the failure, had none cooked. In that state they were in appearance like balls of dark-green spinach, and by no means unpalatable, tasting somewhat like a mixture of oysters and seaweed."

The Golden Crown Thrush or Oven Bird. 1

once had a curious adventure with our common oven-bird. The day before, I lost overboard a number of trout-flies, tied together with a bit of fine copper wire. The buoyancy of the feathers was not sufficient to keep them afloat, and, as it was high tide at the time, they sunk beyond my reach. I revisited the spot the following morning, when the tide was out, hoping to recover them. As I approached I saw an oven-bird fluttering on the very edge of the water. Its efforts to escape became more violent as I drew near, and it was very evident that the bird was a prisoner. Reaching the spot a curious spectacle presented itself. A large sliner had evidently swallowed one of the trout-flies as they sunk. How far the fish wandered after this I could not tell, but by strange good luck it had finally returned to the place where the hooks had fallen, and caused several of them to become firmly fixed in a slightly projecting tree-root. One hook was yet free, and this the oven-bird had mistaken for an insect, and seizing it, was itself securely held. The advancing tide would have caused a double tragedy, and I was glad to prevent the certain drowning of the poor bird. Releasing it, I hoped to be successful in retaining it as a cage-bird, but it proved impracticable. It chirped complacently all that day and on through the night, and died at sunrise on the following morning.—*Waste Land Wanderings.*

Severity of Military Discipline.—The *Herald of Peace* (London) in a notice of the Life of the celebrated Russian general Skobelev, quotes the following incident as an illustration of the cruelty and injustice of what is termed martial "law." Skobelev, during a campaign, had been carefully examined by a court-martial on the camp side. When they walked a few paces to another soldier, who was on sentry duty, and said to the latter, "And let me see your rifle." The man saluted, but replied, "I cannot, your Excellency." "But I want to see if it is clean," said Skobelev. "I cannot, your Excellency," again replied the sentry. The general smiled, and passed on. As a visitor to the camp observing this incident, asked Skobelev what would have happened to the sentry, if he had obeyed the seemingly serious order of his general to deliver up his rifle. "He would have been shot," answered Skobelev, "for disobedience to a previous order." But how terribly embarrassing and confusing, such a mode of procedure must be to an ordinary soldier. And how savage and brutal would be the infliction of fatal punishment, or indeed of any punishment at all upon a poor soldier, for his inability to distinguish between the comparative claims of general orders and special verbal requests, as in this instance, from a high commanding officer.

The general Skobelev was, he did not hesitate to denounce the hideous character of war. His biographer records: "Again and again, Skobelev used to declare, 'I hate war; it is all that is sickening, odious, and atrocious. No more monstrous, no more base, no more terrible crime can be imagined, than to make war without absolute necessity.' He was the last man to make the very fact argument, that a step like this can be justified." This statement, from one who was almost, and perhaps quite the ablest warrior of modern ages, constitutes, in itself, one of the most striking arguments for the establishment of an International Code and Court of Arbitration, for the pacific and conciliatory settlement of disputes.

Friend's Educational Association.—This body, which was organized five years ago, held its annual present year at Haverford College, on the 3rd, 4th, and 5th of the Seventh Month.

The report of the Secretary stated that sums had been contributed to the educational system of Friends during the past five years, amounting to \$1,008,301. This does not include a legacy of about \$200,000 to Haverford College from Jacob R. Jones,

which is not yet paid. Omitting this, the contributions in Philadelphia Yearly Meeting were \$501,855.

Of Bryn Mawr College, it was said that about one-fourth of the students are Friends. Regret was expressed that so few of the Professors were members of our Society.

The North Carolina Boarding School, at New Garden, had been changed to Guilford College. The number of pupils has more than doubled in the last ten years.

At the Bright University, in Kansas, has as yet but an uncertain existence. Large amounts of land had been donated to it, but it was impossible to sell these at present, and the building which had been begun was stopped. The proposed College at Whittier, California, appeared to be in a somewhat more hopeful condition, as it has some money, and a building had been contracted for.

Papers were read on several subjects; among others on Bible Study. This called forth the expression of a caution, lest such study should be regarded as a qualification for preaching the Gospel; one of the speakers said, in his comments, that he had received quite as much benefit from the ministry of a man who was ignorant of Hebrew and Greek, and even of English grammar, as from those who were more highly educated.

The next meeting of the Association is to be held at Penn College, Iowa, in 1883.—*Condensed from The Student.*

Revival Excitement.—The New York correspondent of *The Episcopal Recorder*, gives the following description of a meeting in that city conducted by Thomas Harrison, a revival minister among the Methodists. He was not present, but received his account "from trustworthy witnesses."

"Mr. Harrison was ablaze with fervor. When he prayed he knelt, swung his hands in the air, rubbed his palms, leaped to his feet, knelt down again, rocked himself backward and forward. Pastor Bowdish clapped his hands and shouted. The elders alternately groaned and cried out. There are times in this phase of the work when the elders have come back. The fire is descending. God is here. Bishop Asbury and Philip Embury are in the room. New York shall soon be on fire. Thousands shall be saved. Oh, thank God! Thank God! Thank God! Heaven is watching us, earth is looking on, hell is trembling. Sing on! This fire is mine in the world. New York, oh, how good is! Sing! Sing! Sing! Sing!"

The effect of such excitement on a crowded audience, especially if they are in sympathy with the preacher, is often very contagious; and it is no marvel if many are brought under its influence. This is likely to be the case, even where there is no special outpouring of the Spirit. Multitudes of nominal converts may be made by such means; but the true test of the reality of their conversion is the life of devotion and self-denial which they live in the future. If these fruits of the Spirit are not manifested, there is great cause to fear that the excitement has been the cause of a corresponding reaction, and the last state of those imagined converts will be worse than the first.

Public Meeting at Easton, N. J.—This meeting, held on the afternoon of September 22nd, was appointed by the Committee of Hadronfield, and those members of the Committee of Philadelphia Yearly Meeting, set apart for service in that section. Like the previous ones, held at Camden and Cropwell, it was designed not only for the members of our Society residing in that vicinity, but for the neighborhood generally. It was well attended; and it was thankfully believed to be owned by the presence of the Head of the Church.

The freshness and fulness of the Heavenly invitations to come to the Fountain of life and salvation, were set forth; and reference was made to some of the hindering things which choke the growth of the seed, which kings have been mercifully sown in the hearts of all; among these are the suers and ridicule to which a person is exposed when he manifests tenderness of conscience; and an indulgence in the lusts of the flesh, and in those amusements which tend to draw away the mind

from the love of serious things, such as horse racing, which was mentioned by name.

The uncertainty of life was pointedly referred to; and the necessity that, through repentance, our sins should go beforehand to judgment. It was notified that, so far as possible all wrong that had been done to others should be corrected; that he who had taken that which belonged to another, either by open dishonesty, or by unfair dealing, or in other ways, should restore it dollar for dollar. Where circumstances rendered this restitution impossible, the Lord would forgive, if the mind was brought into a state of repentance for the wrong, and a willingness to do whatever could be done to remedy the wrong.

Several Friends took part in the vocal service. There was a good degree of harmony in their labors, which were largely of a practical character.

A VERY young child knows the difference between being laughed with and being laughed at. If you laugh with a child, you give him pleasure. If you laugh at a child, you arouse his indignation. He feels that, child as he is, he is entitled to be recognized in his personality, and to have his feelings considered with due deference.—*Selected.*

THE FRIEND.

EIGHTH MONTH 4, 1883.

We received a few weeks ago a communication from Adam Spencer, of Canada, in which he mentions having read with interest the printed Extracts from the Minutes of our late Yearly Meeting, and also the account of its proceedings published in *THE FRIEND* and *The Friend's Review*. He is a Friend who has travelled extensively as a minister, and has had large opportunity of watching the changes which have been introduced into our Society in the past thirty years. These things give additional weight to his remarks on the position of Philadelphia Yearly Meeting. From them the following are extracted:—

"The appointment of a committee to visit subordinate meetings and families; co-operate with committees of Quarterly and Monthly Meetings, in such work; and appoint public meetings, does not appear to me like following the example of the General Meetings which were common some years ago in some of the Yearly Meetings; but which have ceased to be held and have been superseded by the holding of series of what are termed 'revival meetings.'

"Some of the remarks contained in the *Review* are significant, viz: 'Visitors observe at once a difference in the aspect, and what may be called the expression of Philadelphia from that of all the other Yearly Meetings in this country. This aspect and expression are of dignity, weight, cautious deliberateness; also of constraint.' * * * 'Were somewhat of this heavy solemnity and careful deliberation, mingled with the feeling of mutual confidence and fraternal liberty which is realized in other Yearly Meetings, the compound might be an excellent one for practical work. As it is, obstruction often prevails over progress.' *The dignity, weight, &c.*, alluded to as the *aspect and expression*, are descriptive of a meeting gathered in the name of Christ, and acting under his Presidency, without being compounded with human wisdom."

In reference to First-day schools among Friends, Adam Spencer remarks:—

"Every department of religious labor requires that persons engaged therein should keep to their

gifts in the true fear and direction of the Lord. Differences in the interpretation of Scripture have been manifest in First-day schools. In the years 1865-6 and 7, I travelled within the limits of Indiana and some other Yearly Meetings. I attended the First-day schools when it was convenient so to do. It was at times painful to hear the sentiments put forth, often by young and forward teachers. The Bible classes were frequently occasions of debate on portions of Scripture, without coming to satisfactory conclusions. The work of disintegration was evidently promoted in the First-day schools and the Bible classes belonging to them.

"At the time of holding the Yearly Meetings, the Executive Committees of First-day schools held their annual meetings in open session to summarize their report. Those were occasions of much speaking; and it did seem that the institution had been made a training-school towards a man-made ministry.

"Having had experience in First-day schools, I think good may be done, especially where children are neglected by their proper guardians; but it requires a close attention to the Divine will. It is evident that the abuse has pre-eminently over the proper exercise and care of them.

"The concern of Philadelphia Yearly Meeting has been that parents should not neglect the religious training of their children, nor transfer such care to other hands."

Adam Spencer says that he has re-read the Essay on the "Right Qualification for Religious Labor," which was issued by Philadelphia Yearly Meeting a few years since, under the concern which was felt for the preservation of its members, and "admires the tenderness and firmness of the work." "That Essay clearly sets forth the views of Friends on the important subject treated of, and expresses a tender caution against any exceeding the line of Divine appointment, with an earnest exhortation to faithfulness to Divine requirements.

"The statement which has been made, that some forms of Church work are growing stronger in Philadelphia Yearly Meeting, even against the official authority of the Church, 'shows plainly,' says A. Spencer, "that a portion of the members are endeavoring to remove said meeting from its true base; failing in which, they are pressing hard on the thin wedge of separation, which they have entered."

"The communication winds up with the following remarks:—

"Friends' principles lead those who receive and abide in the truth, into habits of industry and economy, the general result being an increase in temporals. Without watchfulness and prayer, the increase of earthly stores and cares so occupy the mind as to choke the good seed of the kingdom. The world and the things that are in the world get the pre-eminence in the mind, and religious apathy ensue. These are the great causes of decline in the Society of Friends. Sensationalism and religious excitement, so common in these days, attract undue attention, and divert the mind from the filial fear and love of the Lord, and from that patient waiting for Him, in which stability and growth in grace is known."

SUMMARY OF EVENTS.

UNITED STATES.—The total number of immigrants who arrived in the United States during the 12 months which ended the 31st month 29th last was 529,315, against 482,116 during the preceding 12 months.

INWARD RETIREMENT.

One of the interesting features in the experience of Stephen Grellet, in his extensive journeys in various lands in the service of the Gospel, was the numerous cases he met with, where persons who had been visited with the day-spring from on high had been drawn thereby into inward retirement and waiting on the Lord for the renewal of their spiritual strength.

When at Moscow in 1819, he mentions meeting with a company of about fifteen females at the house of one of the Russian generals. His Journal says: "On our first coming among them, total strangers to one another, our minds were solemnized; a feeling sense was given that the Lord's presence was there; it seemed as if we had suddenly come into a meeting of spiritually-minded persons; very few words passed between us, but we were all gathered together into solemn silence and prostration of soul before God, evidently "Drinking together into the one Spirit." We had continued some time in this state, when, the love of Christ, the dear Redeemer, constraining me, I began to speak as by his Divine Spirit. He gave me utterance; we had a contriving season; indeed I have seldom known any select company of my beloved friends in religious unity and fellowship with me, when more of the Lord's baptizing power has been felt, than we then witnessed together. After the conclusion of that solemn meeting, we gave some account of ourselves; for we were as great strangers to the company as they were to us; we handed to the mistress of the house the letters we had for her from the Princess Metchersky. Among those present were two Princesses from Georgia, sent to this Empire as hostages; another is the Countess Toutschkoff, and two of her sisters; the others were of the same rank. They are in the practice of meeting frequently together, silently to wait upon the Lord; they have become acquainted with the operations of his Spirit, and the power of Truth, under which they have witnessed the one baptism, and are also favored at seasons to partake either of the one bread, even Christ the bread of life.

"The Countess Toutschkoff gave us an interesting narrative of the manner in which she was first brought to the conviction that there is a secret influence of the Spirit of God in the heart of man. The impressions made upon her were such that she can never doubt that it was

the Lord's work. It occurred about three months before the French army entered Russia, the general, her husband, was with her, on her estates near Toula; she dreamed that she was at an inn in a town unknown to her, that her father came into her chamber, having her only son by the hand, and said to her in a most pitiful tone, "all thy comforts are cut off, he has fallen, (meaning her husband,) he has fallen at Borodino." She woke in great distress, but, knowing that her husband was beside her, she considered it as a dream, and tried to compose herself again to sleep; the dream was repeated, and attended with such increased distress of mind that it was a long time before she could rise above it, and fall asleep again. A third time she dreamed the same; her anguish of mind was then such, that she woke her husband and queried, "where is Borodino?" and then mentioned her dream; he could not tell her where that place was; they and her father carefully looked over the maps of the country, but could not discover any such place. It was then, but an obscure spot, but has since become renowned for the bloody battle fought near it. The impressions, however, made upon the Countess were deep, and her distress great; she considered this as a warning given her of the Lord, that great afflictions were to come upon her, under which she believed, that his Divine grace and mercy could alone sustain her. From that period her views of the world became changed; things that belong to the salvation of the soul, hitherto disregarded, were now the chief object of her pursuit. She ceased to attend places of diversion, which formerly had been her delight; she looked forward to see what the Lord would do with her; for she believed that she had not had mere dreams, but warnings through the Lord's Spirit, of what was impending over her. At that time the seat of war was far off, but it soon drew near; before the French armies entered Moscow, the General Toutschkoff was placed at the head of the army of reserve; and one morning her father, having her little son by the hand, entered the chamber of the inn at which she was staying; in great distress as he had beheld him in her dream, he cried out, "he has fallen, he has fallen at Borodino." Then she saw herself in the very same chamber, and through the windows beheld the very same objects that she had seen in her dreams. Her husband was one of the many who perished in the bloody battle, fought near the river Borodino, from which an obscure village takes its name.

"The Countess said that the impressions made upon her, that the Lord, through his Spirit, communicated himself to man, became strongly confirmed; she was convinced that there is a sensible influence of the Divine Spirit; she endeavored to attend to it; one thing after another was unfolded to her of the "deep things of God" and those which concern the Lord Jesus Christ; and it was by this that she had become acquainted with the nature of spiritual worship. This was the case also with the two sisters, then present; the same conviction had been brought on the

minds of the other pious females, through the immediate operation of the Lord's Spirit and power; they knew it to be the Spirit of Christ, the Spirit of Truth, that leads into all truth. The Georgian Princesses are in a humble and tender state; we were indeed all broken and contrited together before the Lord."

When at Petersburg during the same journey, Stephen Grellet met with a Russian Countess who had large estates in the Crimea, and appeared to feel a religious concern for the moral and religious improvement of the people residing thereon. She told our friend, that she had for years ceased to use formal prayers, but that she silently waited for qualification to approach the throne of grace, and to put up her prayers to the Lord. She was in the frequent practice of religious retirement. It was on her grounds that John Howard, the philanthropist, was buried, near Kherston. He died of jail fever, which he contracted while visiting prisons.

When in the southern part of Russia, Stephen Grellet found a body of religious professors, calling themselves Spiritual Christians, but more generally known as Malakams. They were said to number about 100,000 persons scattered through several districts. When they meet for Divine worship they gather in solemn, silent waiting and prostration of soul before the Lord. The silence is not interrupted unless some one apprehends that he is required to speak as a minister among them, or to offer vocal prayer. With these interesting people, S. G. had several satisfactory meetings. He found they held very similar views to those of the Society of Friends on the great points of Christian doctrine; and on the influence of the Holy Spirit, worship, ministry, baptism, oaths, &c. When he was about leaving Simeferopol in the Crimea, "Some of the Malakams," he says, "were at our door before daylight, waiting to bid us farewell once more; they also brought us bread for our journey; this is a very general practice in the Crimea, when departing to go into the desert; to decline it would give great offence to the givers; we had procured some ourselves before, but when we saw their sadness at our refusal, we accepted their farewell offering. One of their old people, a venerable-looking man, with his long beard and sheepskin covering, appeared very desirous to go with us a little way; he got in and sat between us; we could not converse with one another; but there is a language more forcible than words; he held each of us by the hand; big tears rolled down on his venerable head; we rode on several times in solemn and contriving silence, till we came to a water which we had to pass, when he took us into his arms with the greatest affection, kissed us and got out of the carriage; on looking back we saw him prostrated on the ground, in the act of worship of prayer to God; and, after he rose, as long as we could discern him, he stood with his face towards us, his hands lifted up; we felt it, as he did, a solemn separation. May the Lord bless and protect that portion of his heritage, a people whom He has raised by his own power, and instructed by his own free Spirit."

In 1814, Stephen Grellet was in England, about the close of the period of war which had so long devastated the Continent of Europe. He visited a large prisonship and held a meeting among the prisoners, generally Danes and Norwegians, then waiting for an opportunity to be transferred to their own lands. Of these people, he says:—"A very remarkable visitation of the Holy Spirit took place on this prisonship; three or four of the prisoners felt so powerfully convinced of sin, that they sat together in the crowded ship weeping and praying. This drew upon them the sneers of the crew, and the abuses of their fellow-prisoners; but they bore all with so much patience and meekness, that some of their persecutors felt constrained to join them. Through living faith in Jesus Christ, the Saviour of sinners, some of them now felt their sorrow because of sin to be exchanged for joy and gratitude, a lively hope being begotten in them in his mercy and redeeming love. Their minds were so far illuminated by the Spirit in the deep things of God, that, witnessing a spiritual communion with the Father of spirits, a right sense was given them of the nature of that worship which is in spirit and in truth; they accordingly sat together in silence, having their spirits gathered before God, undisturbed by the noise about them, or the revilings and reproaches, and even the stripes inflicted upon them. What greatly encouraged them was, that amidst so much suffering their number increased, and several of their most cruel persecutors became one in spirit with them, and in their turn, endured with Christian patience the same suffering that they had before inflicted upon others. During that time some on board happening to tell to the men in a boat which had brought provisions to the ship, what a strange people they had among them, one of the boatmen said, 'They were like the Quakers.' That account came to the knowledge of a Friend, who sent to the ship a copy of 'Barclay's Apology,' in the Danish language. The little company read it very carefully, and found there several Christian testimonies of which they had been convinced before. They easily apprehended that against war and oaths, and in favor of silent worship, &c. Their number increased to thirty, nineteen of whom are Norwegians. Their good conduct attracted the attention and kindness of the captain of the ship, who generously granted them several privileges. He received me and the friends that accompanied me with great civility: he had the spacious decks covered with awnings, and seats prepared, and we had a meeting with about seven hundred prisoners; many were much affected. After this we had a private opportunity with about forty of the Norwegians and Danes, whom the Lord has so mercifully visited. It was a very tendering time. They appear acquainted with genuine piety."

When at Stavanger in Norway, in 1818, S. Grellet again met with some of these people. His Journal says: "Several of the dear people who became convinced of our Christian principles in the prisonship in England reside here; we have visited them in their families, and had very solemn and interesting religious seasons with them; one particularly, with two young men and two young women; a solemn silence in the Lord's presence prevailed over us. These people are as much enlightened, so that several pious persons in this place have joined them in silent, reverent waiting on the Lord. They meet regularly together twice a week for the worship of God; they have no kind of vocal communication, so that their meeting together is truly and solely to wait on the Lord.

"We met with them at their usual week-day meeting; there were seven men and seven women, with a few children. We found them gathered into the same recollectiveness of spirit and state of solemn silence as we witnessed in our visit to their families."

The settlement of Friends thus established in Norway, still continues; although many of their members have removed to the United States.

J. W.

FOR "THE FRIEND."

Notes on Hayti.

(Continued from page 3.)

As we passed through the larger towns and their environs, and travelled to the few places we were permitted to visit in the interior, we saw the ruins of well-made roads, water-courses, bridges, industrial establishments, cultivated valleys, and other fertile and productive tracts, now utterly neglected and gone to waste. The very coffee, which forms so large a part of the exports of the island, is not cultivated, the crop being wastefully gathered from the plants growing almost wild—the relics of the old French plantations; the cotton, of which we saw hundreds of acres of the largest and most thrifty plants—many of them twelve to fifteen feet high, and covered with ungathered bolls of fine white staple of good quality, grows wholly neglected as a cultivated crop. Where nature does so much quite unaided, it is deemed superfluous for man to add "the sweat of his brow." Yet many of the people are industrious, or comparatively so at least (for one learns not to look for vigorous labor and thrifty forethought in the tropics in any class of the community) bringing to the out-ports of the country a vast quantity of the natural products of the soil—coffee, cotton, timber, tobacco and fruits. Of manufacturing there is none, nor of trades excepting a few tailors, bakers, carpenters and masons, if such they can be called.

Sir Spencer St. John, the late British Consul-General, for twenty years resident at Port au Prince, says of the present condition of Hayti, (his book published in 1884 has given mortal offence in the island because of the facts he records and comments upon):—

"In spite of all the civilizing elements around them, there is a distinct tendency to sink into the state of an African tribe. The mass of the negroes of Hayti live in the country districts which are rarely or never visited by civilized people; there are few Christian priests to give them a notion of true religion—no superior local officers to prevent them practising their worst fetish ceremonies. Foreigners, nearly ruined by their losses during the constant civil disturbances, are withdrawing from the Republic, and capital is following them, and with their withdrawal, the country must sink lower and lower. The best of the colored people are also leaving, as they shun the fate reserved for them by those who have already slaughtered the most prominent mulattoes. Agriculture in the plains is also deteriorating, and the estates produce much less than formerly. Poverty has laid its heavy hand more or less on all. My own impression, after personally knowing the country above twenty years, is, that it is a country in a state of rapid decadence. The revolution of 1843 commenced the era of troubles which have continued to the present day. The country has since been steadily falling to the rear in the race of civilization. The long civil war (1868-9) under President Salnave, destroyed a vast amount of property and re-

duced living in the country districts less secure, so that there has been ever since a tendency for the more civilized inhabitants to agglomerate in the towns and leave the rural districts to fetish worship and cannibalism. It may be suggested that I am referring to the past; on the contrary, I am informed that at present cannibalism is more rampant than ever. A black Government dares not greatly interfere, as its power is founded on the good will of the masses,—ignorant and deeply tainted with fetish worship. The fetish dances were forbidden by decree under the government of Boisrod-Canal; that decree has since been repealed, and high officers now attend these meetings, and distribute money, and applaud the most frantic excesses."

Of course a casual visitor not speaking the language (which is a degenerate patois based upon French) would scarcely be expected to gain much insight to the religious sentiment of the people. There are but few places of worship to be seen. In each of the principal towns we saw one—generally called the Cathedral—under the charge of Romish priests, sometimes only one individual, and he the sole white resident. The bells ring for mass at the usual stated hours, when a few attend. The Catholic religion is said to have but a very slight hold upon the consideration of the people—largely on account of the well-known opposition of the Romish Church to secret societies, which brings the priests into conflict with the Freemasonry which is so universal throughout Hayti. Of course, we saw nothing of the fetish worship, though we were in more than one village where the appearances indicated almost any possibilities in the way of idolatry and serpent-worship, and even of cannibalism, which there can be no doubt whatever, is often resorted to, at times of their religious festivals.

The first day of the week is observed very generally by the people, who avoid all labor in the mornings, and many attend on the services of the priests, but the after part of the day is given up to amusements and such occupations as are most attractive. Some who work piece-work return to their labor, but most spend the day in cock-fighting and carousing. The generals have their reviews and inspections of troops, barracks and accoutrements on that day; but it is difficult to see what results from the "inspection," as a more forcibly equipped set of "troops" it would be impossible to find. The arms are mostly rusty muskets of an ancient pattern, the majority of them probably useless as weapons—though they do for show—and a few swords in better order; but the accoutrements generally are in a most dilapidated state. The dress of the soldiers is as far as possible from a "uniform;" most of the men being barefoot, some without hats, or capped by any sort of a head-covering obtainable, and clad in ragged garments of every shape and color. Some of the barracks we saw were open sheds with a sloping shelf about three feet from the ground, on which the poor soldiers slept, without blankets or other bedding than such straw or leaves as they might find, to soften the boards on which they stretched themselves at night. The very horses and mules in use were better provided with bedding than the men. At every town, village and hamlet, however, there is a large or smaller military force stationed, who act not only as troops, police and guards, but as revenue officers, court officers, and aides to the "general" who is often head of the civil and judicial, as well as of the military branch of Government, except in Port au Prince and

some of the larger towns where there is a pretence of court and regular judicial practice. These officers take cognizance of everything which transpires—a "habitué" may not take his produce to a market outside the Commune in which he resides, without a pass from the general, nor may he travel either afoot or otherwise except by similar permission. I believe, however, that women are not required to have special permission to take their little loads of market produce which they carry on their heads to the nearest town or market days.

The cities we saw are mostly built on sloping sites, with narrow streets having a shallow gutter in the middle, down which rush torrents of water after a tropical shower, and these are the only dependence for cleaning the cities. In the dry season there is, of course, an accumulation of waste material and filth, and as the familiar scavenger of warm climates, the turkey buzzard, does not live in Hayti, dogs, goats and pigs have to make way with most of the garbage and dirt of the towns which they can dispose of; as these creatures do not work systematically, however industrious they may be, the condition of such places as Port au Prince, Cape Haytien, Gonaives and others of the larger towns is far from attractive or salubrious. It would be difficult to imagine more repulsive spots than the market-places of these cities. On market days they are crowded with many hundreds of people, chiefly women, most of whom are both sellers and buyers, dealing in very small quantities,—having a few yams or potatoes or plantains or oranges placed in tiny piles on a few leaves or chips on the ground before them, or some will display a few fish or crabs or shell-fish, a few pieces of cod-fish (salted), some eggs, a few live fowls, some unattractive pieces of beef, cut into small chunks; others offer small faggots, ready for use, which are sold at a very cheap price, (a great many people come to market with nothing else to dispose of but the few bundles of fire-wood which they have gathered in the forests, mostly from fallen trees and branches); the next row of sellers will display soap, tinware, crockery, and other store goods; but the small quantities in which every article is sold, indicate the poverty of the people. The absence of ice compels the prompt disposal of all butchered meats—of which, however, there appears to be a limited consumption. It was a surprise to me to ascertain that the West India Islands are the market to which New England cod fisheries send a very large part of their "catch"—salt cod being a staple article with the negro, who always wants a piece, be it never so small, to boil with his yam to give the flavor. Yams, choca—a farinaceous root similar to the yam—and plantains—which closely resemble bananas—are the staple foods; to these must be added the sugar cane, which forms an important item in the daily diet. But little clothing is needed; the men generally wear a shirt and trousers, and the women a printed calico dress, and sometimes another garment under it; but children under five, except in the cities, are usually unclothed; and between five and twelve, a short shirt and straw hat are all that are generally worn. As to shoes, they are in use by very few. On "Sundays and holidays," however, there is much more display, and some of the toilettes at these times are quite elaborate. Such clothing as is worn is mostly clean and decent, especially that of the women, although their laundry facilities are restricted to pounding the clothing (with or without soap) with a stout paddle on a flat stone in a running stream. Occasionally we saw an

attempt at using hot water at a "laundry," which was heated in an American petroleum can over a small open fire beside the stream.

Very crude methods of cooking are universally employed; no stoves are to be found; the houses have no chimneys; the pot is boiled, or the stew or fry is cooked in iron utensils over a small fire, the fuel being wood from the nearest forest; or in the towns, the faggots sold in the markets. As a consequence, the cooking is of the poorest description, with the exception of bread, which is made from American flour, beautifully baked in ovens, and looks more tempting than any other food. The fruits are very fine and abundant,—oranges, lemons, limes, pineapples, bananas, saponillas, bread fruit, mangoes, akia, and many others unknown to me both in name and taste.

(To be concluded)

Richard Hubbertorn.

Richard Hubbertorn had his birth in the northern parts of Lancashire, being the only son of his father, a yeoman of good repute in that country. From his youth he was averse to vice and inclined to piety, sobriety and virtue. Being arrived to years of maturity, he obtained a post in the parliament's army, and from a zeal for promoting righteousness, preached occasionally to the soldiers and others. But entering amongst some of the first into the Society of the Quakers, so called, agreeable to their principle of peace, he quitted his military employment, as he found it his place to use his endeavors, by a spiritual warfare with his own lusts and infirmities, so to walk in obedience to the grace of God, as to obtain favor with that Prince, whose kingdom is not of this world. And passing through a variety of inward probations, he attained experience in the work of regeneration, and received ability to direct others in the sure way to the kingdom of Heaven, being one of the first of the ministers in this Society who travelled about for the propagation of righteousness.

His bodily presence promised little, being a man of low stature, infirm constitution and a weak voice; so that an acquaintance with his real character was reserved for an intimate knowledge of his worth, which lay out of the way of superficial observation, consisting not in gracefulness of person, but the laudable faculties of the mind: he was of an excellent natural temper, being a man of much meekness, humility, patience and brotherly kindness; of distinguished equanimity, neither easily depressed in adversity, nor elated in prosperity; clear in judgment and quick of understanding, he knew his season when to speak, and when to be silent; and when he spoke, he spoke with plainness and pertinency to the subject before him.

Notwithstanding the weakness of his voice, he was a powerful, able, and successful minister of the Gospel; travelling in the different parts of England in the exercise of his ministry, mostly for the space of nine years. Great numbers were convinced, and brought over to the same faith and practice, which he preached up, as seals to the power and efficacy of his ministry.

Although he was the very man, that having obtained access to the king, was admitted to a free conference with him, in which he gave him such satisfaction, as to the principles and practice of the Quakers, so called, that he received the royal assurance of protection from suffering for the whole Society, while they lived peacefully; yet this promise was violated, as well in reference to his own person, as to the Society in

general. For in the month called June he was hailed with violence from the meeting at Bull and Month, and carried before that implacable magistrate alderman Brown, who, indulging his passion as usual, pulled him down by the hat by the top of the ground, in the insolvency of office thus treating with unbecoming indignity a man of consequence, and good repute, and a much worthier character than himself had any pretensions to. He then committed him to Newgate, where the throng was so great, and the air so vitiated, as soon overpowered his infirm constitution; he presently grew sick, and was taken away by death, when he had been scarce two months in prison.

As his life had been spent in acts of righteousness and the pursuit of peace, his latter end exhibited the happy effects thereof; the peaceful tenor of his conscience, stripping death of all its terrors, he was in his last moments supported to look forward, in full assurance of faith, to the near approach of future happiness. Some of his intimate friends visiting him near his end, and enquiring if he felt anything on his mind to communicate, he replied, "That there was no need to dispute matters; he knew the ground of his salvation, and was satisfied forever in his peace with the Lord." At another time he expressed himself thus, "That faith which hath wrought my salvation, I well know, and have grounded satisfaction in it." But the greatest part of the time of his sickness he passed in inward retirement and meditation, so resigned, and so still, that he was not observed to vent a groan through the whole. The day before he died, he said, "This night or to-morrow I shall depart hence." And the next morning, to one sitting by him, "Do not seek to hold me, for it [the body] is too strait for me; and out of this straitness I must go; for I am wound up into largeness, and am to be lifted up on high, far above all." So, in the evening of that day, the 17th of Sixth Mo, 1662, he finished his course in this life, in a frame of mind well prepared for an entrance into a better.—*Gough's History.*

Palestine in the Time of Christ.

MEDICINE.

Scientific medicine had been known in Greece for five hundred years, but it had been confined to that country. The persistent ignorance of the Jews on the subject of medicine is accounted for by their belief that sickness was the punishment of sins committed either by the sufferer himself or by his relations; hence it was almost always attributed to the action of evil spirits. The only cure possible, therefore, was the expulsion of the evil spirit (or spirits, for there might be many), and the whole science of medicine consisted in discovering the best method of exorcising the demon. It was not the most educated man who was competent to this work of benevolence, but the most religious. The more pious a man was, the more fit he was to heal the sick, that is to cast out the evil spirits. Every one therefore practised this art of healing as best he could for himself and for those who belonged to him. The rabbis, the scribes and doctors of the law, undertook the casting out demons, and some of them were considered very skillful in the art. The healing art was simply exorcism. All sorts of methods of exorcism were adopted. The most common was incantation, or magic formula; sometimes he pronounced a magic formula; sometimes he poured oil on the head of the sick. "Let him who pronounces the incantation first

pour oil on the head of the sick man, and then utter the words." The Talmuds speak of works of healing performed by Christians in the name of Jesus, whom they call Jesus the Son of Pandira.

When the sick man was not possessed, the methods of cure were more serious. The leper, for example, was never looked upon as possessed. The unhappy being who suffered from this malady was obliged to submit to certain rigorous rules laid down by Moses. He was strictly shut up, like one plague-stricken, and if he ventured beyond the assigned limits, he received forty stripes, save one, with the bastinado.

Some doctors, however, tried to employ real remedies. The Essenes, for example, were acquainted with some medicinal herbs, and knew their properties. They were the possessors of the famous Book of Incantations, said to be by King Solomon. Perhaps it contained some recipes which may have been of use. We have spoken of it; its softening, soothing properties, so highly esteemed to-day, seem to have been appreciated even then. It was often mixed with wine, and this remedy is still very efficacious in certain cases. The sick man was anointed with oil. These unctions may, however, have been credited with some magic virtue.

Before closing this subject, we must refer to a very curious passage in the Talmud of Babylon, as illustrating the story given in the Gospel of the healing of a woman who had had an issue of blood twelve years. She "had suffered much of many physicians," says the text. We know of many physicians were. They were the rabbis. And we know, also, what remedies they had prescribed for this poor woman. Rabbi Yoehanan says: "Take a denarius weight of gum of Alexandria, a denarius weight of alum, a denarius weight of garden saffron, pound all together, and give it to the woman in some wine. If this remedy does not succeed, take three times three logs of Persian onions, boil them in the wine, and give this to the woman to drink, saying to her: 'Be free from thy sickness.' If this does not succeed, take her to a place where two roads meet, put in her hands a cup of wine, and let some one suddenly coming up behind, startle her, saying to her: 'Be free from thy sickness.' If still nothing answers, take a handful of saffron and a handful of *fennugreek*, boil them in some wine, and give it her to drink, saying: 'Be free from thy sickness.'" The Talmud goes on thus, proposing a dozen other means to be used, among them the following: "Dig seven pits, and burn in them some vine branches not yet four years old. Then let the woman, carrying a cup of wine in her hand, come up to each pit in succession, and sit down by the side of it, and each time let the words be repeated: 'Be free from thy sickness.'"

HARD work is better than easy work in almost any line of effort; yet many a man shrinks from the task assigned to him in his special sphere of duty because he finds its doing to be hard instead of easy. "How do you like your new place?" asked an elder man of a younger one. "Oh! it's a pretty good place, only it's all up-hill work there," was the reply. "Well, most good work is up-hill work in this world," rejoined the elder. "Down-hill work doesn't amount to much in the long run. It seldom is work that is worth one's doing." Down-hill work is easy, and up-hill work is hard. In fact, it is because a man can go down hill with his work without any need of his working, that makes down-hill work so attractive to the average man as he is. —Exchange.

SIESTA.

BY DORA DEAR GOODALE.

The fields of late July

Send up shy fragrance to the glowing sky;
As a shorn sheep, all stricken and undone,
The bare submissive earth lies trembling in the sun.Far from the smoky town,
Where the broad heat rains pitilessly down,
On these lone hills in silken-velvure dressed,
The hour of noiseless noon invites to blissful rest.Just at the meadow's edge,
Stretch'd in the shade of yon green briery hedge,
A foot-stone led, on distant fortunes bent,
Sleeps through the mid-day calm in measureless content.

What visions of far skies

Move in bright mist across his curtain'd eyes—
Of stately cities, thronged with fervent men
For whom the tolling world were well made young again!Through many a rainbow light
He sees once more the dear familiar heights;
And where tall locusts toss their sweet before,
His little neighbor waits, beside her swinging door!Yet still, in locked repose,
His rhythmic breath, unaltered, comes and goes;
No phanton hops, in happy silence hid,
Can flush the sunburnt cheek or shake the quiet lid.From leafy covert gay
The thrush repeats his careless roundelay;
The sighing wind, the silver-flowing stream
Mix in a mellow sound, nor break that sylvan dream!
Oh, Fame is hard to find,
Sweet Peace, thou foster-mother of mankind!
Still, in rare hours, we yield the costly guest,
And sink in golden calm against thy glowing breast!
—The Independent.

THE MOMENT FOR REVENGE.

[From a Persian translation.]

The haughty favorite of an Eastern king
Pained in mere wantonness a stone to fling
At a poor dervish, who, despite his pain
And fury, dare not hurt the stone again.
But caught it from the dust, he hid it away
Within his robe he kept it: "Yet the day
For sweet revenge will come! In patience wait
That happy time, no man can hurry fate!"Now the same dervish walking, on a day
Within the year, along the crowded way,
Heard the mad shouting of an angry crowd,
Who dashed with fists and coras lead,
A lying victim—"Twas the favorite rude,
Fallen from the height of favor where he stood
Of late. "Now," cried the dervish, "now's the hour
For my revenge!"But now his arm lacked power
To cast the stone: "What, strike one sunk so low?
The curs alone attack a fallen foe.
Lo! if our enemy mock our enjays,
The how we strike ourselves alone destroys;
And if in misery he be sunken low,
Our own hearts bid us spare the fallen foe.
Behold," he cried,—"the stone slipped to the ground—
"The moment for revenge no hour brings round."
—Alice Williams Brockton, in Unity."The Lord is in his holy temple: let all the earth
SING HIS GLORY BEFORE HIM."When the voice of God is thrilling,
Breathe not a sound;
When the fearful eye is filling,
Breathe not a sound;
When the better mind is pleading,
And the better mind is pleading,
When the stricken heart is bleeding,
Breathe not a sound.
When the broad road is forsaken,
Breathe not a sound;
And the unrope path is taken,
Breathe not a sound;
When the angels are descending,
And the days of sin are ending,
When Heaven and Earth are bleeding,
Breathe not a sound.

ONE DAY AT A TIME.

SELECTED.

One day at a time! That's all it can be;
No faster than that is the hardest fate;
And days have their limits, however we
Begin them too early and stretch them too late.One day at a time!
It's a wholesome rhyme!
A good one to live by,
A day at a time.One day at a time! Every heart that aches,
Knowing only too well how long they can seem;
But it's never to-day which the spirit breaks—
It's the darkened future, without a gleam.One day at a time! When joy is at height—
Such joy as the heart can never forget—
And pulses are throbbing with wild delight,
How hard to remember that suns must set.One day at a time! But a single day,
Whatever its load, whatever its length;
And there's a bit of precious Scripture to say
That, according to each, shall be our strength.One day at a time! 'Tis the whole of life;
All sorrow, all joy, are measured therein;
The bound of our purpose, our noblest stride,
The one only counter-signure sure to win!One day at a time!
It's a wholesome rhyme!
A good one to live by,
A day at a time!

—Helen Hunt Jackson.

Faithfulness in the Administration of the Discipline.—"In the course of my life, I found it my place among Friends, where I was concerned, to transact the affairs of Truth with plainness and uprightness, without partiality, particularly in Friends' meetings of business; and when on a sick bed, I examined into the account of my life, and how things stood with me respecting my soul, I had great peace of mind when I considered that I had endeavored in matters of Discipline, to act therein without favor or affection; which practice I would earnestly recommend to Friends to pursue, that they may also have peace in a trying hour."—From the Memoranda of Margaret Ellis.

I was ill one summer, and the doctor had ordered me to go into the woods, but on no account to go without plenty of fresh meat, which was essential to my recovery.

So we set out into the wild country north of Georgian Bay, taking a live lamb with us, in order to be sure that the doctor's prescription should be faithfully followed. It was a gentle and confiding little beast, curling itself up at my feet in the canoe, and following me about on shore like a dog. I gathered grass every day to feed it, and carried it in my arms over the rough portages. It ate out of my hand, and rubbed its woolly head against my leggings.

To my dismay, I found that I was beginning to love it for its own sake, and without any ulterior motives. The thought of killing and eating it became more and more painful to me, until at length the fatal fascination was complete, and my trip became practically an exercise of devotion to that lamb. I carried it everywhere, and ministered fondly to its wants. Not for the world would I have alluded to muton in its presence.

When we returned to civilization, I parted from the creature with sincere regret, and the consciousness that I had humored my affections at the expense of my digestion.

The lamb did not give me so much as a look of farewell, but fell to feeding on the grass beside the farm-house with an air of placid triumph.—Scribner's Magazine.

FOR "THE FRIEND"

The Normal Class at Westtown.

During the erection of the new school buildings, and the general unsettlement resulting therefrom, it became difficult to carry on this department advantageously, and for a short time it was suspended. With the ample accommodations which are now afforded, the Committee desire to promote normal training at Westtown, believing that our young Friends who are looking toward Teaching as an occupation, will find it greatly to their benefit to take a course of instruction under the present Preceptor, Ann Sharpless, whose large practical experience as a teacher, as well as the knowledge gained in one of the best Normal Schools in this country, especially fit her for the position.

It is desirable that pupils who wish to enter this department, make a definite application for that purpose to the Superintendent or Treasurer, in order that arrangements may be made in advance, to meet the probable size of the class.

Letter to a Friend in the Ministry.

Brya y Mor, 4th Mo, 9th, 1824.

My Dear Friend:—One of the consoling promises recorded in sacred writ, "Thy shall not hurt or destroy in all my holy mountain," tends to encourage me to the communication of a few hints upon a subject with which I feel myself most unworthy and insufficient to attempt to intermeddle—I mean the office of the Christian ministry. Having very recently had the privilege of sitting down with Friends of W— in their collective capacity, to wait upon God, and having on that occasion witnessed the willingness of thine heart to bring an offering and to make a sacrifice which might be acceptable, I was led very earnestly to crave that the pure unmix'd counsel of the Most High might indeed be more and more communicated to the assemblies of his people, in the clearness of his light, the freshness of his life, and the sweetness of his love. Having myself on some occasions attempted to convey what I have apprehended to be Divine intimations—if not in a style of elegance, yet with more than a becoming attention to the mode of composition—I think I have experienced that this has had a tendency to dissipate the life, and to lead into a multiplicity of expressions. The minister of Christ Jesus, I was given renewedly to see, must be willing to be anything or nothing; he must be ready at the intimation of his Lord to hand a piece of the barber's leaves or of the small fishes to the assembled multitudes as well as to officiate and to dispense (as in plates and dishes) on occasions of greater plenty, where these may be commanded or allowed. But at all times it is indispensable that he should communicate to others that, and that only which for the purpose he receiveth from his Lord. To begin, to proceed, and to close, in the demonstration of the Spirit and with power, should be the anxious, the unceasing desire of every minister of the new covenant dispensation.

That the attention of thy mind and mine may be more turned singly to aspire after the glory of God and the complete fulfilment of his will, and that the gifts and graces He hath bestowed upon thee, may be abundantly blessed and increased, is the sincere desire of thy very affectionate friend,

J. H.

I BELIEVE that friendship would be truly valuable, and our mutual intercourse instructive, did we speak to, rather than of, one another.—*Mary Cooper.*

Natural History, Science, &c.

Utilizing Snakes.—The journals of the German physician, who, under the title of Emin Pasha, has of latter times figured so conspicuously in African history, mentions a curious practice in use among one of the Dinka tribes. A pool of water is enclosed by a strong thorn fence, so arranged that game coming to drink must pass through a narrow lane. Near this opening are placed poisonous snakes which have previously been captured, and are fastened by a hole bored through the tail. These bite the animals as they attempt to pass; and in this way a supply of game is obtained without the trouble of hunting.

A German Antarctic Expedition.—It is intended to place in the Prussian estimates a very considerable sum for an Antarctic expedition. A large staff of the best men obtainable will be engaged, naval and scientific, and the organization of the expedition has been placed in the hands of Dr. Neumayer, of the Hamburg Observatory, who is, perhaps, the greatest authority living on Antarctic matters. It is intended, we understand, that the expedition will stay out until our knowledge of this almost unknown region has been substantially extended. At present it is believed that within the Antarctic Circle there must be a very large area of land. We know that there is a long range of high mountains, and at least one great volcanic peak. It will be stipulated that the members of the expedition shall exert themselves to their utmost to explore the region, so that within a very few years we may expect to have another great blank in the globe filled up, and that not by the country of Ross, whose Australian colonies have a practical interest in the physiography of the Antarctic, but by a nation whose interest in the subject is of a purely scientific character. The expedition, we believe, will sail in a few weeks.—*London Times.*

Salt Dust of the Sea.—While voyaging from Australia to New Zealand, one of the passengers, a lady, complained that the dust of the sea caused her eyes to smart, and had also soiled her clothing. She was laughed at by the other passengers, who insisted that there could be no dust at sea.

"They were mistaken," says Ballou, who tells the incident in a book of travel. "There is a salt dust which rises from the spray, and impregnates everything, even filling one's mouth with a saline taste. While the sun shines, this deposit, like the dew on land, is less active and perceptible; but to walk the deck at night is to become covered with a thin coating of salt dust so fine as to be hardly noticeable, but which in time becomes sufficiently crystallized to be obvious to the eye. The dust of the sea is no fable. The officer who stands his night-watch on the bridge will testify to this fact; and the cabin steward will tell you that he has often to resort to something more potent than a whisk-broom to cleanse clothing which has been exposed to sea-dust."

Toughness of English Wheat.—In a recent number of the *Journal* of the Royal Agricultural Society of England were published several papers bearing on the question of wheat-growing in England, and the prospect of its continuing under the present circumstances. One of these treated especially of the effect produced on the market for English wheat by the progressive substitution of the roller process of milling for the old "low grinding." This system, which is rapidly growing in favor in England as well as in other parts of the world, and seems

destined to become universal, demands a more brittle grain than the bulk of the English crop is composed of. If the grain is not sufficiently brittle, the rollers in the preliminary processes simply crush it, instead of breaking off the outer hull of the berry, as is intended. If this happens, paste is formed, steam generated, large quantities of the flour ferment, and the whole process is thrown into confusion. For this reason the roller mills are especially rigorous in their examination of English wheat, much preferring the foreign-grown grain, and in wet spells often refusing to buy the native grain at all. This difficulty can be overcome by drying in ovens, or by mixing the damp grain with other which is excessively brittle; but either of these processes adds to the cost of the wheat, and forms an additional obstacle to the British farmer in his efforts to meet the competition of his foreign rivals.—*The American.*

Electrical Patents.—The applications for patents on inventions in electrical appliances have reached a very high figure lately. The *Scientific American* reports a total of seventy-three patents issued for the week ending Fifth Mo, 29th. Of these, 14 were patents relating to instruments and devices of measurement and testing, 2 to telegraphy, 2 to the telephone, 3 directly to the motor, 4 directly to the galvanic battery, 4 directly to the secondary battery, 1 to a thermo-electric generator, 26 to dynamos and electric light apparatus and the transmission and distribution of electricity for purposes of light and power, 17 to miscellaneous applications.

A Remarkable Orchid.—The great blossoms and leaves of the water-lily of the Amazon, *Victoria Regia*, no sooner excited the wonder of flower-lovers than a gigantic *Arum* competed with it in the region of surprise. Now an orchid has come to light, which, in spite of all that has preceded it, is claimed to be the greatest wonder of the vegetable world. Its flower spike sometimes reaches the height of sixteen feet! One under cultivation in the collection of Sir Trevor Clarke, in England, has recently flowered, and though not reaching the height attained in its own country, was yet remarkable. It is a terrestrial orchid, and when it is remembered that the tallest of slipperworts, or *Cypripedium*, rarely exceeds two feet, some idea of a sixteen-foot giant, with each flower as large as *Cypripedium spectabile* may be obtained. It was first discovered by Welwitsch, the traveller celebrated in another vegetable wonder *Welwitschia microbilis*, a plant which pushes out immense seed-leaves or cotyledons, and then remains satisfied with this growth for years and years after. He found this plant in Angola. It has been named *Lissochilus giganteus*. It has since been found along the muddy shores of the Congo River, and a writer on this region gets off the following rapturous expressions regarding it:—"The hot sun and the oozy mud call into existence a plant life which must parallel in rank luxuriance and monstrous growth the forests of the coal measures, and reproduce for our eyes in these degenerate days somewhat of the majesty of the vegetable kingdom in bygone epochs." In that spot they grow only about six feet high, but as there are masses of forty or fifty spikes together, the large pink and gold flowers, aided by delicious fragrance, must produce a charming effect.—*The Independent.*

Sense of Locality in the Lower Animals.—It has scarcely been supposed that the lower animals have any sense of locality. To test the matter, E. Carman, editor of the *Rural New*

the same mind, and in the same judgment." And with similar earnestness, he writes to the Romans—"Now, I beseech you, brethren, mark them which cause divisions and offences contrary to the doctrine which ye have learned, and avoid them." In accordance with these passages, is the testimony of Philadelphia Yearly Meeting, in an epistle written in 1844—"True unity is a precious, but a very delicate, bond, and there is perhaps nothing that so quickly and so effectually severs it as the evidence that persons occupying the highest stations in the Church, are putting forth and maintaining doctrinal opinions at variance with the hitherto established testimonies of the Society."

But even where there is no actual divergence in doctrine, the "precious, but delicate bond" of true unity, on which the strength of the body depends, may be weakened or injured by differences in practice. This was exemplified fifty years or more ago in America, on the subject of slavery. The Society of Friends had long borne a testimony against this great evil; but some of its members about that time became so zealous as to create an uneasiness in the minds of their fellow-members lest they might be led into associations and efforts which would be hurtful to their own spiritual interests; and on the other hand, these zealous ones were disposed to censure their brethren as too lukewarm. Thus the unity of feeling, which had once bound all as into one bundle of life, was weakened, and some of those concerned drifted so far away from the body, as to feel comparatively little interest in, or attachment to it.

In that class of cases, where the decision as to that is right or prudent, rests on the application of general principles, there will always be found one difference of judgment. While all the members of a Christian community may admit the necessity of obeying the command, "Be not informed to this world," some will allow themselves a certain degree of indulgence in one direction as only an allowable liberty; and others, in another direction, until

"Bit by bit the world is swallowed."

In these cases, it is the duty of those who are inclined to any indulgence which is opposed to be general judgment of the religious body to which they belong, to yield their personal wishes, even when they do not see that the thing is wrong in itself; lest they should injure the precious, but delicate bond" of united feeling which should bind together the members.

A few years ago the subject of music came before Philadelphia Yearly Meeting; and the feeling that time re-affirmed with such unanimity the ancient view held by the Society of Friends, that the waste of time involved in its study and practice, the liability abuse, and the temptations to which it exposes those who yield to its allurements, were so great, that it was best for our members to refrain from indulging in it. The meeting at that time issued clear and positive advices to its members on this subject. It must be very evident to any thoughtful person, that those members who disregard these advices, introducing into their families fiances or organs, or other musical instruments, and have their children educated to the use of such instruments, are by their example and influence, weakening the bond which should bind the members of the Society into an harmonious whole.

Robert Barclay, in his treatise on Church government says of our Society in the beginning, at "He who was careful for his church and

people in old times has not gathered us to be as sheep without a shepherd, that every one may run his own way, and every one follow his own will, and so to be as a confused mass or chaos without any order; but He, even the Lord, hath also gathered and is gathering us, into the good order, discipline and government of his own Son, the Lord Jesus Christ: therefore He hath laid care upon some beyond others, who watch for the souls of their brethren as they that must give account."

Is it not plain, that those who disregard the judgment and counsel of the collected Church, are, by their example, reducing the Society into "a confused mass or chaos without any order"? And is not this true, whether the judgment of the body which they disregard relates to matters of personal indulgence; or whether it refers to enterprises and labors of a professedly benevolent or even religious character, as to participating in which the Church has seen it needful to extend a caution?

He who rejects the counsel of the Church on one subject, gives the force of his example to strengthen him who desires more liberty in another direction. Thus little by little every provision of our discipline may be set aside; and every doctrine and principle we hold may be departed from; and the Society of Friends may no longer be able to hold up to the world that banner which it had received from the Lord to be displayed because of the Truth.

In view of these considerations, we feel that there is some ground for the remark of Adam Spencer, quoted in our last number, which speaks of movements in the body which the official authority of the Church is *against*, as a "wedge of separation."

We have received a letter from Indiana, from one who desires to know where he can find "a good training school for boys, one where they will absolutely have to mind, and are taught to work; and where their education is kept up along with their manual labor; and the moral, social and religious influence will be the best." &c. The writer (who does not give his name) further explains that he does not mean a school for little boys but older ones.

We suppose the objects aimed at in the schools at Hampton, Va., and Carlisle, Pa., for Colored and Indian children, are those specified in this letter. Several of the States of our Union have "Reform Schools" for those young people, who have fallen into evil ways through neglect or otherwise; but we know of no institution among Friends where manual labor is systematically taught in connection with a literary education. Indeed the general tendency has been in the opposite direction. A friend suggests that the Manual Labor School in Indiana, established by Josiah White of Philadelphia, may possibly answer the requirements of our correspondent.

We sympathize with our unknown friend in his anxiety and perplexity; and believe that the difficulties which at present exist in this country in the way of boys learning suitable trades are a serious evil. But we have strong doubts whether any training in mechanical schools is an adequate remedy, or can fully take the place of that insight into trade mysteries which is gradually received by him who is thrown into daily contact with skilled workmen and has the opportunity of watching their labors.

We may add, also, that we do not believe any moral discipline, however perfect, in an educational establishment, can be substituted for that

godly watchfulness and training, that prayerful restraint, and earnest longing and effort for the religious welfare of the young which devolve upon parents and heads of families, and which they must personally exercise, and cannot depute to any other.

SUMMARY OF EVENTS.

UNITED STATES.—Philip H. Sheridan, General of the armies of the United States, and its most distinguished cavalry commander during the civil war of 1861-3, died of heart failure on the night of the 5th instant, at Nonquit, on the Massachusetts coast, where he had gone on account of failing health. His body is to be taken to Washington on the 8th, and to be buried in Arlington Cemetery on the 11th instant.

In the U. S. Senate on the 6th instant, Senator Blair offered a resolution, which was referred, requesting the President to open negotiations with the British Government and the Dominion of Canada with a view to the settlement of all differences between Great Britain and the United States, and for the arrangement of terms for a political union between the United States and Canada, or any of the Canadian provinces.

By a letter of the Secretary of the Interior, Land Commissioner Stockslager has recommended that the Attorney General be requested to institute civil suits against the Eureka Consolidated Mining Company, operating in Nevada, to recover \$3,670,741. This sum, it is claimed, represents the value of charcoal and cord wood manufactured from cedar, pine and mahogany timber unlawfully cut from the public mineral lands in Nevada, by or with guilty knowledge of the Eureka Company. Criminal suit is recommended against Henry Donnelly, the Superintendent of the Company's mines. These cases are made a special department by Special Agent George D. Temple, who has just concluded his investigations of alleged timber depletions in Nevada.

The public debt statement shows a reduction during the month of July, of \$4,137,298. Total cash in the Treasury, \$46,125,397.

A statement prepared by the General Land Office shows that 46,256 pre-emption entries were made during the last fiscal year, embracing an area of 7,265,750 acres, an increase over last year of 11,851 entries and 1,777,651 acres, or the close of the year 98,864 pre-emption entries remained unacted upon.

Secretary Mohler, of the State Board of Health of Kansas, has received reports from about 600 correspondents of the Board, representatives of nearly every county in the State, which show that, while the wheat and oats are not yielding a higher crop than was heretofore reported, the corn crop has materially suffered from the effects of drought, and that hot winds in many sections of the State during the last ten days of Seventh Month, have caused injury.

The Supreme Court of New Jersey has rendered a decision upholding the constitutionality of the Local Option High License law. The opinion as regards the high license feature was unanimous. On the local option section the Court stood eight to seven.

The result of the work of the Pittsburg and Lake Superior Mining Company, during the month of July, has been prospecting with diamond drills on the range midway between Marquette, Michigan, and Negaunee, has just been made public, and there is a general rush for options all along that range clear through to the lake in the southern limit of Marquette. The drill in the last hole, at a depth of 17 feet, encountered mixed ore, and at a depth of 135 feet clear ore was struck, through which the drill has worked for 45 feet, and is still working in it. The new find is claimed to be one of the most important ever encountered in all the bearing district, and the fact that the deposit runs clear through to the lake.

A six-story brick tenement in the rear of 197 Bowery, New York city, was burned on the afternoon of the 2nd instant; and of about 150 people, who lived in it, at least 127 perished in the flames, while several others were badly injured, but they are not expected to recover. The fire was started by the explosion of a coal oil lamp on the first floor.

The Philadelphia Custom House receipts for last month were over \$1,853,000, the largest amount, it is officially stated, ever collected in one month at this port.

The number of deaths in this city last week was 471, which was 12 more than the previous week, but a decrease of 21 from the corresponding week of last year. Of the foregoing 181 were under one year of age: 364

were males and 207 females; 72 died of cholera infantum; 43 of consumption; 39 of marasmus; 35 of typhoid fever; 28 of inflammation of the stomach and bowels; 25 of disease of the heart; 19 of mania; 18 of old age; 14 of debility; 14 of pneumonia, and 10 of congestion of the brain.

Markets.—U. S. 4½, reg., 106; coupon, 107½; 4½, 127½; currency 6½, 126 a 130½.
Cotton was quiet, but steady, at 11-16 cts. per pound for foreign upland.

Feed was only in moderate request, but ruled firm under scarcity. Sales of 1 car good winter bran, at \$17, and 1 car choice do., at \$17.50 per ton. Quotations: Winter bran, choice, \$17.50; do. do., fair to prime, \$17.25; spring bran, do. to quality, \$15.50 a \$16.50.

Flour and Meal.—Trade in flour was sluggish, jobbers buying only enough for current requirements. Prices were well maintained. Sales of 125 barrels Pennsylvania family, at \$29.00; 435 barrels Ohio, Wright, at \$4.09 a \$4.65; 375 barrels Illinois patent, at \$1.90 a \$5; 500 barrels Minnesota patent, at \$4.95 a 5, and 375 barrels do., at \$5.05. Rye flour was quiet at \$3.50 per barrel for choice.

Grain.—No. 1 red wheat sold at 90 cts.; No. 2 red at 87 cts.; No. 3 red 85 cts. per bushel. No. 2 mixed corn was quoted at 54 a 55 cts.; No. 2 white oats quoted at 33 a 34 cts.

Bee cattle.—Extra, 4 a 5½ cts.; good, 5 a 5½ cts.; medium, 4 a 4½ cts.; common, 3 a 4 cts.

Sheep.—Extra, 5 cts.; good, 4 a 4½ cts.; medium, 3½ a 4 cts.; common, 3 a 3½ cts.

Hogs—all Western at 9 a 9½ cts.; no other grades arrived.

Milch cows were inactive at \$25 a 50.

FOREIGN.—The Parnell Commission Bill has passed Parliament, the Irish members not being present when the vote was taken. It is stated that the inquiries of the Commission will not commence before the February Month, next.

The *St. James Gazette's* correspondent at Berlin says that in political circles there, the tension between France and Italy is regarded as of the most serious character.

The President of the French Agricultural Society has made a report regarding the losses caused by the recent rains. He says that the hay has been destroyed, and the peasants have been compelled to kill their animals, being unable to feed them. He also says that corn cannot ripen; that potatoes are rotten, and that the vintage this year will be inferior. He estimates the loss to agriculture at half a million of francs, and says if the weather continues a month longer the crisis will extend to the whole of France.

Silesia is being devastated by terrible floods, the worst known in thirty years. Along the rivers Bober and Zacken the damage is especially great. Several mills at Greifenberg have been destroyed, and the crops have been ruined. In Western Russia are inundated in consequence of the overflow of the river Vistula. The river Niemen has also overflowed its banks in the Minsk district and flooded the adjacent country.

On Seventh Month 15th, the volcano of Iwabsai, in the southern extremity of the island of Iwawura were destroyed. The eruption continued next day with unabated violence, and burned 300 and 400 persons in a village named Irita.

The incendiary fires that swept Port au Prince, the capital of Hayti, on the 4th and 7th ult., destroyed 850 buildings, and the amount of the loss reached \$2,717,000, or 40 per cent. of the total export.

Ottawa is enveloped in smoke from forest fires in the surrounding country. St. Joseph's village, with 500 inhabitants, is nearly surrounded, and residents are preparing to flee, as it is believed the place is being cut off from the city by the smoke.

check the fire, and valuable timber limits on the Ottawa River have been swept by the fire. For an area of five miles around Canadian Junction on the Canadian Pacific Railway, the fire has full control, consuming forests and timber. A large number of the forests along the mountain range in Farley township are burning towards the town of Alymer, which is threatened. The loss is believed to have reached nearly \$500,000, with little prospect of the flames being cut under control, as the fire has burned itself out. Many families are homeless.

Supplementary crop reports from all parts of the

Province of Ontario show that all the crops, with the exception of spring and fall wheat and hay, will be above the average in yield and quality. Previous reports have shown that the autumn and winter seasons were a general drought which prevailed, but since then rain has fallen everywhere, and instead of a scarcity, there is likely to be an abundance of everything.

CORRECTION.—In the article "Notes on Hayti," in our last number, the name of the President is erroneously printed Solomon; it should have been *Salomon*.

RECEIPTS.

Received from Josiah Lippincott, N. J., \$2, vol. 62, and for Isaac Lippincott, \$2, vol. 62; from William Bettles, Ill., \$2, vol. 62; and for Joseph B. Remittances received after Third-day, will not appear in the Receipts until the following week.

NOTICES.

WANTED.—A woman teacher at Bradford Preparative Meeting School, on the usual Ninth Mo., 3rd, 1888.

Application may be made to
Lydia D. Worth, Marshallton, Chester Co., Pa.
Sarah A. Satterthwaite, Box 1934, West Chester
Chester Co. Pa.

WESTTOWN BOARDING SCHOOL.—A competent teacher of reading will be wanted for the Boys' department, at opening of next session (Tenth Month 5th). Apply to

JOHN E. CARPENTER,
Knox and Conler Sts., Germantown, Phila.

GEORGE M. COMFORT,
Falsington, Bucks Co., Penna.

WILLIAM EVANS,
292 South Front St., Philada.

DEP. SIXTH Mo., 5th, 1888, suddenly, of paralysis, in Upper Norwood, England, MARTHA, wife of Lewis W. Leeds, aged nearly 78 years. Interred in Friends' ground Croydon, England. The evening previous to her death she remarked: "How I wish my Heavenly Father would take me to himself; I should be so willing to go with you, my dear Mother, but I believe she will enter into everlasting rest."

THE FRIEND.

A Religious and Literary Journal.

VOL. LXII.

SEVENTH-DAY, EIGHTH MONTH 18, 1888.

No. 3.

PUBLISHED WEEKLY.

Price, if paid in advance, \$2.00 per annum.

Subscriptions, payments and business communications, received by

JOHN S. STOKES, PUBLISHER,

No. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

ARTICLES DESIGNED FOR INSERTION TO BE ADDRESSED TO
JOSEPH WALTON,

MOORESTOWN, BURLINGTON CO., N. J.

Entered as second-class matter at Philadelphia P. O.

FOR "THE FRIEND."

Incidents and Reflections.—No. 161.

EXERCISE OF FAITH.

In a recent conversation with a Christian mother, on the early age at which children manifest that they are visited by the Grace of God, giving them a sense of right and wrong, she mentioned the case of one of her own children, who, when a little boy of between three and four years of age, became seriously sick. He asked his mother if little children went to Heaven when they died? She replied, that they did, if they had been good children. After remaining quiet for a little while, he remarked, "Then, they must not take sugar without leave." This was one of the childish temptations to which he was exposed; and, at the time of the conversation, he felt that it was very wrong for him to yield to it.

This simple incident not only shows that the Spirit of Christ visits the heart in very early life, pointing out to the child the path in which it should walk, but it also furnishes an illustration of the nature of faith, which consists in a belief in the reality and Divine authority of those impressions and revelations which are made to the soul of man by his Creator. These revelations of the Divine will are attended with an evidence of their source and authority, altogether sufficient to the mind which yields thereto in simple obedience; but which may be rejected by him who is unwilling to submit to the government of Christ, and reasoned away, until he loses his faith, and becomes darkened in his imaginations. It is the belief in the heavenly source of those revelations that strengthens the obedient mind to obey their requirements; for, if he had not this belief or faith, he would not sacrifice his own will, and bear the cross which is laid upon him. This view accords with the Scripture statement, "Without faith it is impossible to please God, or for that cometh to God must believe that He is, and that He is a rewarder of him that diligently seeks Him."

But however thoroughly a man may be convinced of what the Lord requires of him, it will do him no good, it will be only a dead faith, unless it is joined with obedience; for, as the Apostle James testifies "Faith without works is dead."

The New Testament narrative furnishes many illustrations of the exercise of faith. Her belief in the power of our Saviour to heal her malady encouraged the diseased woman to press through

the crowd to touch the hem of his garment. The faith of blind Bartimeus led him to cry earnestly to have his sight restored. It induced the Centurion to beseech the Lord, that He would speak the word so that his servant might be healed. Without faith in his power, none of these would have sought the help and favor of Christ; and so would have missed of the blessing that they received. And inasmuch as our Saviour declared that no man could come unto Him (spiritually) except through the drawing of the Father, this belief and trust in his power and goodness must have had its origin in the impressions made on their minds by the Holy Spirit.

A few years ago the steamer City of Columbus, from Boston to Savannah, struck a reef near Martha's Vineyard, and was wrecked, on the 18th of the First Month. Of the one hundred and thirty crew and passengers on board, only twenty-seven escaped. Among the survivors was a captain, on his way South, to take command of a sailing vessel. He had "turned in" as was his custom on board ship, with his clothes on. When the steamer struck he sprang to his feet, and hurried on deck; the waves were sweeping across the deck. Hurrying below, he put on his overcoat, fastened on a life-preserver around his room-cabin, and went on deck again. After clinging to the flag-staff for a short time, he tried to cut away a boat, but owing to the ice was unable to do so. Every wave that broke over the deck swept one or more into the sea. Convinced that the wreck could not save him, he plunged into the water and tried to swim for the shore. Finding the struggle useless, he turned upon his back and floated, drifting with the tide; now upon the crest of a wave, again in the trough between the waves. Out of the gray, half-light, there came toward him a life-boat; nearer and nearer it came, until, stretching out his hand, he grasped it and clambered in. The former crew had been washed away. The boat was filled with water to the edge, but kept afloat by corks or air-bags. Exhausted with his struggle, chilled by the cold, he fell asleep. A great wave turned the boat over, and rolled him into the sea. The shock awoke him; again he struggled back, crawled to the stern of the boat, sat upon it, with his feet and limbs in the water up to his knees; and with a piece of board he had found in the boat, his head tied up with a handkerchief, he paddled toward Vineyard Haven, following the tide, borne on by the currents. The wind dashed the wave-tops into spray against him. Following the shore, he struggled on. Some natives of the island spied him, and were just going to attempt his rescue, when a steamer picked him up.

He was a Christian man, and was impressed with the belief that his Heavenly Father would care for him, and that he would be saved. It was his faith in this impression that gave him the use of all his powers, and enabled him under the most discouraging circumstances, to persevere in his struggle for life. Without it he would probably have been lost.

The connection between faith and works is illustrated in the description given by Thomas Jones, an old colored preacher, of his escape from slavery. He says, "When I found myself out on the ocean, I prayed God to help me, and He did help me. I found some boards and got on to them. Well, what did I do then? Did I stop praying, and think because I had got a few boards I could go alone now, and I didn't need the Lord's help any more? No! I kept on praying, and held on to the boards. Well, what did I do then? Sit still, and expect the Lord to carry me safely through, and think that I had nothing to do? No! I took a stick for a paddle, and went to paddling and praying. I did not sit still, like those who have a name to live, and are dead; but I just went to paddling, and I did not forget to pray; and by paddling and praying I got through. So God expects us to pray and also to paddle, and not wait for Him to do the work that He has set us to do."

The Detroit *Free Press* publishes a comparison, which was given to a man troubled with doubts respecting religion, and who was told that he must humble himself and have faith, if he would know the truth. To this he objected, as asking him to accept without proof. He received the following reply:—

"Out West they have a place for watering cattle. The cattle have to mount a platform to reach the troughs. As they step on a platform their weight presses a lever, and this throws the water into the troughs. They have to get on the platform through faith, and this act provides the water and leads them to it. You are like a smart steer that slips around to the barnyard and peeps in the trough, without getting on the platform. He finds the trough dry, of course, for it needs his weight on the platform to force the water up. He turns away disgusted, and tells everybody there is no water in the trough. Another steer, not quite so smart, but with more faith, steps on the platform. The water springs into the trough, and he marches up and drinks."

While there are some instructive hints in such comparisons, yet there is need of care that we do not attempt to apply all the details of them to spiritual experiences—for this may lead into error in other directions.

It is important that the believers in Christianity should remember that a profession of religion will do little good if it does not produce practical fruits in life and conversation. The London *Sunday School Chronicle* relates the story of a family who had engaged as a servant a professedly Christian girl, and one who was a member of a Christian church. They were full of hope that she would be free from the usual faults and deficiencies of her kind.

"But somewhat to their surprise, and greatly to their annoyance, they found she had never been taught, or at least had never received the idea, that doing her household work thoroughly and well was one expression of religion. Her work was done imperfectly; there were manifold hid-

ings and schemings to conceal facts from the mistress, who soon came to the conclusion that this was the worst servant she ever had in the house. She did not question the piety of the girl, who was not to be considered a hypocrite or charged with insincerity in attending the church meetings, but her religion was a matter of sentiment; she had never learned to apply it to her common life."

There was far more evidence of conversion in the answer of the little maid-servant, who gave as a reason for believing that the change in her was a real one, "Now I sweep *under* the mats." She had evidently learned that her work must be performed faithfully, as in the eye of her Heavenly Master, and not slighted, as is often done by those who merely desire to escape the censure of their earthly masters. To "sweep *under* the mats," has a special meaning to the present writer, because it brings to mind the days when he was a school-boy, and at times it was his duty to sweep the school-room; and he well remembers the temptation to slight the work, and leave untouched the floor under the long benches, where the dust would not attract the eye of any but a close observer.

J. W.

FOR "THE FRIEND."

Thirty-seven years ago, under the date of Seventh Month 6th, 1851, that truly conscientious Friend Susanna Lightfoot Wood, thus wrote of her life at Westwood:—

"Times have altered since thou and I were young, have they not? Still, I often think with all their improvements, I do not believe the children enjoy the dear old spot more than we did.

"To me, the crowning pleasure was the feeling that the wing of Ancient Goodness overshadowed, and was round about us; and that some, if not all the teachers, could feel the hungry and thirsty souls. Oh! I would not have missed the good I received there for any earthly consideration, and the greatest desire I feel for the loved spot is, that there may ever be cherished that, by all concerned in its management, which will secure to it the blessings of Heaven."

To one who had said, that the Quakers deny the person of Jesus Christ, William Penn made the following reply:—

"If by the 'person of Christ' is meant the man Christ Jesus, we deny the charge; for there is no other name given under heaven, by which salvation can be obtained. 'Tis Christ alone that hath brought life and immortality to light: He is the Propitiation, the Mediator and Intercessor; and by Him only can man come to God; and no man can come to Him but such as come to his Spirit in their own hearts. And such as have not the Spirit of Christ dwelling in them are none of his. And these are they that deny Christ, [those] that deny his cross, break his law, and live not according to his example, who is meek and lowly, pure and undefiled, and separated from all sinners. So that the anti-Christians of our days are those that live according to the lusts of the eye, the lusts of the flesh and pride of life, without God in the world; that is, without a sense of God upon their hearts; but their minds run after the things that are seen, which are temporal, neglecting the things that are eternal. And though such may profess Christ in words, yet it shall be said unto them in the great day of account, 'Depart from me ye that work iniquity.'"

Notes on Hayti.

(Continued from page 11.)

The roads throughout the country are relics of excellent thoroughfares, of good width, originally level or well graded; but now, through neglect, totally unfit for traffic by any wheeled vehicle, and traversed only by foot passengers, pack mules and donkeys, and by travellers on horse-back. Many of these roads become the water-courses for the summer torrents, and are of course deeply washed and gullied, especially in the hilly parts; no care whatever is taken to prevent these washouts; when the way becomes entirely impassable, a path is soon found around, and had becomes worse. A very little labor bestowed on the difficulty would remedy it and keep a good highway available throughout the year. The rivers are all forded, as of course there are no bridges even for foot passengers. During the rainy season these become greatly swollen so as to be actually impassable; then traffic of all kinds must cease for the time being. As the waters subside, the tops of the banks are left twenty to thirty feet above the stream, and being steep and slippery great difficulty is often experienced in passing them, so that important business interests are necessarily spasmodic on this account alone. Many of these streams totally disappear in the dry season, but their beds must be reached and crossed by a steep and dangerous descent on one side and ascent on the other, often many times within a few miles. All of this for want of a very little engineering skill and public expenditure, both of which should be quite within reach of any Government making the least pretension to civilization. In most parts of the country traversed by the leading thoroughfares, there are no natural difficulties insuperable to building a cheap and good railroad, but there are no railroads in Hayti.

All the produce from the interior which is not carried on the heads of the women, is brought to the sea coast on the backs of pack animals, mostly donkeys of diminutive size, capable of carrying not over 250 lbs. each. These are generally driven in parties of ten by one person, —each donkey having a bag or two of coffee it may be, or a few sticks of logwood fastened by ropes to a suitably constructed pack saddle; generally, no halter is used, the patient animals following steadily along in single file at a quick walk. These donkeys are mostly of a light dun color with long uncurled coats, and bear the marks of cruel usage and poor food. As they will subsist where other beasts of burden would starve, and will survive more neglect and cruelty and rough usage than any other, and are moreover so sure-footed, they are almost the only creature available for this country as a beast of burden. They cost from \$12 to \$20, according to size and age, and will last for 20 to 25 years. There are a few mules of small size, and a number of small horses 12 to 13 hands high, of great strength and endurance, which are universally good, clean-limbed, agile, well-gaited for the saddle, and capable of carrying a man 75 to 80 miles per day for several successive days without overtiring. These animals are well cared for, and carefully cleaned; they thrive on a bundle of the nutritious guinea-grass and a quart of corn, and rarely get any other food during the dry season. When rain falls, and other grasses and forage are plentiful, they are turned out to pasture, and grow fat and sleek on the nutritious herbage which is abundant at that season.

Of schools we saw very few. In Port au Prince there is a Catholic Seminary for boys,

which is well equipped in one of the best houses in the city, accommodating 225, where the very poor are boarded and taught without charge, and a very low price accepted for those able to pay. The public schools are few and slimly attended, and being so poorly equipped are inefficient; we saw no school for girls, and I am under the impression no effort is made to educate them. The daughters as well as the sons of the few wealthy people are sent to the United States or to Europe to be educated.

Few of the harbors in this large island have any landing facilities—all the merchandise arriving and departing must be carried between shore and ship in lighters, and as the sea is oftentimes rough, especially in such open roadsteads as at Jeremie and Port de Paix, loading and unloading the ships is often absolutely suspended for many days at a time, until the wind shifts or abates in violence. On one occasion we were obliged to land through the surf, a perilous and exciting experience, and at another we were carried to the boat which lay outside the breakers, on the shoulders of stout men who waded from the shore at imminent risk, as it felt to us of stumbling and pitching us headlong. The harbors of Hayti are few of them good: that of St. Nicolas Mole, at the extreme N. W. corner of the island, is an exception; it is commodious, well land-locked, with deep water free from shoals and reefs. Nearly all the others are shoal,—some have dangerous coral reefs at the entrance; some are so shallow that vessels cannot approach nearer than two to four miles.

As we had so little opportunity to visit the interior we could have only a faint idea of the animals and birds living in the vast forests which cover the mountains. We saw a few parrots offered for sale in the markets, and often watched the pelicans fishing in the shoaler waters as we lay at anchor. These large birds fly with speed and vigor some distance above the water, into which they suddenly plunge and quite disappear beneath the surface, soon emerging with the fish in their capacious bills. Their industry and activity were not in harmony with the lazy movements of their human neighbors, and we became much interested in the uniform success which attended their unerring aim at their food. There are a few harmless snakes on the island, but no venomous ones; small lizards abound, and probably a few smaller mammals; scorpions, centipedes, tarantulas and land crabs are numerous, but not feared.

As we steamed along in the tropical seas we were greatly interested in the schools (or should I say flocks?) of flying fish, and at night in watching the beautiful phosphorescence occasioned by the disturbance of the water at the ship's stern. The stars appeared to be unusually brilliant; the change in the relative positions of the familiar constellations was really fascinating; the Pole Star was near the horizon, and the beautiful Southern Cross of which I had never before had the sight, was about as far above the horizon in the opposite. The four stars comprising this cross are about as far apart as the four in the bow of the Dipper, and at midnight the Cross is perpendicular to the horizon, exactly in the South, as the Pole Star is in the North.

It would be a task quite beyond my powers to attempt a description of the interesting and strange vegetation which was a constant attraction and source of wonder. The cocoa palm, with its graceful head of waving leaves, is always attractive; the banana, plantain, orange, lemon, mango, bread-fruit, akia, coffee, cocoa-bean, with many others, bearing edible fruits mostly un-

known to us: the curious pickle-tree bears little green fruits closely resembling cucumber pickles in appearance and taste, which grow, not on the branches, but directly out of the stem of the tree; some large calabashes also are produced in the same way. The baha-horn, lignumvitæ, mahogany, rosewood, logwood, fustic, mango, cottonwood, the graceful bamboo, and a great variety of other trees and plants, make the flora of this favored island a very rich one. There are said to be valuable mines of metallic ores in the interior, but they are unknown to outsiders, and are probably little worked.

The habits of the people are of course very primitive: in the towns there is an attempt at copying the modes of civilization in the building and furnishing of the houses; but in the country, a hut built of split bamboo or of other light material and thatched with palm-leaves, comprising but one or two rooms furnished in the most meagre manner, forms the customary shelter of the inhabitants. As before remarked, no agriculture worthy of the name is attempted; a small patch cleared by fire from the forest growth, is planted with a few yams and plantains, and yields the staples for the family consumption. A neighboring cocoa palm, and orange tree supply the fruits, a small patch of sugar-cane yields that important article. The money necessary to buy the clothing is gained by selling dyewoods or timber cut from the forests. Any surplus of earnings is spent in carousing, as all are very fond of "tafia"—a cheap and highly intoxicating rum made from the sugar-cane. The wants of the people are few and easily supplied with a minimum of labor. They are very sociable and fond of gossip; and as is customary in every nation except our own, the women do most of the hard daily labor. It is a highly interesting sight to see the women trooping towards the towns on the market days, each with a basket on her head filled with produce for the market, and often driving a donkey loaded in both punners with similar produce, chatting gaily and cheerfully with her companions, walking with strong elastic strides often for very long distances, sometimes, we are told, 15 or 20 miles. The market places at the last of the week are thronged, and all the town is busy, presenting a marked contrast to the first half of the week when very few of the "habitions" are to be seen.

In reflecting upon my visit to this beautiful tropical island, my mind is saddened by the evidences which abound on every side, that the condition of the people is so far below the standard of civilization which might have and ought to have been attained. My thoughts naturally turned to my own land, and to the contrast presented in its civilization, its Government, its thrift, its schools, its domestic happiness, and last and greatest of all, its religious and social superiority. Notwithstanding the many delinquencies we have among us; notwithstanding the imperfections and even the corruption in the administration of Government, both Civil and National; notwithstanding the defalcations and dishonesty in business which have of late so often shocked our communities, the fact is incontrovertible that the American people are the most moral, the most religious, the best educated, the most sober, the most prosperous, the most considerate in their treatment of women, in brief the most highly civilized of all the nations of the earth. To be fully convinced of this one needs to live in foreign lands for a time, to see the hard lives of the women, to become acquainted with the class distinctions and espionage to which the people of even the most favored European na-

tions are subjected, to study their literature and their religious status; contrasting these with the freedom, the equality, and the high civilization which we are blessed with, every American, both native-born and adopted, should value his citizenship as a priceless boon.

A Visit to Elklands, Pa.

The visitor to this mountain district can fix himself for a night's rest in a sleeping car at Philadelphia in the evening, and awaken next morning near Williamsport, on the Susquehanna. From Williamsport a train winds up the valley of Lycoming Creek, among the mountains, and passes on to Elmira, in New York State.

We left the cars at Canton, forty miles north of Williamsport, about 9 A. M., on the morning of the 17th of Seventh Month, and were there met by a friend who conveyed us to his home, about sixteen miles distant, over a most interesting road. The open wagon, the usual conveyance in this section of country, gave us abundant opportunities of viewing the beautiful pictures spread before us, of valley and hill, and of noticing the flowers and plants, many of which differ from those found in the lower grounds of southern New Jersey.

The valley of Towanda Creek is fertile and well cultivated. After leaving that, the road enters a depression in the mountain range which forms its southern boundary, and for several miles climbs up its sides, most of the way through the forest with which this country was originally covered, much of which still remains, although the noble White Pine trees which once abounded have largely fallen before the axe of the lumberman, and many of the Hemlocks have been felled for the sake of the bark which is used by the tanner.

As we passed along we saw some of the bare trunks of the Hemlock which had been recently cut, and the bark, which had been stripped off, piled up along side of them. This work can only be done during a few weeks in the early summer, when the flow of the sap, or the deposition of new wood, enables the workmen to readily loosen the bark from the old wood. The season was now about over, and soon the adhesion would become so strong, that instead of coming off in sheets four feet in length (the usual length into which it is cut), it would be broken into small fragments in the effort to peel it.

In the rich valley some of the land was desecrated by the cultivation of Tobacco; of which we noticed several patches. There is a general unanimity of sentiment among medical men, that the habitual use of this poisonous plant, either in smoking or chewing, is injurious to the health, and weakens the vital powers, and the ability to resist disease. In view of its properties, those who use their land in its growth ought to feel, that they are instrumental in the promotion of disease among their fellow-men, and in providing the means of indulging in the inconsistent gratification, which many have felt to be inconsistent with due subjection to the restraints of the cross of Christ. May we not hope, nay believe, that with the progress of light, the professed followers of Christ will increasingly be convinced, that tobacco is one of the things to which it is right to apply the advice of the Apostle—"Touch not, taste not, handle not;" and that they are not clear of guilt, if, for the sake of gain, they furnish to others that which will be hurtful to them?

Another plant, which we were sorry to see in

such abundance, was the Canada Thistle (*Cirsium arvense*), which seemed to us to have spread considerably since we visited this vicinity seven years ago; but is yet far from being so common as it is in Canada and Western New York. It is a smaller plant than the ordinary thistle, with very prickly leaves and numerous heads of pale pink or whitish flowers, not half the size of the purple-flowered thistle with which persons residing around Philadelphia are familiar. Like most troublesome weeds this plant is a foreigner, having come from Europe; and it possesses such powers of reproduction and so much vitality of constitution, that nothing but the greatest vigilance and care can keep it within moderate limits.

One great difficulty in checking the growth of weeds is the practice in the mountainous regions of which we are speaking, of never cultivating the pasture lands, so that there is no opportunity of uprooting with the plough, and destroying those plants which are of no value to the farmer, and which occupy the space that might more profitably be filled with nutritious grasses. This custom grows out of the usual plan pursued in clearing land of the timber which originally covered this whole country. After taking out the Saw Logs of White Pine and other valuable timber, and the bark of the Hemlock, the trees are chopped down, the logs rolled together and burned. This is a laborious and expensive operation, costing from \$12 to \$20 per acre. The ground is then often thickly covered with stone and very much marked with hillocks and hollows. Before it can be cultivated to advantage much additional labor must be expended, in removing roots, stumps and stones, and leveling; but without this outlay, it is capable of producing a good supply of grass; so that the fields devoted to pasture are generally left in this unfinished condition. In nearly all of them can be seen clumps of various kinds of weeds, which are an eyesore to the careful farmer. Beside the Canada Thistle (which however, as yet, kills but a minor space among these intruders), the common Milk Weed or Silk Weed (*Asclepias canadensis*), has widely spread, and is spoken of as being very difficult to eradicate;—although in the more carefully cultivated parts of our country it is confined to the road sides and similar waste places.

But by far the most characteristic feature of these mountain pastures, are the clumps of ferns of different species, but chiefly of the beautiful *Dicksonia punctilobata*. These are so numerous and extensive that oftentimes a considerable portion of the field is occupied with them. As we rode along we often admired their graceful outlines and the delicacy and beauty of their foliage. But we suppose the sense of beauty would be dulled in the mind of the farmer, as he looked with regret on this occupancy of his land, and that an unbroken surface of grass would be far more attractive to his eye. Ferns abound in the woods, and when the trees are removed they seem to spread even more profusely than before.

Among the plants that arrested the attention was a wild raspberry (*Rubus strigosus*), with red fruit, very abundant and good. It was found in many places by the road side, and often great patches of it occurred in recently cleared ground, and similar localities.

Another raspberry, which is mostly found on the mountains or in elevated localities (although I have met with it on the hills of the Schuylkill River, above Philadelphia), is one with large leaves and a beautiful rose colored flower, nearly as large as that of the wild rose. The fruit is

edible, although apt to be imperfect, and with but a few of its grains well filled. It is called by the people in these parts the Thimble-berry. It is the *Rubus odoratus* or Purple-flowering Raspberry.

(To be continued.)

From William Edmundson's Journal.

In the Sixth Month, 1698, I travelled into the north (Ireland), accompanied with some Friends, and was at the Province Meeting at Lurgan, which held part of three days in Truth's service, and the Lord's power was nightly manifested amongst us to our great comfort, then I with some Friends travelled together and visited most meetings in that part of Ulster; then came up to Dublin and had three meetings there; so to the county of Wicklow (accompanied with several Friends from Dublin) and had two meetings in that county, and one in the county of Wexford, so came to Leinster Province Meeting at Castledermot, which held part of three days, and a great appearance of Friends, where the heavenly glorious presence of the Lord was amongst us, and things relating to church government closely discoursed of, for the honor of God, and good of his people; the world and the things of it in particular were under our consideration, as they had often been before, viz., the riches, height, finery and delight thereof, which too much prevailed to the damage of many, and hindrance of Truth's prosperity, as also to the grief and wounding of the hearts of true, sincere, self-denying Friends, who loved the Truth more than all. After much discourse how to stop the stream thereof, that it might not prevail over our Society, it appeared difficult to accomplish, and the way intricate how to deal with such to bring them into the bounds of Christian moderation, to use the creatures in their proper places and services, for which they were created and given of God to men (and avoid covetousness); so the way not opening with clearness to proceed I desired Friends to adjourn the meeting, which was done, and the Friends of the said meeting met together again with many ancient concerned women. I desired we might be still and wait on the Lord, that He might open our hearts and show us how to proceed in this weighty matter. Accordingly Friends were all still and quiet, and the Lord filled our hearts with his Holy Spirit and ancient goodness, so that the meeting was covered with the glory of the Lord, that shined amongst us, then a way opened in his Divine light how to proceed in the present affair, and things were offered to the meeting in that matter which answered the witness of God in all their hearts, so that there was an agreement to observe the same, and many testimonies born to truth's limits and against the covetous worldly spirit, so Friends parted in much gladness and great satisfaction. A. F.

MEGESSA, N. C., Eighth Month 4th, 1858.

It was said of Hannah More, that when she was told a tale against another in her village, her usual reply was, "Come, we will go and ask if that be true." The effect was something wonderful. The tale-bearer, taken aback, would begin to say, "Well, perhaps there might have been a mistake," and to beg that no notice be taken of the matter. But no; the good lady would go there and then, taking the scandal-monger with her, to make inquiry and compare accounts. If all tale-bearers could be treated in this way, how few tales would be told.

THE DOVE.

[Written by the late MARY TOWNSEND, of Philadelphia. It was composed after hearing Edgar A. Poe's "Raven" read; and alludes to her own blindness.]

'Twas midnight! solemn, dark, and deep,
And vainly I had courted sleep,
When worn with pain, with anguish tossed,
Hope, faith, and patience nearly lost,
I heard a sound, a gentle sound,
Breaking the solemn stillness round,
A gentle, soft, and musical sound,
Making the silence more profound.

I hushed my breath, again it came,
My heart beat faster, still the same
Low gentle murmur, met my ear,
Approaching nearer, and more near;
A single sound yet soft and clear,
And strangely fraught with memories dear.

A flood of clear and silver light,
Then burst upon my ravished sight,
Filling my little chamber quite;
And in that light a bird was seen
Not "grim and black with stately mien,"
But purely white and beautiful,
With look so mild and dutiful;
A lovely bird with plumage white,
In that calm, still, and clear moonlight.

Floating a moment round my head,
It rested opposite my bed,
Beside a picture lovelier
Than heaven's gods, and holier;
Two beauteous babes, whose saintless eyes
Bespeak them still in Paradise,
Whose loving, soft and gentle eyes
Tell where that land of beauty lies;
There sat the radiant, white-winged bird;
I listened, but no sound I heard.

And when I spoke "sweet bird, I said,
"From what far country hast thou fled?
Whence came'st thou, and why cam'st thou here?
Canst thou bring aught my soul to cheer?
Hast thou strange news? Speak, gentle dove."
And the bird answered, "God is love."

"They tell me so," I faintly said,
"But joy is flown and hope is dead,
And I am sick and sad and weary,
And life is long and dark and dreary,
Think not thy words my spirit move."
Still the bird answered, "God is love."

"Some dearly loved are far away—
And some who fondly near me stay,
Are sick and sad and suffering,
While I am weak and murmuring,
Each for the other grieves and tries
To stay the tears that fill his eyes;
Why comes not comfort from above?"
Firmly but mournfully the dove
Distinctly answered, "God is love."

I started up, "The world!" I said,
"Though beautiful it once was made,
Is full of crimes and misery now;
Want sits on many a haggard brow;
The warrior wields his bloody sword,
Slaves tremble at the tyrant's word,
Vice honored, virtue scorned, we see,
Why are these ills allowed to be?"
He raised his head, that soft-eyed dove,
As though my boldness he'd reprove,
Then bowed and answered, "God is love."

"Forgive," I said in accents mild,
"I would I were again a child,
I've wandered from the heavenly track,
And it is late to journey back;
My wings are clipped, I can no more
I strive to mount, but o'er and o'er
My feeble wings I raise in vain,
I flutter, sink, and fall again."
In low but earnest tones the dove
Still softly murmured, "God is love."

"Thou movest me strangely, wondrous bird,
My soul is strongly, deeply stirred,
My heart grows lighter, my eye I still
My mission now I wish to fill,
Proving my love to God sincere,
By doing all my duty here."

Shall past omissions be forgiven,
And shall the weary rest in Heaven?
He spread his wings, that radiant dove,
And cheerily answered, "God is love."

"Thanks, heavenly messenger," I cried,
"Remain that picture, still beside,
Surrounded by the light of truth,
Companion meet for sinless youth,
Thou blessed type of love and peace,
My hope and faith thou'lt still increase,
Be ever near me, gentle dove,
I know, I feel, that God is love."

"IF WE KNEW."

If we knew when walking thoughtless
Through the noisy crowded way,
That some pearl of wisdom's hidden
Close beside our pathway lay,
We would pause where now we hasten,
We would often look around,
Lest our careless feet should trample
Some rare jewel to the ground.

If we knew what forms were fainting
For the shade that we should fling,
If we knew what lips were parching
For the water we would bring,
We would hasten with eager footsteps,
We would work with willing hands,
Bearing cups of cooling water,
Planting rows of shading palms.

If we knew what lives are darkened
By some thoughtless word of ours,
Which had been ever lain among them
Like the frost among the flowers;
Oh, with what sincere repentings,
With that anguish of regret,
While our eyes were overflowing,
We would cry, forgive! forgive!

If we knew? alas! and do we
Ever care or seek to know
Whether bitter herbs or roses
In our neighbor's gardens grow?
God forgive us lest hereafter
Our hearts break to hear Him say:
"Careless child, I never knew thee;
"From my presence fee away!"

INFLUENCE.

I dropped a pebble in the stream,
It sank forever from my sight;
A moment in the sun's warm beam
A diamond sparkled pure and bright,
Reflecting far its radiant light.
A circle, small indeed, at first,
Widened, 'ere mid the tempest's roar,
Until at last it faintly burst
And vanished on the farther shore.

A frown, a scowl, an angry glance,
A hasty or unguarded word,
A formal bow, a look askance—
These, quicker than a swift-winged bird,
Fierce in the heart like an unslayed sword,
Spreading a fearful influence wide,
They cast a murky shade and gloom
Across life's rough and troubled tide,
And reach unto the silent tomb.

A word, a look of sympathy,
A penny generously bestowed,
A simple act of courtesy,
A kindly influence spread abroad,
And from the soul lift many a load,
These angel-leeds, grand and sublime,
Like ripples on the restless sea,
Sweep o'er the fretful stream of time
And reach unto eternity.

—Paul Chopin, in Boston Transcript.

Nothing wins love like unselfish thoughtfulness for others. He who thinks nothing of himself in his intercourse with his fellows, is surest to make his fellows think of him with gratitude, when they are with him, and when they are away from him. There is no way of winning a place in the hearts of all, like losing all thought of one's self or of one's claim on the love of any. —Selected.

FOR THE FRIEND.

"The Word of His Patience."

"Because thou hast kept the word of my patience, I also will keep thee from the hour of temptation, which shall come upon all the world to try them that dwell upon the earth." This is the language of Him who says, "I am the root and the offspring of David, and the bright and morning star." As Christ is this "bright and morning star," so the language is from the highest authority. And as it was applied to one of the most pure of the seven churches of Asia, so it will apply to all the churches of the living God, and to each individual member of such churches. The word here spoken of, I understand to be that word or power, which in the beginning was God, and is God. And this living and eternal word is quick and powerful against all the evils of the world, and is a discernor of the thoughts and intents of the heart. So it is nigh at hand and ever ready to detect wrong, and lead to that which is right.

But while our Saviour suffers us to be tempted and tried, He will also make way for our escape, and assist us to be patient in tribulation; for He says, "in this world ye shall have tribulation." So it appears that ever since the day of Adam and Eve, it was the design of the great Creator, that his children should be a tried people; and often we find it is in the furnace of affliction. But if we abide the day of his coming, and keep the word of his patience, while He sits as a refiner and purifier of silver, the promise is, that He will keep us from falling in the hour or time of temptation or trial, which He wisely permits to come upon all that dwell upon the earth. So, blessed is the man that endureth temptation, for when he is sufficiently tried, so as to be approved, he shall receive the crown of life.

Human language without Divine inspiration, fails to convey, in full, the sublime intelligence concerning heavenly things that the spiritual man would be glad to have. So it may be in relation to the passage that I have quoted as the foundation of this article. For, while in this lower world, we see and know only in part, and prophesy in part, yet we see enough to make us believe that if we keep the word of the Lord's patience, He will keep us from falling through the remaining tribulations that may come upon us. So let us "count it all joy when we fall into divers temptations; knowing this, that the trying of our faith worketh patience. But let patience have its perfect work, that we may be perfect and entire, lacking nothing."

"Soon will close our earthly mission,
Soon will end our pilgrim days,
Hope will change to glad fruition,
Faith to sight, and prayer to praise."

D. H.

DUBLIN, IRE., Seventh Mo. 4th, 1858.

Palestine in the Time of Christ.

ALMSGIVING.

If fasting was meritorious, almsgiving was still more so. It is certain that the children of Israel practised this. The care of the poor was one of their great concerns, and the practice of collecting for them existed among the Jews before it was introduced into the Christian Church. There is a wide difference, however, between the two. The almsgiving among Christians was not looked upon as meritorious, and it was extended to all men without distinction. St. Paul collected among the Greeks the money intended for the poor Judeo-Christians of Jerusalem. This was an entirely new and unpre-

cedented thing, and a recognition of the universal brotherhood intimated by the gospels. The Jew was charitable only to a Jew; he alone was his "neighbor," and it is singularly instructive to place the parable of the good Samaritan side by side with certain implacable utterances of Malmonides; as, for example: "Heretical Israelites—that is to say, those who worship idols and those who deny the law and the prophets—ought to be killed publicly, if possible, if not, in secret." These words are certainly intended to describe the Samaritans, and we know from the history of the war of 66-70, that the zealots did not hesitate to put this principle into practice. "As to the Gentiles," says the same author, "who are not at war with us, there is no command to kill them, but it is forbidden to save them from death. If a Jew sees a Gentile fall into the sea, it is not his duty to pull him out. It is indeed written, 'Thou shalt not be guilty of the blood of thy neighbor;' but such an one is not thy neighbor." Tacitus had, then, good reason for saying of the Jews: "They are famous for their hatred of the human race." The feeling of charity was absent from these dried-up hearts; and the precept of Christ, "Thou shalt love thine enemy," was absolutely new when it was uttered. St. Paul's ode on charity could not be understood by a Jew, since what he called the exercise of mercy comprehended only two duties—"that of assisting poor or imprisoned Israelites with money, or of comforting them in person in their affliction."

Natural History, Science, &c.

Adventure with a Tiger.—A writer in *Chambers's Journal*, in explaining his attachment to a very ugly Indian dog named Mungo, of Mongrel breed, says that when in the East Indian service, he took compassion on the animal, which used to prowl about the barracks in a half-starved condition, and gave it bones and scraps of food. "For these little attentions he showed his gratitude by attaching himself to me, and following me about as a well-bred English dog would do. At that time we used to go out once a month or so, on shooting expeditions into the jungle, and it was on one of these occasions that the event occurred which has made so indelible an impression on my memory. I was not in very cheerful spirits, for an incident of the previous night had troubled me. The sergeant's wife had been left alone with her little son, ten years old, her husband having been unexpectedly called away on duty. Soon after dusk they were horrified to see the head of a monstrous tiger come through a hole in the veranda, the eyes being fixed on them. Almost beside themselves with terror, they scarcely knew what to do; but a thought suddenly struck the mother. Picking up a tray she placed it against the hole, thus compelling the monster to withdraw his head. But the tray had to be held there in case the tiger should return; and mother and son relieved one another in standing there the whole night, afraid to open the door to give an alarm, lest the tiger should be prowling about in search of another entrance to the room.

"My thoughts were so fixed on this incident as we walked along through the jungle, that I failed to keep up with the other members of the party, who had got on some distance ahead; when suddenly I heard a rustle in the underwood, and almost at the same moment an enormous tiger presented himself and prepared to spring upon me. I had never seen a more magnificent beast, and I could not help admiring him, notwithstanding

the danger of my position. But there was no time to be lost. I immediately presented my rifle and fired. Neither shot struck, and in another second the tiger was on me and had thrown me down, his claws buried in my left shoulder. I had no particular sensation of fear, and I remember thinking quite calmly as I lay on the ground, the tiger's hot breath coming against my face, 'It's all up with me now!' But at that moment my faithful little Mungo came to the rescue; he bit the tiger's tail so severely that the beast immediately released his hold and turned round to seize its new adversary. But Mungo, as sharp and wary as he was plucky, was off in the tall grass in an instant. The tiger followed, but the dog had the advantage over him, as it could run through the grass and under the brushwood at a pace which the other could not keep up with. In fact it was almost conical to see how the great creature bounded about in its useless chase after the dog. But I knew that the tiger, disappointed of seizing Mungo, would soon be back again to attack his master; so I reloaded my gun and stood awaiting his return. In a short time he was before me once more; and again I levelled my gun as well as I could, considering the pain in my left shoulder. The first shot missed, but the second struck the tiger in the shoulder and crippled him. Reloading as rapidly as possible, I went nearer to him, aimed very deliberately, and this time gave him his quietus. Scarcely had I done so before Mungo came bounding up to me, looking into my face and whining as if with joy at seeing me safe. How I patted and fondled him, and how utterly unconscious I was then of his extreme ugliness, can easily be imagined."

Maple Sugar.—Maple sugar was made this year in considerable quantities in California from the sap of the broad-leaved maple (*Acer macrophyllum*). The sugar is said to be of excellent flavor.

A Spring in Crosswick's Valley.—From a little ravine that extends back into the bluff, there issues a considerable stream of purest water, cold, colorless and sparkling. Towards the creek it hurries, rippling over snow-white pebbles, tarrying a second by some projecting rock, and then with greater speed passes it by, "to join the brimming river."

One feature of this spring, unlikely to escape the notice of a naturalist, is the quantity of pure white sand that is carried to the creek by the water. Dip but a tumblerful of the water, and in a moment many fine grains will settle in the bottom of the glass. This, in the course of a day, is a considerable amount, is most readily shown by examining the sand-bar in the creek. Were it not that every tide bears quantities of this sand, so fine is it, both up and down the stream, the ever-growing bar would choke the channel of the creek, and dam up the very waters that have carried it from unknown subterranean depths. As it is, the ever-present bar is constantly built up and unbuilt, as the tides roll by.

Think, for one moment, of the age of this spring. Its crystal waters have been flowing without a check since the close of the glacial epoch, which some too enthusiastic modernists date back ten thousand years. Think then of the enormous bulk of sand which has been washed from beneath our upland fields and carried meadow-ward. What a cavern is beneath our feet if this sand once occupied space by itself; what a certain lowering of upland levels if it is washed from extensive areas! The growth and

disintegration of a continent is epitomized in the work unceasingly performed by this bubbling spring.

Just as two centuries ago this splendid spring was looked upon by its paternal ancestor as a spot very desirable to possess, so the Indians, in earlier days, were attracted to it, and lived, no one can say for how long, within hearing of its rippling waters. The ashes of their fires are mingled with every clod that is now upturned by the spade. I lately gathered from among the pebbles in the brook a tiny arrow-point, and tracing the probable course of the little weapon, which must necessarily have been washed down from the hillside, I found that the crumbling bluff had, by the recent uprooting of a tree directly above the spring, exposed the site of an arrow maker's workshop.

Such evidences of the aborigines are not novelties in this vicinity. I have found dozens such, and thousands of beautiful arrow points, spears, scrapers, and all the variety of chipped flints, now rest in museum cases, gathered from these places and the intervening fields.

The one I found so recently told the same story as have the others. Here were boulders of Jasper and flinty rocks, such as are common to the gravel-beds that form the eastern bank of the river, five miles away as the crow flies; also scores of remnants of the selected pebbles and boulders, which were too small or too irregular in shape to be further available. With these were long flakes, some of which may have been used as knives, or intended for such use; for just such specimens are frequently found with undoubtedly finished tools, on wigwam sites. I found, too, as is always the case, blocked out and subsequently discarded specimens, and others that had been nearly or quite finished and then irreparably injured by some unlucky finishing touch.

—*Waste Land Wanderings.*

Items.

Law and Order Societies.—The object of these associations is not the enactment of new laws, but the enforcement of those that are already in existence. They are founded on the belief that it is impossible for the objects of government to be fully obtained unless there is a conscientious obedience to the requisitions of the law. Their labors have largely been directed to the enforcement of the laws regulating the sale of liquors; but that has been because those laws have been more persistently and openly disregarded than any others.

We have received the "Proceedings of the Sixth National Convention of Law and Order Leagues," held in Philadelphia in the Second Month last. The pamphlet contains much interesting matter. The experience of one of the agents of the Society, in his attempt to check the illegal sale of spirits in Trenton, shows some of the difficulties to be encountered, and the power of firm and resolute efforts. In his first essay, he sent 60 witnesses before the Grand Jury, who ignored the bills. "We published the facts that were before the Grand Jurors, and we saw to it that the whole country that they did not see, the witnesses a word; and they dare not deny it. They told us to take it back or they would sue us. We told them we did not care."

Of the next Grand Jury the agent was a member. Fourteen men came before it one day and testified that they had bought rum at a certain house; yet could not find the whole party that they did not see. "I got right up in that Grand Jury room, and said, 'Gentlemen, you are perjurers; you have perjured yourselves; I am as bad as you if I keep it secret. I am going to tell the world about this, if you don't give me bills against every man who has been proven to have sold whisky illegally. When we came to adjourn we had 11 cases, and we had 12 convictions.'

—*The Pope on Religious Liberty.*—The pope has

issued an "encyclical," in which he attacks "liberty of worship," or the idea that every man is free to choose his religious profession; he asserts that both justice and reason forbid the State to treat the various religions alike and to bestow upon them equal rights and privileges; he thinks it the duty of the State to repress false doctrines by public authority; and says that if "the Pappal Church" acquiesces in certain modern liberties, it is because she judges it expedient to permit them "in the extraordinary condition of these times." All of which shows that the Pappal system continues to be the open or secret enemy of religious freedom.

Arbitration Petition.—On the 29th of Seventh Month, a petition in favor of arbitration was presented to the U. S. Senate, referred to the Committee on Foreign Relations, and ordered to be printed in the Congressional Record. Among the signers of the petition were many of our well-known and respected citizens, including the Governor and three Ex-governors of Pennsylvania, the Mayor and three Ex-mayors of Philadelphia, several of its municipal officers, and the Presidents of several of the Banks and large Trust Companies. The petition is as follows:

To the Senate and House of Representatives of the United States:

"The undersigned citizens of Pennsylvania have been appointed, five in number, by the Governor of the State, and five by the Pennsylvania branch of the American Peace Society, for the purpose of endeavoring to further the adoption by the United States Government of the proposition emanating from over one-third of the members of the British House of Commons, for the permanent abandonment of war as a means of settling differences between the two countries.

"We need not recount the arguments which have already been addressed to you from different quarters in favor of this measure; nor the evidences, derived from scores of successful experiments, and covering half a century, that war can be prevented by arbitration, whenever a nation is just in its intentions.

"In more than half these cases the United States has been one of these parties, and has set a noble example to the rest of the world, which is more and more appreciated and followed as the years pass by. It is eminently fitting that this industrial, commercial and professedly Christian country should be the pioneer in this movement, so becoming to the nineteenth century and so consonant with all the teachings of the Prince of Peace; and in our opinion it is more important that she should take the initiation in the present forward step in favor of a permanent treaty of arbitration than that any other nation should.

"It has been urged by way of objection that there is a dissimilarity in this between the United States and the United Kingdom. But two disastrous wars have occurred between those nations since the middle of last century, and there have been at least two narrow escapes from war between them within the last quarter of a century. It is also significant that these were both averted by arbitration.

"The fact is, that the peaceful and bloodless of war between them than between other nations affords the very reason why the present attempt can be made with reasonable hope of success.

"It would be most ungracious, and would present the appearance of unfrictionedness on the part of this country, if a proposition so commendable on general grounds, advocated by so large a number of the members of the British Parliament, a number of whom crossed the ocean as a deputation for the express purpose of presenting it, should be treated with the discourtesy either of silence or rejection, by a nation between whom and their own exertion the strongest ties of kinship and comity exist.

"We cannot conceive that any sane man would prefer a path, the train of whose woes and death, and its unspeakable demoralizations, to a pacific solution of any difficulty that may arise, which would allow the happiness of a great people to remain uninterrupted, the course of commerce to flow in its accustomed channels, and wealth and population to increase, unchecked by wanton waste and destruction.

"For these reasons, fortified by the experience of the past, and enforced by our hopes of the future prosperity of this country, we cordially support the proposition of the British deputation and entreat Congress to pass a joint resolution instructing our Government to negotiate with the Government of Great Britain a treaty providing for the settling by arbitration of all differences, whatever, between the two countries which fail to reach a satisfactory solution through the ordinary channels of diplomacy, to the end that all disastrous effusion of blood by war between these kindred nations shall hereafter forever be avoided."

THERE is no time that we need so much to go apart and seek God in prayer as when we are conscious of restlessness of spirit and are moved by hasty impulses. In such times we are almost sure to do the wrong thing unless we have taken counsel of God, after waiting before Him long enough to have become perfectly quiet.—*Words and Weapons.*

JESUS says "that there is joy in heaven among the angels of God over a sinner who repents." There is also grief and indignation in heaven among the angels of God for a child or a beginner in the faith who has been unjustly treated or perfidiously drawn into evil.—*Selected.*

THE FRIEND.

EIGHTH MONTH 18, 1888.

In reflecting upon the subject referred to in the Editorial of last week—the supervision properly maintained by the Church over its members, not only as to their manner of living, but also as to the benevolent or professedly religious labors into which they may enter, we believe that a tender care should always be exercised by the Church, lest hurt be done to exercised minds who believe they are called upon to labor in fields that their fellow-members generally may not recognize as incumbent on them. The principles of our Society admit of much liberty in following the guidance of the Spirit of Christ, as it leads to active labor for the good of mankind; and they condemn that indifference, worldly-mindedness and sloth which grow out of selfishness and a love of ease. They refer people in the first place to the teachings of the Spirit as the infallible Guide, which leads into all truth; and which points out to each individual those specific duties which the Lord designs him to perform.

But they also recognize the frailty of our nature; and the liability to err in judgment, especially in the earlier stages of religious growth; and the duty of the Church to watch over its members lest by any means they should be led astray. The duty of *submission* in such cases is pointed out in several passages of Scripture. The Apostle Paul, in writing to the Corinthians, says, "The Spirits of the prophets are subject to the prophets." And Peter, after speaking of the oversight of the flock to be exercised by the elders among them, gives the following exhortation, "Likewise, ye younger, submit yourselves unto the elder. Yea, all of you be subject one to another, and be clothed with humility: for God resisteth the proud and giveth grace to the humble." The epistle to the Hebrews says, "Obey them that have the rule over you, and submit yourselves; for they watch for your souls, as they that must give account."

It is in accordance with these Scripture principles that Isaac Pennington says, in one of his

letters. "In cases of doubt, it is the ordinance of the Lord, for the weak to receive counsel and help from the strong, and for the lesser to be watched over and blessed by the greater—by such as are more grown in the life, and into the power."

In his own experience, this deeply spiritual Friend had felt the importance of that submission to the judgment of the body, which he recommended to others. In those days, John Perrot caused some trouble in the Society by broaching certain peculiar notions—one of which was that it was not lawful to remove the hat in time of prayer without feeling a special command to do so. Some persons, blinded by his pretensions to great spirituality and discernment, were disposed to shield him from the censure which the Church placed on his irregular conduct. Among others, I. Penington published certain Queries, the bearing of which was to weaken the action of the body in placing judgment on this departure—not that he wished to sanction or promote anything that was wrong, but out of tenderness and a desire that nothing should be done which would be oppressive to tender consciences. Further reflection showed him, that in so doing, he had been giving strength to that against which the Lord had raised a testimony in the hearts of his faithful servants; and this brought him under a sense of condemnation.

When George Fox was moved to establish meetings for discipline in the Society, there were some who opposed the movement, contending with some plausibility, that all ought to be left to the leadings of the Spirit in their individual cases; and that all rules and regulations were infringements on liberty of conscience. But G. Fox stated that the same Divine power which sent him forth in the beginning to preach the Gospel, now laid upon him the duty of organizing those whom he had been instrumental in gathering; and Friends generally soon united in the belief that the system of discipline then introduced came from the openings and movings of the Spirit, and that it was of great value in preserving weak and inexperienced minds from running into the excesses of rantism.

There is perhaps no office in the Church, in which it is more essential to know and to follow the leadings of the Spirit of Christ, than in Gospel ministry. Yet from very early times, even in the exercise of this sacred duty, the discipline of our Society recognizes the need of the supervision of the Church. Those who appear as ministers are subject to the judgment of their brethren. And even those who have received the approval of their meetings, and are recognized as ministers, are required to submit any extensive concerns which may rest upon their minds to the judgment of their friends, before they go forth to the field of labor to which they believe they are called. This regulation is not founded on the idea that the Church can set aside a true call from its Divine Head, but on a knowledge of human liability to error, and the consequent importance of that additional certainty of the call being truly from the right source, which is derived from the united feeling of the spiritually-minded members.

The primary object of Church government and discipline, is not the repression of anything except that which is either wrong or inexpedient, but the preservation of the members, and the promotion of the cause of Christ. To reject it, would greatly weaken the efficiency of the Church.

There is instruction in the remark made by Joseph Pike, an experienced elder among early Friends, who, in writing on this subject about the year 1720, said, "I never saw any thrive or grow in the Truth, who opposed the discipline of the Church; but on the contrary, grew dead, dry and senseless, as to the things of God."

It is with sincere regret that we notice in the platform of the Republican party, adopted by their convention at Chicago, the following paragraph:

"We demand appropriations for the early rebuilding of our navy, for the construction of coast fortifications and modern ordnance, and other approved means of defense for the protection of our defenseless harbors."

The tenor of this paragraph is opposed to the doctrines of Christ as regards war and the spirit from which they spring; and if the view embodied in it should become the policy of this country, will inevitably lead to an enormous waste of the public funds, the growth of a military spirit among our people, and the consequent oppression of the working classes by the increase of taxation.

We do not believe that it represents the deliberate judgment of the great mass of those citizens who have been accustomed to support the Republican party; but suppose it has been introduced into its statement of principles in the hope that it might win the favor and secure the votes of some of the military classes. However that may be, the evil almost certain to follow is, that those who are laboring to secure the success of the party at the approaching Presidential election will be led to defend this, along with the other portions of the platform; and thus the corrupting spirit of war will diffuse its evil taint more widely through the community.

It is no part of the object of THE FRIEND to take part in political discussions, except as respects their bearing on morality and religion. But we think it is proper to refer to the paragraph above quoted, both as matter of information to such of our readers as may not have had the opportunity of seeing it elsewhere; and for the sake of advising them to bear a faithful testimony on all suitable occasions against the sentiments embodied in it, and to guard against allowing their political feelings to blind them to the perception of their evil tendency, or to lead them to palliate that which is inconsistent with the peaceable principles of the religion of Christ.

SUMMARY OF EVENTS.

UNITED STATES.—The total amount of bonds purchased to \$60,116, under the circulation of 4th Mo. 15th last, is \$28,938,750, of which \$18,742,050 are four per cents, and \$10,196,700 four-and-a-half per cents. The total cost of the bonds was \$34,779,450, as follows: Four per cents, \$23,802,955; four-and-a-half per cents, \$10,976,555.

Professor Brooks, at Geneva, New York, on the 10th inst., secured good observations of the new comet discovered by him in USA Major. It is moving easterly, about one degree daily, and just above the star Lambda. The comet has a large head and a short tail, which, strangely enough, apparently points toward the sun.

A cable message was received in Boston on the 10th inst., from the new steamer City of New York, announcing the discovery of Fayet's periodical comet on its return. Three comets, two of them periodical, have been discovered within a week.

James G. Blaine reached New York on his return from Europe, in the new steamer City of New York, on the 10th inst. He was enthusiastically received by his friends.

A Jacksonville, Florida, despatch says, the yellow fever panic continues. People are leaving the city by every known means of exit, but these are being cut off, and the present inhabitants will soon be practically

shut in on all sides. No case of yellow fever has yet occurred among the colored people. Business is paralyzed. The banks have been largely drawn upon, but are receiving no deposits.

Two prospectors reached Livingston, Montana, from the foot of the coast range on the 8th inst., bringing with them a buckskin bag containing over \$2000 in gold, which they had panned out with sledge hammers on flat rocks. They also brought probably the richest specimen of quartz ever seen in the territory. It was of the size of a pea, contained a small vein of gold, broken with a hammer, and was full of fine wire gold, plainly visible to the naked eye. The Boulder district has, until a comparatively recent period, been a part of the Crow Indian reservation, but is now open to settlement. Prospectors say it promises to be one of the richest gold regions in the mountainous part of the country.

A Sioux City despatch says there is a gloomy outlook for many of the important crops in Northwestern Iowa and Southern Dakota. Wheat and all grains will yield less than one-third of the average crop. Rust has severely attacked the wheat and oats, and fields of grain, which otherwise promised fairly, are now twisted and tangled by the storms of the last few days.

A Minneapolis despatch gives details of one of the most gigantic trusts ever devised. It is a combination of all the principal lumber interests of Minnesota and those of the Wisconsin and Michigan States, the wealthy Wisconsin lumberman, is at the head of the syndicate.

A freight train on the Erie Railroad was wrecked near Shohola, New York, early on the morning of the 13th inst., by striking a lot of rocks which had been washed on the track by a recent rain. The conductor, however, was badly injured. Shortly afterward an express train came along and dashed into the wreck. It was thrown from the track and down an embankment eighty feet from the rails. The cars caught fire and were burned, but not until the passengers were saved. Thirty-two persons were killed, and it is feared fatally. Fourteen racing horses were lost.

The number of deaths in this city last week was 508, which was 37 more than the previous week, and an increase of 82 over the corresponding period of 1887. Of the whole number of deaths, 188 were children under one year old; 157 were males and 251 females; 13 died of cholera infantum; 41 of consumption; 38 of inflammation of the stomach and bowels; 37 of typhoid fever; 37 of marasmus; 25 of old age; 22 of inanition; 20 of debility; 19 of convulsions; 10 of diseases of the heart; 10 of cancer; 9 of aneurism; and 1 of an unknown cause.

Markets.—C.—U. S. 4's, 120 c; coupon, 107; 4's, 127; currency, 6's, 120 a 130.

Cotton was quiet, but steady, at 114 cts. for middling uplands.

Flour and Meal.—Flour was steadily bid, but quiet. Sales of 25 barrels Pennsylvania flour, at \$3.90; 250 barrels Ohio, straight, at \$4.65; 375 barrels winter patent, at \$5; 125 barrels Minnesota straight, at \$4.35; 500 barrels do. patent, at \$4.95 a \$5. Re flour moved slowly, at \$3.30 for new and \$3.40 for old.

Grain.—No. 2 red wheat sold for 91 1/2 a 93 cts.

No. 2 mixed corn, 56 a 56 1/2 cts.

No. 2 white oats, 30 1/2 a 30 3/4 cts.

Beef cattle.—Extra, 50 a 55 cts.; good, 44 a 5 cts.; medium, 34 a 44 cts.; common, 3 a 34 cts.

Sheep.—Extra, 3 cts.; good, 4 1/2 a 5 cts.; medium, 3 1/2 a 4 cts.; common, 1 1/2 a 3 cts.; lambs, 3 a 7 cts.

Hogs were in fair demand; Western at 8 1/2 a 9 cts.

FOREIGN.—United Ireland publishes a rampant article on the Parnell Commission bill adopted by the House of Commons. It says the bill is the greatest threat ever made to the Parnells and that they reject it because their action would have been misinterpreted, and did not accept it because it was a fraud and the tribunal will be packed. The Parnells, however, will pass the ordeal earnestly and in good faith.

The House of Commons has passed the bill providing for the trial of Lord Russell on the 11th inst., and as a consequence in effect law. It does not appear, however, that Parnell is willing to accept the Commission composed of the three Law Courts Judges as the tribunal of final resort, he having caused to be served upon certain members of the Commission, a copy of the Scotch legal law as "arrestments" for £20 each against the publisher and editor of the Times. This action was taken for the purpose of founding jurisdiction in Scotland.

The amount of damages which Parnell asks for in his suit against the Times is £50,000. He bases his action on letters which the Times published in 1887, and on letters and statements introduced by the defence in the trial of O'Donnell's case against the Times. The trial will take place before Lord Kinnear, of the Court of Sessions, in Edinburgh.

FOR "THE FRIEND,"

Incidents and Reflections.—No. 162.

CONVERSIONS.

Martin Boos was a Roman Catholic priest in Bavaria, who, like some others that undertake to instruct the ignorant in spiritual things, had in itself but little of that true knowledge which is derived from the work of Divine grace on the heart, and its unfoldings of spiritual mysteries. "In the discharge of his office as a priest, he went, about 1789, to visit a woman distinguished by her humility and piety, who was dangerously ill. 'I do not doubt,' said he, endeavoring to prepare her for death, 'that you die calmly and happily.' 'And why?' said the woman. 'Because,' replied he, 'your life has been a continued chain of good actions.' The woman smiled and said, 'If I were to die relying for my salvation on the works which you mention, I am certain that I should be condemned; but that which makes me calm at this awful moment is, that I rely on Jesus Christ my Saviour.' 'Those few words,' says Boos, 'in the mouth of a dying woman, who was looked upon as a saint, opened my eyes for the first time. I understood the meaning of *Christ for us*; like Abraham, I saw his day. From that time I announced to others that Saviour whom I had learned to know, and there were many who rejoiced with me.' Thus did this woman, whom he wished to prepare for death, prepare him for life eternal. The impressions which he had received were never effaced. He put in practice the lessons he had taught, and zealously preached the doctrines for which he had afterwards severely to suffer. His labors began to be blessed in an extraordinary manner. He felt deeply his own insufficiency, and sought, in continual prayer to God, and the assiduous perusal of the Holy Scriptures, the assistance which he needed. He generally felt his own sinfulness and insufficiency most deeply, when he was about to deliver a discourse intended to affect the consciences of others. On these occasions he would often forget the sermon which he had studiously composed, and committed to memory, and would acknowledge with tears to his hearers, that he had nothing to say to them; but he would feel himself led on, by the contemplation of their wants and his own insufficiency, to urge upon them that which the Holy Spirit gave him at that moment for their edification. Several discourses uttered thus from

the abundance of his heart were the instruments of a religious awakening."

Stephen Grellet mentions in his Journal, that after a Grellet meeting at Natchez in 1824, he was called upon by a rich planter who resided about sixty miles from that city; who, he says, "Told me that for many years he had been a man of pleasure, seeking only the gratification of sense and animal enjoyments, living out of the fear of God, not even thinking that he had a soul to lose or to save. About three years since, the Lord, in his love and mercy, brought him to feel his sinful condition, and the depth of misery into which he must be plunged for eternity, should he continue in such a course of life, and die in his sins. By the operation of the Divine Spirit, who convinceth man of sin, of righteousness and of judgment, his mind was directed to Christ, the Saviour of sinners. He was induced to peruse the Holy Scriptures, and, by degrees, the Lord opened his heart, which became expanded in love to God and man. He now felt that, if God, through Christ, had in his mercy so loved him, he ought also to love his fellow men. He looked upon his slaves and felt that the love of God is towards them, that Christ has died for them, and would have them to be of the number of his saved ones; that therefore he ought to love them, and seek their good, temporal and spiritual. Now, he said, he longed for their salvation as for his own. He felt for them as his brethren; whereas, before, he had only considered them as slaves or chattels. He had about four hundred on his plantation. At first he thought he would invite them to meet, that he might read the Scriptures to them, and try to persuade them to love the Lord, and earnestly to seek for the salvation of their souls. 'But,' said he, 'how should they believe that I was really concerned for their souls, unless I gave them proof that I was equally engaged to promote their outward well-being?' Accordingly he collected them together, told them what the Lord had done for him, and what he believed He would do also for them, and that he would endeavor to promote their good as far as he could. 'To convince you of my sincerity,' he added, 'from this day the lash of the whip shall no more be lifted upon you, by any direction of mine; your food and clothing shall be increased, and I will promote your general comfort. I have confidence in you that you will try to conduct yourselves well, and do your best on the plantation, and be industrious; but, rest when you are tired, and when sick I do not wish you to work; on the contrary, I desire that good care be taken of you.' His slaves were like men amazed at the hearing of such language; but much more so when, from that day, they saw all these promises fulfilled."

When Stephen Grellet visited Halle, in 1832, he met with F. Tholuck, one of the Professors in the University there, who appeared to be free from any taint of the Socinian principles, at that time prevalent among the learned men in some parts of Germany. Tholuck gave his friend an interesting account of a young man named Hoff-

man; who, about twelve years before, "went to Berlin, from a sense of religious duty, as he thought, to study to become qualified to go as a missionary to the East Indies. He went accordingly to a mission-house, where he manifested great fervor and piety; some of his fellow-students, who had taken Barclay's Apology out of their library, began in his presence to make their comments; some of them spoke with great contempt of the Christian doctrines it advocates; this awakened the curiosity of this young man, more particularly to examine for himself what those doctrines were; he perused Barclay with great attention; his interest was more and more excited as he went on, and he became so thoroughly convinced of the soundness of the great Christian truths treated by him, that he told his teachers that his views were changed; his mind was opened to see the nature of the Christian ministry, and that the qualifications for it, as well as the call thereto must be from God alone, through his Divine Spirit. His teachers, who were much attached to him, endeavored to convince him of what they thought his errors, but their arguments tended only, by further examining the subject with the Holy Scriptures and commencing with his own heart, to establish him more firmly in his views. He left Berlin and soon after came to America to endeavor to be among Friends; but he found great difficulty, as he did not understand English, and was an entire stranger. As he had but small means to support himself, he concluded to learn a trade; during his apprenticeship he studied the English language; he attended Friends' meetings, and became more thoroughly acquainted with their different Christian testimonies. He had it under his serious consideration to join them in outward fellowship, as he felt he had already done in spirit; but about that time it was suggested to him that as the Lord had been pleased to bring him to the knowledge of such great and important Gospel truths, it would be proper for him to consider if the light, now shining in his heart, was not designed to be put on the candlestick in his own nation,—that perhaps to him was applicable the language of Christ to the man on whom his Divine power had been exerted, 'Go home to thy friends and tell them how great things the Lord hath done for thee.' This brought Hoffman under very serious thoughtfulness; the result was that he returned to Germany; he came back to Berlin, and followed his trade of shoemaker for a livelihood. He led for awhile a very private life; yet his life shone with such brightness that it could not be hid; men of piety in Berlin took notice of him; his humility and genuine piety made deep impressions upon them; they beheld, under the humble appearance that he had assumed as a man, the dignified Christian. Among those who first became acquainted with him, were Tholuck himself, and Justice Folke, a pious and valuable man, who in the year 1796 was very useful as an interpreter, and in other respects, to our late and valuable friends, David Sands and William Savery, who were then at Berlin on a religious

visit. Hoffman died about three years since; he continued to the last an eminent and bright example of piety; by example and precept 'he proclaimed how great things Jesus had done for him,' and many did marvel. He departed this life with a countenance beaming with heavenly joy, and testified of the love and mercy of God in Jesus Christ his Redeemer, rejoicing in the hope of his salvation." J. W.

FOR "THE FRIEND."

Notes on Jamaica.

BY THOMAS SCATTERGOOD.

The retrospect of my visit to Jamaica in the Third and Fourth Months last, is accompanied by very different feelings, in respect to the people and their social condition, from that which was alluded to in the Notes on Hayti. The population of this island is also mostly negro,—perhaps ninety-seven per cent. black or mulatto, two per cent. East Indian coolie, and one per cent. white; the total number being approximately 600,000. We were favorably impressed with the appearance of the island as we steamed along the southern coast of the eastern end, on the passage from Jaemel to Kingston—a run of about 200 miles. The Blue Mountain peak rises to a height of 7360 feet, and is cloud-capped and mostly covered with verdure well up the steep sides, which are seamed by deep valleys. A littoral of five to ten miles in width, doubtless formed by the washings from the mountain ridges, stretches between the foot-hills and the sea, and is level and very fertile. The large fields of sugar-cane looked bright and fresh, showing a distinctly lighter green than the other foliage; and the planters' houses, with their long rows of coolie barracks and large sugar-house, where the cane is crushed, and the sugar and rum manufactured, have an aspect of civilization and industrial enterprise which is not to be seen at all in Hayti.

We were boarded off Port Royal by the customs and health officers about noon, and after a thorough examination, were allowed to proceed up the narrow channel of Kingston harbor, some five or six miles to the city. Port Royal, having about 2000 inhabitants, is located upon the extreme end of a long, narrow sand-spit, which forms a natural breakwater for Kingston harbor, making it an exceptionally safe and quiet one, though not especially commodious. The fringe of coconut palm trees which line this long peninsula are particularly graceful and tropical in appearance. Ten large ships of the royal navy, comprising the North Atlantic squadron, were at anchor off the fort, being here for a few weeks' visit as they cruised from one British-American port to another.

Kingston, the seat of government, presents a rather attractive appearance, and is the centre of the business interests of the island. It has about 40,000 inhabitants, and does a considerable business. The chief office for Jamaica of the Colonial Bank is located here, and being under very able management, contributes to the prosperity of the island to a marked extent. There are quite a number of large and successful commercial houses who do extensive importing and exporting trade. Several regular lines of steamships make this a port of call, en route from New York and from Liverpool to the isthmus and the Columbian and Mexican ports. There are also many transient or occasional steamers and sailing vessels which come here with lumber, coal and general merchandise

from England and the United States. For many years, sugar constituted the most important article of commerce produced on this fertile and beautiful island. Most of the sugar estates were owned by English or Scotch landlords, who rarely or never visited them, but confided the management to agents or attorneys, who attended to all the business, and shipped the sugar and rum to the owners, or their agents in London. Since the increased production of the beet sugar in Germany and France has added so enormously to the world's supply of sugars, and has consequently most seriously affected the prices, many of the Jamaica estates have ceased to be profitable, and have been abandoned by the owners, and allowed to stand idle for a number of years. A great many estates have changed proprietors within a few years at very low prices, and now, with less capital invested, and some modern labor and time-saving machinery introduced, are again running at a moderate profit. The abolition of slavery in 1838 wrought a vast change in the condition of the whites, as well as of the blacks, in this island. Prior to that event, a man was obliged to be the owner of a certain number of slaves to each acre of land he proposed to "patent," before the "patent" would be issued to him. When emancipation took place, the planters felt themselves much aggrieved, notwithstanding they were compensated for their slaves, as the cost of raising sugar was considerably enhanced; and the British Government, yielding to the popular clamor for "Free Trade" soon removed the duty from all sugars imported into Great Britain, which permitted the slave-grown sugars from Brazil and the Dutch, Portuguese, and other tropical colonies to compete with the higher cost free-grown sugar from the British colonies in the London markets. Latterly, the subsidized beet sugars have further competed, and the prices have been increasingly unremunerative for a number of years. All the molasses made on the Jamaica sugar estates is converted into rum, which, of course, constitutes a very large item in the financial returns. Much of this is very strong in alcohol, and has a peculiar flavor highly appreciated in Germany (which country takes a very large proportion of the product) where, being mixed with "potato spirit" it is sold under the various brands of alcoholic beverages of which the Continental consumption is so extensive.

Excepting the sugar and rum, natural products comprise the great bulk of the exports, of which coffee, pimento, cocoa, logwood and fruits are the chief. There have been at times considerable quantities of tobacco shipped; also, to the isthmus, large numbers of cattle and horses, which are profitably raised on the hillsides of the interior.

Jamaica is not a large island; its area is about 4200 square miles, of which only 646 are flat; the rest mountainous and often rough, and not adapted to cultivation. The surface being so various, and the altitudes of some of the mountains being so considerable, the climate shows great diversity, and the range of temperature and amount of rain-fall differ in localities within a few miles of each other to a very marked extent. In Kingston, the rain-fall averages 45 inches, while at the Government Botanical Gardens at Castleton, only 19 miles distant, the rains amount to 108 inches, and have been known to reach 130 inches in a single year.

With the wisdom born of long experience, the British Government takes special interest in

the introduction of foreign plants to its various colonies; and in many of the more important ones, has established experimental gardens, where economic plants suited to the latitude are propagated at the Government expense, and furnished at a merely nominal price to planters who will apply for them and put the experiment to a practical test of attempting to raise a crop. In this way important results have been attained, and many valuable forest and fruit trees, spices and fibrous plants have been adapted to new localities. The celebrated Botanical Gardens at Kew, near London, are the centre of the system. In Jamaica there are no less than seven extensive public gardens whence many improved varieties of sugar cane, coffee, cotton, jute, spices, fruits, &c., have been distributed. A cinchona plantation was established in 1868, but the trees have not yet reached an age to demonstrate the success of the experiment. Meanwhile, however, more than 1,635,000 cinchona seedlings and plants have been distributed to private planters. This establishment comprises 143 acres under cinchona, and about seven acres devoted to tea and other valuable plants. The altitude is about 5000 feet above the sea, and the average annual rain-fall somewhat in excess of 180 inches. At the Castleton Gardens and Hope Nurseries, both situated within a few miles of Kingston, especial attention is paid to propagating and distributing economic plants, such as sugar cane, coffee, cocoa, rubber, nutmeg and other spices, vanilla, olive, pineapples and various other fruits, besides hemp, jute, ramie, indigo, and many timber and shade trees; there is also quite a handsome collection here of orchids, hibiscus, and other showy and beautiful flowering and ornamental plants. At Castleton there is a very successful and interesting collection of palms; of which there are, growing in full vigor, and in most instances, bringing fruit to perfection, between forty and fifty species from both the East and West Indies.

It is an interesting fact, that with the exception of pimento, most of the staple products of the island are derived from exotics, or plants introduced from other parts of the globe, some of them accidentally. The now indispensable Guinea grass, which supplies the highly nutritious forage for horses and cattle, sprang from some seed brought from Africa in 1745 as bread food. The breadfruit is not a native, though it grows wild in many parts of the island; the logwood tree was introduced from Honduras in 1715; the mango, now one of the commonest trees in Jamaica, and supplying a staple article of food in the greatest profusion, was introduced about 100 years ago; and the bamboo, almond, yam, ginger, orange, lemon, lime, coffee, cocoa, and many others, now thoroughly naturalized in all parts of the island, where soil and climate are adapted to their growth, were introduced from foreign lands mostly by government officers during the last 150 years.

(To be continued.)

Just how quickly, dear sister, can you make your toilet when emergency presses? You have timed it before now, I warrant. How does this tally with the average of time you actually devote to this duty, including the indecisions, the alterations, the experiments, the posings, and the various hindrances arising from forgetfulness, from previous neglect, and from want of order? Make the calculation. How would "Re-deciding the Time" do for a motto over your dressing-room door?—Selected.

FOR "THE FRIEND."

A Visit to Elklands, Pa.

(Continued from page 26.)

The road by which we travelled from the railroad at Canton to Elklands, on leaving the valley of Towanda Creek, ascends a spur of the Alleghany Mountains called Bernard's Ridge, gradually winding its way through the forest. However wearisome the continued ascent may have been to the horses which drew us, to ourselves it was a continued pleasure. The springs that issued from the sides of the mountain, were conducted into troughs for the horses of the travellers; and we never wearied of watching the different species of trees and the variety of shrubs and more lowly plants that were presented to our sight. But little of the White Pine was left, but we occasionally met with clumps of Hemlock whose majestic trunks rising to a considerable height before a branch was visible, and standing close together, with but little undergrowth, forms a characteristic forest scene, impressive to the beholder, and conveying a sense of sublimity.

Of the hard woods, the Beech, Sugar Maple and Birch were the most abundant. When the land is cleared, the roots of these decay in a few years, so that their stumps can be removed with but little difficulty; but those of the White Pine are almost indestructible. Frequent inquiries failed to find any of the residents of this region who would fix a period of time for their decay. One told me of a stump which he had known for thirty-five years, and in which he could notice little or no change. Another spoke of a large Hemlock, probably not less than two centuries old, which was uprooted, I suppose by a storm, and which brought up with it the stump of a Pine tree which it had enveloped in its growth, and which must have been a stump when it commenced to grow. This stump, not less than 200 years old, was still sound.

In some places we noticed a number of trees which had been blown over by a strong wind. Their roots had brought up with them a mass of earth and stones of two or three feet in thickness; the portion which had been the lowest seemed almost entirely stone, as if the roots had reached to the solid rock of the mountain, and could penetrate no further. A tree whose habit of growth is to send down a deep taproot, would be baffled in its efforts to secure the foothold which such a manner of growth is designed to give it. Perhaps this is the reason, that the Hickory and some other varieties of trees are very seldom found in this region.

In the undergrowth of the forest, were several interesting plants. Perhaps the most peculiar in its foliage was the *Viburnum lantanoides*, or Hobble-bush, here universally called Trip-up, and so named because the branches of this low-growing, straggling shrub often reach the ground and take root, so that they are well calculated to intercept the footsteps of an unwary traveller. The large round leaves are conspicuous objects. A low-growing Maple, scarcely more than a bush, arrested attention by its spikes of winged fruit, some of which were quite pink in color. I suppose it was the *Acer spicatum*, or Mountain Maple. It is called Elk-wood by the residents here, probably because it furnished a source of food to the Elk which formerly abounded in this part of Pennsylvania. In the mountains near Manch Chunk, there is another species of maple, of about the same size, the bark of which is of a light green color, striped with dark lines, and which bears the similar name of Moose-wood.

Ferns were abundant in the woods, as well as

in the pasture fields. In endeavoring to call to mind the different kinds that were observed as I passed along, I recollect about 16 species; and probably several others could have been added to the list, if time had been taken to explore the woods more thoroughly. As it was, the principal object of our visit not being botanical in its nature, it was felt not to be advisable to devote much time or thought to such matters.

The prevailing rocks in this part of the country are red shale; but on the upper part of Bernard's Ridge we found a whitish sandstone; and were informed that coal was found near its eastern end.

The visitor to these mountain regions, who navigates socially with the people, listens to their narratives of the efforts they have made to convert the rough woodland into habitable farms; and becomes familiar with their manner of living and the direction of their thoughts, has opened before him a very interesting and novel page in the book of social science. He may come to the conclusion that the gifts of our bountiful Creator are more evenly dispensed to his creatures than a superficial view would lead one to believe; and that the labor and hardships endured by the first settlers here had compensating advantages in the development of character, and in a real enjoyment of life.

Wooded land, which has not White Pine or good Hemlock upon it, is practically worthless in this country. For although it will command a few dollars per acre, yet that price may be regarded as the money to be paid for the opportunity of making a home and a living. It resembles more the "good will" often charged in cities for a business opening, than the purchase of something which has an intrinsic value of its own. That this is so is evident from the fact, which was stated to us by men of experience and judgment, that a farm would not sell for as much as the cost of clearing and improving the land. So that a man would be a loser, if he should accept as a gift a body of unimproved land, and then hire men to remove the timber and surface stone, and do the work necessary to convert it into farm land.

One of the friends with whom we met, gave me an interesting account of his own experience. He had saved a little money by working at his trade, and purchased about 100 acres of woodland for \$400. On this he put up a very inexpensive little house, made I think of logs out of his woods. He could pay but a very small proportion of the price of the land at first. Year after year he toiled on, gradually cutting down the trees and burning the logs, and bringing acre after acre into cultivation. No doubt his labor was hard, but it must have been a continual source of satisfaction to see his fields steadily improving. As I looked over some of these, free of stumps, and contrasted their smoothness and greenness with the rough, unsightly aspect of the land from which the trees had but lately been removed, I felt that I could understand the comfort which a review of his toil and its fruits must bring to the owner.

Quite a number of persons belonging to Elklands Meeting were not originally members of the Society of Friends. One of these with whom I conversed, said that he was convinced of the truth of our principles by reading George Fox's Journal and Barclay's Apology. Another described his feelings when he first began to wear a "plain" garment. He was so nervously sensitive, that it seemed to him if he should meet a dog, it would gaze at him.

Among the interesting and instructive inci-

dents we heard narrated, one was told us by the person concerned. Many years before, a Friend invited him to take a seat in his carriage to go to the Monthly Meeting, then held at Manly. The trip would require three days; and as he was poor, and was saving his money to purchase a home, he thought he could not spare the time, nor afford to lose the wages of three days. Just as he had arrived at this conclusion, a sudden attack of pain seized him, as if a fork had been run into his body, so that he bent forward and could not straighten himself. The thought then crossed his mind, that possibly, instead of losing only three days, he might never again be able to do a day's work. And he determined that he would go to the meeting, no matter what the sacrifice might cost. As that conclusion was formed in his mind, in a moment the pain ceased. He now regularly attends his meetings on week-days as well as First-days.

As an illustration of the primitive simplicity, traces of which still exist in the Elklands, a Friend at whose house we visited told us that he never fastened up his house by day or by night, not even when all the family went to meeting, and it was left without an occupant. He never had suffered loss from this practice.

(To be concluded.)

FOR "THE FRIEND."

Stephen Grellet's Meeting at Birmingham in 1812.

The notice of this memorable meeting, published on page 402 of the last volume of THE FRIEND, has called forth some reminiscences of the occasion from our aged friend, George Reid, now in his 91st year. His letter, written from West Grove, Pa., is dated the 8th of Eighth Month, and says:

"As I was reading the account of the public meeting held by Stephen Grellet in Birmingham, I thought it might be interesting to thee to hear something more about it. It was held, as stated, in the Union Meeting-house occupied by a congregation called Independents, a very large building, formerly a riding school, so capable of holding a large number of persons; but not more than half of those who wished to hear S. G. could get in the house; numbers remained in the street. The house was crowded so that some occupied the windows, all wishing to hear. S. Grellet was much favored to deliver what was given him to communicate, very pointedly to a class that were employed in the manufacture of arms for warlike purposes; yet they were attentive and quiet, though addressed in very close language on the evils they were committing in making instruments to kill their fellow creatures. There appeared a solemn feeling to spread over the meeting, while the miseries caused by war were being set before them, and how contrary it was to the Gospel dispensation; in language that I am not capable of writing; which caused a silence so that what was communicated could be heard by most. The house was crowded, yet the stillness that prevailed was remarkable both inside and out of the house—some hundreds being there. It was a favored meeting throughout, and held near three hours; was closed by S. Grellet appearing in supplication for all classes, and ended in separating in a very quiet manner—not the least disorder. There are but few that remember that meeting, but it has flowed me through life, and that evening will not be forgotten."

Sin is of one nature all the world over.

FOR "THE FRIEND."

Persevering Effort.

The *New York Observer* contains a sketch of the life of James C. Moffat, Professor of Church History at Princeton, which furnishes an interesting illustration of the progress which may be made by earnest and persevering effort, even where the outward advantages are few.

James Clement Moffat was born of humble parentage, in the home of a cottar in Glenecree, Galloway, in 1811. His father, a plowman in the service of the laird of Glenecree, was a man of upright Christian character, reticent with his children, but faithful in all his relations as husband and father. His mother, a woman of natural gifts and self-culture above the level of her birth, had a more moulding and directing influence upon their first child, who bears her maiden name, Clement. The childhood days of the son were spent quietly among the glades and brooks of his mountain home. When six years of age, he was sent with his sister to a school opened temporarily in the valley below, but on account of sickness was able to attend only three weeks. During these early years his mother was his teacher. The narratives of the Bible and the *Pilgrim's Progress* were the objects of his special attachment. About this time, his father moved near to Newton-Stewart, and the boy was able to enlarge his acquaintance with the literary world by borrowing books from the new neighbors. When he was only nine years old, a proposition was made to his father that he should teach the children of certain families living on the mountains. This suggestion was followed, and the small boy took charge of quite a school of boys and girls. The matter of order occasioned no trouble at all since one of the older boys, a well-grown lad, took a strong fancy to the young teacher, and saw that he was not disturbed in his work. Apparently without any of the customary school-room annoyances, he gave instruction during the winter. Spring dissipated the school, and brought with it a change in the life of the youthful teacher. He was then nearly ten years of age, and was engaged by a farmer to keep sheep during the summer upon the hills of Penninghame. For five years he was a shepherd boy. His extraordinary thirst for knowledge found means of satisfying itself in the leisure hours of his employment. Sitting on the hillsides with his sheep before him and his collie dog beside him, he read all the books that he could borrow. For five years the collie and the books were his only comrades. When it rained, he retreated to some stone wall and made a tent with his staff and plaid, only careful to protect his book from injury. As was natural to his temperament and circumstances, he varied the monotony of his reading with composing poems. Early in the second year of his shepherd life, the mother who had been so dear and helpful to him, died. Returning from her burial to his sheep, he renewed his reading, exhausting the small store of books in one farm-house after another. A young friend, a lame boy, introduced him to certain English authors before unknown. Kennet's *Lives of the Greek Poets* aroused within him the desire to know Greek. Another friend, a farmer's son, who had enjoyed the advantages of a good school, taught him Latin grammar on the moor. In 1827 he made an engagement with a farmer near Ayrshire. But the hours of work allowed him no time for his books. Some change must be made, so in 1828 he became a printer's apprentice in Newton-Stewart. Here he was among books, and made rapid progress in the

study of Latin, Greek, French, German, and a good start in Hebrew. Getting up at four or five in the morning he studied before it was time to work. Fearing ridicule and misunderstanding he carefully concealed from his friends his efforts toward self-education. His father did not know that he had studied Greek at all until he had completed the reading of the New Testament in the original.

One day a well-dressed stranger with a foreign air came into the printing-office—a small incident that had large consequences for the young printer. The stranger was a Scotsman, James K. Douglas, who had gone to America and made a fortune in the South. He persuaded the father and uncle of young Moffat to emigrate to the new country. The printer's apprentice could not go with them, having still two years to serve. At the end of that time he determined to go to America, but rather with the idea of seeing his family than of settling there. In 1833 he landed in New York, and went at once to his father's farm at Morris Plains, New Jersey. He could not remain idle, and as printing was his trade he determined to seek employment in New York. Meeting J. K. Douglas on Broadway, the latter persuaded him to abandon his intention for the present, saying that he wished to introduce him to a friend in Princeton, and asking him to be there on a certain day. This appointment the would-be printer kept, walking from Morristown to Princeton. The friend he was to meet proved to be Prof. John Maclean, in whose study he found John S. Hart. Various Greek and Latin books were taken down from the shelves, and the Scotch lad was discovered to be ready to enter the senior class, except in mathematics, and this without his suspecting that he was submitting to an examination. At first the thought of entering college was overwhelming, and his lack of money seemed an insuperable obstacle. Prof. Maclean removed his fears on this score, and he was persuaded to set himself to the study of mathematics. When the fall term opened he entered the junior class of Princeton college. Up to this time he had sought knowledge for his own sake, but he soon determined to devote all his attainments to the service of the Master whom as a child he had learned to love.

He graduated in 1835, and after that filled various positions as teacher, until in 1861 he was elected to the chair of Church History in the Theological Seminary at Princeton.

BEAUTIFUL THINGS.

SELECTED.

Beautiful faces are those that wear—
It matters little if dark or fair—
Wholesouled honesty printed there.

Beautiful eyes are those that show,
Like crystal pines where heart-fires glow,
Beautiful thoughts that burn below.

Beautiful lips are those whose words
Leap from the heart like songs of birds,
Yet whose utterance prudence guards.

Beautiful hands are those that do
Work that is earnest, and brave, and true,
Moment by moment the long day through.

Beautiful feet are those that go
On kindly ministries to and fro—
Down lowliest ways, if God wills it so.

Beautiful shoulders are those that bear
Causeless burdens of homely care
With patient grace and daily prayer.

Beautiful lives are those that bless—
Silent rivers of happiness,
Whose hidden fountains but few may guess.
—*Littell's Living Age.*

FOR "THE FRIEND."

OUR PERFECT COMFORTER.

"He hath sent me to comfort all who mourn."

Sad friend, to-day, dear loving hands which often
Have clasped thine own in gentle fond caress,
Lie still and cold. Nought seems thy grief to soften,
Nor comforts thy distress.
Thy heart is sad, and desolate thy home,
And yet, take courage, thou art not alone,
With mourning ones, Christ tears of pity shed,
And He will comfort thee, for thy own dead.

Life's joys may fade; life's plans may all seem thwarted

But He who guides, in purer, holier light
Some day will show, just here, thou wast exhorted
To walk by faith, not sight.

Here, He pointed thee beyond the river;
Claimed thy right, lest thou forget the giver.
He knew, because so very dear to thee,
Where treasures were, the heart would surely be.

Then his healing hand, in love outreaching,
Would bind thy wounds, and bid thy tear-dimmed
eyes

In golden letters read what He is teaching:—

That mercy underlies,
Should'st thou repine, that He thy treasure hold
In keeping more secure? Through gates of gold,
Gears to thy right, lest thou forget the giver,
Where not a grief may reach, or shade of night,
Should'st thou repine?

No pain, no care, no weight of earthly sorrow,
But such thy loving Lord will hold thee bear;
Why then, trust his grace for each to-morrow,
And rest in his kind care?
Storms cannot toss, no conflict fierce can harm
Those who are sheltered by a Saviour's arm;
But all may rest, in time of grief and loss,
One sure, safe refuge—a Redeemer's cross.

1888.

Y. N. T.

BEYOND THE CROSS.

SELECTED.

Still will we trust, though earth seem dark and dreary,
And the heaven fall beneath its chattering rod;
Though rough and steep our pathway, worn and weary,
The still will we trust in God!

Our eyes see dimly till by faith anointed,
And our blind choosing brings us grief and pain;
Through Him alone who loved our weak appointed,
We find our peace again.

Choose for us, God! nor let our weak preferring
Cheat our poor souls of good thou hast designed;
Choose for us, God! thy will we'll preferring,
And we are fools and blind.

So from our sky the Staff shall fall her shadows,
And Day poor gladness through his golden gates;
Our rough path leads to lower-extended meadows,
Where joy our coming waits.

Let us press on in patient self-denial,
Accept the hardship, shrink not from the loss;
Our goal lies beyond the hour of trial,
Our crown beyond the cross.
—*Christian Life.*

Sorrow not an Accident.—Sorrow is not an accident, occurring now and then—it is the very woof which is woven into the warp of life. The account of it which represents it as probation is inadequate; so is that which regards it chiefly as a system of rewards and punishments. The true account of this mysterious existence seems to be that it is intended for the development of the soul's life, for which sorrow is indispensable.

Every son of man who would attain the true end of his being must be baptized with fire. It is the law of our humanity, as that of Christ, that we must be perfected through suffering. And he who has not discerned the Divine sacredness of sorrow, and the profound meaning which is concealed in pain, has yet to learn what life is. The cross manifested as the necessity of the highest life, alone interprets it.—*E. W. Robertson.*

FOR "THE FRIEND."

Testimony of Bernard of Clairvaux.

[The following directions of Bernard were followed by a Friend in England, who accompanies them with this comment:

"It was something for such a man to see even thus far; though the full truth as seen by the early Friends—say rather by every true Friend, is, that every thing which arouses the imagination in worship, other than by the Divine leading, forestalls, and in so far prevents the true exercise of soul in which worship consists."]

We find from "Annales Cistercienses" (Lyons, 1642.) that Bernard of Clairvaux, the founder of the order of Cistercians, says, "Let the glass of their windows be white, without pictures or crosses. * * * Let not sculptures or paintings be made in any of our churches or monasteries; we interdict them, because, while attention is drawn to them, the use of profitable meditation, and the discipline of religious gravity is apt to be neglected."

FOR "THE FRIEND."

[The following account of the establishment of Gwynedd Meeting, Montgomery Co., Penna., is copied from an ancient manuscript recently handed by a Friend in this city to the writer, to be deposited in Friends' Library. Unfortunately, the manuscript bears no date, but it was probably written some time during the latter half of the last century. G. V.]

BRYS MAWE, Eighth Month 7th, 1888.]

Friend Churchman.—Agreeably to thy request, I herein give thee some account of the first settlement of Gwynedd Meeting.

In the latter end of the year 1698, Gwynedd Township was first purchased by William Jones and Thomas Evans, and distributed amongst the original settlers, which were William Jones, Thomas Evans, Robert Evans, Owen Evans, Cadwallader Evans, Hugh Griffith, Edward Foulke, Robert Jones, John Hugh, John Humphrey. There was but the two latter inhabitants that belonged to the Society of Friends—the others being church people. The said John Hugh and John Humphrey began to hold religious meetings in one or the other of their houses on the first day of the week. The other inhabitants belonging to the Church of England, used to hold a meeting at the house of Robert Evans, and that Cadwallader Evans was in the practice of taking his Bible with him to the meeting, and, as they had no officiating minister, used to read a chapter or two in the Scriptures. But, as he himself related, that as he was going to his brother Robert's to the meeting, as usual, when he came to the road leading down to the lower end of the township, where John Hugh and John Humphrey held their meeting, it seemed as though a voice said to his spiritual ear, "Go down and see how the Quakers do," which circumstance he mentioned after the close of their meeting,—and that they one and all agreed to go to the Quakers' meeting on the next First-day. And being so well satisfied with their mode and manner of worship, that they never met again in their usual form of church worship.

Their meeting now increasing, they continued to hold it at the house of John Hugh or John Humphrey for some time, but in the year 1700 they built a meeting-house near where the present one stands, and held meeting there by the consent of Haverford Monthly Meeting, unto which they at first joined themselves. But their numbers increasing, and their house small in

size, the present meeting-house was built, and on the 19th of the Ninth Month, the same year, the first meeting for worship was held there.

In the year 1714 it was considered that a great number of settlers coming in, and a young generation arising, and the Monthly Meeting so remote that it being inconvenient to attend the same, it was agreed by Gwynedd and Plymouth jointly to apply to Haverford Monthly Meeting for liberty to hold a Monthly Meeting among themselves, which, after a time of silyly considering the same was moved to Philadelphia Quarterly Meeting, and approved of by that Meeting. And the first Monthly Meeting was held at the present meeting-house at Gwynedd on the 22d day of the Twelfth Month, 1714.

There is not any further occurs that they requested; if there is, please to communicate it, and my endeavors shall not be wanting to satisfy thee.

I am thy friend,

JESSE FOULKE.

FOR "THE FRIEND."

The following brief notice of Francis Owen has recently been received from a friend in England. It is copied from an old manuscript which is preserved at Devonshire House, London, and appears to have been extracted from one of the registers given up to the British Government in 1837. This simple testimony to a devoted life seems of sufficient value for a place in THE FRIEND. G. V.]

Francis Owen, the wife of Nathaniel Owen, of Reigate, departed this life in a lamb-like frame, the 6th of the second Month, 1724 and in the 62d year of her age. During the time of her illness, through the great mercy and goodness of the Lord, she was preserved in great and admirable patience, fully resigned to his will, declaring she had further assurance of his love and favor than ever she had known; and exhorted those that were about her to love and fear the Lord; rejoicing that from her youthful days her conversation had been godly and holy, and that was the way to everlasting life and peace—with other comfortable sayings as long as her strength remained.

Natural History, Science, &c.

How to rid a House of Mosquitoes.—[The following remedy for the mosquito annoyance is one that our readers can easily try, and determine for themselves its value. It is condensed from an article in *Wide Awake*. The powder alluded to in it is the same that is often sold by druggists under the name of Persian Insect Powder.]

"A dozen years ago, perhaps, I read a newspaper paragraph to the effect that if Dalmatian insect powder were burned in a room, the mosquitoes would leave it, and though windows remained open they would not return. I read the paragraph and forgot it, as others did, doubtless, for I saw nothing more about it, and I never heard of anybody trying it.

"In the summer of 1881 I chanced to be with a friend on board a schooner which lay off Philadelphia, on the Delaware side. The time was September, and the mosquitoes swarmed. They took possession of the *Lucy Graham* fore and aft. The captain and mate gave up to us their bed-screens. We objected to the sacrifice,

"The year in which the meeting-house was built is not given. It was, of course, after 1700, and before 1714.

and were casting about for some other possible defense, when there flashed before my mind the newspaper paragraph before-mentioned. "Have you Dalmatian insect powder?" I asked of the captain. "We have." Then I shall burn some in your cabin; the mosquitoes will flee. You can sleep with open windows and they will not return." He smiled as one who should say, "You can burn pounds if you like. We will not dispute your statement; but we do not believe it." We burned the powder, the mosquitoes fled, and *did not return*.

"For some years I had no occasion to repeat the experiment; but in 1886 I found myself in a green and bowery spot in New Hampshire, full of all fresh delights, but, alas! full also of mosquitoes. They came like an army with banners.

"We are told that the mind never forgets; that everything we ever heard of is stowed away in compartments of the brain, like papers in pigeon-holes, ready for use when the time comes. I believe it. For out again from some place where it had lain dormant all this time, popped that newspaper paragraph. And that night I burned the powder—a teaspoonful in an iron spoon, lighted with a match and left to smoulder. The effect was magical. Not a mosquito lifted his wing that night within the four walls of my room, and I slept soundly. Perhaps it was not the smoldering powder that drove them off, you say. Perhaps it was only some mysterious withdrawal of their forces for a season. How was it, then, that on going down to breakfast the next morning I was greeted with a piteous story from the other members of our party of a night spent in fighting mosquitoes, the greatest sufferer of all being the little fellow, whose freshly-cropped head offered such a seductive field to their operation? The next night the powder was burned in every bedroom, and never was wall of the Middle Ages more impregnable to a besieging force than was the invisible barrier it raised against the mosquitoes raging without."

The Oyster and the Star-fish.—J. G. Wood says: "No one would have thought, on placing an oyster and a five-finger side by side, that the star-fish is a relentless foe to the oyster. Those who can remember their first fruitless endeavors to open an oyster may naturally wonder how the star-fish can achieve such a feat. As I have repeatedly seen, it proceeds as follows: Clasp the oyster in its rays, it brings its mouth opposite the hinge. From the mouth it pours a secretion that paralyzes the hinge-muscle and causes the shell to open. It cannot, like a dog-welch, extract its prey, and put it into its stomach, so it reverses the process, and puts its stomach into, or rather over, the oyster, protruding the stomach from its mouth, surrounding the oyster with its coats, digesting it, and then withdrawing the stomach into its body. The wildest fancy of oriental legends never equalled in grotesque imagination this perfectly true history of the oyster and the star-fish."—*Longman's Magazine*.

A Baby Beaver's Dream.—A college professor in Maine tells, through the *Leicester Journal*, how he convinced a friend, who did not believe that beavers could build dams. He bought a baby beaver of a hunter one day and sent it to his sceptical friend. The beaver became a great pet in the house, but showed no signs of wanting to build dams, until, one morning, a leaky pail full of water was put on the floor in the back kitchen. The beaver was there; he was only a

baby then, too, but the moment he saw the water oozing out of a crack in the pail, he scampered into the yard, brought in a chip, and commenced building his dam. His owner was called, and watched the little fellow, very much astonished at what he saw. He gave orders to have the pail left there, and the industrious beaver kept at his work four weeks, when he had built a solid dam all around the pail. The professor's friend believes now that beavers know a thing or two about dam building.—*Our Dumb Animals.*

Effect of Intense Light.—A curious affection to which the workmen around the electric furnace at Creusot, France, are subject, has been engaging the attention of the Paris Surgical Society. The men suffer greatly from the effects of the intense light, which exceeds a hundred thousand candle power. After one or two hours the workers have a painful sensation in the throat, face and temples, while the skin becomes copper red in hue, and an eye irritation lasts 48 hours, the discharge of tears being copious. After five days the skin peels off. All these effects are produced by light alone, no heat being felt. Dark-colored glass mitigates the effects somewhat, but does not entirely prevent them.

Analysis of Spanish Moss.—The curious question as to where certain plants get their mineral constituents has been revived by the published analysis by Chalkley Palmer, of the Spanish moss of the South, *Tillandsia usneoides*, the well-known epiphyte that gives so wind a look to the Southern forest. Dr. Palmer found of ash 2.95 per cent.—and among these are silica, iron, alumina, manganese, lime, magnesia, potash, soda, sulphur, chlorine, carbon and phosphorus. The plants adhere to the back of trees by a kind of expansion, apparently similar to that which the Virginia creeper uses in adhering to the walls and the trunk of trees; and it has been considered not improbable that as we know the *Ampelopsis* absorbs through these "suckers," these epiphytes may do so too. In this way mineral matters may enter the system of the *Tillandsia*.

Tailor Recipes of Ancient Egypt.—Curious hair recipes occur on some of the papyri, some of which are very absurd. One to prevent the hair from turning gray directs that a salve should be made from the blood of a black calf cooked in oil; in another that of a black bull was preferred for the same object; evidently the color of the animal was to pass through the salve into the hair. In another place we read of the tooth of a donkey dipped in honey being used for really strengthening the hair; and the ingredients for an ingenious compound are given for injuring the hair of a rival, and the counter-remedy to be used by those who think their hair-oil has been tampered with by a suspicious friend. Cakes of some composition which absorbed oil were always placed on the heads of the guests at feasts, and from them the oil gradually trickled down through the hair. A most disagreeable practice this may seem to us, but to them it appears to have given great pleasure, and with the Egyptians as well as with the Hebrews, oil was symbolical of joy and gladness. Rouge and other coloring substances were used by women of Egypt to enhance, as they thought, their beauty; the eyes had often a green line underneath them; the lashes and eyebrows were pencilled in black; and, as in modern Egypt, the nails were stained red with a preparation from the henna plant. In our museums we can see the little pots and vases

formerly filled with these unguents and colors, and the pencils they used with them, as well as various sorts of combs and hairpins; of the latter, there is a very pretty set in the museum at Boulaek—single-pronged wooden pins with jackal heads, stuck into a cushion in the form of a turtle, which was evidently one of the favorite dressing-table ornaments belonging to the deceased lady.

All these little essentials of the toilet were placed in the tombs by the loving hands of friends and relations for the use of that spiritual body, which they believed required all the adornment the lady had loved upon earth.—*The Women's World.*

Items.

The Horrors and Demoralization of War.—The Editor of the *Pall Mall Gazette*, in speaking of the danger of war in Europe, says: "Hitherto, down even to the last wars, when empires have gone to battle, it has been a war of soldiers. The next war will be a war of peoples. In the Russo-Turkish war it was an army from one country against a republic in a foreign land, and ultimately swept in triumph to Constantinople. In the Franco-German war, the French army was largely professional, and it was because the standing army of professional soldiers went down like ninetails before the irresistible rush of an armed nation, that the whole military system has been revolutionized. Now every nation has got up its own bodied soldiers. In former days the mustering of half a million of soldiers was regarded as a mighty feat. To-day Prince Bismarck adds to the ranks of the army of the Fatherland, with one stroke of his pen, 700,000 fathers of families, and not a single voice is raised even in passing protest. Germany, in the centre of Europe, fronts east and west with an available host of three million trained soldiers. France will have between two and three millions ready to hand. Russia before long will be able to put five millions into line. Austria and Italy we need not count. The blast of the trumpets that proclaims the beginning of war will summon the manhood of Europe to the center."

Not only will the number of the combatants be far beyond those which were raised, even in the days of the First Napoleon—the Grand Army which he led to Moscow only consisted of 150,000 men more than the 700,000 added this year to the German army—but the spirit in which it will be fought out will differ. For the worse. Prince Bismarck frankly told us what kind of war it will be. "We shall fight," he said, "if we do fight, until we are bled as white as veal. It will be a duel to the death—a war in which the avowed object of the combatants is the utter destruction of their adversary."

Apart from the certainty of horrors to which the burning of bazilles and even the murder of Magdalen, will be but as trifles in the infernal tragedy, there is another aspect of the struggle which is too often overlooked. The new style of warfare, in which battles are fought, not by a professional class set apart from the nation, governed by strict codes of military laws, and remaining apart from the activities of national existence, but by the nation itself, will tend to realize the ideal of brotherhood for humanity and civilization. We are able to see something of what it involves, in the Criminal Statistics of Germany since the war. The conquest of France was one of the most expeditious, and in many respects one of the least objectionable, wars ever waged. But it brutalized the Germans to an extent in difficult to realize elsewhere. The citizens, plunged for six months into all the license and savagery of war, acquired a taint from which he did not purge himself for years. War is the unloosing of all crimes, the sanctioning of all violence, the negation of the sanctity of property and of life. To accustom men to war is to accustom them to live in a world where the ordinary moral law is suspended. It does not easily re-establish its authority when peace is concluded. The Criminal Statistics of Germany, since 1871, show a terrible increase in all kinds of violent crime—murder,

highway robbery, theft by violence, burglary, assaults on women and children—which after ten or fifteen years has only now begun to decline. The violence put in practice against the Jews by the Germans is a proof of the advance which will be the effect, upon civilization and humanity, of accustoming ten millions of citizens to make murder their daily passion, throughout a long war, in which every evil, dormant in the human animal, would be given the run, no one can foresee. One thing only is certain, that the consequences would be far more dire and deadly than any one has yet ventured to conceive.

"In face of such portentous possibilities, it is difficult to find words adequate to condemn the amazing and reckless criminality of those who, in the Press and elsewhere, are continually flinging firebrands of taunts, and sneers, and recriminations, between the nations. When the advances are temble, overhead, even the fool might cease to whistle; but these gentry, with the measureless catastrophe impending, go shouting and hallooing, like a very Tom of Bedlam escaped from his keepers. It is sport to the fool to do mischief, and the madman loves to scatter firebrands and death—but surely those who, in London and elsewhere, who do this, will be the warhorse passionate for war night at least reflect on the responsibilities of provoking a conflict which would have as its watchword '*de saigner a blanc*' all round."

Friends' Gospel Standard.—This is the title of a Quarterly paper, issued by Edward G. Wood, of Quilley, Michigan. We have received the second number, which opposes the introduction of water-baptism into the Church; and regards it as an outland rite that belonged to a former dispensation, but has no proper place in the Christian Church—the baptism of Christ being with the Spirit.

It appears to be in antagonism to the *Friends' Expositor*, published by D. B. Uplegraff, who advocates the plan of allowing members of the Society of Friends to practice ceremonial rites if they wish to, without prejudice to their standing in the Church.

Roman Catholics in New York.—New York is said to be one of the strongest Catholic cities in the world. It has 75 parishes, 40 chapels, 290 priests, 300,000 Catholics, 2,000 religious women, 40,000 pupils in its colleges, academies and parochial schools, and 15,000 poor or sick or orphaned cared for in its homes, hospitals, and asylums. Full \$20,000,000 are invested in Catholic churches and institutions, and there are 800,000 Catholics within the city limits.

The Bible in Italy.—The Editor of a Republican Journal in Italy, the *Secolo*, has advertised that he is about to bring out a "new edition of the Bible." This is how he announces it:

"There is a book in which is gathered up the poetry and science of all humanity. It is the Bible, to which no work in any literature can be compared. The Hind may have been for Greece, in certain respects, to light the culture of the world, but the Bible encloses the thought of all the ages. Believers and non-believers have read and studied it. It was the book that Newton read most frequently. When Cromwell went to battle, he always took it to his holster, and even Voltaire had it always upon his writing-desk. It is a book that is necessary for the cultivation of all classes, and that should be in every house."

He then goes on to say that the existing editions being too large and too costly to be attainable by the masses, he intends to bring this one out in weekly parts at a ridiculously low rate. Each number is to contain eight pages of letter-press, and five of fine illustrations. The price is to be only five cents, or one cent. There are to be two hundred and odd numbers, and over nine hundred beautiful and varied engravings. The text is to be the only one that is not placed in the "Index" by the Vatican,—that of Martini, which is, of course, translated from the Vulgate. There are also copious notes.

He then concludes: "This artistic and useful edition, the very first of its kind in Italy, is destined to have a success as extraordinary as its cheapness is miraculous." This want of destined success is not an unfounded one,—for the *Secolo* is, perhaps,

the most widely read daily paper in Italy. Its circulation is chiefly through the northern provinces, but is not confined to them. It is a cheap one,—only costing a *soy*,—and is a great favorite with all the working classes. Its editor and proprietor, has for some time been bringing out good class works in the same manner and at the same rate,—*Julia Robertson in the Sunday School Times.*

Calm Quarterly Meeting.—There are many cheering evidences that the visitations of Divine grace are still extended for the help and comfort of those who have entered into covenant with the Lord; and for the awakening of the careless and rebellious. This has been exemplified in several of the Quarterly Meetings recently held in the Districts of Philadelphia Yearly Meeting; and was in that held at Calm meeting-house on the 17th of Eighth Month.

At this meeting, a sweet stream of consolation flowed in the public ministry, towards those aged servants who had long borne the burden and heat of the day; and who had but a few more steps to take in the path that leads to the Celestial City, until they would be prepared to join the innumerable company that surround the throne of God, and to receive that Heavenly crown laid up for all those who love the Lord's appearing.

There was also an "honest, earnest and harmonious" prayer on the part of the younger part of the assembly, especially directed to the younger part of the audience, to persuade them to submit to the government of Christ, and become faithful laborers in his harvest field.

In the meeting for business a timely caution was given by one of the members against becoming too much interested in the political struggles of the opposing parties, at the approaching Presidential election, and taking part in processions and other similar movements. He spoke from experience of the hurtful spiritual effect on himself in former years, of participating in such things.

THE FRIEND.

EIGHTH MONTH 25, 1858.

Since receiving the account of his visit to Hayti, kindly furnished by our friend Thomas Scattergood, we have again looked over the narrative of Stephen Grellet's travels and labors in that island in 1816. His visit was paid from a feeling of religious duty; and in the course of it, he held many meetings for worship which were largely attended. He found great openness to receive the Gospel message in the President, Petion, and in many others who were in authority, as well as among the people generally; so that he says:—

"I frequently marvel in beholding how among these descendants of Africa, who have had so few advantages compared to many of the Europeans, the Gospel stream *does* flow; and the word preached appears to have an entrance; they receive it in the simplicity of their hearts, and in the love of it I may also hear testimony to their general good conduct and honesty. One may travel among them with the greatest security."

It is not surprising therefore, that Stephen Grellet looked forward with hope to a progressive improvement in the condition of the Haytian people—an improvement which the recent observations of T. Scattergood indicate has not taken place.

Some of the causes which have hindered the advancement of these people in civilization and religion are indicated in the remarks contained in S. G.'s Journal. He refers especially to the prevalence of the military system, the loose condition of morals that prevailed under the French domination; the deistical, vicious and obscene

books which that people left behind them; and the general demoralization of the Romish priests, which induced "some to turn the religion of Christ into ridicule, when told that their salvation depends on men who publicly evince by their conduct that they are the servants of sin."

These four powerful instruments in the hands of Satan are enough to corrupt any community, and to prevent the upward progress of any people; for it remains to be an eternal truth that whilst righteousness exalteth a nation, sin is a reproach to any people, and always tends to debase, to injure, and to destroy those among whom it is allowed to prevail. We sincerely regret that the inhabitants of Hayti should be so affected by these unfavorable influences, as appears to be the case; and we desire that the Great Ruler of the Universe may in his own time and way rebuke these evils, and bring the rulers and the people of that land more and more under the government of his own blessed Spirit, so that the moral "desert may rejoice, and blossom as the rose."

Very recent information from that country, shows that the un-settlement which existed there in political matters, has developed into open insurrection against the government, so that poor Hayti may experience some of the same disorders and bloodshed which marked the history of many of the Spanish-American colonies, after the controlling power of Spain was withdrawn, caused by the want of self-control and respect for law—virtues which the inhabitants were slow to learn, but without which there can be no stable government, except that of a military despotism.

The Editor of THE FRIEND has received a communication which states, that on page 7 of the extracts from the Minutes of last Yearly Meeting, there is a paragraph which should have the serious thought of every one of our members and attenders, in the present weak state of our gatherings for Divine worship.

The paragraph referred to, we suppose is the following one:

"Under the weight of our exercise in regard to the weak condition of some of our meetings, we have desired that the query might be pressed home to every heart, 'Lord, is it I?' As the responsibility is felt by us individually for the condition of things, it is believed a living concern will arise to exhort one another, 'Let us go up to the mountain of the Lord, to the house of the God of Jacob; and He will teach us of his ways, and we will walk in his paths. Come ye, and let us walk in the light of the Lord.'"

The friend who wrote to us further states that "his desire is to encourage the weaker ones to faithfulness, and the aged to give that sympathy to their fellow-members and others, which centers heart to heart, and leads on to that peace which passeth knowledge."

With these desires the Editor can unite; and he commends them to the notice of the readers of THE FRIEND.

In the issue of THE FRIEND of Sixth Month 30th, on page 281, there was inserted a short contributed article on family prayer, which appears to have created uneasiness among some of our readers, lest as a letter received by the Editor expresses, "if its recommendations were followed, we would soon fall into the formal methods of other denominations, in regard to prayer in meetings of all kinds, as well as in the family."

When the article was received and examined,

we were sensible that some persons might receive such an impression; but it appeared to be so well guarded in its terms, as not to be justly liable to the charge of encouraging any practices at variance with the principles of our Society; and from the source from whence it came, we did not believe the writer intended to advise anything more than a consistent Friend might properly do.

The consistent members of our Society have always borne a decided testimony against merely formal acts of worship, such as praying or preaching at stated times; yet it has ever encouraged in its members that earnestness of devotion and liveliness of spirit, which would prepare them to offer acceptable sacrifices to our Father in Heaven when divinely called for. It seemed to the Editor that there might be a danger, that in endeavoring to avoid the mistake of those who offer words of prayer without experiencing a renewed anointing and call to the service, some might err on the other hand, and not follow in simple faith the leadings of the Spirit.

This we supposed to be the concern of the writer of the article referred to; and we felt willing to give the space required to speak it before our readers.

SUMMARY OF EVENTS.

UNITED STATES.—The Fisheries Treaty is still under discussion in the Senate. It is thought a vote will be reached this week, and that the Treaty will be defeated.

The Danish steamer Thingvala, from Copenhagen for New York, collided with the steamer Geyser, of the same line, from New York for Copenhagen, near Sable Island, early on the morning of the 14th instant. The Geyser sank in about five minutes, and 72 passengers and 17 of the crew were lost. The Thingvala, 100 passengers and 17 of the crew were saved, and all landed at New York by the steamer Wieland, which also brought 455 passengers from the steamer Thingvala. At the time of the collision there was a very heavy sea with rain, but no fog. The Thingvala reached Hayti, Nova Scotia, on the morning of the 17th inst., lastly damaged.

The Secretary of the Interior is informed that the Bois and Red Lake Indians, in Minnesota, refused to consent to the right of way through their reservation granted by Congress to the Duluth, Rainy Lake and Northwestern Railroad Company by act of Fourth Month 24th, 1858.

Advices from Standing Rock Agency, Dakota, state that the Sioux Commissioners are still there. The influential one nation by the Agency, and the Commission had hopes of making a favorable impression on the minds of the Sioux. It is stated that the Indians have not the least idea of signing the treaty, and that the Commissioners will meet with a similar result at the lower agencies. Red Cloud, the great and influential chief of the Pine Ridge Agency, is still moving around among the tribes, stirring opposition on every hand, and he cannot be suppressed.

A despatch from Sioux City says: Reports from 35 representative points in northeastern Nebraska show that wheat, corn and all small grain are almost a total failure. Almost continuous rain and the heavy wind and hail storms of the last week destroyed the little prospect which there was. Corn in this section will be in peril of frost.

A powerful gale and oil well gusher has broken loose two miles east of Davenport, Indiana, and the farmers within a half mile radius of the well are panic stricken. No fires have been lighted at their homes since the well broke loose, and it is considered unsafe to strike a match within half a mile of the well. The fields and standing crops are saturated with oil over the entire section.

The rainfall in the Yazoo Valley, Louisiana, on the 15th instant, was the heaviest ever known. At Leland it measured 1 1/4 inches, and was followed on the 16th by a rainfall of 9 inches. The water in some fields was four and five feet deep.

At Dubuque, Iowa, on the 15th instant, Judge Lincoln ordered permanent injunctions against forty-seven saloon keepers in that city. The defendants fled super-

seals and bonds and will appeal to the State Supreme Court.

The number of deaths in this city during the past week was 439, a decrease of 69 from the previous week, and an increase of 26 over the corresponding week of 1887. Of the whole number, 138 were females under one year of age; 251 were males and 185 children; 49 of them consumption; 42 of cholera; infantum; 35 of inflammation of the stomach and bowels; 32 of typhoid fever; 30 of convulsions; 26 of marasmus; 25 of diseases of the heart; 13 of old age, and 10 of cancer.

Markets.—U. S. 4 3/8, reg., 106 1/2; coupon, 107 1/2; 4 1/2; currency 6 1/2, 124 to 130.

Cotton was quiet, but steady, at 11 1/2 cts. per pound for middling uplands.

Flour and Meal.—Flour was firm, with a good demand for spring wheats, but winters were dull. Sales of extra No. 1 Pennsylvania, at \$4.75; at \$4.75; 250 barrels Ohio, clear, at \$4.65 a \$4.70; 375 barrels winter patent, at \$5; 625 barrels Minnesota, clear, at \$3.90 a \$4; 875 barrels do., straight, at \$4.20 a \$4.60; 2000 barrels do., patent, at \$4.80 a \$5; 500 barrels do., do., fancy, at \$5.05, and 375 barrels do., do., favored brands, in lots, at \$3.20 to \$3.25. Rye flour moved slowly, at \$3.30 per barrel.

Bee-candle.—Extra, 5 a 5 1/2 cts; good, 4 1/2 a 5 cts; medium, 4 a 4 1/2 cts; common, 3 a 3 1/2 cts.

Sheep.—Extra, 5 a 5 1/2 cts; good, 4 1/2 a 4 3/4 cts; medium, 4 a 4 1/2 cts; common, 3 1/2 a 3 3/4 cts.

Hogs.—Extra Chicago, 9 1/2 cts; common western, 8 1/2 a 8 3/4 cts.

Milk cows are in good demand at \$30 a \$60.

FOREIGN.—It is rumored that the action which C. S. Parnell has brought against the *Times* in the Scotch Courts may possibly collapse on a technicality. It is said the *Times* counsel will claim that, as the *Times* neither owns property nor resides in Scotland, the Scotch Courts have no jurisdiction.

The *Freeman's Journal* of the 20th inst., says, in referring to this rumor, in order to announce that the statement of a contemporary that C. S. Parnell's action in the Scotch Courts will be ousted for want of jurisdiction, is utterly unfounded, as it is known that at least two of the agents against whom arrestments were made at C. S. Parnell's suit, owed money to the *Times* at the date of their arrestment, and consequently the jurisdiction of the Scotch Courts in the matter has been successfully established.

An English Parnell defence fund is to be started to help defray the expenses of the suit against the *Times*. According to late advices from Ghana there is no doubt now but that the breach in the Yellow River embankment, which caused the terrible inundation last year, cannot be repaired before the next flood.

Russia gives the protest of the Porte against the Italian claims to Moscow, in the Red Sea.

The Spanish Government is trying to induce the United States Government to give up its claim to the territory of its claim of \$1,000,000, which Signor Moret granted to American citizens on account of losses during the Cuban war.

The Japanese Government has decided to spend £10,000,000 in five years in purchasing new war.

Advices from Cayenne, French Guiana, state that the business portion of that city has been destroyed by fire. The National Liberal Federation

A despatch from Port-au-Prince says that the revolution has been successful and that the Government has been overthrown. The President has taken refuge on an English frigate. Boobion has formed a new Government.

There were twenty deaths from yellow fever in St. Jago de Cuba up to Seventh Month 28th, and they were largely among the military. The season is irregular, and the weather is favorable to the spread of the fever. Reports from the interior of the island say that many children and natives are dying of the fever. Genouez has got well clear of the epidemic of small-pox. New Manzanilla and other points are suffering. Precautions are unknown.

RECEIPTS.

Received from Henry Palmer, Pa., \$2, vol. 62; from Sallie A. Kaizhn, N. J., \$2, vol. 62; from Samuel Allen, Philada., \$2, vol. 62; from Henry R. Woodward, N. J., \$2, vol. 62; from Joseph Howell, Gtn., \$2, vol. 62; from David D. McGrew, Agent, Io., \$8, being \$2 each

for Sidwell Healdt and Ole T. Sawyer, to No. 13, vol. 62; for Sidney T. Heston, and Ole Tostenen, vol. 62; from Amy S. L. Exdale, N. J., \$2, vol. 62; from John Carey, Agent, O., \$14, being \$2 each for Elijah Haworth, Jacob Barrett, William Haworth, Lewis Johnson, and Joseph Stanton, O., and John F. Stanton, Ala., \$2, vol. 62; from John H. Smith, N. J., \$2, vol. 62; from Daniel Williams, Agent, O., \$88, being \$2 each for Asa Branson, Joseph Bailey, William L. Ashton, Margaret Hobson, David Branson, Eranson D. Sidwell, Charles Stratton, Mary J. French, Mary Chandler, Thomas Conroy, Jacob Holloway, Maria Walker, Edwin Holloway, Julia Ann Walker, John P. Parnell, Parnice, Mary Anne Holloway, Mary A. Mitchell, Asa G. Holloway, and John C. Hoge, vol. 62; from George Abbott, N. J., \$2, vol. 62; from Benjamin Hinshaw, Io., \$2, vol. 62; from Hannah Stevenson, Ill., \$2, vol. 62; from John H. Evans, and Esther Prickett, vol. 62; from Reuben K. M., and W. Philada., \$2, vol. 62; from Edmund Wood, N. J., \$2, vol. 62; from Jonathan Eldridge, Pa., \$2, vol. 62, and for Mary Eldridge, \$2, vol. 62; from Sabina Hancock, Pa., \$2, vol. 62; from Deborah Takhlin, Pa., and Mary A. Champlin, Mo., \$2 each, vol. 62; from John H. Ballinger, N. J., \$2, vol. 62, and for Edward H. Jones, \$2, vol. 62; from Mary Wistar, W. Philada., \$2, vol. 62; from James W. Oliver, Mass., \$6, being \$2 each for himself, Mary Pace, and Owen Dano, vol. 62; from John Hall, England, \$2, \$108, being \$2 each for Jane Hall, William Hall, and John H. Walker, vol. 62; from Joseph W. Lippincott, Philada., \$2, vol. 62; from Gilbert Jones, Canada, \$2, vol. 62; from Dr. Edward Maris, Philada., \$2, vol. 62; from Jacob Manle, O., \$2, vol. 62, and for Asenath Kaley, \$2, vol. 62; from John H. Blackburn, Ezra Barker, and David Stalker, vol. 62; from William Carpenter, Agent, N. J., \$14, being \$2 each for himself, Samuel P. Carpenter, Priscilla M. Lippincott, Sarah W. Abbott, Adelsa S. Reeve, Paoli, C., Zelley, and Josiah Wistar, vol. 62; from Martha A. Mearns, N. J., \$2, vol. 62; from George R. Reil, Pa., \$2, vol. 62; for George R. Chambers, Pa., \$2, vol. 62; from Richard J. Allen, \$8, being \$2 each for himself and Rowland D. Allen, Philada., and William C. Allen and Rowland J. Dutton, N. J., vol. 62; from George H. Acet, D. C., \$4, being \$2 each for James P. Millin Cooper, W. Philada., \$2, vol. 62; from John P. Sunde, Io., \$8, being \$2 each for himself, Ove Rosdail, Lars Fav, and Thomas T. Strand, vol. 62; from Philip P. Dinn, N. J., \$2, vol. 62; from Susan J. Parnell, N. J., \$2, vol. 62; from John P. Robinson, Philada., \$2, vol. 62; from Jesse W. Taylor, Philada., \$2, vol. 62; from Sarah T. House, Pa., \$2, vol. 62; from Eliza G. Sheffield, Conn., \$2, vol. 62, and for Nathaniel Green, R. I., \$2, vol. 62; from J. Barclay Hilyard, J., for Emeline E. Hilyard, \$2, vol. 62; from George H. Hart, N. J., \$2, vol. 62; from George H. Hart, N. J., \$2, vol. 62; from Catherine W. Dorrington, Thomas Y. French, Josiah Fawcett, Mark Bonnell, Martha J. Cook, Edward Bonnell, Thomas F. Fawcett, Emilie Maerck, John M. Stratton, Richard E. Fawcett, John French, Elizabeth French, Edward Stratton, Jonathan Blackburn, Robert

Miller, Elma French, Hannah Blackburn, Miriam French, Sarah S. Winder, Annie C. Bensch, Ann Rachel C. Stratton, vol. 62; from Joel Thompson, Del., \$2, vol. 62; from Ann C. Jones, Pa., \$2, vol. 62; from Isaac C. Stokes, N. J., \$2, vol. 62, and for Ruth A. Harnel, \$2, vol. 62; from Mary R. Deacon, Pa., \$2, vol. 62.

Remittances received after Third-day, will not appear in the Receipts until the following week.

NOTICES.

WESTTOWN ACADEMY, under the care of Chester Monthly Meeting, N. J., will re-open Ninth Month 3rd, 1888.

WALTER L. MOORE, Principal.

WESTWOWN BOARDING SCHOOL.—An annually large number of applications having been made for admission of pupils the coming winter, the committee have decided to limit the number of boys to 165, and of girls to 140, for this term. Members of Philadelphia Yearly Meeting intending to enter their children for the next session, will please do so prior to Ninth Mo. 13th, as after that date it is proposed to consider applications for children, members of other Yearly Meetings, who are not now pupils at the school. If from any cause children who have been entered, are prevented from coming, their parents or guardians will confer a favor by sending notice thereof promptly to the Superintendent, Jonathan G. Williams, in order that such vacancies may be filled from other applicants.

THE NORMAL CLASS at WESTWOWN.—Pupils desiring to enter this department are requested to make a definite application for that purpose, to the Superintendent or Treasurer, before the close of a School Term, in order that arrangements may be made in advance to meet the probable size of the class.

WESTWOWN SCHOOL COMMITTEE.—A stated Meeting of the Committee will be held on Seventh Mo. 13th, at Philadelphia on Seventh-day, the 25th of Eighth Mo. 1888, at 10 o'clock A. M.

GEORGE M. COMFORT, Clerk.

WANTED.—A woman teacher at Bradford Preparative School, to open Ninth Mo. 3rd, 1888.

Application may be made to Lydia D. Worth, Marshallton, Chester Co., Pa. Sarah A. Scattergood, Box 1934, West Chester, Chester Co., Pa.

WESTWOWN BOARDING SCHOOL.—A competent teacher of reading will be wanted for the Boys' department, at opening of next session (Tenth Month 30th.) Apply to JOHN E. CARTER, Knox and Conter Sts., Germantown, Phila.

GEORGE M. COMFORT,

Fallsington, Bucks Co., Penna.

WILLIAM EVANS,

252 SOUTH FROST ST., PHILADA.

DIED, at Westery, E. I., on the 7th of Eighth Mo. 1888, ELLEN P. FOSTER, daughter of John H. Foster, of Westery, on the 23rd of Seventh Month Meeting Friends, aged 23 years. Her last illness was for her three months' duration. Repeated hemorrhages from her lungs reduced her very low, and quick consumption followed. She said, regarding the result, "I feel to just leave it to my Heavenly Father, I should like to get well only that there are so many temptations in the world." At another time, "It will be hard for me to part with my dear friends, but I leave it all." Again: "I have prayed my Heavenly Father to forgive my sins, and I believe He will. Her sufferings outlasted me very great, and I shall have with wonderful patience. But she said, "I could not be so patient if I was not helped; I have to pray continually for patience." Always when enquired of if she felt peaceful, she said yes. She was very modest and careful in alluding to her religious feelings, and spoke of her great nothingness. The day before her death, when difficult breathing caused her intense suffering, her father asked her if she felt Jesus near; and her countenance lighted up with a sweet smile as she replied, "Yes, I feel Him very near." Her dear Heavenly Father's consolation that, through the mercy of God in Christ Jesus, our Lord, her purified spirit has been received into the mansions of everlasting bliss.

Incidents and Reflections.—No. 163.

FASHIONABLE AMUSEMENTS.

When a person has not been brought under religious conviction, nor felt the force of the command, "Whether ye eat, or whether ye drink, or whatsoever ye do, do all to the glory of God;" it is difficult to make such an one see the necessity for that non-conformity to the spirit of the world which the Gospel requires. This is especially the case in regard to various fashionable amusements; some of which would be innocent in themselves, if it were not for the associations connected with them, or the tendency to excessive indulgence. "By their fruits shall ye know them;" and in applying this rule the sincere seeker after salvation soon finds the effect of them on his mind to be evil, and he is forced to refrain from such things as tend to dissipate serious feelings, and to encourage improper excitement or frivolity.

Elizabeth Fry mentions in her memoirs that about the time she was coming under religious conviction, she paid a visit to London, and while there entered various scenes of gayety, and attended balls, and other places of amusements. She remarks in reference to these things,—"I consider one of the important results was the conviction of these things being wrong, from seeing them and feeling their effects. I wholly gave up on my own ground attending all public places of amusement; I saw they tended to promote evil. I felt the vanity and folly of what are called the pleasures of this life, of which the tendency is, not to satisfy, but eventually to enervate and injure the heart and mind; those only are real pleasures which are of an innocent nature, and are used as recreations, subjected to the cross of Christ."

When John B. Gough was a youth he had, he says, "an intense desire, almost amounting to a passion, to adopt the theatrical profession. I was fascinated by the theatre, stage-struck, enamored of all dramatic representation."

When about 16 years of age he paid his first visit to the theatre, and was dazzled by the dresses, the music and the lights. His little bedroom seemed mean and poor; his plodding in a shop to learn a trade, a dreary monotony; regular business, tame and grovelling compared with the occupation of an actor. Some persons, he remarks "cannot conceive the attraction of all

the stage paraphernalia, and the glamour thrown around certain minds by the glitter and unreality of the stage." All his spare money was spent on theatre-tickets. His regular business was neglected, and finally he obtained a situation among those employed at a theatre in Boston. The effect on his mind of an intimate acquaintance with the stage, he thus describes:—

"I found the gold to be tinsel. I acquired a thorough distaste for all theatrical representations, and all the genius and intellect displayed by the most famous actor has not, and never can reconcile me to the sham, the tinsel crowns, the pasteboard goblets, the tin armor, the paltry spangles, cotton for velvet, all make-believe, the combats, and the sham blood. Even the nightly disguise became an annoyance; the painting the face, corking the eyebrows, pencilling the wrinkles, the d-ing up with false whiskers, hair, moustache, the French chalk, the rouge, the burnt cork, to say nothing of the habiliments, rendered the whole thing at last odious to me; and I never felt meaner or had less self-respect, than when I was deluzened to do some character. How men of ability and common sense can submit to this caricaturing night after night, passes my poor comprehension.

"Oh, the disenchantment! The beautiful women were, some of them, coarse and profane; the noble gentlemen often mean, tricky and sponging. In fact, the unreality of it, the terrible temptation to the lower forms of vice, especially to those of the nervous, excitable temperament, increased by the falsehood and fiction involved in their profession, in seeming to be what they never were or could be, while their lives were wholly vicious, repelled me. I do not say this of all actors. I only speak of the special temptations of the profession."

His connection with the drama lasted but three weeks. And on looking back to that period of life in after years, he expresses his gratitude to the Almighty that hindrances had been thrown in the way of accomplishing what had been a cherished design—hindrances which he regarded as mercies, because they were the means of rescuing him from probable ruin.

There is a Wesleyan tract on "The Theatre," professedly written by one who had followed for years the business of acting on the stage. I have no means of ascertaining the accuracy of its statements, but no reason to suppose it is not substantially correct. He was successful in his undertakings, and was preserved from much dissipation; but says that many of his companions fill the drunkard's grave, and that he dare not describe the scenes he witnessed. The manner in which he was induced to give up a lucrative engagement on the stage, is thus described:—"It chanced that, in a new play, the part of an eccentric clergyman was cast for me; and as there was a living original I determined to visit him, on some pretext or other, and study him, so that I might present my part more perfectly. One sunny day I walked to his residence; and on inquiry I found the good man was not at home, but was expected soon. As I was ushered

into a side room for the purpose of waiting until he returned, a young lady was wheeled in on an invalid's chair. I immediately arose, and was on the point of retreating; but she requested me to remain, saying that her father would return in a few minutes.

"Never shall I forget the appearance of this fair girl. She could not have seen more than seventeen summers, and I was sure that the seal of death was even then stamped upon her brow. There was a beauty in her countenance such as I had never met with before; and as with the candor of a child she soon began to converse with me, and told me out of the fulness of her heart, simply and fervently, of the arduous duties in which her father was engaged, and of the good he was daily doing, my spirit failed me. I had come for the purpose of setting forth the actions of this excellent man in the light of ridicule.

"I said to her at last, being overwhelmed with confusion, and desirous of finding some excuse to leave, 'Have you not been suffering from illness?'

"A flash of light broke over and played along her features, as she exclaimed, 'Oh, I have many months ago given up the hope of life. I have been very ill, I shall never be better than you see me now; and I so long for my heavenly home!'

"There was no acting in that reverent glance upwards, the folding of the hands, the flitting tremor of the delicate lips. I felt as if a sword had cut me to the heart. The pure sweet presence smote me with a powerful conviction. I sat there, accused by the Spirit of God; and when the good old pastor returned, I told him trembling, for what I had come, and now for what I remained—Christian counsel.

"This part of my experience seems so wonderful to me as I look back. I entered that old parsonage a careless, trifling, proud and wayward man; I came from it humbled, repentant, and a sincere seeker after the peace and holiness that gave to that dying girl the face of an angel.

"Time passed, and found me at length no longer an actor by profession, but a minister of Christ. Gladly I gave up my lucrative employment, and became comparatively a poor man.

"One day a man, who appeared to be a servant, came to my house and left a message for me. It was to the effect that a young gentleman, very ill, residing on — street, wished to see me.

I hurried to the place designated, an elegant mansion in the upper part of the city, and was ushered into a chamber, where on a luxurious couch, with all the indications of wealth surrounding him, the sufferer lay in what seemed to be a death-like sleep. A troubled, griefed, care-worn look gave to the exceedingly youthful features the emaciated appearance of age. I sat down silently by his side, thinking him unconscious, when suddenly he glanced up at me:

"'You—you—have—come,' he said, slowly, with difficulty, 'to see—the wreck you have made!'

The startled minister recognized in the patient before him, one whom years before he had often

seen sitting in the pit at the theatre, and whose evident admiration of himself had gratified him exceedingly. He was smitten with awe and remorse now, when his former admirer told him, that thrall by his power, he had followed him until he was happy nowhere but in the atmosphere of the theatre, which had drained him of every good, sapped his virtue and destroyed his soul! and that now he was going prematurely to the grave, a disgrace to his name. "Lying here, day after day," he said, "I have thought of you; how in my eager admiration I followed you, and learned to love through your enticements the stage; and I have hated—yes, I have cursed you."

"I deserve it all," was the reply of the humbled minister, "but, oh, I cannot bear to think that you will die cursing me." And then he endeavored to point him to the rejoicing in heaven over every sinner that repents, and to the Lamb of God who taketh away the sins of the world. Subsequently he learned from the mother of the young man, that before he was taken away, "there was light before him," and he was willing to die. Of his own feelings at that solemn interview, when listening to the reproaches of the dying man, the writer of the tract says: "Oh, to have him die thus! Oh, to feel that his soul would be required at my hand! He the beautiful temple, prostrate in ruins through my agency. Wonder not that I say, words cannot express my agony. I prayed and wept over him as I had never wept and prayed before." J. W.

FOR "THE FRIEND."

Notes on Jamaica.

(Continued from page 25.)

About one-half of the inhabitants of Jamaica are officially reported as attenders of different places of worship. The custom of strictly abstaining from all labor and business on the first day of the week is rigidly observed, and the people being of social habits, are fond of collecting together at their chapels. Roman Catholics are few, there being only ten priests, who claim less than 10,000 souls. The Wesleyans of whom 7000 are in Kingston. The Wesleyan and Methodist claim about 150,000 attenders, while the "Church of England" (which is the State Church here as in the mother country, but was disestablished in 1870, and is now supported by voluntary contributions like other churches) has a registered membership of about 20,000; the Baptists, Presbyterians, Moravians, &c., claim about 100,000 attenders. Nearly all of the denominations support flourishing "Sunday schools," and many of them do a large work in mission schools also, while there are besides, a few denominational schools of higher grade. The Government has adopted a very intelligent system of aid to elementary schools, based upon the results attained, both in respect to the number and the proficiency of the scholars, under which there are about 700 schools receiving Government aid to the extent of about £20,000 per annum, and having about 62,000 children enrolled. These schools are all inspected regularly, and the Government appropriates £1500 yearly toward opening new schools and erecting the necessary buildings. A good degree of proficiency is attained at these schools, and the number of people who are able to read and write has advanced, until perhaps only one-half of the inhabitants can now be classed as illiterate. There are also four Normal schools under Government patronage on the island.

It seemed to me that much remains to be de-

sired in regard to thoroughness of the teaching, especially in the matter of pronunciation—as I found it extremely difficult to understand ordinary conversation, not only of the laboring classes, but of many in higher circles. The use of provincialisms is very great, and the pronunciation of the common words in daily use is so slovenly, if I may use the term, as to make their language a sort of "lingo" which is nearly incomprehensible to those who are accustomed to hearing a better English. I have noticed the same tendency in the blacks of our Southern States, in the familiar corruptions of the "Mass," "Sah," "Gwine," for Master, Sir, Going, &c., and long since ceased to expect a clear, accurate enunciation among the negroes. Probably the home training exerts too strong an influence for the schools to overcome, both here and elsewhere.

In 1834 Sir Thomas Fowell Buxton succeeded in diverting to the purposes of "Christian instruction of the children of the West Indians," the income of a fund originally bequeathed by Lady Jane Mico about the year 1670, for the purpose of redeeming poor slaves taken by Algerian pirates; the suppression of piracy and the release of all the Christian slaves prevented the application of benevolence in this direction, so that the fund accumulated until it had reached the large sum of £120,000 before a suitable channel for its appropriation was decided upon. To the income from this bequest, the Government added a liberal donation for five years, and established training institutions and schools in Jamaica, Antigua and St. Lucia Islands, under the care of trustees. The benefits of this charity are not confined to any creed, class or color, and are being more and more appreciated. Public spirited citizens have, from time to time, established and assisted educational institutions throughout the island, so that a fair education can be obtained in almost all parts of Jamaica, with small expense; or in many cases, wholly free of charge, for both tuition and board.

The only railroad in Jamaica extends from Kingston via Spanish Town to Porus, 58 miles, with a branch from Spanish Town to Ewarton, 23 miles, a total of 81 miles,—which cost, it is said, about £200,000—an enormous sum, considering the character of the railway and its equipment. The Government purchased the road and extended it to term, but notwithstanding its importance to the general welfare of the community, the traffic fails to meet the expenses and interest by about £15,000 per annum. It is proposed to extend the line to several points on the north side of the island—which, when accomplished, will doubtless add to its income, and prove an immense advantage to the people. Owing to the mountainous character of the island, and the height of the entire interior, it will prove an expensive undertaking; but a private corporation is now negotiating for the purchase of the existing lines from the Government at a fair price, with a view of making the extensions alluded to.

No manufacturing is carried on, except converting the sugar cane into raw sugar—which is then only a crude article when shipped to the ultimate markets for consumption, and has to be further refined before it is available for table use. The process of making sugar, as followed on most of the Jamaica estates, is a very simple one. The cane is planted in rows about two feet apart, and when ready to cut, the field is invaded by a score or two of laborers of both sexes—the men and women alike wielding the "machete"—a heavy, short-handled knife about two feet long,

swung in one hand, and when handled by a strong man, capable of dealing a powerful blow.

The cane is cut off a few inches above the ground, and is, at another stroke, deprived of the large and luxuriant bunch of leaves adorning its top, which are left on the field to be partially consumed by the large droves of cattle which are turned in to feed upon it. Strong teams of six or eight, or even a dozen pairs of oxen, are used to haul the cane to the mill, where it is crushed between powerful rollers, and passes out as "bagasse." The juice runs in a copious stream to the clarifying and boiling pans, where it is quickly evaporated, the heat being mostly generated by the "bagasse," which comes from the rollers almost in a condition to be used as fuel without any further drying. The syrup is skimmed and ladled from one pan to another by a gang of workmen, who have gained knowledge by long experience, until it is sufficiently dense for the sugar to "grain." This boiling is mostly conducted in open pans,—though on a few estates the modern improvements of evaporators and vacuum pans have been adopted. The grain sugar is drained of its molasses by the slow process of percolation, or in a few places by the more rapid centrifugal machines; and is then packed into large hogsheads and forwarded to the shipping port. The molasses produced is almost all of it, fermented in an adjoining building and distilled into rum,—for which a ready market exists, as above stated, chiefly in England and Germany. There is also a large consumption of rum by the Jamaicans themselves, although we saw but little actual drunkenness.

The scenery among the mountains and their foothills is often exceedingly picturesque and romantic; high hills are intersected by very steep and deep ravines, at the bottoms of which are rushing torrents fed by the frequent heavy showers which the mountainous parts are favored with; while in the dry season the vegetation of the lowlands is sadly parched. The great mango and cottonwood trees are often loaded with parasitic growth of orchids, wild pines and other epiphytes; and besides, are not unfrequently overgrown with lianas and other creeping vines, which hang from the high branches in long, bare, rope-like strands, or in graceful festoons of leaves and flowers. Many of the road-sides are lined for miles with cactus shrubs, mostly of the "Cereus" genus, and almost every wall is covered with the "Pig-weed," a vigorous plant very much like the pineapple, with long and strong thorny edges, the leaves serving as admirable *Chamaedrifrie*, and effectually preventing any surreptitious entrance of the premises by scaling the wall. The road-sides are adorned by luxuriant growths of *Tradescantia*, maiden-hair ferns, and many flowers familiar to us as hot-house plants. Upon very many of the plantations all the roads and division fences are built of stones in the most substantial manner; we were told in reply to a remark upon the amount of labor required to erect them, that they were mostly built by the slave labor of the former regime: we cordially accepted this explanation, as it seemed very evident that sufficient energy was not manifested by any of the proprietors we saw to warrant the belief that such wall-building would be done now. The public roads are rigorously kept up in excellent condition; the stone-breaking being mostly done by stout girls, who earn a shilling a day at the work. Abundance of suitable stone is found on every side, and the roads are all thoroughly made, and have a smooth, hard surface. In

many places great expense has been incurred in grading and bridging, and in building safety, and retaining walls along the steep hillsides and over the ravines.

(To be continued)

FOR THE FRIEND.

Infirmities not Sinful.

It appears that man, soon after his creation, was pronounced not only good, but very good. But he had what I think we might call an infirmity of the flesh and spirit given him, perhaps as a medium through which he might have opportunity to test his allegiance or fidelity to his beneficent Creator. And although this infirmity or weakness was not of itself sinful, yet it furnished ground for the tempter to work upon. So through it Eve was induced to look upon the forbidden fruit; and when she saw that it was good for food, and pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit, and also gave to her husband, and they did eat; and so by sad experience their eyes were opened so that they could see the evil as well as the good. So it was then, and even so it is now. For our lustful infirmities or evil propensities, when they are embraced, bring forth sin; and sin, when it is finished, bringeth forth death.

We, the best of us, have our infirmities and weaknesses to contend with, and we have the same tempter that our first parents had, to seek to draw us away and entice us to listen to him. But "blessed is the man that endureth temptation, for when he is tried and approved, he shall receive the crown of life, even this side the grave, which our first parents lost in the fall by yielding to the tempter. So the blessing comes on such as endure the temptations, which are wisely permitted to come upon us through our infirmities. But while the Holy Spirit remains in us, we cannot sin; for greater is He that is in us than he that is in the world.

In this glorious gospel day, the Spirit helpeth our infirmities. Christ himself was touched with a feeling of our infirmities, and was in all points tempted like as we are, yet without sin. And I believe we would also be without sin if we would resist the devil as He did. And He has left us an example that we should follow his steps. But I do not say that we shall be clear of infirmities until this mortal shall put on immortality. But while we are here, and at times made partakers of the inheritance of the saints in light, we only see in part, and know in part; but when that which is perfect is come, then that which is in part will be done away. But while I believe it is our duty to strive for perfection on this side the grave, yet I believe that infirmities will still beset us. But while we walk in the Spirit, we shall not fulfil the lust of the flesh, and consequently not sin.

Though we are at times made partakers of the inheritance of the saints in light, yet while we are here, we only see in part, and know in part. Therefore we should not look for more perfection in others than what we have attained to or can attain to in ourselves. But the strong should bear the infirmities of the weak, and not seek to please themselves. Neither should we esteem the frailties or infirmities of others as sinful, when they only spring from the infirmities of the flesh or spirit, contrary to the desire or will of the heart. The royal Psalmist has left us a striking example of sinless infirmity, and also of infirmity that when yielded to, brought forth sin, and sin as it was promised, brought forth death. David, I believe, was said to be a man after God's own heart; yet he suffered the

tempter so to work on his infirmity as to, at times, overcome him, and lead him into grievous sins. But as he had a prayerful and penitent heart, the Lord had mercy upon him, and made him instrumental in his hands in teaching transgressors of his ways, and converting sinners unto him. But he, like Peter, had first to see his own great transgressions, and then go out and weep bitterly before he could be restored to the joys of God's salvation, or teach transgressors of his ways. And we now must see the evil of our own sinful ways, and be touched with a feeling of our infirmities, and turn to the Lord with prayers for a clean heart, and that we may have a right spirit renewed in us, before we can availingly teach transgressors the right way, or convert sinners unto God. For we cannot teach others the right way further than we have learned it ourselves. But there is a Divine Spirit in man, and as we have faith in it, and look to it for strength, it will help our infirmities, and by the inspiration of the Almighty enable us to overcome them so far as to put an end to sin.

As this spirit is nothing less than the Spirit of Christ, let us take his yoke upon us and learn of Him; and we will find it will help to keep every wild thing down, even every thing that tends to exalt us above the true knowledge of God, and lead us away from obedience to the cross of Christ. We shall also find that his yoke is easy in comparison to the galling yoke of sin and spiritual death; and that his burden is light. But above all, we shall find rest to our souls. So turn ye, turn ye, why will ye die?

But let us remember, that the days and battles of David were under the old and outward dispensation, which were figurative of the inward and spiritual gospel day in which we now live. They were only a shadow of good things which were inwardly to come. And now, where Christ the substance has come, the shadows flee away. The battle of the outward warrior is with confused noise, and garments rolled in blood, but the battle of the Christian is with burning and fuel of fire, to the destruction of every thing that impedes our journeying forward through the wilderness of this world, to an inheritance beyond Jordan, which is incorruptible and undefiled, and fadeeth not away.

D. H.

DUBLIN, IRE., Seventh Mo. 13th, 1888.

"EIGHT years ago," said the president of an American railroad, "I resolved to abandon the use of all alcoholic beverages for the sake of my influence over others. I reflected upon the importance of having sober men in our employ, and also upon what would naturally be the influence of my example over my own son, just entering manhood."

But the beneficial influence of this resolution, consciously adhered to from that hour, was wider than he had supposed possible at the beginning. Incidentally, we have learned that, in the semi-annual gathering of railroad officials, his refraining from wine and other strong drinks was always warmly commended by those present, indicating in their judgment strength of character to govern him in the important trusts with which he had been invested. He was, consequently, chosen by them to serve on committees having great responsibilities, and his views on matters affecting the interests of stockholders uniformly received special consideration.

We give this as an illustration of a fact, well known, and yet too often forgotten, namely, the surest way to win the confidence of men is by our giving conscientious attention to the kind of influence we are exerting over them. It

requires no further argument than this to convince them of our sincerity and true friendship. — *Christian Advocate.*

FOR "THE FRIEND."

A Visit to Elklands, Pa.

(Continued from page 27.)

Although the fertile valleys are mostly occupied by settlers, and many farms have been chopped out on the mountains, yet a large portion of the country is still covered with forest. In the course of our visiting we came to a small stream, a branch of the Loyalsock Creek, on whose bank we saw a number of saw logs. These had been cut on the surrounding mountains, and hauled there on the winter's snow, to wait for the swelling of the waters in the spring, so that they could be floated down to the main stream. This is rough and exciting work for those engaged in it, who accompany the logs on their downward course, preventing them from lodging on the banks or among the trees; and who plunge into the water, when necessary, to bring back the floating material into the current. Thus the various streams which wind among these mountains, and drain off the superfluous waters, furnish each its share of the logs, which supply the great mills of Williamsport and other places on the Susquehanna.

At certain points on the larger streams, the logs are built into rafts, perhaps 18 feet wide and 100 feet in length, but varying according to circumstances. Several men go with each of these, and by the use of rudders and oars, keep them in the current of the streams. One of our friends, who had rafted lumber on the Loyalsock, said that he had been carried 3 miles in 24 minutes; so that it may well be imagined that to guide such unwieldy masses in such rapid currents, requires men of skill, strength and energy.

The wild and wooded country formerly abounded in wild animals, and many were the hunting stories that were told us. So abundant were deer, that one fall the father and uncle of a Friend, with whom we spent a night, killed 92 of these animals. A few of them are still left, but they are not numerous.

Wolves are now extinct, their destruction having been hastened by the bounty offered by the State of Pennsylvania for their scalps. On one occasion, Joel McCarty, the husband of that valuable minister, Ellen McCarty, of whom a memorial was issued by her meeting, had set a steel trap for wolves. During the night, he and his wife were awakened by a sound that seemed to be the barking of a dog in distress, and Ellen told him he must have caught a neighbor's dog in his trap, and urged him to go and set it free. On reaching the spot, he found an animal fast in the steel; and opening the jaws of the trap, he gave it a kick and told it to go home. It was not slow in obeying, and as it galloped off, Joel saw that it was a wolf, and that he had lost the \$15 which its scalp would have brought him.

Bears still occasionally visit these parts, having, as is supposed, their homes in some of the mountain swamps. They are unwelcome visitors, because they destroy sheep, the raising of which forms an important part of Elkland farming. They kill one or more sheep at a time, and eat what they wish. They are very apt to return in a night or two afterward and consume what had been left of the carcass. When a partially eaten sheep is found, the people set loaded guns in the vicinity, pointed in the direction of the sheep, and with strings running from it to the

guns, so that any disturbance of it will discharge the weapons. Several bears had been killed in this manner within a few years. I saw a spot in a wild ravine, where this kind of a trap was set. The gun was discharged and the bear wounded, but not fatally. My friend and another man started in pursuit on his trail, and they and other parties followed it for 15 miles over the mountains, unsuccessfully. In a day or so afterwards, the animal returned to the same neighborhood and continued his depredations, killing in all 8 sheep before he himself fell a victim.

Elk have long since disappeared; but the same friend who pursued the bear said he had found some of their horns on his farm, which had evidently been exposed to the elements for a number of years. A very fine specimen was killed a few years ago in Potter Co., Penna., some distance to the westward of Elklands. The skin of this was mounted and placed in the museum of the Academy of Natural Sciences, Philadelphia.

Rattlesnakes are still found in the mountains, but, I should suppose, are not so often seen as in the swamps and pine lands of New Jersey. One Friend showed us a rattle taken from the tail of a snake which he had killed. A stout thread had been passed through it in such a manner, that by moving the string the rattles were put into quick vibration, very much as they are at the will of the living reptile. The sound was quite similar to the trill made by the *Cicada* or common locust. It was a good thought thus to familiarize the ear with the sound made by this dreaded snake, so that one could recognize its presence even when concealed from view.

The approach of a shower of rain and the motions of the clouds excited much interest. On the wooded slopes of the adjacent mountains, masses of vapor were formed, resembling lines of smoke rising from various points. It was a beautiful illustration of cloud formation, which we watched with great pleasure.

A thunder storm naturally led our friends to speak of the effects of the lightning—and they assured us that when a house is struck by the electric fluid, the dog of the family is sure to be killed. Why this is so, I cannot tell. It may have happened in a few instances, and from these a general law may have been deduced which requires further observation to establish or disprove.

Since the preceding remarks were written, we have received information of the killing by a stroke of lightning of a yoke of oxen, which we suppose to have belonged to the kind Friend from whose house we watched the clouds during a thunder storm. But this loss was a small matter compared with that of the boy who was driving them, whose life was taken by the same bolt. If our information is correct, he was a nephew of the Friend, and an inmate of his family. J. W.

In his reply to Thomas Hicks, an Anabaptist preacher who had published an attack upon Friends, William Penn says:—"I charge him with another lie, in saying that we appoint ministers beforehand, to speak in such a place, at such a time; and much less that the end of our meeting is to decoy, trepan and inveigle others, as he scoldingly and falsely insinuates. We deny the suggestion, and renounce and judge such practices by that pure Spirit which hath otherwise taught us. God preserve us from that dry, hireling custom."

[A friend in Ohio sends us the following article piece, as a lively description of Ohio harvest scenes forty years ago.]

FROM THE SALEM REPUBLICAN.

HARVEST-TIME.

BY MARY M. HOLE.

The harvest-time has come again,
We hail it with delight;
It marks the year, as marks the day
Each morning, noon and night.

Its time appointed never fails,
Tho' aeage be its yield,
With gratitude we gather in
The products of the field.

The sound of reapers, mowers too,
Is heard both far and near;
The whetting of the olden scythe
Falls sometimes on mine ear.

This keenly whets my memory,
And fondly brings to view
The meadow of my childhood home,
Its harvest scenes renew.

'Twas there, in homedade linen garb,
My father led the way;
Five scythes in unison with his,
Behind them six swarths lay.

The morning sunbeams shone as now,
Upon the drops of dew,
Commingled with the purple bloom
That from the tall grass grew.

And when the strong meridian rays,
Upon the swarths would pour,
The boys would come with rakes and forks,
And turn them o'er and o'er.

'Twas then in childish girlhood glee,
That sister E. and I,
Dore to the mead the crystal draught,
To quench the thirsty cry.

Then, father kindly greeted us
With tender, loving words;
And bade us not distantly the nests
Of scolding mother birds;

Because the ruthless scythe had scared
A tiny fledgling brood,
Or bared the little speckled eggs,
And narrowed their happy mood.

He warned us of the humble bees;
But we liked the childish fun;
We loved to punch the buzzing nest,
And then like cowards run.

'Twas oft our lot to bear the sting
Of mischief warned to flee,
Because our rest-less spirits longed
The straight spout to see.

And when the evening shades would fall
To close the busy day,
The air would teem with sweet perfume
From off the new-made hay.

The brindle cow that led the herd,
Would calmly watch the scene;
And when the last load left the gate
She claimed the right to glean.

With knowing look and tossing head,
She gave the signal low;
And soon the herd, with the mead
Were running to and fro.

I wonder oft how children now
Enjoy the harvest days,
Inventive genius has so changed
The work in many ways.

A life-time harvest, too, has come,
For father's had to fall
Before the swaying scythe of time
That soon shall reap us all.

The Master of that harvest knows
Just when the time will be;
Just when these trifling forms shall fall
And set our spirits free.

Oh! may we hail it with delight,
And yield a well-spent life,
To Him, who goes before us here,
Through every field of strife.

ALONE WITH THEE.

SELECTED.

Into thy closet, fleeing as the dove
Both homeward flee,
I haste away to ponder o'er Thy love,
Alone with Thee.

In the dim woods, by human ear unheard,
Joyous and free,
Lord I adore Thee, feasting on Thy word,
Alone with Thee.

Amid the busy city, thronged and gay,
But One I see;
Tasting sweet peace as unobserved I pray
Alone with Thee.

O sweetest life—life hid with Christ in God,
So ninking me,
At home, and by the wayside, and abroad,
Alone with Thee.

—Elizabeth Prentiss.

A QUARREL.

SELECTED.

There's a knowing little proverb,
From the sunny land of Spain;
But in Northland, as in Southland,
Is its meaning clear and plain.
Look it up within your heart;
Neither lose nor lend it—
Two it takes to make a quarrel;
One can always end it.

Try it well in every way,
Still you'll find it true;
In a fight without a foe,
Pray what could you do?
If the wrath is yours alone,
Soon you will expend it—
Two it takes to make a quarrel;
One can always end it.

Let's suppose that both are wroth,
And the strife begeth;
If one shall cry for "Peace,"
Soon it will be done.
If but one shall span the breach,
He will quickly mend it—
Two it takes to make a quarrel;
One can always end it.

FOR "THE FRIEND."

History and Romance.

I do not feel easy to let pass without comment, the story given on page 413 of the last volume of THE FRIEND, in relation to the first case of counterfeiting coin in America. As it presumes to be matter of history the true facts should have been given; but the writer has drawn upon his imagination for much that is said, and mis-quoted authentic records for the rest.

It is reported that Thomas Pickering, a silversmith of London, coined several barrels or kegs of false money, and, dressing himself in Friendly garb, came to Pennsylvania to pass it off among the unsuspecting colonists. His arrest disclosed several thousands of the false coins in his possession; and a grand jury—the first in the colony—being convened for that purpose in the spring of 1683, rendered a decision (sentence) against him.

It is likely that little or nothing is known of this case beyond what is given in the Minutes of the Provincial Council. The name of the principal offender was Charles Pickering, who employed one Robert Felton or Fenton to coin 24 lbs. of silver, to which a few ounces of copper were added, beyond the legal alloy. Felton made the dies, and testified that Charles Pickering and Samuel Buckley helped him to make the "bits," as the pieces of money were called. As all the parties were here, the money was doubtless made here (perhaps in New Jersey), as they said it was not made in this Province. Governor Penn questioned Pickering and Buckley, and "they confessed they have put off some

of those new bits, but they say that all their money was as good silver as any Spanish money, and also deny that they had any hand in this matter."

The grand jury (not the first in the colony) of whom the writer gave only two-thirds of the names, was impaneled on the 25th of Eighth Month (August), 1683, and finding a true bill against the prisoners, their case was submitted to a petty jury the next day. The Governor sat as judge, and, after a verdict of guilty was rendered, proceeded to sentence the offenders; beginning with, "Charles Pickering, the Court hath sentenced thee for this high misdemeanor whereof thou hast been found guilty by the country, that thou make full satisfaction in good and current pay to every person that shall, within six space of one month, bring in any of this false, base and counterfeit coin, * * * and that the money brought in shall be melted into gross before returned to thee," &c., &c.

Samuel Buckley was fined ten pounds towards a public court-house, and Fenton sentenced to sit an hour in the stocks.

Aside from this episode there are some facts of interest in the history of Charles Pickering. Before leaving England, William Penn conveyed by deed of March 16th, 1681, one thousand acres of land, in Pennsylvania, to Charles Pickering, master, of Asmore in the County of Chester, England. In the First Month, 1683, certain mariners belonging to the "Friends' Adventure," complained to the Provincial Council about not receiving their wages according to contract; and it appears that Charles Pickering and Richard (?) Wall were the persons against whom the complaint was made.

It is said that Pickering, in the hope of discovering some of the precious metals, explored the valley of the Schuylkill, and finding what he believed to be traces of silver in the sands of one of its tributaries, he took up a tract of over five thousand acres in that locality. He is mentioned in the Colonial Records occasionally as an attorney-at-law, and in 1690, he represented Philadelphia County in the Assembly. In his will he styles himself a merchant of Philadelphia; but it does not appear that he left any children, as he devised his lands to be equally divided among sixteen of his friends—men of wealth and influence in Philadelphia. His death occurred in 1694, and it is said that he was drowned while crossing the Atlantic. His lands, which lay in Chester County, were divided in 1705, but remained unimproved for some years. In 1722, the tract was organized into a township, to which the name of Charlestown was given in his honor, and the stream flowing through it, on which he found his supposed silver, was called Pickering Creek. In 1826, the township was divided, and that part lying on the river received the name of Schuylkill.

GILBERT COPE.

WEST CHESTER, Pa.

The chief difference between agreeable and disagreeable people in this world, between those whom everybody loves, and those who are loved by nobody, is in the place given by them respectively to *self*, in their thoughts, in their words, and in their actions. Those persons who give the first place to themselves, in their intercourse with others, cannot well be pleasing to others. And those persons who lovingly give the first place to those whom they meet, cannot be generally disagreeable, whatever they say or do. If a person thinks of himself, thinks of what he can say of himself, thinks of what the other is

likely to think of him, thinks of the impression he will make on the other, he is sure to stand in his own light when he meets another. But if he thinks first of the other person, thinks of the other's good side, thinks of what he can say that will gratify the other, or that will help the other, and if he speaks and acts accordingly, he is sure to be a means of light and cheer to others. —S. S. Times.

Natural History, Science, &c.

Uses of Sea-weeds.—To all our shores, old ocean brings a liberal supply of drift weed, precious to the farmer, to whose lands they supply the phosphates and salts which nourish all plants. Cattle too and horses, and sometimes sheep, find their winter fodder on the shore, and in times of scarcity many of our poor fellow-subjects eke out their scanty living by the use of certain seaweeds, chiefly those known as dulse and tangle, which are offered for sale in many of our Scottish towns, not in the prepared forms, which to the Chinese and Japanese appear so appetizing, but in their crude, uninviting state. Now, when all food-products are being scientifically discussed, the merits of this great family are being realized—a family, moreover, of which not one poisonous species is known.† So now wise men are turning their attention to methods for utilizing these edible properties as food for man and beast; and in addition to these, many other good qualities are now being discovered. It is found that sea-weed yields a jelly ten times as strong as isinglass, and, by a new process, this glutinous matter can be separated from the weed, and an altogether new substance is obtained, to which the discoverer has given the name of *Algina*. It closely resembles horn, and has all the properties of strong glue, and of a transparent starch, and has already been applied to many practical uses,—in stiffening fabrics, in applying carbon to the lining of boilers, &c., &c. The weed from which it has been extracted, is bleached to a fairly pure white, and being dried and pressed, forms a rough material, which seems likely to prove an excellent substitute for rags in the hands of the paper manufacturers. The other processes to which weed is now subjected to obtain its salts, leave a large residuum of charcoal, which is of value of its own as an effectual and economical desodorizer. Altogether the prospects of sea-weed are looking up, and there seems good reason to hope that the Hebridean Isles may yet find a source of wealth in reaping the self-sown crops of these their great natural harvest fields.—*In the Hebrides.*

The Stranger's Cold.—There is a curious belief in St. Kilda, one of the Western Islands of Scotland, that the arrival of a vessel from the mainland is sure to be followed by a species of influenza. This belief is noticed in a history of the islands, published in 1716, and by different writers since that time. Why such an effect should be produced by such a cause, it is difficult to explain.

A writer in *Chambers's Journal* mentions several analogous facts, respecting other parts of the world. H. W. Bates, in his interesting and reliable work, *The Naturalist on the River Amazon*, mentions that some of the native tribes on the upper waters of that river, dread the arrival

* In this hard spring, of 1883, sea-weed (*Fucus vesiculosus*) is being largely used by the poor Irish, chiefly in Limerick, where it is prepared with Indian corn.

† Dr. Leteby's Chemical Analysis shows that sea-weed contains an average of 60 per cent. of mucilaginous matter, and from 9 to 15 per cent. of "flesh producing" material.

of any visitors from civilized settlements, since it is almost certain to be followed by a disease (if we remember correctly) of a pulmonary character.

Tristan d'Acunha is a remarkably healthy island, but it is said that a vessel from St. Helena touching there invariably brings with it a disease resembling influenza.

In several of the islands of the Pacific Ocean, dysentery and other forms of disease, previously unknown, followed the advent of the white man; and in some cases missionaries who had visited them were murdered or compelled to flee on this account. So strong was the fear of infection from strangers, that when first visited it was found that the people of Savage Island, near Tonga and Samoa were in the habit of killing every person who landed there, from fear lest they should introduce disease.

In the *British Medical Journal*, of Ninth Month 4th, 1886, a disease is described of the nature of influenza, which affects the residents of one of the Chatham Islands (to the east of New Zealand), whenever a vessel comes into port. The mere occurrence of this disease is regarded by the people there as proof of the arrival of a vessel; and without other evidence they have ridden to the port from a remote part of the island to fetch their letters, &c.

The Garden Spider.—An observer of the habits of these insects says, he placed one in a glass case, whose bottom was filled with earth. Next morning he found a perfect web spun horizontally across the case, about half way up. "He placed a small house fly in the case, when it soon became entangled in the web. The spider immediately seized and killed it; and after sucking all the moisture out wrapped it loosely round with web and let it fall to the ground."

"After this we placed four flies in the case, three of which were speedily caught. Running to each in turn, she turned the fly rapidly round and round with her front legs; at the same time two distinct webs kept winding round the fly from the spinnets, until it was encased in such a bag of web that the fly could not be seen. She then hung them in different parts of the web, and ate two of them the same night. We detached one from the web, and after exposing it to the air for three days, opened the case and found it was quite fresh. This clearly shows their wonderful instinct in preserving food for future meals."

In the Ninth Month the spider destroyed her web, and spun a bright yellow cocoon on the top of the glass, and laid about 360 eggs. The account was written in the First Month, and at that time she still remained hanging on this cocoon, greatly shrunken in size, refusing food, and appearing in a dormant, if not a dying state.

One spider that this observer was in the habit of feeding every morning with a fly, became so accustomed to it, that when he shook her net, she would come and take the fly from his fingers.

Pure Water for Cows.—Prof. Law, of Cornell, caused some cows to drink for several days from a stagnant pool; and on examining their milk with a microscope found it full of living organisms the same in kind as those in the pool. The cows were then examined and found to be in a feverish condition, their blood being charged with the same minute animals. The lessons to be learned from these experiments is, that the cows must have pure water to drink, in order to produce wholesome milk.

Items.

Public Meeting at Malvern, Pa.—A meeting for the public generally was held at Malvern, Chester Co., Pa., on the afternoon of First-day, the 19th of Eighth Month. Its appointment was by the joint action of the Committee set apart for religious service by the Yearly Meeting of Philadelphia, and of a similar committee of Concord Quarterly Meeting. The meeting was held in Friends' Meeting-house at Malvern, which was considerably crowded on the occasion; but by the help of extra chairs and benches, seated the multitude of those who took charge of the seating of the people, nearly 300 people were seated within its walls.

For a time a solemn quiet prevailed over the gathered assembly, which was followed at intervals by the vocal exercises of several Friends who felt called upon to address the company convened, or to offer petitions to the Throne of Grace.

There was considerable variety in the communications delivered; yet substantial unity in the doctrines and exhortations presented. In different forms, there was held up to view the fundamental doctrines of practical religion,—that the Grace of God brought salvation, that it visits all, and bids them to obey it in the path of holiness; that the Divine power operating on the mind effects in those who submit themselves to its government, the great change which our Saviour declares to be essential for all to experience who would enter the Kingdom of Heaven. Earnest were the exhortations to those who were visited by this grace, not to reject the claims of the Holy Spirit.

It was stated that this meeting had been appointed from a religious concern for the spiritual welfare of the people of that neighborhood; and the thoughtful and serious persons present, of whatever denomination, were encouraged to maintain a similar exercise of spirit for the good of the community, so that it might be the harmonious labor of many people righteousness, which alone "exalteth" any one.

Priesthood vs. Priestcraft.—Under this heading *The [London] Christian* comments on a "Letter on Confession in the Church of England," in which the author, a ritualistic clergyman of that denomination, claims for the priest the Divine authority to absolve the penitent of sin.

Methodism in Israel.—It is to be noted in the Christian Church there is no priesthood on earth, but that of all the saints; and that "In permitting this false priesthood to be established in our midst, we are but following in the steps of Israel, who committed two evils; first, they had forsaken God the fountain of living waters; and, secondly, they had hewn out for themselves cisterns, broken cisterns, which could hold no water."

The Salvation Army in India and Water Baptism.—The officers of the Salvation Army in India have not followed the practice of missionaries generally, in requesting their converts to undergo water baptism. Their position on this subject is shown in the following letter, published in *The [London] Christian*, which is interesting to us from its approach to the views of "Friends" in reference to this rite:—

"Dear Sir,—With reference to the letter signed 'A Zenana Missionary,' in your issue of May 18th, of the question raised by your correspondent in regard to the baptism of our converts is one on which we can now speak with some authority, having had nearly six years' experience.

"We consider that our position is quite as Scriptural as that of Z. M., for (a) we insist on all our converts having the one essential baptism of the Holy Spirit, and (b) that, in the words of one of the Apostles, and though sent especially to the heathen Gentiles, boldly alleges that he was *not sent to baptize*, but to preach the Gospel, and thanks God that, though he spent a year and a half in Corinth, and had hundreds of converts from idolatry, he scarcely baptized a single one of them; and (c) that, if we have, and have no objection to water baptism. What we do dislike is the controversy that it invariably entails. If Christians in general would only agree among them-selves as to *how, when, where, and by whom* it was to be done, I venture to say

that we should willingly adopt the use of it ourselves. But while the churches are torn with internal dissensions regarding infant baptism, immersion, sprinkling, ministerial and lay baptism, we feel that we have as much right to shelve the question as other evangelists.

There is a mistaken notion that among the heathen water baptism prevents the converts from back-sliding. I am sure, from careful observation, this is not the case, and know in one district of hundreds who have been formerly baptized, but who have since openly returned to heathenism. One leading missionary assured us that he had baptized forty converts, and could not lay his hands on a single one of them, all having relapsed, so far as he was aware, to heathenism.

"We have, side by side, baptized and unbaptized soldiers and officers, and we would defy any one to distinguish the one from the other in all the gifts of the Holy Ghost.

"Z. M. is quite mistaken in supposing that our converts escape persecution by not being baptized. I could quote scores of instances to show that the contrary is the case.

"Every one admits that our tests of sincerity are far severer than those enjoyed by any other mission. Not only is no inducement offered in the form of money, or houses, or other comforts, are expected to support their officers, attend daily meetings both in the open air and indoors, testify in public, wear uniform, abstain from drink and tobacco, and prove the truth of their profession by the holiness of their lives. Would Z. M. venture to apply these tests to his converts?"

"Yours faithfully,

"F. DELATORR BOOTH-TUCKER,
"Salvation Army, India."

Discontinuance of The Interchange.—The number of this periodical, dated Seventh Month 28th, announces that it has been concluded to discontinue its publication. It was commenced a few years ago by Friends in Baltimore, as a means of communication among the members of that Yearly Meeting.

How to Avoid Declension.—[A friend sends to us the following extract from an address delivered by a Methodist preacher at a Conference recently held in Cornwall, England. He accompanies it with the remark, "If we would not in reading it, we might substitute the word *Quakerism* for *Methodism*, it might serve as a watchword to some of our own people.]

"I may say that I am a Methodist and the son of a Methodist, and I have a growing conviction that we cannot do a better thing for ourselves or our families and the community at large, than to extend and strengthen the Methodist Church; but if we do this we must remember what J. Wesley is reported to have said when asked what Methodist people must do to keep Methodism alive after he was dead. He said they must take heed to their doctrines, experience, practice, and discipline. If they took heed to their doctrines *only* they would become Antinomians; if they took heed to their experience *only* they would become enthusiasts; if they took heed to their practice *only* they would become Pharisees; and if they did not take heed to their discipline they would become like a man who bestows much pains and expense on his garden, but leaves it without a fence to be 'devoured by the wild boar of the forest.'

An Acknowledgment for Kindness Received.—A Chicago Jewish congregation recently asked the use of a neighboring church (building) until their new synagogue was completed, and accepted the offer for some months. On their withdrawal, the pastor of the church received the following grateful and remarkable letter:

"To the Pastor and Board of Trustees of the First Christian Church of this city:

"*Honored Sir*—Yesterday our congregation held their last service in your house of worship. We took leave of its sacred precincts with feelings of true attachment as a natural consequence of your kind hospitality enjoyed therein during these past twenty months. This, your kindness, was one more of those precious links in the golden chain of mutual recognition which, under the fostering arms of true

American civilization, reconciles the disciples of Moses to the disciples of Jesus. May this Godly spirit of a free fraternization abide and increase as the years roll on! May the Eternal Lord of Hosts, the God of Israel, bless your church and all your hopes and plans! For my brethren's sake and friends' sake, I bespeak peace for thee. For the sake of our God's house I solicit thy well!—Psalm cxlii. 8, 9. Ever faithfully yours,

"S. H. SONNENSCHEIN,
"Rabbi of Congregation Temple Israel,"

THE FRIEND.

NINTH MONTH 1, 1888.

In the year 1675, William Dewsberry addressed an epistle to his friends, encouraging them to faithfully bear their testimony to the truth in the midst of the persecutions and sufferings to which they were exposed; and not to rest satisfied without knowing the work of regeneration perfected in them. "Seeing many are called, and few chosen; many convinced, that are not converted; and many come forth with us, and go forth from us, that are not of us, as by sad experience hath been witnessed;" he felt constrained to caution them against the wiles of the enemy, who would seek to draw them into a confidence in the outside form and profession of truth, and thus cause them to lose that "Heavenly hunger" which seeks after full possession of the Divine life.

"Therefore," he says, "all dear Friends watch diligently to the heart-searching light, that so the enemy may not prevail against you; that whatever the Lord has convinced you of to be evil, you may wait upon Him for strength to preserve you out of it; so you may stand clear before the Lord, that you are willing to do and suffer whatever the Lord should call you to. And when you have done all this, then be you watchful to the heart-searching light, that the enemy doth not draw your minds to place your confidence in the work of righteousness you have done, as the ground of your hope and calling to Christ, and want faith in Him, and so cause you to rest in your services, and so come short of the hidden life, enjoyed through faith in the light and life of Christ, our righteousness."

"So, tender Friends, that truly seek God's glory, and so love his light that you are willing

to give up life and all to do his will; when the enemy would draw you to rest in what you have done, you see that all that you add there is your duty and your reasonable service which you must do, or otherwise you perish eternally; and woe to the souls in the light travel on in the companions, who are weeping in secret, and inwardly seeking the Lord God to be married unto Him in that hidden life which is hid with Christ in God."

These remarks of William Dewsberry illustrate a truth—which many have experienced—that even after the mind has known the pardoning love of God, and a remission of past sins, there is a further work to be accomplished in the purification of the soul; and this work is attended with conflict and suffering. So that those who thus mourn in secret over their imperfect and frailties, cannot believe in the doctrine which some superficial teachers proclaim, of *uninterrupted* joy and peace, to be felt by all who have entered the path which leads to eternal rest. The Lord does indeed give the needful food to the soul that seeks its nourishment from Him; but He also permits it at times to hunger and thirst, and to pass through trying conflicts, which He sees to be a discipline necessary for its own good; for "what son is he whom the Father chasteneth not;" and this chastisement afterwards "yieldeth the peaceable fruit of righteousness to them who are exercised thereby."

To the sincere seekers after God and the light of His countenance, William Dewsberry gives a loving exhortation to "lift up your heads and stay your minds in the light of the Lord Jesus." "Oh, tender babe, born of the immortal seed, lend not thine ear to any of thine own thoughts, doubts and unbeliefs, neither to the accuser, who seeks every way to discourage thee for trusting in the name of the Lord; but diligently incline thine thine ear to the righteous counsel, which is the light and life. The Lord will satisfy thy hungry and thirsty soul with his everlasting loving kindness in Christ Jesus; and thou wilt receive dominion to reign over thy own thoughts and thy own will, and to walk in his strength in the word of faith, which will give thee victory over the world within and without; so will thy heart be kept pure, thy conscience clean, and thou clothed with a meek, low and quiet spirit."

We publish on another page an interesting article, "History and Romance," correcting a statement which was copied into THE FRIEND a few weeks since, in relation to counterfeit money circulated in the early days of the settlement of Pennsylvania. We feel indebted to our friend Gilbert Cope, for the information he has furnished.

SUMMARY OF EVENTS.

UNITED STATES.—The Senate on the 21st ultimo, rejected the Fisheries Treaty, by a strictly party vote.

President Cleveland on the 23d ult. sent to Congress a message upon the fisheries question. He said: "I fully believe that the treaty just rejected by the Senate was well adapted to the exigency, and that its provisions were adequate for our security in the future from vexatious incidents and for the promotion of friendly neighborhood and intimacy, without sacrificing in the least our national pride or dignity. I am quite conscious that neither my opinion, nor the value of the rejected treaty, nor the motives which prompted its negotiation are of importance in the light of the judgment of the Senate thereupon. But it is of importance to note that this treaty has been rejected without any apparent disposition on the part of the Senate to amend its provisions, and with the evident intention, not wanting

expression, that no negotiation should at present be reached touching the matter at issue. I recommend immediate legislative action conferring upon the Executive the power to suspend by proclamation the operation of all laws and regulations permitting the transit of goods, wares, and merchandise in bond across over the territory of the United States to or from Canada. There need be no hesitation in suspending these laws arising from the supposition that their continuation is secured by treaty obligations, for it seems quite plain that Article XXIX of the treaty of 1871, which was the basis of the article authorizing such laws, terminated the first day of July, 1885."

Captain Harris, acting superintendent of the Yellowstone National Park, in his annual report to the Secretary of the Interior, expresses the opinion that the number of elk, elk deer, and mountain sheep, which find a refuge in the Park have heretofore been considerably underestimated. He finds that fully 200 buffalo range over the divide between the Madison and Yellowstone rivers, in summer and winter in the adjacent valleys. The elk, deer and mountain sheep, he says number many thousands, and are constantly increasing. With proper protection, he says, no fear need be felt that any of these animals will ever become extinct in this country.

The shipment of standard silver dollars from the mints and sub-treasuries in Philadelphia, New York, New Orleans and San Francisco for storage in the large new silver vault in Washington, began on the 28th ult. The shipments will be made in lots of \$500,000 a day, and will continue until the vault is filled. The vault has a capacity of \$100,000,000 in silver dollars, and it will take about six months' time to fill it at the rate of shipment decided upon. It is estimated that about \$20,000,000 will be shipped from each of the cities named. The first shipment will be made from Philadelphia. The old vaults of the Treasury already contain \$68,000,000 in standard silver dollars, and this sum will be swelled to \$168,000,000 when the shipments now contemplated are finished.

Jerome Cohen and station Phelps, prospectors, have found a very rich deposit of nickel in Logan County, Kansas. They have been offered \$50,000 for their find.

A despatch from Marquette, Michigan, says forest fires are raging all along the railway lines of the peninsula.

A tornado swept over a strip of country about six miles south of Wilmington, Delaware on the evening of Eighth Mo, 21st. Orchards were destroyed, houses unroofed and several persons killed. The water swept up both sides of Chesapeake Bay and did considerable damage, though no lives were lost. Numerous frame houses and barns were demolished and two schooners were overturned. Entire fruit orchards in Maryland were destroyed. A waterspout was carried from the mouth of Chesapeake Bay across Pooles' Island.

The steamers Oceanic from Hong Kong and Yokohama ran into the steamer City of Chester, in the Bay of San Francisco off Fort Point, on the morning of the 22d ult. during a heavy fog, and both were smashed to halves. When the steamers were locked, a number of the City of Chester's passengers were passed up to the Oceanic's bow and rescued. The City of Chester began to sink immediately after the collision, and in five minutes she was completely submerged. The Oceanic was so far as known 34 persons were lost—10 cabin passengers, 21 steerage and 3 members of the crew.

The Galveston News has published the cotton crop reports from 141 points in 85 counties, covering the entire cotton-producing section of Texas. These indicate the condition of the crop to be about the same as last year. Allowing for the increased acreage and the superabundance of rain during the first six months of the year, a crop of 150,000 bales seems assured, with the possibility of an increase of 20 per cent. The present year's crops are sufficient to start a vigorous growth of the plant again, and an open fall favors the development of all the late cotton.

Up to Eighth Month 27th, the total number of cases of Yellow fever reported at Jacksonville, Fla., was 107. The deaths have numbered 17; discharged cured, 28; still under treatment, 62. Many of those under treatment are convalescing.

The number of deaths in this city last week was 434, which was an increase of 65 over that of the previous week, and of 36 over the corresponding period of 1887. Of this number, 143 were children under one year old; 238 were males and 221 females; 44 died of consumption; 44 of cholera infantum; 41 of typhoid fever; 28 of marasmus; 28 of pneumonia; 24 of inflammation of the stomach and bowels; 23 of old age; 18 of con-

Incidents and Reflections.—No. 164.

CONVINCEMENT—WORK OF THE SPIRIT.

It is interesting and instructive to trace the dealings of the Almighty in bringing men under a deep feeling of their need of his grace to teach, guide and preserve them.

Stephen Grellet mentions that when at Bremen in Germany, in 1814, he met with a small company of persons who were in the practice of meeting together in silence, to wait upon and worship the Lord. They told him of a sailor who resided about sixty miles distant in Friesland, who had gone to England a few years before, and being at Yarmouth, happened one day to pass by the meeting-house of Friends, as they were going in. He felt inclined to enter also. The meeting was held in silence; but such were the strong convictions made by the Spirit and power of truth on his mind, that after his return home he continued in the practice of silently sitting down to wait on the Lord, though entirely alone. Having heard of the pious people at Bremen, he sometimes came to sit with them. S. Grellet says: "What was their surprise, when, that very evening, shortly after we had sat down together and were gathered into silence, they saw him coming in! I could not help noticing the great reverence with which he sat, and the brokenness of his spirit during the meeting. The little intercourse we had with one another afterwards furnished me with an evidence that he is a disciple of Jesus."

Still more striking is another case which S. Grellet thus describes in his Journal:—

"A few days ago I had a meeting in the forenoon at Pickering; on my way thence, to a large village some miles distant, where I had appointed a meeting to be held in the evening, we overtook a man, on foot, going the same way. A Friend, who accompanied me, being alone in his chaise, invited him to take a seat by him. He soon recognized him as the person whom he had noticed in the preceding meeting, much affected by the testimony of Truth that was proclaimed. My friend's attention had been so attracted towards him, that he tried to speak to him after meeting, but in the crowd he had lost sight of him. Now, the stranger, after alluding to that meeting, was melted into tears, and then broke forth somewhat in this strain: 'What is the matter with me? what is all this? I have never known anything like it. I was going towards

Scarborough, and on my way I felt an irresistible power turning me towards Pickering, about six miles out of my way, a place where I had no business, neither had I been there before. Arriving there this morning, I heard of the meeting, and thought that I must attend it; but I was so unwilling to do so, that after going to the door, and looking into the meeting-house, I tried to go back again, but I felt constrained to go in and sit down. O, I heard such doctrine there, delivered with such awfulness and power, reaching my very heart, as I had never done before; my secret actions and thoughts were set before me; a heavenly flame was kindled in me,' &c. Then he stated that at the conclusion of the meeting he retired as speedily as possible into the fields, out of sight, to give vent to his tears, and having heard of the meeting that evening, he was now on his way to it. It was another solemn meeting; blessed be the Lord for ever and ever."

When at Berne in Switzerland, in 1832, S. Grellet states, "I was recognized by a female as I passed her in the street; she saw me when I was here before, and was at a meeting. She says it was the first time in her life that she had been in a Christian assembly. She was greatly astonished at my communication, for it seemed to her as if I was singing her out of the large company and exposing her conduct, even her secret thoughts, before them all; and yet she knew that I could not have any knowledge of her; nor could any body have informed me of what none knew but herself; but she has since found that there is One who knoweth the secret of our hearts. Now she knows and loves God, and is willing that He should try her, prove her, and show her her thoughts."

True Gospel ministry can only be exercised at the command and by the help of the Spirit of Christ; and where the preacher is sensible that the holy anointing power of the Spirit attends his labors, he may rest satisfied that the Lord will bestow such a blessing upon them as He sees proper. He can bring conviction to the hearts of many of whom the preacher knows nothing, and He can carry on in them a work of grace, of which their companions are ignorant—save as they may see the blessed fruits which ultimately become apparent in those who are engrained into Christ, the living Vine.

When S. Grellet was at Bristol, England, in 1820, he had a meeting at a Moravian establishment there, of which he says:—

"The female, who is at the head of the sisters, gave me such a welcome as I could not at first understand, nor recollecting to have seen her before, but I found she had been at the head of the Moravian establishment in Dublin when I visited it some time since. In the course of my religious communication there I particularly addressed a young woman, warning her against yielding to the strong temptation which was assailing her; for if she did, anguish and misery would be the result; but if she sought to the Lord for help to resist it, He would be her saving strength, and would greatly bless her succeed-

ing days. I knew nothing concerning the young woman, but I could not help thinking my address to her a singular one. Now, I am informed that a young nobleman had found means of obtaining access to her, and under fair pretences of strong affection and promise to marry her, he had nearly persuaded her to elope with him. This had come to the knowledge of my informant a very short time before I was there. As soon as I went away the young woman came to her, bitterly reproaching her for telling me the circumstances, but she satisfied her fully that she had not been with me, except in the presence of them all, and that nobody could have told me about it, since no other person was in the secret; she must therefore consider it as a particular interposition of the Lord to induce her to flee from temptation, and escape the ruin that threatened her. The young woman resolved, by the Lord's help, to do so; she was enabled to resist, and soon after heard that he who made such fair promises to her was a profligate person."

At Geneva, in the same year, a number of persons assembled in the evening at the house of a religiously concerned resident of that city, where S. Grellet was present. "After some instructive conversation, a time of silence ensued. The whole company seemed impressed with the solemnity of it. It was some time before anything was said. S. G. then addressed the company in a very edifying manner. Whilst he was speaking, a man who was but slightly known to the family, and had never before attended the little meetings occasionally held at their house, entered the room and took his seat by the door, without interrupting the stillness; and, it was thought, unobserved by the speaker. For a while there was no change in the tenor of his discourse, but towards the conclusion he was led to address himself, with increased solemnity, to an individual whom he described as being in the greatest danger of committing suicide. After a solemn warning against the fearful sin and its awful consequences; the forgiving mercy of God, the beautiful provisions and the entreaties and promises of the Gospel of Christ, and the all-sufficiency of the help of the Holy Spirit, even for the most destitute and sinful, were dwelt upon in such a manner that all present were deeply affected, wondering at the same time, why they should be thus addressed. But, from that time, it was remarked that the man, who had unexpectedly come into the room whilst S. Grellet was speaking, became more serious and frequently attended the evening services which continued to be held by the little company of pious persons with whom he had mingled. It was not, however, till many years after, that he mentioned, that on the evening of the meeting, he had left his own house, under the pressure of great trials, with the full determination to throw himself into the lake. On his way to it, an involuntary impulse caused him to take a less direct course, which brought him to the house where the company were assembled. He entered it, he scarcely knew why, and through the Divine blessing it proved the means of his deliverance."

FOR "THE FRIEND."

Notes on Jamaica.

(Continued from page 53.)

From FORTS, the railroad terminus, we went to Mandeville, only ten miles distant, but 1400 feet higher, by carriage-road, and staid a few days in its delightful climate, where the air is pure and bracing, the orange flowers spreading their delicious perfume on every hand, the handsome coffee plants in full bloom, and the mango trees loaded with fruit. Coconut palms flourish best near the sea, but many other valuable and interesting trees, including the giant cottonwoods, the mahogany, satin-wood, logwood, fustic, several species of palms, the useful mango, lancewood and the pimento (whose dried fruit is the "all-spice" of commerce) were abundant.

While at Mandeville, we visited the extensive coffee plantation of Col. Wynne, who has a large estate of fertile rolling land, of which about 200 acres are in coffee, the largest tract devoted to this crop under one ownership on the Island. The annual outturn varies from 25 to 40 tons of superior upland coffee, which brings a high price in London, whither it is all shipped as soon as ready. The coffee plant is an erect, perennial shrub, bearing a slightly aromatic white flower about an inch in diameter. In most cases the plants are allowed to grow at random, and attain a height of 10 to 15 feet; but in well regulated plantations they are kept trimmed to a height easily reached by the pickers. As the season advances, the white flowers are replaced by berries which when ripe are of a brilliant crimson color, and rather more than an inch in diameter. When fully ripe, these "berries" consist of which contain two grains of coffee surrounded by a pulp, and three other coverings, are picked by hand and carried to the curing house, where they are passed through a pulping machine—a rude implement worked by hand—then thoroughly washed, spread upon the "barbecue," which is merely a drying floor, where the tropical heat quickly dries the grain and shrivels up the "parchment cover," a thin tough membrane surrounding each grain, so that a simple process of rubbing and winnowing quite removes it. Should a shower happen to fall during the drying process, the coffee is liable to injury, and the planters use every precaution to prevent the beans from being wet. When thoroughly dry and clean, it is packed in sacks (mostly from India) of about one hundred weight each, and is then ready for market. The coffee raised on the high mountain plantations is considered greatly superior to that from the lowlands, and will bring one-third or one-half higher price.

Coffee raised from Liberia seed is gradually supplanting that from other sources, as the berry is larger and the flavor finer, enabling it to command the high price which Liberia coffee always brings. Col. Wynne has about fifty bands regularly employed at a shilling per day, and in the picking season about seventy-five additional—mostly boys and girls at from four pence to six pence per day. These laborers work very irregularly, however, and seldom make more than four days' wages each week. The other two days are occupied in preparing for and attending market, not so much to buy and sell, though nearly every one has a triling amount of produce, but for the social opportunity thus afforded. Col. Wynne mentioned incidentally that he had a large number of orange trees in full bearing upon his plantation, which grew up without having been planted,

and received no cultivation whatever. An exporting merchant purchased the fruit on the tree, at the rate of one shilling per barrel. The purchaser is at the expense of picking, sorting, wrapping, packing and transporting the oranges to market (generally New York) where they bring about twelve shillings (or three dollars) per barrel, and yield a handsome profit, if there is not too much loss en route by rotting. Col. Wynne staid his plantation yielded about 2500 barrels of 800 oranges each, the past season.

In passing across the central portion of the western end of Jamaica, we found it rocky and almost arid; the soil is thin and does not retain moisture so as to keep the springs and brooks filled, and during the dry season there is a very great scarcity of water. Of course the population of this part is far less dense than in the more fertile plains and mountains. The chief dependence for water of the people and of the cattle in this section on the farms (or "pens," as they are universally called) is, upon small ponds of rain water collected in the low spots where there is no outlet. These stagnant pools, which become very small and foul toward the end of the dry season, are the only supplies near at hand. We found some of the people in the county of Cornwall were in the habit of carrying (on the heads of the women) all the water for domestic purposes, three, or even five miles from a spring of fresh water. This part of the island does not bear the meaning of its aboriginal name "Xaymaca," signifying "a land covered with woods and overflowing with rivers." This name is nevertheless appropriate to the greater part of the island, whose plains are intersected by deep, swift-running rivers coming from the high valleys, and making fertile the alluvial lands. Of course they are navigable for short distances only; the Black River and the Milk River being among the longest, can be passed by small boats for 30 to 40 miles. The swampy land on the margins gives the traveller many glimpses of the luxuriance of tropical vegetation, a description of which I will not attempt. Lady Bracey, in her last account of the *Suabean's* cruise, entitled, "The Trades, the Tropics and the Roaring Forties," may be referred to, as enlarging in her delightfully enthusiastic manner, upon this topic.

The turkey buzzard is a most useful bird in Jamaica, and abounds everywhere on the lowlands, especially in the cities, where they perform a large amount of scavenger work; or more pleasing, if less useful members of the feathered tribe are common, among which the mocking bird is probably the sweetest singer. We saw no parrots, and I believe they do not live in the forests of this Island. The great pelicans interested us much, as they swiftly wheeled over the water, and diving with unerring aim, rose again with a fish safely stowed in the great pouch under the lower mandible.

Some years ago the cane fields were devastated by rats to so great an extent that the mongoose (or *Ictoneumon*) was introduced from India to exterminate them. This little animal is of the weasel tribe, and feeds only upon flesh, and in a few years succeeded in almost wholly exterminating the rats; but when this source of food was exhausted, it turned its attention to other ground animals, such as rabbits, mice, moles, snakes, and to such birds as live or nest on the ground, which have also been exterminated, and now most of the poultry on the island having been sacrificed, the question is becoming a serious one as to how to get rid of the mongoose. Small lizards abound, and we

In 1831, when in England on a religious visit, S. Grellet attended a meeting at Saffron Walden, where, he says, "My mind was introduced into much distress on account of the evils of infidelity, and I felt it my religious duty to speak on the subject; I had not proceeded long upon it, when a young man was brought under such strong convictions, under the Lord's power, that he cried aloud and wept in great distress of mind. I was obliged to stop speaking for a while, and then addressed a few words to him to encourage him to be calm, and to look up to Jesus the Saviour, whom he had rejected and denied, but whose love is towards sinners; He came not to destroy, but to save; He had come to show even unto him his salvation. I revived the case of Saul, met with by the Lord on his way to Damascus, and wished, that after his example, he also might say from his heart, 'Lord, what wilt thou have me to do?' The young man became quiet, and I proceeded to deliver to the meeting the testimony to the Truth required of me. After meeting I was told that this young man had been a notorious infidel, and as far as was in his power used his efforts to corrupt many others. The clergyman of the place had tried repeatedly what reasoning with him would do, but all was unavailing. On hearing what occurred at the meeting he remarked, as I am told, that it must be the Lord's Spirit who had done this."

Stephen Grellet bore a clear and strong testimony against all that would derogate from the attributes and offices of Christ, and often felt it his duty to proclaim the doctrines of the Scripture on this subject. After a meeting, probably in the State of New York, where he had spoken on this topic, he states that "A man, bathed in tears, came to me and stated how sorely he had been tried by this spirit of infidelity; that it had destroyed peace and harmony in his family, where heretofore a most sweet union prevailed. His wife and daughter had embraced those impious principles; and their conduct had totally changed. His endeavors to reclaim them only tended to alienate them more and more, till the anguish of his mind became indescribable. One evening, after pouring out his soul unto God, with many tears, his faith revived in his all-sufficiency to remove mountains, and to change the heart. He felt engaged to go to his wife, and taking her by the hand, he prayed fervently to the Lord on her behalf and of his daughter. After that he felt his mind much relieved. He could quietly wait and see what He on whom he had cast his burden would do. He said nothing more to his wife on that subject. A few days after she came to him, her spirit being greatly contrited, and told him that the Lord had opened her eyes and softened her stony heart. She now saw the darkness and the wildness of the notions she had entertained; how it had estranged her from him, her beloved husband, and from everything that is good, but especially from the Lord Jesus, in whom, in her darkness, she could see no beauty or comeliness. A few days after, the daughter also saw the error of her ways, and came to bow down before that very Saviour, whom she had lately despised and rejected." J. W.

"True prayer consists not in the words of our lips, but in the feelings of the heart; for our desires, not our words, fall as a sound of power on the secret ear of God. If we pray with our lips, but do not desire with our hearts, our calling upon God is only a silence; but if we desire with the fulness of our hearts, our only silence is a calling upon God."

were often much interested in watching their quick and graceful movements as they darted about us in the most fearless manner, after insects. There is a larger species called the Cricket Lizard, about 15 inches long, with brown body and brilliant green tail, which is also common, and is often very disturbing at night by its loud chirp. Its arboreal habits have saved it from being wholly exterminated by the industrious mongoose.

Insect pests, such as mosquitoes and fleas and the famous "jigger," are numerous; and as usual with this class of animated nature, are active and persistent, producing a maximum effect by a minimum effort. Centipedes, scorpions and large spiders (interesting species) are being perhaps the most interesting species are frequent. Little fear is felt, as no serious harm results from their attacks, beyond perhaps a few days' soreness and swelling following the sting of a scorpion or bite of a ten-inch centipede. The giant cockroaches looked formidable, but proved to be very active in getting out of sight. The large fire-fly of the tropics, which has been so often described, was an interesting object as it flew through the air with a loud hum, after the short twilight had deepened into the gloom of night, emitting a long flash of brightness.

In Jamaica there are many excellent horses and mules, though they are mostly small; in country districts oxen are freely used for draught animals by those who are rich enough to own them, but donkeys are the favorite burden bearers of the poorer classes. These are mostly quite small, but wonderfully strong and enduring, and will subsist upon the poorest of forage; they receive almost no care from their owners, and after the day's work are generally turned loose on the roadside to pick up what they can find. We saw a considerable number of sheep, and were interested in observing that as they required no wool to keep them warm, nature had adapted them to their surroundings and supplied a very meagre coat. The goats were very numerous, and pigs of the real razor-back type common enough everywhere, roaming the streets in the towns, and the roads and pasture fields in the country, quite at random.

The only mode of travelling, after leaving the short railroad, is by a "buggy," but scarcely more than forty miles per day can be accomplished in this way; and, owing to the hills encountered, even in following the roads along the coast, the journey is really hard upon both man and beast. It is also somewhat expensive, the usual charge, including food for horses and drivers, amounting to twenty cents per mile. There being no hotels outside of Kingston, lodging is had at boarding-houses, where generally very indifferent food and accommodations are obtainable; it is therefore quite customary for travellers to be entertained at private houses, and such is the hospitality of the planters and well-to-do people scattered through the island, that they always expect to entertain respectable wayfarers, even without the least previous knowledge. Our ignorance of this open-hearted custom lost us several opportunities of being entertained at places where we would gladly have availed ourselves of the chance to get an insight to their manner of life.

(To be concluded.)

THERE is no greater stumbling block in the way of the acceptance of Christianity by the masses, than the apparent, and often real inconsistency between Christ's humble and self-denying walk on earth and that of his preachers and followers in the present day.

FOR "THE FRIEND."

A Memoir of Grace Watson.

Grace Watson was a young woman, whose parents resided in Yorkshire, England, but who died at London on the 20th of Sixth Month, 1688, in the 20th year of her age. Several of the testimonies to her worth that have been preserved, speak of her as one gifted with more than ordinary beauty of person; and to this was added the charm of that innocence of spirit which flowed from obedience to the light and spirit of Christ.

Benjamin Antrobus, at whose house she died, speaks of her as "a beautiful flower, one whom the Lord took to himself out of this world, in the flower of her youth." He adds, "I have often said, I have been much refreshed to hear her read the Scriptures with so much delight, distinction and affection in the family."

Charles Marshal, an eminent minister among early Friends, wrote a testimony concerning her, of which the following is a portion:—

"Dear Friends! and all tender-hearted people,—it falling to my lot to be frequent with this dear lamb of my Heavenly Father's fold, and to have more than ordinary concern in a travail of spirit with her, I had the opportunity to see that inward exercise which was in her soul, in a spiritual combat with the enemy of Zion's peace.

And this I observed, first, she kept close to the working of the power of an endless life inwardly, but made no great appearance until she was a conqueror; and then being delivered from the temptations of the enemy, and the crooked serpent (as she expressed it) being driven far from her dwelling, and no Philistine any more to stop her well of living refreshments, and the springing-up-well overflowing, she came forth as a vessel full, wanting vent, and so she sang to her beloved the song of Moses, and the Lamb, in a spiritual triumph, in great humiliation and brokenness of spirit.

And I testify, that she had given her the tongue of the learned, and she spake seasonably and distinctly; in the current of a sweet stream of immortal life, she beheld the several states of the people of the Lord and the wiles of the crooked serpent, who, she expressed, she saw had laid his snares in trades, dealings and commerce in the world, and also in families; and her trumpet herein gave a certain sound.

And although her weakness was so great, that common sense would advise to silence, or sparing herself, yet she that stood by, durst not do it.

She was so spiritually full, and had such a constraint upon her, that things flowed from her a long time in great sweetness; and heavenly refreshment was in it; so that we who were bystanders, were bowed before the Lord, and tendered in the sense of the majesty of his presence, which caused many tears.

And as any came into her chamber, whether Friends or others, a suitable testimony came from her, in that strength, as if she had been over all weakness; and indeed, I must say, my lot has fallen with few on a dying bed, so filled; which caused me to entertain some of the bystanders to write; for I saw it was a ministration of the power of God, especially to young men and women.

Dear Grace! the remembrance of thee is precious, and the breaking seasons by thy bedside in the ascending, pouring forth supplications to our Heavenly Father, which were answered with showers of blessings, breakings and tenderings before the Lord, I tenderly remember."

This remarkable manifestation of Divine Grace, and the outpouring of praises to her Heavenly Father, and of counsel and testimony to those around her bed, occurred a few days before her decease. An account of it was kept by her half-sister Elizabeth Moss, who says:

"Upon the Fourteenth of the Sixth Month, 1688, at night she lay in a heavenly harmony, singing spiritual songs, and making melody in her heart, but uttered not many words; afterwards she broke forth into words and did sing aloud of the Lord's mercies, and talked of his loving kindness, saying, 'O Heavenly Father, O Heavenly Father, O what hast Thou done for me this night, how hast Thou removed the crooked serpent, and not only removed him, but hast taken him quite away, so that I can say truly, O Heavenly Father, thy will be done: Thou hast shown in upon me with thy marvellous light: Thou hast showed me the glory of thy house, the glorious place that ever my eyes beheld; neither did I think Thou hadst such a place for any, much more for me poor worm, a pelican, once ready to think herself destitute.

'But now hath the Lord taken me up, He hath removed the crooked serpent; so that I can say, I defy him, I defy him; this she spoke.

And further she said, that 'If Thou require my life this night at my hand, I freely give it unto thee; O Heavenly Father thy will be done; and if Thou hast a further work for me to do, keep me, O Heavenly Father, in that which I now enjoy, for there will my greatest care be,' meaning to be kept therein.

And she said 'Thou hast made my cup to run over, over, over; O Heavenly Father, Thou hast taken away all my pain, I am as if I ailed nothing, though of myself I could do nothing, scarce move one of my fingers; my tongue being ready to cleave to the roof of my mouth; but Thou hast been a light unto my feet, and a lantern unto my path. O Heavenly Father, how can I cease praising of thee, thou God of power! Thou art more unto me than the corn, wine, oil; thy love is sweeter unto my taste than the honey or the honeycomb.

'O, it is more to be valued than the costly pearls, the rich rubies: the gold of Ophir is not to be compared unto it: O blessed, O praised, O magnified be thou forever.

If she had been asked how she did, her reply was, 'I have been very weak,' or 'I am but weak of body, but strong in the Lord, and in the power of his might.'

Once she was questioning something, but her answer was, 'Why do I so? my case is no doubting one; the Lord hath created a clean heart, and renewed a right spirit within me; so that all fears and doubts are taken away, in full assurance of that life which I am fully satisfied with many more she is now made partaker of; for said she, 'The gates are open, and the angels are ready to receive me into the bosom of my heavenly Father, where I shall sit and sing praises with his redeemed ones.'

In all the time of her sickness, she never desired life that I know of, but said many times, 'If thou require my life this night, it is freely given unto thee: O Lord do with me what Thou pleasest; O Heavenly Father, thy will be done. O what hast Thou done for me, poor strippling, in comparison of many! Thou hast made my bed, Thou hast taken away my pain, my sickness is gone, I am as if I ailed nothing.'

She was carried above her weakness, though her body was much spent that day, for she was the most of it in this frame of spirit, with many other times.

She said the Lord had a people in this city, and other parts of the nation and nations, that the Lord would take unto himself, and crown with glory and honor.

And said that now was a day that every one might serve what God they pleased, but it might be, that some that are now in being, might see another day; therefore, she did exhorted those that were present, to prize their time, and not to give themselves too much to things of this world.

For in much business the mind is carried away and in way of trade, much evil; how many, said she, had laid up great riches, earthly treasure, and in one night deprived of it all, ready to beg their bread, having neither spiritual nor temporal.

Her sister was weeping by her, and she said, 'Weep not, remember David, and be comforted; and the tongue of men and angels can't declare the wonderful greatness of God.

'O Heavenly Father! how sensible of thee, Thou hast made me! Thou hast made me, Thou hast strengthened me, otherwise I should not have been able to speak so much of thee: O Heavenly Father! with thee is fulness of joy, and at thy right hand are rivers of pleasure for evermore.'

At another time, the parable of the ten virgins came very fresh into her mind.

And she said, 'There were five wise and five foolish; they that were foolish took lamps and took no oil, but the wise took oil; while the bridegroom tarried, they all slumbered and slept; at midnight there was a cry, "Go ye forth to meet him," then all those virgins arose and trimmed their lamps, and the foolish said unto the wise, "Give us of your oil, for our lamps are gone out;" but the answer was, "No, so lest there be not enough for us and you, but go and buy for yourselves;" and while they went, the bridegroom came, and they that were ready, entered in with him.

'Oh! therefore,' said she 'keep upon your watch-tower, that whether He come at midnight, or cock-crow, or the dawning of the day, be ready, for that is the wedding chamber indeed, the heavenly Bridegroom, the Uniter of souls, the heavenly marriage-chamber; speaking as, if that was the marriage unto which she was joined.

She likewise spoke of Dives and Lazarus, saying, 'Consider those two states, there is much in them; Dives in his lifetime received his good things; but Lazarus his evil things; now the one is comforted, the other tormented: Oh! what a poor mean thing is the tongue of a dog, yet poor Lazarus found virtue in it! Oh therefore let none despise their fellow creatures, nor say, I am more holy than thou art; for the Lord is beautifying of his temple with whom he sees meet, in his wisdom; glory be given, and that in the highest, to his powerful name over all.'

Her dear and tender parents were much in her mind, who, said she, 'are as dear and near, with many more of my relations, as the flesh unto the bone,' taking me by the hand, saying, 'Though we be deprived as outwardly, we shall meet in the kingdom of glory.' 'Oh,' said she, 'what cause have I to bless the Lord on your behalf, who, I am sure, never countenanced any thing of evil in any of us, but reproved it. The words of my dear and tender mother I do remember, since I was but ten years of age, who said, "She had fought the good fight of faith, and a crown of glory was laid up for her." These words having remained upon my mind, and taken impression upon me, I can now say, "I finish my course with joy, and receive the crown of glory."

FOR THE FRIEND.

WELL-SPENT DAYS.

Be thou in the fear of the Lord, all the day long: for surely there is a reward.—*Eccl. v. Prov. xxiii. 17, 18.*

How little we know, how long it will be
Our pilgrimage here below,
Or how near to-day we are treading the brink
Where the chill dark waters flow.

But if Christ is near,
And his presence clear,
And we each clasp close his hand,
What matters it then,
To know how or when,
We shall reach the border land.

But the thought will come, on this glad new morn,
With its gray mists floating by,
Now resting low in the scenes of earth,
Now lost in the golden sky—
Should a message say
Behold thy last day!

At evening, thy call will come.
How, then, would we spend
The hours to the end
How, then, would our work be done?

Would not every word, be watchful and true,
Our Master's will, in each thought?
No time for jest, or the scornful fits
In the souls, our Lord has bought?

O'er the creeds of men,
No cavilling then—
Or resting on rites or forms;
We would think instead,
Of one how'd he lead,
Of his cross and crown of thorns.

Earth-cares that burdened, and censure that tried,
Would, then, to us seem as naught—
And hasty decision, and unkind words,
Would find no room in our thoughts.

We would watch, and pray,
That each hour of that day
We honor our Saviour's name;
Never fearing, then,
The opinions of men,
Nor halting, for praise, or blame.

And as it may be, that this is the last,
The last for you, or for me;
And that nearer, the angel may stand to-day,
Than our mortal eyes may see;

Would it not be wise
In strength to arise—
And seek more fully to know
Each service done,
Each victory won,
In life's battlefield below?

For eternal loss to more souls than ours,
May be the price of delay;
And eternal joy, be the rich reward
For each guarded, well-spent day.

Not left for a day
On the pathway home,
Is a single toiling one;
But each passing hour
God helps, with his power,
That our life-work be well done.

1888.

SELECTED.

WHAT LITTLE THINGS WILL DO.

BY M. A. KIDDER.

A crumb will feed a little bird,
A thought prevent an angry word,
A seed sown forth fill many a flower,
A drop of rain foretell a shower!

A little cloud the sun will hide,
A dwarf may prove a giant's guide,
A narrow plank a safe bridge form,
A smile some cheerless spirit warm!

A step beyond the journey long,
A weak hand oft outwits the strong,
A gull defies the angry sea,
A word will set a captive free!

A horned goat the mighty beast,
A cry of "fire" breaks up a feast,
A glass shows wonders in the skies,
A little child confounds the wise!

A straw the wild wind's course reveals,
A kind act oft an old grudge heals,
A beacon light saves many a life,
A puff of smoke will often kindle strife!

A sigh of smote betrays the frame,
A pen-stroke e'en can blight a name,
A little hand may ams bestow,
A message small bring joy or woe!

The widow's mite a great gift proved,
A mother's prayer has heaven moved,
"Then let us not," the poet sings,
"Despise the gospel of small things,"

SELECTED.

A CHILD'S EVENING HYMN.

Jesu, tender Shepherd, hear me;
Bless Thy little lambs to-night;
Through the darkness be Thou near me,
Watch my sleep till morning light.

All this day Thy hand has led me,
And I thank Thee for Thy care;
Thou hast clothed me, warmed and fed me,
Listen to my evening prayer.

Let my sins be all forgiven,
Bless the friends I love so well;
Take me when I die to heaven,
Happy there with Thee to dwell.

FOR "THE FRIEND."

Letter from Samuel Fothergill to Sarah Morris.

[The following letter is copied from the original which is in the hands of a Friend in this city. It was written somewhere on the Eastern Shore of Maryland, but the name of the place is so far obliterated in the original that it cannot be deciphered with certainty. The Memoirs of Samuel Fothergill, published about 1844, are no doubt familiar to many of the readers of THE FRIEND. An interesting series of articles respecting Sarah Morris, who was also a devoted minister of the gospel in our religious Society, appeared in THE FRIEND in 1862 and 1863.

G. V.]

14th 10th Mo. 1754.

Dear friend Sarah Morris: An unexpected correspondent will doubtless surprise thee, but I thought for some days past a secret sympathy of spirit brought thee fresh and lively into my remembrance, and a salutation in brotherly-ness spread towards thee, which seemed to be on this wise: Work while it is day; it is a precept which has at times furnished to me an awakening hint, when I have considered not only the shortness and uncertainty of our stay here, but the many gloomy and dark intervals to be met with in a spiritual progress, in which we find a suspension of power and ability to work to our own or others' comfort—it is at least so with me, and perhaps my lot may not be peculiar to myself.

It seems, dear friend, a hint to thee that claims thy regard, and probably some present dubious apprehension of employment may attend thee, which natural inclination would decline and prompt a variety of reasons to overlook; but I would entreat thee look over all hindering things to thy Master and his will, and in an awful submission, thy understanding will be opened to see it, and strength administered beyond expectation to labor for a clear discharge of duty. It is matter of humble gladness when we can appeal to our great Lord that we have honestly served Him, and that our low pinching times are not the effect of disobedience and unfaithfulness. Our low bestments are then more for the instruction of others than the chastisements of our Father for our own negligence; though doubtless that often brings suffering.

I salute thee in the fresh sense of merciful re-

guard, and awfully crave our mutual preservation in the holy truth, that our steps may be straight and our obedience perfect to the heavenly will, that therein we may know our morning and evening song often raised to the rock of our hopes. Keep pace with knowledge, with holy confidence lean upon thy Beloved, let thy faithful obedience manifest the Lord himself is so, and He will never fail thee in the needful time.

I have passed along hard beset through this Province so far. The unfaithfulness of those professing with us, and the general indolence of the people toward religion, are painful; but the Lord of all strength and power has been at times near to sustain to close labor and secret ease of mind.

Probably the above hints may have little in them pertinent to thy present state. However, accept it as an earnest of my cordial affection, and believe me to be, in the sympathy of Gospel friendship, thy sincere friend,

SAMUEL FOTHERGILL.

FOR "THE FRIEND."

Ichneumon Flies.

I recently received by mail from an observant friend, a small box containing the shriveled body of a large green worm, with a projecting curved horn on the hinder part of the body. It was one of the kind which feed on tomato-vines, and on the tobacco plant; and which, after they have attained their full size, bury themselves in the earth to undergo the final change of form, and emerge as a large-bodied, strong-flying species of moth, called "Sphinx," or "Hawk-moth," which is semi-nocturnal in its habits, and may often be seen in early evening visiting the flowers of our gardens. Its wings are much narrower than those of other moths of similar size.

This particular worm had, adhering to its body, a cluster of about 40 very small white silk cocoons, looking somewhat like diminutive grains of rice. These cocoons were empty; a small section, or lid, having been forced off at one end, thus making an opening through which the occupant of each had escaped. The insects which had emerged from them were all gone, otherwise the box would have contained a numerous brood of small, four-winged insects, resembling wasps in their shape, and belonging to the very extensive family of Ichneumon flies.

The Ichneumon does not sting like the wasps, but with their sting-like ovipositors they lay their eggs in the bodies of other insects, such as caterpillars, worms and grubs. The grubs which come from these eggs feed on the bodies of their hosts, instinctively avoiding the vital organs. The tomato-worm which was sent me, must have had about 40 eggs laid in it, by the parent Ichneumon fly; and the grubs from these had eaten the nourishment provided by its own voracious appetite, until finally it had perished with exhaustion; and its unwelcome visitors, having reached their period of mature growth, had emerged from the body, and spun the little cocoons in which they passed through their final change, and from which they had escaped as winged insects, ready to re-commence this wonderful round of life, by seeking other worms in which to deposit their eggs.

The Ichneumon flies seem designed to keep in check the numbers of other insects. There are more than 1600 species of them in Europe alone, and they sometimes swarm in great numbers. Particular species of them seem to be the natural enemies of particular kinds of other insects.

Thus there are some which lay their eggs in the caterpillars of the cabbage butterfly; others which select the tomato-worms; one kind, which has ovipositors several inches in length, feels after and deposits its eggs in the grubs which are deeply boring in the wood of trees. So it may easily be seen that they form a very valuable division of the great insect family; and greatly lessen the ravages of many of those species which prey upon the crops of the farmer, or injure the trees of the forest.

FOR "THE FRIEND."

Notes on Russia.

Our entrance to Russia was by way of Stockholm. We left there at midnight, and in the morning were steaming deliberately among the thousands of islands which skirt the coast of Finland. The boat gave plenty of time to examine the old Finnish cities, and stare at the dwarfed but respectable Finnish people that came in boats and carts to sell their black bread and country produce. The capital of Finland, Helsingfors, is a modern city of 20,000 people, where there is a university of 700 students and a library of 200,000 volumes of well selected books of various languages. We passed among the ironclads and fortifications of Sveaborg and Cronstadt, which make the harbor of St. Petersburg impregnable to external attack by water, and steamed up the broad and slothful Neva in full view of the brilliant gilded and star spangled domes of the capital of all the Russias.

An American travelling in Russia is powerless without a passport. He must present it when he buys the ticket which carries him into the country, at every hotel at which he stops, and at various places of interest to which he seeks admittance. When he reaches a hotel, the passport goes to the police, and in due time he receives permission to remain in the country or city for a few weeks or months. The formalities for entering are however much simpler than for leaving the country. There is a Russian saying that the doors of the country are wide to those who come in, but narrow to those who go out. How much "police protection" (which is the excuse for the passport nuisance) I received, I do not know. The hotel clerks take care of the passport for you, and you pay the bills for stamps, and that is about all you know about the matter. No police shadowing was ever seen, and the whole matter was so arranged as to make the least possible inconvenience to a traveller. I have been informed since I returned, by an American traveller in Russia, that he was visited by a policeman one morning and informed that his wanderings of the night before were unsafe, and that as he was specially charged with his welfare, he preferred to accompany the traveller on his nightly rambles. Before this time he was entirely unconscious of any watch being set upon him. Russians themselves are required to have passports as well, and every stranger stopping at any hotel or private house in St. Petersburg will have his presence announced to the chief of police; the government undertaking the vast contract of keeping itself informed of the movements of all its subjects.

St. Petersburg is a western city. Created by the powerful will of Peter the Great, in the midst of an immense swamp, there is no atmosphere of antiquity or orientalism about it. The Greek Church has impressed itself on its architecture, and the Russian spirit pervades its streets and its shops. Droskies dash about the

streets. Overcoats and high-topped boots, worn through the summer apparently only for show, are universal on the better dressed men. The peasants are continually stopping before the "ikons"—images of the saints and virgin, supposed to possess holy or miraculous powers—bowing with uncovered heads, and making the sign of the cross on their breasts. The fronts of the shops are covered with rude paintings of what are for sale within—and many features are new to a western traveller; but there is all the time a consciousness of being in the civilization of the occident, which is especially marked after one returns from Moscow.

It is a city of remarkable contrasts. The wealth accumulated in the palaces and cathedrals, of precious stones and gold and silver is incalculable. The pictures of saints are fringed with diamonds and pearls, the thrones and crowns, of which multitudes are shown to visitors, fairly glitter with wealth; gilded carriages and silver furniture fill the imperial stables, and every evidence of inexhaustible wealth abounds in the halls of residence of the political and ecclesiastical dignitaries of the land. These things contrast with the reports we hear of the weakness of Russian finances, and the absence of any provision for general education. The cathedral and monastery wealth has been derived largely from the gifts of devout worshippers, and the imperial treasures are displayed mainly for the sake of their effect on the minds of the people. But it will occur to the mind of an American that if some Henry VIII would confiscate the hoarded riches, and some Blair educational bill would distribute it to overcome illiteracy, the Russian people would eventually be the gainers.

That the poverty and squalor of St. Petersburg is vastly greater than that of other large European cities, is not manifest. Drunkenness is quite prevalent, and the villages of Russia and parts of Moscow and other cities show abundance of hard conditions; but the capital, externally, at least, looks comparatively comfortable. There is probably more discomfort in Russia in proportion to its population than elsewhere in Europe, but part of this is due to the cold of the long and rigid winter.

The Russian people are saved from the discussion of a very prolific subject of talk and thought in America—politics. They are in the main blind and loving subjects of the Tsar, perfectly satisfied to leave all affairs of state to him, and having no desire to question his will. The Russian people are certainly not in a ferment preceding a great revolution. They are not of the sort that revolutionists are made of. The Nihilists are very active but comparatively small in numbers and comparatively well educated, which the great body of the Russian people are not. Their agitations are confined to the large cities, and are carried on without the sympathy of the masses of these. Over the spot where Emperor Alexander II was killed by a bomb is arising a splendid cathedral, the gift of the humble peasants.

Through the grounds of the Peterhof Castle, while we were there on the occasion of a fête in honor of the Empress' birthday, the Imperial carriage rode through crowds, and the cheering was enthusiastic and general. Everyone told us that the Tsar personally and as a ruler was wonderfully popular.

Nevertheless, things are done in Russia almost daily which in America would rouse an irresistible indignation from one end of the land to the other. One event of this kind was told me with bated breath by a German guide.

Evidence was accumulating that in the University of Kiel there were traces of Nihilism. So one morning some of the students disappeared. Their classmates, their friends at home, their professors, never knew anything more of them. Without explanation, trial or sentence, they passed out of their former places, a terrible warning of the dangers of political free thought.

The Tsar Nicholas used to say that he believed he was the only honest official in Russia. Certainly the arbitrary system does not secure devoted and efficient service. No custom house officers were more careless in the duties and more shameless in demanding bribes than those that met us on the St. Petersburg quay. We could have carried into the country enough dynamite to have blown up all the Imperial buildings in Russia, and pamphlets enough to have revolutionized the country, if it was open to revolting by such means, without being detected. Every man expects a fee for every service. Even the old veterans on guard in the art galleries, that show their decorations, dating away back with the Crimean war, to eager western visitors, are not by any means insulted by the presentation of a few kopecks. The amount of money squandered in process of collection, not by the simple country people, whose superstition guards implicitly what belongs to the Imperial Father, but by the officials through whose hands the taxes pass, is tremendous. It is a striking illustration that one man with all the power he can ask, and every inducement to do so, can not, by the Imperial will maintain a government nearly so efficient as our Republic.

(To be concluded.)

Natural History, Science, &c.

Banyan Tree in Samoa.—Plodding slowly on through the many and varied timber trees—from the ready-made-board tree, with its irregular, wide-spreading buttresses, to the "muscle," standing erect with a mathematical perpendicularity, as regular as if its trunk had been turned out of some workshop, surmounted with its crown of splendid foliage, whose flower produces the most valued scent and head ornament for the Samoans—and gaining height at every step, we came suddenly upon a sight worth looking at. It was an enormous banyan tree, whose branches, hung with many varieties of hang-drops, supported flowery parasites of all descriptions festooned with hanging mosses and lovely creepers. It rose to a great height above its tallest bark companions, its aerial roots descending in a vast twisted network, about eighty feet in depth, and covering a yearly increasing expanse of ground, to the effacement of its neighbors. It is, I believe, of the same species as the Indian tree, and its phenomenon of growth is worthy of remark. It commences from a seed deposited in the top of some tree, generally a palm. How it gets placed in such a position is a matter for conjecture, but it is probably through the instrumentality of some bird. Here the seed germinates, but makes all its effort downwards, guided in its descent by the trunk of the tree, which in time it thoroughly encases, and on reaching the earth it immediately takes root. This root, whilst descending, derives sustenance from the tree-trunk, for all the time the seed is putting forth leaves and shoots, from each of which more roots descend earthwards; and so this process continually goes on until the supporting tree is completely destroyed, and the banyan stands alone on its own roots, often a hundred or more feet high

before coming to the plant proper, from which roots are perpetually descending to earth to form fresh props to the tree, and with each new one more and more ground is taken up.—*Churchwarden's "My Consulate in Samoa."*

A Spider's Web.—In one of my morning rambles [in the island of Borneo] I came across a small bird first entangled in the web of a spider. These structures in the tropical forests of this part of the world are often of large size and great strength, but I was astonished to find that they were sufficiently strong to capture a bird, which in this instance was as large as a goldfinch. For the moment my feelings of humanity overpowered me, and I released the captive. The spider, though evidently somewhat deterred by his unusually large capture, and the violent shakings of the web, showed no intention of flight, and quietly watched the issue of events close by. I am not aware that this species is avivorous, but the huge *Mynale* is supposed to be. One of these is a common species in Borneo, living in holes in banks. The entrance is perfectly circular and about two inches in diameter, and the smooth tunnel leads backwards to a small chamber, eighteen inches or more from the mouth. This creature is of enormous size—the body as much as three inches long, by an inch in width, and is no doubt quite strong enough to cope with an adult bird of small size.—*F. Guillemand in Cruise of the Marchese.*

Rats in Mongolia.—The *Pekin Gazette* publishes a memorial to the Emperor of China from the governor of a district in Mongolia, who testifies to the presence of swarms of rats, which, for some two years past, have destroyed the grass, and so undermined the ground with their burrows, that mounted men are exposed to serious risks. For this reason it became necessary to alter the route of the government courier service in several of the postal lines.

St. Catherine's Point Light-house.—This light, erected on the southern point of the Isle of Wight, is said to be the most powerful one in existence. It is a revolving light, and exhibits 10 separate and sharply defined beams of light, like the spokes of a gigantic cart wheel, steadily travelling around the horizon. A few years ago the height of the tower was reduced about 40 feet, and at that time it was found to have settled so as to be three inches out of perpendicular. That no further movement of the kind might take place unobserved, a white marble slab was let into the ground floor, with a black dot in its centre, and a heavy, pointed weight or plumb bob was suspended over this from the ceiling by a fine wire. This was done about twelve years ago; and since that time the deflection has not been more than a quarter of an inch. The light itself is electric, and equal to that of 60,000 candles.

Electric Lights in Fishing.—An experiment was tried in Ramsey Bay, on the coast of Wales, England, by lowering nets on opposite sides of a ship, one of which was provided with a submarine electric light, and the other was left in the dark. On hauling them up, it was found that the light had attracted to the net to which it was fastened a large number of marine animals, principally crustaceans; while but few were found in the other net.

Cultivation of Pine Trees in France.—Up to the Rebellion the French were competitors with America in the export of resin—an enormous amount being shipped from Bordeaux. Since the termination of the War for the Union, the

exports from America have run French resin out of the market. The French planted thousands of acres in the Department of the Gironde with the sea pine, chiefly with the view to the resin trade, and it occasioned much distress when the cheaper American article destroyed the trade. In comparatively recent times they have discovered that the dregs or refuse of their species of pine tree, after the resin has been extracted, will furnish a valuable oil, much cheaper than refined petroleum, and free from all bad explosive habits. They have also discovered that the wood of this pine, *Pinus maritima*, after several years of extraction of the resin, has been going on, an excellent and cheap article for paper making. As a result, the planting of this pine has taken a new start, in the poorer lands of France, and is thought to be among the most promising of the many French industries by which these frugal people manage to keep all their money at home.—*The Independent.*

Items.

Repeal of the Infamous Acts, India.—Under this heading *The [London] Friend* gives some interesting particulars of the victory gained in the House of Commons on the 5th of Sixth Month, for the cause of Puris in India. From its article, the following narrative is condensed:

"The five letters written by the able pen of Alfred S. Dyer, from India, which appeared in *The Sentinel, Christian*, and other periodicals in the early part of this year, had aroused the indignation of the English public, and this was heightened by the attitude of 'know-nothing' assumed by the Under Secretary for India (Sir J. Gorst) in the replies he gave to Profes-or Stuart in the House of Commons. The infamous 'Circular Memorandum' issued by request of the Commander-in-Chief in India (General Roberts) in [Sixth Mo.] 1886, had formed the subject of many pointed questions by Professor Stuart in India. From its article, the following at last he wearied the patience of the House, as it became generally apparent that if a member of Parliament cannot obtain from the proper authorities a straightforward answer to such a simple inquiry as to the genuineness of such a document, then an infatuated Government becomes paralysed. So evident did this become that — Gladders applied on this ground to the leader of the House (W. H. Smith), and he then promised that a telegram should be sent to India, and a few days later came the reply admitting that the said document was genuine.

"From that time the Under Secretary could no longer plead ignorance, but, strange to say, he then pleaded that the English Cabinet had no power over the Viceroy and his Council! This absurd theory, put forward at the last moment, was so suspicious that the only course open to the friends of Repeal in the House of Commons was to challenge the decision of the members of the Council in India, is insufficient, and the legislation which enjoins or permits such measures ought to be repealed.

"On the occasion of the debate both the Government and front Opposition benches were crowded, and there was a large attendance of members. The debate lasted seven hours, and was led off by W. S. B. MacLaron, M. P. After the style of his illustrations, his speech was a mass of facts followed by a peroration which not only riveted the attention of the House but elicited its applause. After having dealt with several aspects of the question, he said, 'There was also the high ground of morality, and the inherent wickedness of the Acts. A waterer was morally wrong could not be politically or physically right. The very helplessness and poverty of

the Hindoo women in comparison with their English sisters, formed a reason for the protection of the House to be extended to them. The wealthy daughters of India were as precious in the sight of God, as were the daughters of any member of that House, and their security and welfare ought to be as carefully guarded. Then, addressing the Government bench, he asked, "Are you prepared to face the agitation of this question from every platform in England, and to carry this on against the whole religious sentiment of the country? Above all, are you prepared to meet the indignation of the women of England?" As he sat down the applause, begun on the floor of the House, somewhat naturally extended to the women's gallery. This, however, being contrary to parliamentary usage, and the Speaker, turning round and looking up to the cage allotted for ladies, called out, "Order! order!"

Sir R. W. Fowler, rising from the Conservative benches, then seconded the resolution, urging the right of the English Government to interfere with the Viceroy and his Government. It was constantly done in other matters, and there was ample cause for interference in such an affair as this."

After several members had spoken, mostly in favor of the resolution, which no one had the courage openly to oppose, the debate was brought to a close.

The Speaker then put the question, and there being loud cries of 'Aye' from all parts of the House and only a few faint cries of 'No,' declared that the Ayes had it. A few members challenged a division, and the House was accordingly cleared. Upon the Speaker again putting the question one of two members again cried 'No,' and shouts of 'Aye' had been heard, and 'Stand up,' from different quarters, of the House. The Speaker directed the Division Clerks to be summoned to take down the names of the 'Noes' and called upon the latter to stand up in their places, but no member rose, and the Speaker, amid cheers, declared the resolution carried.

We cannot but consider that the result of this debate is an evidence of God's overruling power."

Public Meeting of Christians, Lancaster Co., Pa.—This meeting was appointed by the Committee of the Yearly Meeting, in conjunction with that of Caln Quarterly Meeting. It was well attended, there being present probably more than 100 persons.

After a time of silence, a Friend explained to those assembled our practice of silent waiting on the Lord, in the performance of Divine worship, in order to experience a measure of that Divine help and power which alone can enable any one to truly worship God, or to minister to the people—quoting the language of our Saviour to the woman of Samaria, that "they that worship the Father must worship Him in spirit and in truth." "The Son of the Living God," was set forth and clear testimony was borne to his labor and sufferings for the redemption of mankind; and also to the efficacy of that grace purchased by Him, through whose operations on the soul, it is cleansed from the defilements of sin, and enabled to walk in holiness of life. Earnest were the appeals made to those who had not yet submitted their hearts to the government of the Spirit of Christ not to delay accepting the offers of mercy by repenting and forsaking their sins. The language of our Saviour, "strive to enter in at the strait gate," implied the necessity of a struggle and an earnest effort to resist the temptations of Satan, and the evil tendencies of human nature; so that men might be freed from all filthiness of flesh and of spirit, and become the adopted children of God.

There was a remarkable degree of quiet and solemnity prevalent, which continued to the close of the Christian service. We believe an evidence that the Lord was pleased to favor the assembly with his presence, and to bless this effort to promote his spiritual kingdom. Notice was given at the close of the meeting, that a supply of tracts had been provided, setting forth some of the doctrines of the Christian religion. These were distributed by some of the young men, and appeared to be gladly received.

The One Grace of the Rich.—It is recorded in the memoir of Thomas Brainerd, for thirty years a pastor in Philadelphia, that at a meeting of leading members of three churches, called to raise money for an important new enterprise, there was little response in the way of subscriptions, though all applauded the object. T. Brainerd rose, faced the rich men, and thus addressed them: "Brethren, the Lord has denied to you the privilege of exercising many of the most precious graces of the Christian character, which, in his infinite mercy, he has vouchsafed to the rest of us. You never knew what it was to repose absolute, unassisted faith in God for the things of this world. You never had to go to sleep at night without knowing where your breakfast was to come from. You never had a sick child wasting away for the want of costly luxuries. You never had to deny yourself the gratification of the impulses of pity, when a sufferer came to your door. You never had to endure the humiliation of being dunned for an honest debt, without knowing whether you can pay it. All these unespeakable advantages in developing Christian character, an inscrutable Providence has taken from you and bestowed upon you poor men. The one solitary grace of the Christian life which has been denied to us and given to you is the grace of liberality, and if you don't exercise that, the Lord have mercy on your souls!" That bold appeal did its work. A smile crept over the face of one of the rich men; he drew to him the subscription paper, put down \$10,000, others followed his example, and this meeting accomplished what all preceding meetings for consultation had failed to do.

THE FRIEND.

NINTH MONTH 8, 1888.

We have received from a beloved Friend residing in another State, a letter commenting on an expression made use of by James Backhouse, at a meeting with some Wesleyan missionaries in South Africa, at which he explained to them that the views held by Friends respecting ritual observances, and "the necessity of waiting for the immediate teaching and putting forth of Christ in the work of the ministry," prevented them from uniting in the missionary labors of other denominations; yet that from the foundation of the Society, many of their ministers had spent much time in travelling abroad after the manner of the Apostles. James Backhouse added "That the Society always freely bore the expenses attendant on such labors."

In connection with this incident, several other extracts from the Journal of James Backhouse were given, (see page 337 of last volume of THE FRIEND) which show the spirituality of his views of religion; and his conviction that the simple Gospel, unmixt with that which is merely the fruit of the will and wisdom of man, is best adapted to promote the spread of true religion.

In reference to the remark above quoted, as to the payment by the Society of the expenses of its ministers, our friend observes:

"So far as I have been acquainted, ministers have largely been at the expense of the travelling, &c, themselves; but this would not hinder a Friend, who felt called, to hand something to the travellers as they felt drawn; but to say that 'the Society always freely bore such expenses,' would to my mind give those missionaries a dif-

ferent impression than I understand our Society to have carried out in days that are past. * * I have known more than one Friend to labor industriously for a time, and then spend the money earned on Truth's account; and [I] know of a neighborhood when visited, where the people said they did not know anything about a love that would cause persons to leave their home to visit strangers, and not take up a collection at the meetings they held."

We believe our correspondent is correct in the opinion, that the ministers among Friends have largely depended on their own means to defray the necessary expenses of travelling abroad in the service of the Gospel. Of this, the journals of many of them give abundant evidence. Yet it is true, also, "that the Society always freely bore such expenses," when it was necessary; so that the gracious designs of the Head of the Church in preparing and anointing for service might not be frustrated. It is probable, that in his discourse with the missionaries, James Backhouse more fully explained the practice of Friends as to their ministers' travelling, than is related in his article. The object of the interview, in which his attention appears to have been principally directed to the ground of all right ministerial labor.

Thomas Story, in an extended narrative of an interview with the Archbishop of Canterbury, describes the practice of our Society in his day. That where a minister is a poor man, "and not able to fit himself with common necessities for his journey," when he is concerned to leave home to preach the Gospel, "in such a case the Friends of the meeting to which he belongs provide all such things and furnish him," &c. And he adds: "But though our principles allow such assistance to our ministers as I have related; yet I have not known any instance, save one, of any such help; for, by the good providence of God, our ministers have generally sufficient of their own to support the charge of their travels in that service, and are unwilling that the Gospel should be chargeable to any; only as their ministry makes way where they come, their company is acceptable to their friends, who afford them to eat and drink and lodge with them for a night or two, more or less, as there may be occasion."

We believe the account given by Thomas Story holds good to this day in all parts of the Society where its primitive principles and practices are observed; and that our ministers generally "are unwilling that the Gospel should be chargeable to any," except in such cases where it is plainly necessary that the Church should bear a share of the burthen.

SUMMARY OF EVENTS.

UNITED STATES.—The public debt statement shows that the reduction of the public debt during the Eighth Month was \$7,224,676. The total cash in the Treasury was \$646,573,447.

A despatch from London dated the 1st instant, says that China refuses to ratify the American treaty restricting immigration. Up to the 4th, our State Department had not been advised of this alleged action of the Chinese Government.

In the House, on the 2d instant, Representative Scott, of Pennsylvania, asked consent to introduce a present consideration of a bill for the absolute exclusion of Chinese immigration. There was no objection, and the bill, after a brief discussion, was passed without a division. This bill is in violation of our treaty agreements with China.

A statement of the per capita consumption of whiskey, beer, &c., at the present day as compared with the consumption per capita 47 years ago, has been pre-

passed by Acting Commissioner of Internal Revenue, Burderson. During 1880, the total amount of spirits, 1849, it was as follows: Distilled spirits, 2,527 proof gallons; wines, 0,291 gallons, and malt liquors, 1,366 gallons, making a total of all wines and liquors of 4,173 gallons. Since then there has been a steady diminution in the per capita consumption of distilled spirits, with corresponding increase in the consumption of malt liquors. The per capita consumption during the year ended Sixth Mo. 30th, 1887, was as follows: Distilled spirits, 1,19 gallons; wines, 0,54 gallons, and malt liquors, 11,98 gallons, making a total of 13,68 gallons.

The *Manufacturers Record* says that in 1880, the South had 20,612 miles of railroad, costing with equipment \$699,800, while at the present time it has 39,000 miles, costing \$1,456,000, a gain of 18,000 miles in 1887. The amount invested in the railroads is \$78,000,000. It is said that the growth of the iron interests has had a marked effect in stimulating railroad construction, and next year the South will make 1,800,000 tons of pig iron, against 397,301 tons in 1880. "The traffic of coke and iron developed by this business, will furnish Southern railroads, in 1889, over 12,000,000 tons of freight, which is equal in volume to the entire wheat crop of the country, and seven times as great as the cotton crop."

The first local option election in New Jersey under the act of 1876, was held in Philadelphia last winter, on the Eighth Mo. 25th, in Cumberland County. It resulted in a majority of 1744 against license, and three precincts to hear from.

The receipts of wheat in Minneapolis for the crop year ending Eighth Mo. 31st, were 47,469,430, as against 39,278,350 bushels during the previous year. This exceeded the whole wheat crop of Minnesota.

A tract of land in Aroostook County, (Me.), containing 1,000,000 acres, has been sold for \$1,000,000. The tract described contains 25,000 rows, covering seventy-five pages.

Oregon's peach crop is reported the best, both in size and quality, that that State ever produced.

A telegram from Wilmington, North Carolina, says that a bale of cotton has been received there, covered with a fine of iron. The bale was sent by a company of that city. "It passed all tests satisfactorily, including that of compress, and it is believed, will answer all the purposes of jute bagging, at much lower prices."

The four-masted schooner, William H. Fredson, is reported to have sprung a leak during a voyage from ore. It is said that the Fredson is the first vessel of that rig to bring a cargo of iron from Kilauea to this port. She is owned in Boston, and was built in Finland in 1866, and it is said, is the only foreign built schooner with an American register.

Up to the 3rd instant, the total number of cases of yellow fever in Jacksonville, Fla., was reported to be 285. The total of deaths was 36.

The deaths in this city last week numbered 352, being a decrease of 102 from the previous week, and a decrease of 43 from the number during the corresponding period of 1887. Of the whole number, 105 were children under one year old; 36 died of consumption; 36 of cholera infantum; 32 of marasmus; 24 of typhoid fever; 25 of diseases of the heart; 20 of inflammation of the stomach and bowels; 19 of old age; 11 of casualties and 11 of infanticide.

Markets.—U. S. 4's, 120, reg., 106 $\frac{1}{2}$; coupon, 107 $\frac{1}{2}$; 4's, 125 $\frac{1}{2}$; currency 6's, 124, a 120.

Cotton was officially quoted at 10 1/16-15 cts. per pound for medium uplands, but there were sellers at 10 1/16.

Flour and meal.—Flour was firm under small supplies, but business was restricted by the extreme views of sellers. Sales of 125 barrels Pennsylvania family, at \$47.50; 125 barrels Pennsylvania roller, straight, at \$47.50; 125 barrels Ohio, straight, at \$49.00; 375 barrels white patent, at \$52.00; 750 barrels do., at \$52.50 to \$55.45, and 125 barrels do., at \$55.50. Eye flour was sold at 83 cts. per barrel.

Wheat.—No. 2 red held at 97 1/4 cts. etc.; No. 3, 92 cts. etc.

Oats.—No. 2 white, at 33 cts.; 2 1/2 cts. etc.

Reef cattle.—Extra, 5 1/4 cts.; good, 5 1/4 cts.; medium, 4 1/2 cts.; common, 3 1/2 cts. etc.

Sheep.—Extra, 4 1/2 cts.; good, 4 1/4 cts.; medium, 3 1/2 cts.; 3 cts.; common, 2 1/2 cts.; lambs, 3 1/2 cts. etc.

Hogs.—Extra western, 9 1/4 cts.; good western, 8 1/4 cts.; country 8 a 8 1/2 cts.

Fat cows were in good request, at 2 1/2 cts. etc.

that Canada is a dependency of Great Britain, and that if the necessity should unfortunately arise, she should be treated as an English colony.

The *Pull Mall Gazette* denounces the *Standard* for its violent utterances on the fisheries question, and charges that paper with outraging that good feeling which ought to exist between Great Britain and the United States.

Arklow, in Ireland, has been proclaimed under the Crimes act. The proclamation placing several baronies of Galway and Mayo under the Crimes act has been repeated.

Albinal Moran, Archbishop of Sydney, who is visiting Turin, in reply to an address of the 30th ult., contrasted the condition of self-governed, loyal and prosperous Australia with the abject state of Ireland. The difference, he said, was due to the Irish land legislation of the past three centuries.

An official report from the harvest in Austria, places the yield of wheat at 38,100,000 metrecenters, against 40,900,000 in 1887.

It is semi-officially stated that Prime Minister Crisp's interview with Prince Bismarck at Friedrichsruhe has in no wise changed the general European feeling towards Crisp, and that he is not likely to provoke France; on the contrary, he earnestly desires to conciliate her. Italy will maintain the position she has taken with respect to Massowah, but has sent instructions to General Baldissera, the Italian commander in the East, to be on his guard against the Russian General Prjevsky's has started on his exploring expedition to Central Asia. He will penetrate to L'Hassa, the capital city of Thibet, by way of Lop Nor, a lake of Chinese Turkestan.

A despatch from Shanghai says that Tientsin-Taku railway is being enormously patronized, and promises to be a success.

Despatches from Melbourne, Australia, announce that in a test action in the Supreme Court, a Chinese emigrant sued the Government for damages for protracted delay in his hearing, and the Government deviled in favor of the plaintiff. The Chief Justice dissented.

A despatch from Auckland, dated the 2d instant, says that an earthquake has done serious damage in New Zealand. The spire of the Cathedral in the town of Christ Church was destroyed, and many other buildings were damaged.

A cable has been laid between Cuba and Hayti, connecting Cuba with Porto Plata, San Domingo, Caracua and Venezuela.

RECEIPTS.

Received from Milton Stanley, Agent, Ind., \$10, being \$2 each for Esther Mills, Joel Nowlin, Beth Woodward, Albert Maxwell, and Arthur B. Maxwell, vol. 62; from Martha Gregson, Philadelphia, \$2, vol. 62; from George Abbott, Jr., N. J., \$2, vol. 62; from Jesse Negus, Agent, Ia., \$8, being \$2 each, for William D. Branson, Charles W. Collier, Sarah Ann Alderson, and Clarkson T. Penrose, vol. 62; from John S. Lowry, Philadelphia, \$2, vol. 62, and for Charles S. Lowry, \$2, vol. 62; from Amos Bartlett, N. J., \$2, vol. 62; from Nathan Satterthwaite, Ia., \$2, vol. 62; from George Byrum, Agent, \$4, being \$2 each for Joelina J. Boone, O., and Dr. Jesse T. Boone, Cal., vol. 62; from Helge Thompson, Ia., \$2, vol. 62; from William Henry Brown, Gin., \$2, vol. 62; for Margaret P. Warner, Pa., \$2, vol. 62; from Mary Ann Sharpless, Pa., \$2, volume 62; from Parker Hall, Agent, Ohio, \$4, being \$2 each from Elwood Thomas, to No. 14, vol. 63, and \$2 for David Thomas, vol. 62; for Henry A. Lippincott, Philadelphia, \$2, vol. 62; from David Heston, Fkfd., \$2, vol. 62; from William Webster, Pa., per Caleb Webster, \$2, to No. 14, vol. 63; from J. H. Brimman, Ia., \$2, vol. 62; from Paschall Worth, Pa., \$2, vol. 62; from George Foster, R. L. for Ruth A. Crandall, \$2, vol. 62; from Reuben Satterthwaite, Del., \$2, vol. 62; from Hannah W. Richardson, Del., \$2, vol. 62; from Milton Carter, Agent, Kan., \$6.50, being \$2 each for Jesse A. Carter, Reuben Hart, and J. Joshua Cox, vol. 62, and 6 cents for Newby Hubbard, to No. 15, vol. 62; from Jno. M. Saunders, N. J., \$2, vol. 62; from Richard M. Acton, N. J., \$2, vol. 62, and for William C. Reeve, \$2, to No. 14, vol. 62; from Christy Davis, Cal., \$2, vol. 62, and for Wm. S. Gatterson, Pa., \$2, vol. 62; from George Norris J. Scott, Agent, Pa., \$2, vol. 62; from Joshua T. Ballinger, Agent, Pa., \$6, being \$2 each for Ann Scott, vol. 61, and for Deborah G. Britton and Robert Garrett, vol. 62; from Ezra Stokes, N. J., \$2, vol. 62; from J. H. S. Gatterson, Pa., \$2, vol. 62; from Sarah J. Dutton, Philadelphia, \$2, vol. 62; from Lloyd Balderston,

Md., \$2, vol. 62, and for George Balderston, \$2, vol. 62; from C. A. Hoffman, W. Philada., \$2, vol. 62.

Remittances received after Third-day, will not appear in the Receipts until the following week.

NOTICES.

WESTWOWN BOARDING SCHOOL.—A Stated Meeting of the Committee on Admissions, will be held in the Committee-room, Fourth and Arch Sts., Philadelphia, on Seventh-day, the 15th inst., at 10 A. M.

JOHN W. BIDDLE, Clerk.

EVENING SCHOOLS FOR COLORED ADULTS.—Teachers are wanted for these schools, which will open on the 1st of Tenth Month next. Apply to
Edward S. Lowry, 2220 Pine St.
Joseph J. Walton, 924 Chestnut St.
Thomas Woolman, 258 Marshall St.

FRIENDS' LIBRARY.—The Library will be open hereafter, until further notice, on the afternoons of Third, Fifth and Seventh-days, from 3 to 6 o'clock.
Ninth Month 1st, 1888.

FRIENDS' SELECT SCHOOLS.—These schools, under the care of the three Monthly Meetings of Friends of Philadelphia, will re-open in the new School-house 140 N. 16th St., above Arch, on Second-day, Ninth Mo. 17th, 1888.

The department for Boys continues under the care of John H. Billingham, that for Girls in charge of Anna Walton; and both of them will be assisted by a corps of competent instructors.

The Boys' and Girls' Primary Department, will be continued in charge of Elizabeth W. Warner and Anna Yarnall.

The new School-house is well adapted for conducting a first class school; great care having been taken to provide all necessary comforts and conveniences. The heating and ventilation have been carefully attended to, and the cheerful and commodious character of the rooms, and the arrangements of the surrounding grounds are attractive. The scholars will have the benefit of Friends' Library, within the same enclosure as the School-house.

Children not members of our religious Society are admitted to the education of Friends and others invited to these schools, which afford the opportunity for education free from the disadvantages which appertain to many seminaries. The terms are moderate, and our members who find the charges burdensome may be fully relieved.

The School-house will be open daily from and after the tenth of Ninth Month, from 9 A. M. to 12 M., and 3 to 5 P. M., when teachers will be in attendance to give information and receive applications for admission.

Further information may be obtained of EDWARD MARIS, Treasurer of the Committee, No. 1106 Pine Street.

WANTED!—In a small family, a compassionate helper, with a fondness for little children, and an ability and willingness to assist with all light domestic duties. Address E., Office of THE FRIEND.

THE NORMAL CLASS AT WESTWOWN.—Pupils desiring to enter this department are requested to make a definite application for that purpose, to the Superintendent or Treasurer, before the close of a School Term, in order that arrangements may be made in advance to meet the probable size of the class.

WESTWOWN BOARDING SCHOOL.—A competent teacher of reading will be wanted for the Boys' department, at opening of next session (Tenth Month 30th.) Apply to
JOHN E. CARTER,
KNOX and Coulter Sts., Germantown, Phila.
GEORGE M. COMFORT,
Fallsburg, Bucks Co., Penna.

WILLIAM EVANS,
252 South Front St., Phila.

DIED, on the morning of Eighth Mo. 9th, 1888, at her residence in Moorestown, MARTHA R. COMFORT, in the 78th year of her age, a member and elder of Chester Monthly Meeting, New Jersey. Through the unobscured love of her heavenly Father, she was enabled to bear with patience a severe illness; long to be released from the shackles of mortality. Her spirit was clothed with a peaceful serenity; the remembrance of which is comforting to her surviving friends. Her last words were in English, "Daughters of Jerusalem, weep not for me."

Incidents and Reflections.—No. 165.

LOVE TO OTHERS.

Love for their offspring is a feeling deeply implanted by the great Creator; not only in mankind, but in those animals of a lower order among whom the young are so helpless as to require for a time the watchful care and attention of their parents. One of the brutalizing effects of vice is to deaden the sensibility and finer feelings of its votaries, so that the children of such are often badly treated. But when the convictions of Grace, and the softening effects of the love of God are allowed to operate, such parents find in their hearts a feeling of tenderness towards their children to which they were before strangers.

It is recorded of Edward Wright, who had been a notoriously wicked man, that in that portion of his life when he was living in sin, he had but little love for his offspring and treated them with much severity. But being remarkably visited by Divine Grace, and submitting his heart to the heavenly visitation, the affection that sprang up for his children was like a new revelation, which filled his eyes with tears and his heart with emotion. "How he could have been so savage a brute seemed now to him strange. How he could have permitted them almost to starve while he was drinking and rioting, passed all comprehension." Seeing the poor little creatures huddled up in the corner of the room, "his first feeling was to weep; his next to take them up in his arms and kiss them. There and then he made a solemn vow that, with the help of Him who had awakened such gentle emotions of love in his breast, he would ill use them no more, but act the part of a Christian parent."

It was a touching illustration of parental love, which Gladstone gave to the British Parliament, when he announced the death of the Princess Alice. Her little boy was ill with diphtheria, and the mother had been cautioned not to inhale the poisoned breath. The child was tossing in the delirium of fever. The Princess stood beside him, and laid her hand on his brow to caress him. The touch cooled the fevered brain, and brought back the wandering soul from its wild delirium to nestle a moment in his mother's lap. Then, throwing his arms around her neck, he whispered, "Mamma, kiss me." The instinct

of mother-love was stronger than all the comforts of physicians, and the Princess pressed her lips to those of the child.

An anecdote is told of an invalid woman, whose sister was about leaving her to spend the day in a large city. Before going, she asked if she could bring anything for the invalid from town, that she would like to have. The reply was: "Nothing, dear. Don't bring anything, I only want you. Come home as soon as you can." The sister, in relating this conversation, says, "Her tender words rang in my ears all day: 'I only want you;' and it suggested to her mind the requirements of our loving Saviour, 'My son, my daughter, give me thine heart.' Without the heart is given to our gracious Lord, no outward services will be acceptable.

An interesting illustration of that Divine love which reaches to all mankind, even to the unthankful and unlovely, was given by one who was endeavoring to impress on the mind of another, the goodness of Him who first loved us, and willeth not the death of the sinner, but that all men should return, repent and live. He said to his friend, in substance: "When I leave you I shall go to my own residence, if the Lord will; and when there the first thing that I expect to do is to call for a baby that is in the house. I expect to place her on my knee, and look down into her sweet eyes, and listen to her charming prattle, and, tired as I am, her presence will rest me, for I love that child with unutterable tenderness. But the fact is she does not love me, or to say the most of her, she loves me very little. If my heart were breaking under the burden of a crushing sorrow, it would not disturb her sleep. If my body were racked with excruciating pain, it would not interrupt her play with her toys. If I were dead she would be amused in watching my pale face and closed eyes. If my friends came to remove the corpse to the place of burial, she would probably clasp her hands in glee, and in two or three days totally forget her papa. Besides this she has never brought me a penny, but has been a constant expense on my hands ever since she was born. Yet, although I am not rich in the world's possessions, there is not money enough in the world to buy my baby. How is it? Does she love me, or do I love her? Do I withhold my love until I know she loves me? Am I waiting for her to do something worthy of my love before extending it to her?"

The Scriptures contain many passages which speak of the love of God to man, and of the offers of mercy held out even to those who have been rebellious, and disobedient. But while the penitent sinner may well take comfort in reading and meditating on these, it is wise also to remember, that those who continue to reject the invitations of the Almighty shall finally be cut off without remedy. In the Bible, we have both invitations and warnings, and we must not shut our eyes to either class of the inducements thus held out to walk in that way that is well-pleasing to God.

Here I am reminded of a conversation reported to me some years ago by that wise elder,

Alfred Cope, of Germantown. A woman Friend showed him a list of texts which she had selected from the Scriptures, speaking of the joy, peace and comfort which are experienced by the righteous. After examining the collection of passages, Alfred told her, that it was very well so far as it went; and he advised her to complete her work by again going through the inspired volume, and gathering together those passages which show the trials, exercises and sorrows which in this life are often the lot of the Lord's faithful servants; then she would have both sides of the case before her, and her work would be better balanced. She declined following his suggestion, saying, that she had no taste for that branch of the subject! The habit of looking on all sides of important questions is a wise and safe one; and may often preserve from unsafe or erroneous conclusions.

The softening influence of undeserved kindness is shown in an incident related in the life of John Griffin, a Congregational minister of Portsea, England. He received information that two young men of a respectable family in London had taken offence at some domestic restraint, and left their father's house to go to sea. He found them at Portsmouth, and urged them to return home. The younger was prevailed upon to do so; but the older brother, a man of determined spirit, persisted in his conclusion. On parting with him, J. Griffin's last remark was—"Well, young man, remember one thing: your sin will find you out."

Several years after, a ship of war came into the roads, and J. Griffin was sent for to visit a young man on the ship who was sentenced to death. He went on board, and found lying in irons the runaway youth with whom he had before unavailingly pleaded. He had struck one of the officers, a breach of military discipline, for which he had been condemned to die. At his trial every advantage was given to him to plead some palliation for his offence; but his proud spirit was yet unbroken.

Through the instrumentality of the person who was then member of Parliament for Portsmouth, a pardon was procured from the Admiralty, just in time to save his life. When the information was communicated to him, the man whom the terrors of a violent and ignominious death seemed incapable of appalling was completely softened, and burst into tears. He afterwards obtained a discharge from the navy, returned to his family and became a respectable citizen.

In narrating this anecdote, J. Griffin spoke of it as an illustration of the melting effect of kindness—an effect which the Grace manifested in the Gospel is fitted to produce on the hearts of men. The experience of the goodness of the Lord; and the feeling that, notwithstanding all their rebellion against Him, He is still willing to forgive them freely; has tendered the heart of many a hardened sinner, and led him to bow in submission to that Saviour who delights to seek and to save those who are lost.

FOR "THE FRIEND."

Notes on Jamaica.

(Concluded from page 43.)

The methods of carrying on business, whether sugar or coffee growing, or cattle raising, which prevailed under slavery, still have so strong a hold upon the habits of the proprietors that probably yet another generation must come and go before the modern economies will generally be put into practice; and in the case of sugar plantations, as stated above, the owners of many of them have sustained such heavy losses for several years that they have arrived at a serious crisis. The best sugar of Northern Europe now competes so severely with the Colonial cane sugars that the Jamaica planters have been pushed to the wall. In this emergency, when not only the proprietors, who generally had other means of support, but the thousands of laborers and dependants were deprived of their usual means of living, the fruit business with the United States was commenced, which has developed into such an extensive interest within the past five years. Two men living on the north side of Jamaica have the credit of developing this now important trade, by which many thousands of negroes gain their sustenance, and a fleet of small but quick steam vessels finds constant and profitable employment. There is a large fleet of steamers carrying from 12,000 to 25,000 bunches of bananas each, regularly engaged in the trade; and so constant and so enormous is the demand in the United States for this fruit, that the shipments now average 10,000 bunches daily from the north side of Jamaica alone. To this large quantity must be added all the shipments from the other West India and Bahama Islands, and from the Isthmus, amounting now to at least one-half as much more. At a very moderate computation, each bunch will have one hundred separate bananas upon it, so that we have the astounding number of 1,500,000 bananas supplied daily to the people in the United States. As the market is entirely confined to those points which are within two or three days' distance by freight trains of the ports of entry, it will be seen that this enormous quantity is absorbed by the people of the Northern and Middle and Western States, east of the Mississippi. The market is a growing one, and the demand is always in advance of the supply. Of course, the working classes are the great consumers of this fruit, which has been discovered to be not merely a luxury, but a nutritious and wholesome food as well. It furnishes nevertheless, a striking instance among many others, of the superior advantages in the matter of food which the laborer in the United States has, as compared with the working classes of other lands.

Besides bananas, Jamaica furnishes us with cocoanuts by the million, with luscious oranges by thousands of barrels (most of which pass to the consumers under the brand of some special "grove" of Florida grown fruit) and with tens of thousands of pineapples. Most of the other standard fruits of Jamaica, the mango, the nanceberry (or sapodilla), the guava, &c., are too perishable to bear transportation, but I notice recently a few arrivals by steamer of these fruits, as vessels are being used in the trade which make the voyage in quicker time. My general impression of the negro in Jamaica, especially as compared with the inhabitants of the adjacent island of Hayti, which also was peopled by Africans brought over as slaves, mostly more than a century ago, is that they are industrious—as much so, at least, as the

inhabitants of tropical lands can be expected to be—careless, happy as children, taking little thought for the morrow. Under the strong government of the British Colonial system, they are law-abiding and orderly. They are religious, after their superficial manner, but notwithstanding their membership in a Protestant church, will generally take refuge in their superstitions, and when sickness attacks them will have more faith in the vagaries and silly rites of the "Obeah Man" than in the administration of remedies by an intelligent physician, or in the consolations of the Gospel. When the restraints of the government and the proximity of a higher civilization than they have inherited, are removed, they seem very quickly to degenerate into utter barbarism. This was very noticeable in the case of many thousands who have gone from Jamaica to the Isthmus, attracted by the high wages offered to laborers on the Panama Canal, who have gained an unenviable notoriety there, as being the most vicious and unmanageable of all the motley crowd of laborers which flocked to that place.

The labor disturbances which followed the abolition of slavery arose from the sudden change of relationship between master and slave, and the planters having brought to the island a considerable number of East Indian coolies, demonstrated their ability to supply laborers for their estates, even if the freed negroes declined to work for their former masters at the current wages. These coolies dropped peacefully into their allotted position, and while they refrained from associations with the negroes, displayed no hostility to them, and when their term of service was expired, mostly remained in the island, accepting current wages, living in entire harmony with the negroes, but not intermingling much. They save the greater part of their small earnings, as they live in utter wretchedness in small cabins built of bamboo, and subsist upon the poorest food. Occasionally a vessel furnished for the purpose (in accordance with the agreement) will afford passage to India to the liberated coolies; but as most of them would suffer an irretrievable loss of caste in their native land, they prefer to live on in the West Indies free to hire wherever they can make an advantageous engagement. A few of them amass considerable wealth, which they generally convert into gold coins, which are hoarded, or into valuable trinkets with which they adorn their persons. Some of the negroes, and a few of the coolies, engage in trade,—and among these an occasional one will prove quite able to compass extensive business engagements and to rank with white merchants. Of course there are many mulattoes who are more or less largely engaged in trade, and are fully up to the average in success, and, from what I learned, are at least equal to the average tradespeople of the United States in the practice of commercial integrity.

James Anthony Froude, a writer of eminence, having visited Jamaica and the other British West Indian colonies in 1887, has written a book descriptive of their present condition and prospects, in which he draws a rather doleful picture. He thinks that the abolition of slavery, followed by free trade, caused the downfall of the planters, who were the governing class, and who were a real oligarchy, maintained probably by any very lofty conceptions of duty or of life, but were in the main kind masters and popular with the slaves, who were mostly happy and contented.

When freedom was declared, accompanying

this great change, were the enfranchisement of the negroes and the erection of a semblance of constitutional government amongst a race quite unfitted for so important an event. Froude would have had the Government to have made Crown colonies of all these places, and have them ruled exclusively by English governors, unhampered by popular assemblies. There are many who would agree with him, as they firmly believe that the vast majority of mankind had not been fit for self-government in the past, are not fit for it now, and hold out small promise of becoming so in the future—thus squarely antagonizing the American idea that "all men are created free and equal" politically. Without attempting to endorse this sweeping sentiment, it is very plain to even the casual observer, that the negroes when left to themselves show a marked tendency to relapse from the civilization they had attained under the influence of a stronger and more progressive race. Many thoughtful men in Jamaica are looking forward with the gravest apprehensions to the increase in the number of the blacks, who are a prolific race, and to the diminution in the number of the white inhabitants, who are finding smaller and smaller inducements to remain in a country where the necessary compensations are diminishing. Froude thinks, however, that such a regime as he would have preferred is now impracticable, and he utterly fails to suggest any tangible method of averting the political and civil disasters which he thinks are certain, in the not distant future, to befall the British West Indian colonies.

FOR "THE FRIEND."

A Short Biographical Sketch of the Life and Religious Labors of ELI NEWLIN, a beloved Minister of the Gospel in the Religious Society of Friends.

A narrative of the labors of this Friend may be appropriately introduced by the Testimony concerning him, issued by Plainfield Monthly Meeting of Friends, Indiana, in the Seventh Month, 1879. It is as follows:—

We feel it to be our duty to issue a brief testimony concerning our late beloved friend, Eli Newlin, believing that encouragement and instruction are often received by those who are striving to walk in the straight and narrow way, by becoming acquainted with the conflicts and Christian progress of those who, through obedience to Divine grace, have been enabled to overcome their spiritual enemies, been made useful in the Church, and finished their course with joy.

He was the son of John and Esther Newlin, born in Clinton County, Ohio, the fourth day of the Twelfth Month, 1808.

The early training and watchful, restraining care, and the consistent example of his parents, were doubtless largely instrumental in preparing his mind for so full an acceptance of pure Gospel truth, as he was afterward favored to experience through the leadings and teachings of his dear Redeemer.

He felt in youth that the strict, watchful care of his parents, to guard him against improper associates, and requiring the First-day afternoon to be mostly spent in reading the Holy Scriptures, the writings of pious authors, and in social religious converse at home; and requiring him to conform to the simplicity of the Gospel in plainness of speech, deportment and apparel, were close and unyielding; but in after life he was often heard to say that those restraints had been as a hedge about him, to preserve him from

running into vice and folly that might have quenched the strivings of the Holy Spirit in him, and he have been left to follow the vain imaginations of an unregenerate heart, as some of his youthful acquaintances did, who, like Eli's sons, were not restrained.

When in his thirteenth year, his parents having left his younger brothers and sisters in his care, his little brother John escaped from under his eye a few minutes, and he found him in the spring drowned, which made a deep impression on his tender mind; but like other youth of his age, time erased to some extent those serious thoughts, though never entirely obliterated them.

We understand that he was obedient to the counsel and admonition of his parents, though contrary to his natural inclination.

We have but a meager account of his spiritual exercises and concern of mind for his eternal welfare in his younger years, though more staid and consistent in appearance than many others.

On the 25th of the Twelfth Month, 1828, he was married to Lydia, daughter of Charles and Sarah Osborn, and settled in Economy, Wayne County, Indiana. At the death of his father, in 1832, he removed to Clinton County, Ohio, to assist his mother in executing his father's will. In 1834, he removed to Sugar Grove, near Plainfield, Hendricks County, Indiana, where he resided till 1855, when, under an apprehension of religious duty, he removed to Clear Creek Monthly Meeting, in Ohio. In 1857, under a similar impression, he removed to Newberry Monthly Meeting, Ohio.

It appears from his own account, that when he set out in life, his chief concern was to accumulate wealth, but adverse circumstances soon convinced him that riches was not for him in this world.

Near his fortieth year he was brought, apparently, near the brink of the grave, and feeling that he was not prepared for the awful change, he then made a vow to the Lord that if He would spare his life he would serve Him the remainder of his days. Soon after his recovery, he felt it was required of him to testify to others of the goodness of the Lord; and as he attended to these little services, it gave peace to his tried mind. Being careful to follow his Guide, and waiting for a renewed qualification for every act of service in the Church, he grew in his gift, to the comfort and satisfaction of his friends. In Second Month, 1854, he was recorded by WhiteLick Monthly Meeting a minister of the Gospel.

Previous to his being recorded he performed several short visits of a religious character, with the advice and encouragement of the elders, particularly visiting schools and attending some meetings as they came in course, on his own account or in company with a minister. He felt a living concern for the guarded religious education of the rising generation.

The meetings he then attended often passed in deep travail of spirit on his part, and with but little vocal exercise by him. He saw the necessity of the minds of the people being turned to the manifestations of the Light or grace of God in the heart as their teacher, and drawn away from a dependence on frail, finite man as their guide and leader.

Being assured that all Gospel ministry must flow from the immediate influence of the Holy Spirit, preparing the instrument for the right exercise thereof, and directing when and how to speak to the people; also preparing the minds of the hearers to receive the message, he was concerned to wait for and to minister under this

qualification, that he might be made instrumental in gathering souls to Christ.

In the exercise of his gift he was often engaged to call his hearers away from the love of the world, its vain maxims and customs, to obedience to the manifestations of Divine grace in the heart, which enabled our forefathers in the truth to embrace the doctrines of the Gospel as recorded by inspired penmen, in the Holy Scriptures, to promulgate them, and to exemplify their blessed fruits in their lives and labors. He was solicitous that the members of our religious Society, in the present day, should become more conversant with the writings of those faithful men and women who have left behind them records of their labors, in word and doctrine, for the promotion of the cause of truth and righteousness in the earth, as well as the many deep baptisms and close provings their Heavenly Father saw meet that they should pass through to qualify them for his work and service.

He was a firm believer in the unchangeable doctrines held by our religious Society, which, if obeyed, would call forth the same testimonies against the evils which abound in the world, and would require the same self-denying practices that have characterized the faithful members of every generation since its rise. He was often publicly engaged in exhortation to encourage the rising generation to submit to the restraints of a self-denying, cross-bearing life, which is in accordance with the precepts of Christ and his apostles; and that the followers of the Lamb must not be conforming to the vain fashions and customs of this world, but be transformed by the renewing of their minds.

He was first settled in the conviction that if we, as a people in the present day, lived as near the Fountain of light and life as the founders of our religious Society did, that we could not dispense with one of the testimonies which they bore before the world at so great a sacrifice.

He bore a faithful testimony against all innovations on, or deviations from, the principles and practices of the Society in its early rise, as being out of the truth.

After he submitted to the yoke of Christ and to serve his Divine Master, he travelled extensively, with the unity of his friends, in the limits of most of the Yearly Meetings of Friends on this continent, and in many parts several times. The last twenty years of his life was much occupied in the service of his Master in laboring for the promotion of his kingdom in the earth.

He continued his labor very near to the close of his life: the last four or five years under much bodily affliction. He was at times favored to see clearly the state or condition of individuals in meetings, and to speak directly to their case.

On the 14th of the Sixth Month, 1860, his beloved companion was removed by death. The loss he felt keenly. She was not only a partner for life, but was a true helpmeet in his spiritual exercises, ever ready to sympathize with him in his deep trials and close provings, to stay the drooping mind by a word of counsel and encouragement.

He deeply sympathized with the erring, the destitute and the oppressed, and labored much among those classes, in visiting prisons, almshouses, and the downtrodden Africans in this country.

Often when travelling in truth's service, under a deep sense of his unworthiness, and utter inability of himself without Divine assistance, to turn the people from the evil of their ways, to a dependence on God their Saviour through the

atoning sacrifice of his dear Son on Calvary, he was cast down and depressed in spirit, baptized, as it were, for the dead to qualify for the labor before him.

On the 21st of the Eleventh Month, 1861, he was united in marriage with Lydia, daughter of Levi and Susannah Barrett, of Ohio. In the Twelfth Month, 1863, he removed to his old home at Sugar Grove, near Plainfield, Indiana, where he resided till his death.

During his last illness, which was short, he imparted much pertinent counsel and admonition to those around him, particularly to his dear children, impressing on the minds of all, the necessity of standing firm for the principles and practices of the Society in its earlier days, by giving heed to the manifestations of the light or grace of God in the heart, which teaches us, that denying all ungodliness and the world's lusts, we should live soberly, righteously and godly in this present world, adorning the doctrine we profess in the simplicity of the Gospel, strictly in accordance with the teaching of our Saviour; saying that a trying time was coming upon the Society, that would test the foundation of many, on account of a libertine spirit that desires more liberty than truth owns, ignoring many of our testimonies, denying the cross, &c.

A few days before his last attack of illness, on returning from a neighboring meeting which he attended, he remarked to the friend who was with him, that he saw no opening to move forward any further in the service.

On the 19th of Twelfth Month, 1874, he quietly passed away from works to rewards, in the 67th year of his age, as a shock of corn fully ripe for the heavenly garner.

We may say of him that he hid down his head in peace in the assurance that through the mercy of God in Christ Jesus, he would be admitted into a mansion of rest.

After his close, the last minute granted him for religious service was returned to the meeting where we find the following record, in Twelfth Month 30th, 1874 :

"This meeting was introduced into a deep solemnity on being reminded of the death of this, our friend and brother. We feel it right to record in this minute that we believe that he was a minister of the Gospel, and that he was measurably faithful in his gift, even until the end of his life. May we remember the influence of his spirit and words of his counsel."

(To be concluded.)

FOR THE FRIEND.

The Crown.

The Apostle Paul, in speaking of the crown which awaits the faithful disciple of the Lord Jesus, calls it a "crown of righteousness," a "crown of life," a "crown of joy;" and Peter alludes to it as a "crown of glory that fadeeth not away."

They that bear the cross with resignation to the end are the ones who receive the crown. Not, as some may infer, anything of a material nature as worn by an earthly king or potentate, but a victorious crown, a state or condition of being, in a future world.

Those who are now accounted as kings and priests unto God, through a faithful walk with Him in this life, shall then be such in all fullness, and enjoy the blessed experience of kingly fellowship with Him who hath washed them in his own most precious blood.

This crown is something pre-eminently above and far beyond anything we can conceive of in our earthly state; and only as we get a passing

glimpse or foretaste of the powers of the world to come, can we know anything about it.

"Eye hath not seen, nor ear heard, neither hath it entered into the heart of man, what God hath in store for those who love Him; but it hath been revealed unto us by the Spirit."

"Thus we see that the Holy Scriptures tell us that we can and do enjoy a foretaste of the life to come. To those who look for Him He does appear, and

"Of our taste e'en here the hallowed bliss
Of our eternal home."

Again the apostle says, in comparing the Christian life to a race, "*They* (the runners in the arena which he pictured) run to obtain a *corruptible* crown, but we an *incorruptible*;" and the satisfying assurance is given, that although in their race in the arena but one obtained the prize, yet with us all may obtain if we will. "There is not any distinction, for in every kindred, tongue and people, they that work righteousness are accepted of Him."

Then from Peter we have the crown spoken of as "an inheritance incorruptible, undefiled, that fadeeth not away, reserved in heaven for us." We see, then, that this crown so much spoken of in Holy Writ, must be an experience, a state and blessed condition which the followers of the Lamb shall realize in the life to come. "A crown of righteousness," blessed fulfillment and entire fruition of the saints' hope; a living experience in a world where all is purity, unmix'd with evil of any kind. "A crown of joy"—joy in all its perfectness, with no sorrow intermingled. No bitter with the sweet, for in that land "sorrow and sighing shall flee away," for God shall wipe away all tears from our eyes." And it will be a "crown of life"—eternal life. "And many shall come from the east and from the west, and shall sit down with Abraham and Isaac and Jacob in the kingdom of God;" and they shall reign forever and ever.

It is a crown, however, that is not to be received through any merit of ours: "not through any works of righteousness that we have done," but only through the mercy of Him who hath sought us and bought us by his own blood. It is only received by submission to Him who, through his cleansing and regenerating power, hath made us meet to be partakers with the saints in light.

St. Paul tells us that the crown was to be given, not to him only but to all those who love the appearing of the Lord Jesus.—"So, then, it is for those who are willing to let the Spirit of Truth prepare the heart for his indwelling, and fill that heart with desires for his presence; fill it with the love of and longings for communion with Him.

Let each one, then, ask the question in all earnestness: Do I love the appearing of the Lord Jesus in my heart? Do I long for and enjoy sweet fellowship with Him? Does my soul thirst after these things? If so, we have the blessed promise: "They that hunger and thirst after righteousness shall be filled." The Master himself speaks of such as these as "blessed." Reader! dost thou come up to the apostle's standard of those who love the appearing of the Lord Jesus Christ? Is it thy one aim to be found going with him above all else beside? Has He become thine all and in all? If so, and thou continuest in this way, the crown most surely awaits thee. If not, then give thy soul no rest until thou hast sought for peace and found it at the foot of Calvary's cross. There, and there only, will thy burden roll away, and thou canst truly "crown Him Lord of all." J. H. Y.

GOING BACK TO SCHOOL.

BY M. E. SANISTER.

A merry tramp of little feet,
Just hear the sweet vibration!
The children over all the land
Have had a long vacation,
And back again they haste to take
In school the dear old places,
To measure out the days by rule
With fair, unshaded faces.

They troop along the city streets,
Grave eyes glow young that see them,
And wistful hearts would free them
Of sin and pain would free them.
Attend the dusty ways of Change,
With waits of flowers and grasses,
As if to music sweet and strange
The brilliant array passes.

Along the quiet country roads,
By purple asters half-past three
At nine o'clock and half-past three
The gay reviews are ordered.
And childish voices, clear and shrill,
Amid the rustling bushes,
The vireos in the orioles,
Housekeeping in the bushes.

We older people like to watch
Our little kids and lassies,
As sturdily they set to work
In sober ranks and classes,
Such happy brows are overbent
To on the pictured pages,
Such earnest wills are wrestling with
The story of the ages.

And sometimes, sighing as we gaze,—
So fast the hair is growing,—
We think of darker skies to come
For these, so glad and glowing.
Fain would we keep the children still
Brown-cheeked and blithe and ruddy,
With nothing harder in their lives
Than days of talk and study.

But God our Father's wisest love
Prepares them for the evil;
The army yet shall wage the war
With world and flesh and devil.
God bless them, in the coming years,
And guard the waiting places,
Which, by and by, He'll bid them fill,
His smile upon their faces.

THE WILD WHITE ROSE.

It was peeping through the brambles,
That little wild, white rose,
Where the hawthorne hedge was planted
My garden to enclose.
All beyond was fern or heather
On the breezy open moor,
All within was sun and shelter,
And the wealth of beauty's store.
But I did not heed the fragrance
Of flower or of tree,
For my eyes were on that rose-bud,
And it grew too high for me.

In vain I strove to reach it,
Through the tangled mass of green—
It only smiled and nodded
Behind its thorny screen.
Yet through that summer morning
I lingered near the spot;
O! why do things look so meter
If we possess them not?
My garden buds were blooming,
But all that I could see
Was that little mocking wild rose
Hanging—just too high for me.

So, in life's wider garden,
There are buds of promise too—
Beyond our reach to gather,
But not beyond our view—
And like the little white rose,
That tempted me astray,
They steal out half their brightness
Of many a summer day.

SELECTED.

O! hearts that fail for longing
For some forbidden tree,
Look up and learn a lesson
From my white rose and me!

'Tis wiser far to number
The blossoms at my feet,
Than ever to be sighing
For just one bud more sweet.
My sunbeams and my shadows
Fall from a pierced heart,
I can better trust his wisdom
Since his heart I understand.
And maybe in the morning,
When his blessed face I see,
He will tell me why my white rose
Grew just too high for me!

—E. Fletcher.

FOR "THE FRIEND."

Leadings of the Spirit.

We are told that if we have not the Spirit of Christ we are none of his. But as many as have his Spirit, and are led by Him, become the sons of God. And if sons, then heirs of the inheritance of the saints in light. And as we walk in this light, we have fellowship with the Father, Son and Holy Spirit, and one with another; and witness the blood of Jesus Christ to cleanse us from all sin. As we are led by his Spirit we are made new creatures, and are set free from the law of sin and death; so that all old things pertaining to the fallen nature pass away, and all is of God, who gives us the victory through our Lord, Jesus Christ.

If we are led by the Spirit of Christ, we shall not anxiously seek to lay up needless treasure here on earth, where moth and rust may corrupt, and where thieves may break through and steal; but we shall seek more earnestly than many of us do, to lay up treasure in Heaven. And where our treasure and affections are, there will our hearts be also. If our hearts and affections are on Heaven, and on heavenly things, they will not be turned so much to things of the earth; and we shall not be so greedy after worldly gain.

Neither will the Spirit lead us to seek the applause of men by any insincere performances in our pretended religious devotions. But under its influence we would seek to worship God in *spirit and in truth*; and would look to Him to lead us, instead of depending on the emotional spirit and activity of man.

All things are open and naked to the eye of Him with whom we have to do; and God will bring every work into judgment with every secret thing, whether it be good, or whether it be evil. So, if we are led by the Spirit of God, we do the things of God, to the edification and comfort of his children. But if we are led by the spirit of man, we do the things of men, in the strength of man, which has no more effect towards saving the soul, than sounding brass, or a tinkling cymbal. For Christ says, "Without me, ye can do nothing."

When we come before the Lord in our assemblies for Divine worship, if our labors are performed in our own will and strength, we may be equipped of, as said the Lord, through his prophet, (Isaiah i. 11, &c.), "To what purpose is this multitude of offerings? Who hath required it of your hands?" Is it from the Spirit of the Lord, or from the spirit of man? Incense or prayers of your own making are an abomination unto me. When ye spread forth your hands I will hide mine eyes from you. When ye make many prayers, I will not hear.

Our counterfeit worship may be clothed in beautiful words of man's wisdom; and with fascinating sounds of musical skill; yet, if we are led into it by the spirit of man, it will be but

mockery in the sight of the Lord, and only tend to quiet the conscience, and to settle it down in a false rest. If the outward eye is taken up with splendid forms of external beauty, the inward or spiritual eye has but little chance of seeing Him who is invisible. If the outward ear is filled with enchanting sounds of earthly music, where is the room for the more symphonious sounds from the music of Heaven? But is there not great danger of the carnal man mistaking the one for the other? and being ruled by the spirit of man, as to be content with the songs of earth, to the exclusion of the far sweeter songs of Zion? which come to us only as we are led by the Spirit of God, and worship Him in the beauty of holiness. Oh, the deceptableness of unrighteousness in them that perish! We are much prone to think we are led by the Spirit of the Lord, when it is nothing but the emotional spirit of the natural man, unstable in all his ways. All that we can gain by following after those who are speaking great swelling words of vanity in their own strength, can never raise us higher than earth; for a stream cannot rise higher than its fountain, and I fear it is only treasuring up wrath against the day of wrath. For a day is approaching, which we cannot evade, wherein we must all stand before the bar of God: a day in which the sinner in Zion shall be afraid, and fearfulness surprise the hypocrite. It is then that we shall find that those only who have been led through this probationary world by the Holy Spirit, are the sons of God; who will receive the welcome language of "well done," &c.

In all ages of the world there have been false apostles, deceitful workers transforming themselves into the likeness of the apostles of Christ. And if these wolves in sheep's clothing, who are going to and fro in the earth, and preaching as the ministers of righteousness, should outnumber the true ministers of Christ, it would be nothing new. For in the days of Ahab, we are told of 450 false prophets when there was only one true one. And now we find, in these days of boasted enlightenment, many who are so unlearned in the school of Christ, and so unstable as to be led by the delusive spirit of man, so that they wrest the Scriptures to their own destruction. And many are following their pernicious ways, so that the cause of truth is evil spoken of. But thanks be to God, we still have a few left that are "ministers of the sanctuary, and of the true tabernacle which the Lord pitched and not man."

DUBLIN, IND., Eighth Mo, 18th, 1888.

FOR "THE FRIEND."

Notes on Russia.

(Continued from page 40.)

The Greek Church seems to have very little influence for good on the Russian people. The services are altogether ceremonial. There is no sermon or anything calculated to give moral or spiritual advice. The result is that the educated classes tend to infidelity, and the lower to a superstitious dependence on ritualism. No one who sees the devout behavior of a crowd of Russian peasants in their church services on one of the numerous legal holidays, their serious aspect, their bowings and cross-making, their purchase of candles to light in front of the icons out of their scanty earnings, can doubt the sincerity of their intentions. Yet in many cases this sincerity is in their minds, but the indulgence which permits them to commit some immorality immediately afterwards.

There are no seats in the places for worship, and rich and poor stand side by side on terms

of perfect equality. There are no graven images in deference to the Mosaic Commandment, but painted images are abundant. There is no organ, but choirs of men and boys chant beautiful singing. There is no preacher, but the priests in their brilliant robes and imposing motions make a most impressive spectacular display. The whole is calculated to appeal to an ignorant people, and to quench aspirations for more intellectual forms. Blind obedience on the part of both Church and State are insisted on and obtained.

The railroad from St. Petersburg to Moscow is one of the best in Europe. In a truly Imperial fashion the Tsar laid a ruler on the map between the two places and had the engineers to follow the line the pencil made. They made very slight deviations in places, but the result was that the road only strikes one town of any consequence—Twer. After about an hour's run the train pulls up to a neat station house, where in a clean restaurant, one can, at very moderate rates, drink his tea and have his choice of a number of viands. The Russians are great tea-drinkers, and take it steaming hot, with a piece of lemon or tart in it, instead of milk. The cars open end to end in the American rather than the European fashion. The sleepers are very comfortable—quite as much so as the Pullman—with the berths across the car. The attendants are very accommodating, but cannot speak a word of anything but Russian. There are stone ballast and air brakes, and a first class passage means every convenience for travelling to be found in any part of the world. The third class cars are clean but not comfortable, and men and women smoke in them without restraint. The Russian people who use the trains seem to be polite and intelligent, commonly able to speak one, two or three languages besides their own, and, except for the smoking habit, not disagreeable fellow-travellers.

The country is uninteresting. There is much morass and scrub oak and birch forest, and villages of miserable huts sparsely scattered along the route. Near to Moscow great fields of wheat open out. Women were just beginning to reap there when we rode by. One or two together attacking a field of a hundred acres or more with sickles seemed a hopeless task. But the men were in the army and the women had it to do. It is said that in South Russia improved agricultural machinery had been introduced to some extent, but north of Moscow the work was done with the implements of our grandfathers.

Moscow is the great Russian city; not in size, for it and St. Petersburg each contain about 800,000 people; not in buildings, for it is distinctly inferior to the new capital; but in all that is distinctively Russian and Oriental and antiquated. Russians speak of it as "Mother Moscow" and "Holy Moscow." The provinces look up to it almost with veneration; and the Tsar himself, notwithstanding his coronation at St. Petersburg, does not consider his title complete till he passes, with uncovered head, under the Belemmer's gate into the Kremlin, and is re-crowned in the old church where his predecessors of the Romanoff line for four centuries have preceded him.

The Kremlin is the centre of Moscow. It is the old citadel, containing about ten acres, and is enclosed in a high wall with watch-towers along its line, erected long ago as a protection against Tartar invasion. It includes a number of churches which contain the caskets of the old Tsars, miracle-working images and bones and

countless jewels; an armory with relics of various wars, notably the guns left behind by Napoleon in his rapid retreat; a palace built to replace the one burned up in the fire of 1812; a monastery; and other public buildings. The general style of architecture and whole appearance are decidedly Oriental. The multitude of pear-shaped domes, gilded and green and blue, surmounting the towers; the external frescoes; the battlemented walls; the bell towers with hundreds of great bells clanging out the hours, and calls to worship; the curious droskies, with their long-cloaked and padded drivers; the dirty priests flitting about; the Russian soldiers on guard, looking suspiciously at strangers from their striped houses; Tartars and Persians and Turks, passing through, but always in a reverent way; the hum of traffic kept outside, and all as still and quiet as in a secluded monastery; give to an American a feeling of strangeness, which rather grew than lessened after daily visits for a couple of weeks.

The view of Moscow from the Kremlin is curious. The city is laid out as a spider's web, with the Kremlin in the center. Streets radiate from it and circular boulevards surround it. Vast numbers of painted domes rise in all directions. The streets are full of peasants—especially on First-days—bartering their wares. Bright-colored handkerchiefs and shirts, boots which did not match, old pieces of furniture or carpets—anything which will bring in a few kopeks are thrust at you persistently. Dry-goods are piled up on the cobble-stones, and booths set up at every available corner. The center of such a crowd is not pleasant to the nose, and your pocketbooks and watches are safe outside; but it is a good-natured, easy-going company. Nearest to the Kremlin is the merchant quarter; the next circle includes the finer dwellings; and outside are the poor people, living as they best can; worse and worse as the outskirts are reached; but the ikons and monasteries and priests are everywhere. You see a crowd of barterers pause in their jabbering, reverently uncover, and prostrate themselves before a painting, and as promptly take up the noisy bargain. You are on the top of a street car and suddenly every passenger except those who are the best dressed (and some of these) are making the signs of the cross, and you notice for the first time a little shrine by the street side. You are in a store or a bank, and you see every one who enters remove his hat and make signs of devotion to an upper corner of the room, where, upon closer examination, you see a little ikon. They apparently do not expect conformity from strangers and do not notice the absence of it.

Walking about one First-day, I saw a little band just starting for Siberian exile. It did not seem to attract much attention, probably on account of its frequency. They looked like hard and sordid, but not desperate characters, as they marched under guard, chained together, with a few women following—probably their wives—as they allow them in some cases to accompany their husbands.

But Moscow is not wholly made up of the lower classes. In summer time the better educated are much absent from the city; but there is a fine university, with an able corps of professors, and about a thousand students; libraries and museums; technical schools and a normal school; and all the paraphernalia of civilization. Only political subjects are tabooed, and the Russian Government thoroughly believes in a "guarded education."

It would not be pleasant to live in Moscow. Two weeks in a Russian hotel is sufficient. But there is no other large city in Europe so strongly in contrast with American cities, and hence so interesting for a short visit, as the ancient capital of all the Russias.

ISAAC SHARPLESS.

Natural History, Science, &c.

Eruption of a Japanese Volcano.—On the 15th of Seventh Month last occurred an eruption of the apparently extinct volcano, Bandai-san, about 165 miles north of Tokio, Japan; resulting in the burial under volcanic mud, rocks and ashes, of a region of about 75 square miles; and causing damage over a much larger area. A correspondent of the *New York Tribune* furnished that paper with a description of the event, from which the following account is derived:—

"Suddenly, a few minutes past 8 o'clock, a low rumbling was heard, like the sound of distant thunder, actually believed to be such by some; but before there was time for an interchange of words, the earth was heaved up and began to tremble violently, the ground undulating like water shaken in a bowl. From the peak of Bandai-san there then shot up into the air, as though discharged from a cannon's mouth, and accompanied by a noise as of a hundred thunderstorms combined, a huge mass of red volcanic mud, mixed with fire and rocks and sulphur and smoke, carrying with it the very peak of the mountain, and hiding for a time the broad and brilliant canopy of heaven, and then, in its fall, covering the green earth below with a bluish-gray winding sheet of volcanic mud, heavy rocks, hot water, burning sulphur, red hot sand and glowing ashes of a bluish tint. Under this mass, varying in thickness from 7 to 20 feet, were hidden 6000 men, women and children. Dense black smoke continued to issue from the aperture through which the subterranean forces had found vent, and black clouds soon covered the sky far and wide, while constantly recurring earthquake shocks increased the fright of the trembling fugitives.

At 10 o'clock the scene had reached its climax, but eruptions and earthquake shocks did not cease until 4 o'clock in the afternoon. The landscape then presented a piteous aspect. Within a distance of five miles around the mountain, trees and shrubs, as well as all the tea and rice plants—the entire crop of the year—had been destroyed. Forty-four houses were found buried to a depth of 20 feet, and many more were covered to a less depth."

Vegetation on Telegraph Wires.—A telegraph wire is the last thing one would expect to support vegetation of any kind; yet a traveller in Brazil writes to a German horticultural journal describing a crop of mistletoe which he found clothing the wires not far from Rio Janeiro. At a distance, he says, the wires appeared fringed with what he supposed were the leavings of a recent flood. But a perception of their height soon removed this idea, and upon examination the fringe proved to be composed of thousands of little mistletoes, firmly fixed to the wires from which they depended. Many species of this family flourish in Brazil, and some of them, called "bird weeds" by the people, thickly infest fruit trees and other cultivated plants, and bear large berries which are greedily devoured by birds. These seeds are deposited on the telegraph wires in the birds' droppings and quickly take root, and although the plants

perish, naturally, before very long, they are succeeded by others, and the curious mistletoe fringe is perpetuated.—*Garden and Forest.*

Boring for Gas.—Boring for gas is exactly like boring for oil, in all its workings; but the after-operations of pumping and packing, as in the case of some oil-wells, to raise the oil, are not necessary in gas-wells. If the gas is there, it will come up of its own free will and accord, and come with a rush, blowing tools and everything else out of the well before it. Indeed, gas men would often be as glad to keep their treasure down as oil men are to get theirs up. The great pressure at which it is confined in the earth, and the corresponding force with which it escapes from the well, makes it somewhat hard to manage or control. This pressure is enormous—as high as five hundred pounds to the square inch in some cases where it has been gauged. In the great McGugin well, which was not gauged, the pressure is estimated to have reached eight hundred pounds to the square inch. Any attempt to confine the gas in this well for the purpose of measuring it, would doubtless have resulted in sending the iron casing flying from the well, or in producing other effects more startling and costly than satisfactory or agreeable. Indeed, until recently, no plan had been devised by which the flow of gas from a well could be stopped or reduced. The quantity of gas that escapes from some wells is enormous, but probably no correct estimate of it has yet been made. Where the gas is "piped" away to mills and houses, all that comes from the well may be used; but if it is not all used, the remainder must be allowed to escape into the air. This is done at the regulator, where it is burned. It allows only just as much gas as is being burned in the town to go on through the pipes, and so reduces to a proper and safe point the dangerously high pressure of the gas as it comes rushing along from the well. The temperature of the gas as it comes from the wells is about 45° Fahrenheit.

Items.

Public Meeting at Westfield, N. J.—A meeting for the inhabitants generally of that neighborhood, was held in Friends' Meeting-house at Westfield, Burlington Co., N. J., on the 1st of January, First-day, the 2nd of Ninth Month. It was appointed by the joint committees of Philadelphia Yearly Meeting and Haddonfield Quarterly Meeting.

The house was nearly full. Several Friends took part in the vocal service which embraced, in the subjects treated of, a condensed outline of the leading points of the doctrine of Christianity. The undeniable truth, that all have sinned and fallen short of the glory of God, was enforced by an appeal to the consciences of those present in reference to various points, such as loving our neighbors as ourselves, resisting the temptations of the flesh, faithfully obeying the leadings of the Spirit of Christ in all things.

The serious consequences of this yielding to sin were shown by the revival of the corresponding truths, that we must be brought to judgment, and that the wages of sin is death. But to those who were willing to forsake their sins, there was encouragement and hope in the blessed assurance, that "the gift of God is eternal life, through Jesus Christ our Lord." "God so loved the world, that He gave his only begotten Son, that whosoever believeth in Him might not perish but have everlasting life." His grace and Spirit visits the hearts of all; and those who turn to Christ as He thus appears within them, and believe in his merciful assistance, and walk in obedience thereto, will receive remission of sins that are past; and, as they seek for glory, honor and immortality by patient continuance in well-doing, will, in the end, receive eternal life.

These visitations of the Spirit are the "knocks"

of Christ, of whom it was said in the Revelations, "Behold, I stand at the door and knock; if any man hear my voice and open unto me, I will come in and sup with him."

We have our outward bodies to feed, clothe and care for; so that much time and labor must be given to those necessary duties; but it is very needful, also, that all should be *perfect in spirit*, earnestly seeking to secure their own salvation, and endeavoring to promote the spread of the Redeemer's kingdom among men.

The meeting was a comfortable, and it is believed a profitable one; and satisfactory to those Friends on whom had devolved the charge of making the necessary arrangements.

Persecution in Norway.—In Norway the State religion is Lutheran, and the Baptists are frequently fined and imprisoned for administering water-baptism; and an ex-member of Parliament has been heavily fined for administering "the Lord's Supper" in his own house.

Liturgy in the Presbyterian Church.—In speaking of the remarks made at the late Pan-Protestant Council in Great Britain, *The Christian Leader* says: "The day of a common prayer-book in the Presbyterian Church is not apparently at hand; and we would advise all who think of it to mark those churches which have taken up with some sort of liturgy, before imposing it on themselves. Its introduction neither keeps the young nor fills the church with more people or more piety, than would be there without it."

Christianizing Japan.—The philosophic politicians of Japan are proposing to adopt Christianity as the national religion, as the Empress ordains the imitation of European dress. Such a proposal is eminently suggestive. The keen-witted Japanese see that their ancient religion is crumbling away before Western civilization; that the people must have some religion to sustain ordinary morals, and that Christianity has been the life-blood of States where it prevails. They doubtless are not blind to the fact that there is a marked trend in some quarters, under missionary influence, towards a hearty adoption of its doctrines and practices. Thus, though usually asserting that all religions are equally illusory, they discern the use that can be made of only the dress of Christianity. They are like Constantine, of whom Archbishop Tench says: "He was rather a political Christian—saw that it was the coming thing."—*The Christian Leader.*

The Temperance Association of Friends of Philadelphia Quarterly Meeting.—The Executive Committee believes that just now, when thousands of our Friends have been closed in Philadelphia, is a fitting time to offer the former patrons of these places Coffee Rooms and Coffee Houses as substitutes. It requires about \$300 to fit up a Coffee House, and past experience shows that a guarantee fund or a reserve fund is required to sustain them until custom is established. They now hold two coffee houses, one Coffee Room and two Coffee Stalls in operation. A Coffee Cart has also been started. Money, as well as care and labor, is required to carry forward this work. Any Friend may become a member of the Association, by the payment of \$1.00 annually.

Donations and annual dues will be received by Chas. Malack, Treasurer, 425 Walnut Street, or John C. Winston, Chairman of the Finance Committee, 1009 Arch St., or Frank A. Sniffen, Friends' Institute, 1395 Arch St.

THE FRIEND.

NINTH MONTH 15, 1888.

A Friend in North Carolina has sent to us an account of their late Yearly Meeting, from which the following narrative is taken. It convened at High Point, North Carolina, on Fourth-day, the 8th of Eighth Month.

At the Representative Meeting, held at 10

A. M., a report was read from the committee appointed to lay down the Quarterly Meeting of Lost Creek, Tennessee. Two of the Monthly Meetings belonging thereto have been joined to one Quarter and one to another in North Carolina. Interesting information was given as to the condition of the work of education amongst the Cherokee Indians in Western North Carolina; also that an appropriation had been obtained from the Department in Washington for the training of 80 of their children at a small advance over last year.

At 2 P. M. the meeting of Ministry and Oversight assembled. Several strangers attended, and we were favored with a covering of good, under which prayer was feelingly offered for Divine aid and direction during our annual assembly.

Fifth-day, the 9th, at 10 A. M., the first meeting for business was held. It was concluded to hold a business session in place of the usual meeting for worship at 2 P. M. The London General Epistle was read and approved. Several Epistles from other Quarterly Meetings had not been received this year.

Two P. M., one of the Representatives reported the name of L. L. Hobbs for clerk, and Josiah Nicholson and J. E. Cartland for assistants, which were approved. We were reminded that the clerks of our meetings should be consistent Friends, impartial servants of God and of his people, spiritually minded men, that they might be enabled rightly to understand the leadings of the Spirit as it spoke through the members, for we Friends do not rule by majorities. The report of our Representatives to the Richmond Conference was read and considered; afterwards the Declaration of Faith, issued therefrom, which brought these subjects before the meeting. Objection was first taken as to the Constitution of the Conference, where representatives attended who were not in unison with our spiritual views as to baptism and the supper, as well as other elements of discord and division. How then, from a body so constituted, could pure counsel flow! About 60 years ago, a conference was held, from whence issued a concise statement of our belief, which was agreed to and adopted by all the Yearly Meetings then extant. We had also in our Book of Discipline our Principles set forth for the use of our members and honest inquirers. One of the Representatives from Eastern Quarter said that Friends there were not prepared to adopt the Declaration of Faith.

A Friend from another Quarter strongly objected to its adoption, but had not opportunity to go into the subject matter then, so left himself at liberty to criticise its contents in the future if he felt so disposed. A few other Friends, both men and women objected to its adoption; however, those who spoke in favor of it were more numerous, and the clerk made a minute adopting it.

Sixth-day 10th, met at 10 A. M., Epistles from a few of the Yearly Meetings with which we correspond, were read, and a committee appointed to prepare replies. The Queries were read, and the answers, which were about the same as usual; some labor was bestowed when the state of society, as shown by these answers, was being considered. At 2 P. M. the Report on Evangelistic work was read and passed, also an appropriation of \$125 made, from the Yearly Meeting's treasury, to aid the work for the ensuing year—this is the first time in which such a grant has been made; heretofore, the funds raised were by voluntary offering in the open meeting; the course now adopted did not pass without protest. Seventh-day, Eighth Month 11th, meetings for

business at 10 A. M. and 2 P. M. Reports on Bible Schools and Education came before us. The change of name from New Garden School to Guilford College was approved, and Friends were encouraged to keep abreast of our times in the right training of our children for Heaven and earth. That part of the report as to giving the pupils object lessons in farming, &c., was felt to be a movement in the right direction, as all honest labor is honorable, whether by the spade, or needle, wash-tub, or cook-stove. But this, as well as intellectual development, must be kept in subserviency to the one great object for which we were created. The endowment fund started last year has now reached to \$25,000. So now there is a good opportunity for Friends of other Yearly Meetings, who have means, to contribute to raise the \$50,000 wanted.

On First-day four meetings were held in the meeting-house and in the grove adjoining. The attendance was large and orderly. Friends were offered the use of Baptist and Methodist houses, but thought better respectfully to decline.

Second-day, 13th, met at 10 A. M., and continued mostly routine business. The proceedings of the Meeting of Ministry and Oversight were read. The Committee appointed last year about granting returning minutes to ministers from Philadelphia brought in a report against granting such, until after the re-opening of correspondence between us. Last year, men friends expressed approval of leaving it to subordinate meetings to give returning minutes; and this year there was a very general expression approving the same course, which the Clerk minuted at a subsequent sitting. A Minute was read from women Friends, not in unity with such a course; so the subject was left over for another year.

At the meeting held on Third-day, 14th, together with other business, a strong set of resolutions were adopted.

The Committee appointed to have charge of the meetings during Yearly Meeting, reported. They and the Ushers appear to have done pretty well, but the Rules of Discipline were broken by several members in disturbing the meetings by congregational singing, against which we protest. Some ministers from other Yearly Meetings were disorderly in this respect; and there was not sufficient silence after ministry and prayer. Towards the close, we were dipped into sympathy, one towards another, under the various trials and discouragements of the present day; and prayer was offered to the Lord of the Harvest for qualification to work in his field, with thanksgiving for his continued goodness.

Letters have also been received from two other Friends of North Carolina, which express sorrow at the adoption of the Richmond Declaration of Faith. One of them says, "The last hope is well high crushed out of returning to first principles."

A Friend in Ohio calls our attention to the 15th verse of the 17th Psalm, which he has frequently heard incorrectly quoted by ministers and others, who substitute the word *in* for *with* in the concluding expression, "I shall be satisfied when I awake *with* thy likeness." He noticed that a similar change was made in a reference to this verse in an article in No. 32, of the last volume of THE FRIEND.

We have little sympathy with the attempts to build up systems of doctrine on delicate shades of meaning in particular words—for this is a

foundation which may be destroyed by a different, and perhaps equally accurate, translation of the same passage. But as the meaning of *in* and *with* is not the same, it seems proper to call attention to the criticism of our Ohio Friend.

SUMMARY OF EVENTS.

UNITED STATES.—The Chinese Restriction bill passed the Senate on the 7th instant, with but three negative votes. A motion of Senator Blair's, for reconsideration, is now pending in that body.

Senator Gorman has introduced in the Senate a bill to further suspend for five years, from Fourth Month 18th, 1859, the operation of Section 5574 of the Revised Statutes, which prohibits Americans who may discover guano islands, from selling the product of those islands to persons other than the United States. A statement accompanying the bill says that the expense of mining guano in small quantities is as great as that of mining it on a large scale, and that since the discovery of phosphoric rocks in the Carolinas and Georgia, waste paper may be sold everywhere, and such islands cannot be worked successfully unless the markets of the world are thrown open to them. The Navassa Phosphate Company, the owner of these islands, says that the price of its product has declined from \$25 to \$6 per ton.

On the 5th instant a bill passed the House of Representatives for the exchange of worn or mutilated subsidiary coins, at coinage value, for new coins.

Chairman Palmer, of the Arkansas Prohibition State Executive Committee, claims that 40 counties of Arkansas have gone against license, and says that whiskey had a great deal to do with the raid on the ballot boxes at the State capital. The returns carried away were from precincts which have large Prohibition majorities.

Local option elections were held in several counties in New Jersey last week. Salem County gave 997 majority against license; and Cape May, a majority of 208 for license. The latest returns from Warren, a strongly Democratic county, show that the majority against license will reach over 1000. Most of the hotel and saloon licenses there will not expire until next spring.

Judge Ney, according to a despatch from Waterloo, Iowa, and the State Prohibitory law, decides that a man cannot lawfully manufacture cider for use in his own family, and instructs the Grand Jury to find an indictment, if they discover that such a thing has been done.

The comet discovered by Professor Barnard, of the Lick Observatory, California, was verified next morning at Warner Observatory, in New York State, by Professor Lewis Swift. "It is in right ascension 8 hours, 52 minutes and 3 seconds, declination north 10 deg. 57 min. Its real velocity is 100 miles per second, and it is just visible through a 2½ inch telescope, and has no tail."

On Seventh-day, the 8th instant, 43 new cases of yellow fever and 6 deaths were reported in Jacksonville, Fla.

The deaths in this city last week numbered 265, being an increase of 13 over the previous week, and a decrease of 27 compared with the corresponding period of last year. Of the whole number 184 were males, and 181 females; 43 died of consumption; 32 of cholera infantum; 28 of marasmus; 27 of typhoid fever; 27 of diseases of the heart; 22 of inflammation of the stomach and bowels; 14 of old age; 14 of convulsions; 12 of cancer; 11 of disability, and 10 of inflammation of the brain.

Markets, &c.—U. S. 4½, 107; 4's, reg.; coupon, 129; currency 6's, 129 a 130.

Cotton sold in a small way to spinners at 10½ cts. per pound for milled uplands.

Flour and Meal.—Flour met with a moderate demand from jobbers, and with light offerings, holders were firm in their views. Sales of 125 barrels Ohio, straight, at \$5; 250 barrels winter patent, at \$5.50; 125 barrels Minnesota, clear, at \$4.70; 375 barrels do, straight, at \$4.75; 250 barrels do, patent, at \$4.50; 1000 barrels do, do, at \$5.50 a \$5.45. Rye flour was dull at \$3.25 per barrel.

Grain.—No. 2 red wheat, 99½ cts. a \$1.

No. 2 mixed corn, 53½ a 54 cts.

No. 2 white oats, 52 a 53 cts.

Beef cattle.—Extra, 5½ a 5½ cts.; good, 5 a 5½ cts.; medium, 4½ a 4½ cts.; common, 3 a 4½ cts.

Sheep.—Extra, 4½ cts.; good, 4¼ a 4½ cts.; medium, 3¼ a 4 cts.; common, 1¼ a 3 cts.; lambs, 3 a 6½ cts.

Hogs.—Extra, western, 9 1/2 cts.; western, 8 1/2 cts.; State, 8 1/2 cts.

—During the past week the European crops are reported to have been further injured by heavy rains.

A dispatch dated Dublin Ninth Month 6th, says: Workmen are engaged on the new water works, and the level is higher from which the tenants have been evicted. The tenants had hoped to make some arrangement enabling them to return to the dwellings, and the destruction of the structures is causing a very bitter feeling. One of the houses which have been levelled was occupied by a farmer named Tully. Tully built the house himself and spent \$1000 in its construction.

The Provisional Committee appointed to inquire into the advisability of building a ship canal between Liverpool and Birmingham, has made a report favoring the project, and recommending that immediate steps be taken to obtain from Parliament the necessary powers.

On the 5th instant Ferdinand de Lessops read a paper at the meeting of the British Association at Bath. In it he said he was confident that ten locks of the Panama Canal would be completed by 1890.

A dispatch from Zanzibar, received in London on the 6th inst., says that a dhow, flying the French flag and carrying French passengers, had been captured by the British man-of-war Griffin. It is reported that a regular slave traffic is carried on between Pemba and Madagascar by dhows, with which, in view of the fact that they carry the French flag, British cruisers are powerless to interfere.

The French Government has ordered an investigation to be made of the report that dhows carrying the French flag, are engaged in the slave trade between Pemba and Madagascar. Should the report be found true, steps will be immediately taken to stop this degradation of the national colors.

A dispatch to the *Temps*, from Zanzibar says: The Panegri natives have resisted the landing of the German Company's officers and the Sultan's troops. Shots were exchanged and two Germans were wounded. A man-of-war arrived afterwards bombarded Tanga. The excitement is spreading. Communication with the interior is interrupted.

The Siamese Government has granted a concession for the construction of one of which is to be connected Bangkok with its port, Paknam. It is stated that the Government has undertaken the construction of a steam tramway in the capital.

A telegram from Havana says the cyclone of the 4th instant was terribly destructive. Life and property in Cuba were in a general state of confusion. The captain and her captain and nine of her crew were drowned. At Sagua 50 persons lost their lives, and the neighboring village of Pueblo was "literally wiped out." The telegraph wires being broken, no news from other parts of the island has been received.

RECEIPTS.

Received from MARY ANN SIMKIN, N. Y., per Nicholas D. Tripp, Agent, \$2, vol. 62; from HETTY ANN BELLAH, Del., \$2, vol. 62; from GEORGE W. SHEPPARD, N. J., \$2, vol. 62; from WILLIAM ROBINSON, Agent, Ind., \$14, being \$2 each for William Peacock, Elijah Peacock, and Barclay Peckoff, Philadelphia; from HILL LUDWIG ROBINSON, and SUSANNA COX, vol. 62; from JULIANA N. POWELL, N. J., \$2, vol. 62; from JAMES KERSEY, Ind., \$6, being \$2 each for William T. Hadley, William C. Stanley, and Joel W. Hudson, vol. 62; from JOSEPHUS HOLLINGSWORTH, Ill., \$2, vol. 62; from GEORGE W. HEDGECOCK, per James R. Jones, Pa., \$8, vol. 62; from ELIZABETH H. BROWN, Pa., \$2, vol. 62; and for Phebe Humphrey, \$4, to No. 52, vol. 62; from Elijah Kester, Md., \$2, vol. 62; from ANNA W. CUBBS, or, per WILLIAM W. BRUFF, \$2, vol. 62; from EATHER ROBERTS, N. J., \$2, vol. 62; from GEORGE MICHAELSON, Agent, No. 8, 10, being \$2 each for Joseph Beecley and Samuel Willard, \$2, and \$2.10 for Eli Scott, to No. 52, vol. 61; from Edward Michener, Pa., \$2, vol. 62; from John R. Hodgson, Canada, \$2, vol. 62; from John Knudson, 10, \$2, vol. 62; from Richard E. Ely, Pa., \$2, vol. 62; from George and Evans, Pa., \$2, vol. 62; from Samuel M. Wickersham, Pa., \$2, vol. 62; from Sarah Nicholson, N. J., \$2, vol. 62; from Eli Sharpless, N. J., \$2, vol. 62; from Amos Ashard, N. J., \$2, vol. 62; from Henry Newton, Esq., \$10, vol. 62; from James R. Jones, Pa., \$8, being \$2 each for his self, Charles Cooper, Thomas B. Hoopes, and James Thompson, vol. 62; from John Forsythe, Pa., \$2, vol. 62; from Charles Osborne, Me.,

\$2, vol. 62; from David Wallace, O., \$2, vol. 62; from Dillon Haworth, Philadelphege, Esther C. Bales, James N. Smonds, Wilber F. Crist, and Addison Hadley, Ind., \$2 each, vol. 62; from Benjamin C. Reeve and Richard H. Reeve, N. J., \$2 each, vol. 62; from Mercy H. Jones, Philada., \$2, vol. 62; from Joseph H. Brannan, \$2, vol. 62; from Joshua R. Howell, W. Philada., \$2, vol. 62; from Lydia H. Moorman, 10, \$2, to No. 13, vol. 63; from Stephen Hodgkin, Kans. \$2, vol. 62; from Samuel W. Stanley, Agent, 10, \$8, being \$2 each for Joseph Patterson, Samuel Embree, Stephen Jackson, and William G. Coppock, vol. 62; from Ellis Smedley, Pa., \$2, vol. 62; from Elizabeth S. Field, Philada., \$2, to No. 9, vol. 63; from William Archut, Philada., \$2, vol. 62; from Richard Himes, N. J., \$2, vol. 62; from Mary M. Garrett, Pa., \$2, vol. 62; from Jesse Negus, Agent, 10, \$4, being \$2 each for Thompson Walker, and Tristram Coggeshall, vol. 62; from Benjamin Ellyson, 10, \$2, vol. 62; from Enos Smedley, Gtn., \$2, vol. 62; from Seneca Hazard, Vt., \$2, vol. 62; from Mary M. Britton, Pa., per Joshua, vol. 62, vol. 62; from Susanna Brinca, Pa., \$2, vol. 62; from Richard Wistar, Philada., \$2, vol. 62; from Howard G. Taylor, N. J., \$2, vol. 62; from Hannah Evans and Joseph G. Evans, N. J., \$2 each, vol. 62; from Robert Harris, or, per Joshua Brantingham, Agent, \$2, vol. 62; from Richard W. Howard, W. Tow., \$2, to No. 6, vol. 62; from Joseph Carlant, Mass., \$2, vol. 62, and for S. Abbie Dove, N. H., \$2, vol. 62.

Remittances received after Third-day, will not appear in the Receipts until the following week.

NOTICES.

WESTOWN BOARDING SCHOOL.—A State Meeting of the Committee on Admissions, will be held in the Committee-room, Fourth and Arch Sts., Philadelphia, on Seventh-day, the 15th inst., at 10 o'clock.

JOHN W. BIDDLE, Clerk.

A WESTOWN BOARDING SCHOOL.—An unusually large number of applications having been made for admission of pupils the coming winter, the committee have decided to limit the number of boys to 35, and of girls to 140, for this term. Members of Philadelphia Yearly Meeting intending to enter their children for the next session, will please do so prior to Ninth Mo. 15th, as after that date it is proposed to consider applications for admission made by the parents or guardians. If there are not now pupils at the school. If from any cause children who have been entered, are prevented from coming, their parents or guardians will confer a favor by sending notice thereof promptly to the Superintendent, Jonathan G. Williams, in order that such vacancies may be filled from other applicants.

FRIENDS' SELECT SCHOOLS.—These schools, under the care of the three Monthly Meetings of Friends of Philadelphia, will re-open in the new School-house 140 N. 10th St., above Arch, on Second-day, Ninth Mo. 15th, inst.

The department for Boys continues under the care of John H. Dillingham; that for Girls in charge of Anna Walton; and both of them will be assisted by a corps of competent instructors.

The Boys' and Girls' Primary Departments, will be conducted in charge of Elizabeth W. Warner and Anna Yarnall.

The new School-house is well adapted for conducting a first class school; great care having been taken to provide all necessary comforts and conveniences. The heating and ventilation has been carefully attended to, and the cheerful and commodious character of the rooms, and the arrangements of the surrounding grounds are attractive. The scholars will have the benefit of Friends' Library, within the same enclosure as the School-house.

Children not members of our religious Society are admitted, and the attention of Friends and others is invited to these schools, which afford the opportunity for education free from the disadvantages which apparently may be felt in other schools. The charges are moderate, and our members who find the charges burdensome may be fully relieved.

The School-house will be open daily from and after the tenth of Ninth Month, from 9 A. M. to 12 M., and 3 to 5 P. M., when teachers will be available to give instruction, and receive applications for admission.

Further information may be obtained of EDWARD MARIS, Treasurer of the Committee, No. 1106 Pine Street.

EVENING SCHOOLS FOR COLORED ADULTS.—Teachers are wanted for these schools, which will open on the 1st of Tenth Month next. Apply to Edward S. Talbot, 2220 Pine St. Joseph J. Fallon, 924 Chestnut St. Thomas Woolman, 535 Marshall St.

WESTOWN BOARDING SCHOOL.—A competent teacher of reading wanted for the Boys' department. Apply to JOHN E. CARTER, KNOX and Coulter Sts., Germantown, Phila. WILLIAM EVANS, 252 South Front St., Philada.

DIED, at her residence, near Downingtown, on the morning of the 10th of Eighth Month, 1883, MARY ANN BELLAH, in the 55th year of her age, an elder and overseer of Uchlan Monthly Meeting of Friends, and Downingtown Particular Meeting. For months previous to her death, this dear Friend was strongly impressed with the belief that the end was near, and frequently spoke of it to her family, saying: "It has been sounded in my ear, 'the time of thy departure draweth nigh.'" She was confined to her room, and mostly to her bed, for nearly three months, during which time she often expressed her willingness to be released, butling, "I am waiting for the solemn change, saying at one time, "If I am not deceived, and I believe I am not, I have this day been permitted to see the beauties of Heaven." At another, "I am about ready to be offered up," &c. Among her last words, which were recorded and preserved, were "Peace, peace, everlasting peace." To her language seems applicable, "Blessed are the dead who die in the Lord from henceforth; yea, saith the Spirit, for they rest from their labors and their works do follow them."

—, at her home in Philadelphia, in Chester County, four, after a lingering illness of five months, which she bore with much patience and resignation, on the 22nd of Fifth Month, 1888, HANNAH, wife of William H. Ford. She was a firm believer in the principles of Friends, and a member of Waynesford Yearly Meeting, and a comforting and loving solace with her relatives and many friends, that her end was peace.

—, at his residence, Glen Riddle, Delaware Co., Pa., on the evening of Seventh Mo. 2d, 1888, THOMAS H. ELLIS, a member of West Chester Monthly Meeting of Friends. He was a loving father and a kind friend, always willing to lend a helping hand in any office of kindness. Although he was suddenly called off, his family have the consoling belief that the end is peaceful, and that he is resting with his father, B. F. Wickersham, in Kennet Square, Chester Co., Pa., after a protracted illness. J. LESLIE WICKERSHAM, aged thirty-three years, a member of London Grove Monthly Meeting, Ninth Month, 1888, at the residence of her uncle, Ellwood Tomlinson, at Atlantic City, New Jersey, ELA HATTON, in the 23rd year of her age, a member of Birmingham Monthly and West Chester Particular Meeting, Pa. Although the illness of this dear Friend was not long, she manifested a peculiar favor with a presentiment that her end was near; and with a quiet and composed resignation to the will of her Saviour. She has, we reverently believe, been safely gathered into one of those mansions He went before to prepare for such as are faithful to the end.

—, on the 17th of Eighth Month, 1888, at the residence of Rebecca Troth, Bordentown, N. J., HANNAH ELLIS, an elder of Upper Springfield Monthly Meeting, N. J., in the 104th year of her age. This dear Friend, while comparatively young in life, was made willing to submit to the operation of the Spirit of Divine grace in her heart, and thus became qualified for the work and service to which she was called in her more mature life. She was a true believer in, and steadfast in the support and maintenance of the doctrines and testimonies of our Society as promulgated by its founders. The purity of her life, and her gentleness of manner, greatly endeared her to a large circle of friends and relatives, for whose welfare, especially that of the young, she manifested an earnest, true solicitude. For a number of years preceding her decease, she was deprived of sight; yet no word of murmur on this account was ever heard to escape her lips; but she was strengthened to bear her affliction with patience, and to thank God for the mercies he bestowed, which she manifested to the end of life, justifies the assurance that her sun went down in brightness; and that she has been gathered, like a shock of corn fully ripe, into the heavenly garner.

FOR "THE FRIEND."

Incidents and Reflections.—No. 166.

HIDDEN CHRISTIANS.

It is recorded in the Book of Genesis, that when the earth was yet without form and void, and darkness was upon the face of the deep, the Spirit of God moved upon the face of the waters, and God said, "Let there be light; and there was light." So it is in the redemption of man from a state of spiritual blindness and alienation. The Spirit of God is felt moving on his mind; and a measure of Divine Light irradiates his heart, showing him the path in which he should walk—that he should choose and what he should reject. To this blessed truth our Saviour bore testimony when He declared that "Light is come into the world." The reason that so many fail to exhibit the blessed fruits it is calculated to produce, is, that they refuse to bring their actions to this Light to be judged by it; but walk in their own evil ways.

It is a source of comfort to one who loves his fellow-creatures, to believe that thousands and tens of thousands of persons in every part of the world; even amid surroundings which we must consider very unfavorable for the development of truth and righteousness, have been illuminated by this Light—have heard the voice of the Saviour speaking in their hearts—and through obedience thereto, have experienced the fulfilment of the declaration, "If we walk in the Light, as God is in the Light, the blood of Jesus Christ his Son cleanseth us from all sin." And this we believe has been the case with many who never heard of the coming in the flesh of our Saviour, Jesus Christ; yet who have known Him in spirit as a Guide and Teacher.

A very interesting feature in the extensive journeys of Stephen Grellet, was the frequency with which he met, in unexpected places, with pious people, who had been led into a manner of life different from that with which they were surrounded. When in Switzerland, in 1814, he found in the village near St. Gallen a number of persons, both Protestants and Papists, who, from religious conviction and tenderness of conscience, had withdrawn from the various professions they were joined to. His Journal says: "They spend much of their time alone in religious retirement; and when they meet together, sit in silence, or read some portions of the Holy Scriptures. Some of them appear also to be con-

vinced of the unrighteousness of war, and of the unlawfulness of oaths, under the Christian dispensation. I have heard of many others, under similar convictions, who reside among the mountains." Of these people he remarks, when on a subsequent visit: "I am comforted in the belief that the Lord has many precious plants that I may never hear of, whom He cares for himself, and whom He waters from his holy presence." On another occasion he makes the more general comment: "It is a great consolation to me to have the persuasion that there are those among the various nations and the various Christian professors, yea among Jews and Gentiles, who fear God, and according to the measure of grace they have received, work righteousness, and are accepted with Him through the one Mediator."

Among the students of the University at Leipzig, he found several small companies who met together silently to wait upon the Lord, and to feel after the manifestations of his Spirit, or at seasons to unite together in putting up their prayers to Him.

When at Valencia, Spain, he met with an aged man, eminent in his profession as a lawyer, who had become convinced of the evils that flowed from the gross superstitions which abounded. This man had written to the king of Spain, plainly setting forth the sufferings to which many of his subjects were exposed, in his name. The king's prime minister ordered his immediate arrest and punishment; but his life was saved by the judge, who was a personal friend, who had him confined in a cell as a madman. There he remained six months, and was released on a change in the Government, which had taken place shortly before S. Grellet's visit. S. G. says of him: "This aged man appears to be well acquainted with several of our Christian testimonies, especially as regards the influences of the Spirit; hence his views respecting Divine worship and the ministry are pretty clear. He knows a number of persons convinced of the same important truths, who reside in various parts of Spain, but have mostly retired to lonely places, on account of the great persecution that lately prevailed, when many of his friends, spiritually-minded persons, perished. We told those pious individuals who came to see us, that the Lord is very near to those that fear Him; that a book of remembrance is written for those that think on his name; that though they should be so few as two or three only engaged in waiting upon Him, He has promised to be in the midst of them. As we were thus proceeding to encourage them, the dear old man, with brightened countenance and glistening eyes, said, 'O yes, it is a blessed privilege for the two or three, or even four, or solitary one, to wait upon the Lord, and to obtain access to his Divine presence.' This he had been very graciously permitted to realize, whilst shut up in his dark cell, and treated by some of his keepers as a madman."

At Brives in France, where Stephen Grellet's mother resided, he had religious opportunities during his successive visits to that country with Roman Catholic nuns, some of whom were en-

gaged in waiting on the sick in the hospital. His "heart was enlarged among them in the love of Christ, who was preached to them as the only Saviour and Bread of life; they were directed to enter into the temple of their hearts, sanctified by the Spirit, and there to offer up to God the worship well-pleasing in his sight, in spirit and in truth." "Several of them," he says, "I believe hold frequent silent communion with God, and amidst the round of forms that their religious order requires, they enjoy Christ, the substance." "My soul does magnify the Lord my Saviour, who has brought me to the knowledge of some among the various nations of the earth, outwardly joined to separate religious names and communities, priests, monks, nuns, &c., to whom my heart is united in the Spirit, and whom I can salute as disciples of the Lord Jesus Christ; by-and-by, I trust, all these will be united as fellow-servants of our Lord in the Church triumphant, harmoniously singing praises, and ascribing glory to their God and Saviour."

The Malakans, who were numerous in Southern Russia, he found to be a people holding pure and spiritual views of Christian doctrine. At a meeting with them, there was present one of the clergy of the Greek Church, named Macarius, who himself seemed to be a pious and spiritually-minded man. After the meeting had ended, he remained for sometime absorbed in silent meditation; and then, with a flood of tears, he cried out, "In what a state of darkness and ignorance have I been! I thought I was alone in these parts endeavoring to walk in the light of the Lord, to wait for and sensibly feel the influences of his Spirit, so as to be able to worship Him in spirit and in truth; and, behold, how great has been my darkness, so that I did not discover that blaze of light here round about me, among a people poor in the world, but rich in faith in the Lord Jesus Christ."

In conversation with Stephen Grellet, this Macarius imparted some of the exercises of his mind, and the way in which the Lord by his Spirit had been pleased to lead him. He said "that formerly he endeavored, and that with much care and labor, to prepare his sermons; but when in the pulpit he attempted to preach them, he felt them to be so dry and lifeless, that his tongue seemed to refuse to perform its office, and he was obliged to stop; when under very deep abasement before the Lord, he felt the quickening influences of his Spirit constraining him to speak, as He then gave him matter and utterance. Now when he ascends the pulpit, his dependence is on the Lord alone, and he has nothing prepared beforehand."

The surprise which Macarius felt, at finding others who had been led in the same path with himself, brings to mind the case of Thomas Story. He had been remarkably visited by the overshadowing of Divine power, and many of the things pertaining to the kingdom of heaven had been opened to his understanding. He knew of no one who had passed through such an experience; and he supposed it was a peculiar manifestation of Divine regard to him personally.

While in this state of mind, he attended a meeting among Friends in Cumberland, where his concern was to know whether they were a people gathered under a sense of the enjoyment of God in their meetings. He says:—

"Not long after I had sat down among them, that heavenly and watery cloud over-hadowing my mind, broke into a sweet abounding shower of celestial rain, and the greatest part of the meeting was broken together, and dissolved, and the meeting was broken together, and the heavenly presence of the true, heavenly Lord; which was divers times repeated before the meeting ended. In the same way, by the same Divine power, I had been often favored before when alone, and when no eye but that of heaven beheld, or any knew but the Lord himself; who, in infinite mercy, had been pleased to bestow so great a favor.

"And, as many small springs and streams, descending into a proper place, and forming a river, become more deep and weighty; even so, thus meeting with a people gathered of the living God, into a sense of the enjoyment of his Divine and living presence, through Jesus Christ, the Son of God and Saviour of the world, I felt an increase of the joy of the salvation of God; and the more, by how much I now perceived I had been under the like mistake as the prophet of God of old."

It is interesting to note the effect on the mind of Stephen Grellet, of the extensive intercourse with people of other persuasions into which his religious engagements led him; which he expresses as follows:—

"The more I have mixed with persons of other religious denominations, the stronger has become my attachment to our own Society and the Christian principles which we maintain. I rejoice greatly indeed in having met with individuals, yet many in several nations where I have travelled, who are very near and dear to me in spirit, and who I believe love the Lord Jesus in sincerity; but I met with no people, who, as a religious body, maintain doctrines and testimonies so scriptural and agreeable to vital Christianity, as does the religious Society of Friends." J. W.

FOR "THE FRIEND."

Food and Digestion.

Abstract of a Lecture given at Westtown by DR. MARY E. ALLEN.

The girls, their teachers, and a few other friends, met in the lecture-room. The lecturer began by naming the various tissues of the body and stating their uses; stating also the different elements composing these tissues, of which elements nitrogen, carbon, hydrogen and oxygen are most important.

Seeing that the growth of the tissues depends upon the food taken, it becomes necessary that the latter should supply the different elements in the right proportion; a variety, therefore, of substances is essential. The proportion should be, for the average man, one pound of non-nitrogenous food to one and a half pounds of non-nitrogenous, taken daily. Animal fluid and tissue, as well as grains and some vegetables as beans and peas, contain the important element nitrogen; while grains—peas, beans, potatoes, cocoa, tapioca, &c., supply starch and fat, of which carbon is a most prominent ingredient. Sugar also supplies carbon.

It would seem from the foregoing that a vegetable diet will give both the nitrogenous and non-nitrogenous elements demanded by the system. Is, then, a vegetable diet alone, good for us? No, the structure of the teeth and stomach

of man shows that they are made for both kinds of food.

Digestion begins in the mouth. The saliva is alkaline in its reaction, and changes the starch of bread, potatoes, &c., into sugar. Wheat, after chewing, tastes sweet. The change is similar to that which takes place in sprouting grain. The food should be kept in the mouth long enough, and be rolled about there sufficiently to come fully in contact with the saliva, as, when it passes to the stomach, another part of the work of digestion succeeds, under the influence of the acid juices of that organ. The bile, however, of the liver, continues the work commenced by the saliva. The reason why we feel so uncomfortable when bile gets into the stomach, is because the bile, being alkaline, interferes with the work of digestion which is properly brought about by the acid pepsin secreted.

If starch has to be changed into sugar, why not eat sugar and candy as common articles of diet? The answer is that the sugar made in digestion is not the same kind of sugar as that which suits our palate so well; the former is grape sugar, the latter cane sugar, and has itself to be changed in composition.

The various foods take different lengths of time for digestion. The average is two and-a-half hours. The most digestible food is not always the most desirable. Thus pigs' feet can be digested in one hour, but pork is not the most nutritious article of diet. Young meat may or may not be more digestible than old. Veal is not so digestible as beef. Lamb is more digestible than mutton, and young chickens than those of greater age. Duck is hard to digest; venison very easy, taking only one and-a-half hours; raw oysters very easy, because the main part of the oyster is liver, and contains itself a digestive fluid. Cooking lessens its digestibility. Cabbage is more digestible than boiled cabbage. Girls should learn how to cook so that their preparations will be most digestible.

Some men and women, boys and girls are afflicted by being too thin, others are equally troubled by over-stoutness. Is there any relief for these? Happily there is, by care in diet and other respects. The following recipe is for the thin:

1st. Eat oatmeal, and bread made of unbolled flour. Drink unskimmed milk.

2nd. Drink a great deal of cold water between meals.

3rd. Exercise considerably, but not so violently as to cause much perspiration. Live in the fresh air as much as can be.

4th. Take plenty of sleep. Sleep from nine to seven, or take even eleven hours a day. Cultivate a habit of sleeping.

If you are too fat, or in fear of becoming so, you must—

1st. Eat little. Take one good meal a day—at the other meals a glass of milk, or a little bread and butter will do. The craving for more food will soon cease to give discomfort.

2nd. Drink little. Don't drink hot water at meals.

3rd. Sleep little.

4th. Exercise several times a day, till a profuse perspiration is excited.

Cleanliness makes thin people fat, and fat people thin.

Tea and coffee should both be made rapidly, but not boiled. Black tea is better than the green, as the latter is colored. Tea and coffee are both stimulants, but different in their action. Tea increases the action of the skin, produces perspiration and cools the body. Coffee diminishes

the action of the skin, makes it dry, excites mucous membrane, and quickens the pulse and the action of the heart. Coffee and tea may sometimes be taken with advantage when great work is to be done, but like all stimulants, have injurious effects on most people. Those under forty, and those living sedentary lives, should not drink them. Tea-tasters, although they do not swallow the tea, and sometimes only breathe on it, cannot follow their occupation many years; they become nervous and trembling. Chocolate and cocoa are real foods, though sometimes too rich for weak stomachs.

Alcohol is not a food; no tissue is built up by it. It does not give heat. It may do good in retarding the change of tissue in fevers; but even in such cases its use is doubtful, and other articles are found to be equally beneficial. Therefore, in view of its many dangers, the wineglass should be turned upside down and kept so.

FOR "THE FRIEND."

A Short Biographical Sketch of the Life and Religious Labors of ELI NEWLIN, a beloved Minister of the Gospel in the Religious Society of Friends.

(Concluded from page 51.)

The memoranda which Eli Newlin preserved of his numerous travels in the service of Truth, are mostly confined to a simple statement of the meetings and families he visited, with occasional references to the incidents which occurred, and to his own feelings and mental exercise. They do not often express the trains of thought, or unfold the doctrines he was called upon to proclaim in the meetings he attended; yet they contain many things which confirm the accuracy of the description of his gospel ministry, given in the Testimony concerning him, issued by his Monthly Meeting.

These memoranda show that in the twenty years which elapsed after his gift in the ministry was acknowledged by his meeting, until he was removed from this scene of labor, he obtained nearly sixty minutes for religious service, several of which were quite extensive in their character. In one of these (which included most of the meetings of North Carolina Yearly Meeting), he was from home nearly six months, travelled 5,000 miles, visited 113 meetings and 150 families, and returned home, "bearing," he says, "sheaves of true peace. I don't feel that I can convey with my pen scarcely a faint idea of the feelings of my heart. Blessed and praised be the name of the Lord forever!" During this visit, he at different times experienced much poverty of spirit, and found it to be "hard for flesh and blood" to deal faithfully—especially when visiting families.

During the last fourteen years of his life, he was often engaged in visiting prisons, infirmaries, and similar institutions. In the fall of the year 1865, he believed it right to lay before his friends a prospect of such labor in Tennessee and parts of Kentucky, and along the Ohio River, of this he says, "Notwithstanding my mind was weighed down much under the concern, at times I found myself hoping or wishing my friends might be enabled to see that the will might be taken for the deed; yet the unity and sympathy manifested, tended to strengthen and encourage my tried mind."

In the course of this visit, he several times experienced the fulfillment of the Scripture language, "He that goeth forth weeping, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him."

At Knoxville, Tenn., he makes this record:—

"My mind much depressed. I have some prospect of visiting the prison here this morning. O! how my soul is weighed down with the prospect. Paid the visit as anticipated, and was favored to leave the prison with a light heart. Our God is indeed worthy to be praised and adored forever."

"A Nashville his journal says:—"I set off this morning to see the application in the county jail. Having made an application when I was here last winter and was denied, I felt discouraged. When we arrived at the jail, the prospect was not very flattering. However the jailer at length agreed to conduct me through the prison. There were a number of cells, mostly with several in a cell. I went from cell to cell, and addressed them at some length. When I parted with the jailer, he seemed much reached, and requested me to come again if I could, that I would be welcome at any time if he was about. I returned to my lodging quite wearied with my walk and exercise of mind, as well as considerable speaking. There are 71 inmates, and being many cells made the labor of addressing them very considerable. I feel like recording something of the feelings of gratitude that pervade my heart this evening; and desire to commemorate the goodness of my Heavenly Father, who hath dealt bountifully with me. Exalted be his name forever."

In these visits among prisoners, &c., Eli Newlin was usually provided with suitable tracts, which he distributed to those who could read.

In the year 1871, he believed a similar service was required of him in Southern Indiana and Illinois, and parts of Tennessee and Kentucky, in connection with other religious labor in those parts. In the prosecution of this he was from home about four months.

After his return from this visit, his nervous system became so much deranged by disease, and his hand so paralyzed that he was unable to write, and consequently kept no notes of his subsequent travels and exercises of spirit for the promotion of the cause of Truth. Yet his zeal for the spread of the gospel of peace and righteousness in the earth, and for the advancement of his Master's kingdom, was in no degree abated by his indisposition and feebleness of body; indeed it may be said of him that he was indefatigable in his labors for the salvation of souls, and the reconciliation of man to his Maker; and that he held out faithful to the end, and put off the armor till he laid down on a bed of languishing.

At Plainfield Monthly Meeting, held Eleventh Month 4th, 1874, he informed Friends that he felt a religious concern to appoint some meetings for Friends and others as Truth might open the way, in the limits of Plainfield, White Lick and Fairfield Quarterly Meetings. His concern was united with and he was liberated for this service. This was the last of his long series of such engagements; and after its completion, he did not live to return to the Monthly Meeting its minute of approval; so that it may be said of him that he died with his armor on.

Many instances might be recorded in the ministry of this dear Friend, of his speaking directly to individuals in his public testimonies, from the impression made on his mind at the time; pointing out hidden misconduct or giving a word of consolation to the humble, contrite, Zion-bound traveller, who was under discouragement. On one occasion, when attending a remote Yearly Meeting, he visited the women's apartment, in which he had a short lively testimony—speaking to some young woman who had con-

tended with her mother for more liberty than the Truth allowed; and giving the mother's warning against such liberties; and then adding a general pathetic admonition to children to obey their parents and elder friends in the Truth.

Some time after, a woman Friend said to his companion, "Eli's communication in Women's Yearly Meeting was to me and my daughter; for he repeated very nearly the same words which passed between me and her a short time previous."

His example in meetings for worship and discipline, as well as in social circles, was becoming his high profession. The solemnity of his countenance, and his orderly deportment in religious meetings were instructive, showing that he was concerned to come before his Heavenly Father in humility and abasement of self, and down to wait to feel the arising of the Holy Spirit to qualify for such service as his Master called for; whether in silent adoration, thanksgiving and praise, or in vocal exercises before the congregation.

He was a firm believer in the influence of the Holy Spirit upon the mind of man, and in the manifestation of the Light or Grace of God in the soul; not only to convict for sin, but also to show man his duty, and to qualify for every act of service in the militant Church. By strictly heeding this inward Teacher, he became what he was, and not by any superior rational or mental faculty.

He often mourned over the declension in our religious Society from its first principles; manifested by a worldly spirit, a love of show, of honor and of ease, and by a conformity to the maxims and customs of the world; not consistent with that humble, self-denying bearing of the cross which distinguishes the followers of Christ.

He gave evidence of the sincerity of his profession by his almost incessant labors, even under much bodily infirmity, to arouse the lukewarm, indifferent and careless; and to reprove the superficial activity of others, advising them to a deeper indwelling of Spirit before the Lord, so that they might hand forth to the people that only which the Master had blessed and broken.

As showing the concern felt by Eli Newlin for the preservation of Friends in adhesion to their original principles and practices, the following extracts are taken from a letter written in 1873, the year before his decease.

"The unsettled state of society has caused me many hours of lamentation and sorrow. I have exclaimed with the prophet, 'How is the gold become dim, how is the most fine gold changed!' The stones of the sanctuary are poured out in the top of every street." Things are introduced into our religious meetings, practices not ever before used among Friends: such as having mourners gathered in some place in the meeting, and some detailed to pray for them; and, again, requiring all to arise to their feet that wish to come to Jesus; and other demonstrations not belonging to the Society of Friends, accompanied by language not clear of abuse, epithets concerning Fathers who had for many years manifested to the world an earnest concern to acknowledge Him [Christ] as their Saviour and Redeemer before men, but had not presumed to claim infallibility, but rather smelt upon their breast, exclaiming, "God be merciful to me, a sinner," going down to their house into the valley of true humiliation, where they have been enabled to rejoice in solemn prostration of soul in the silence of all flesh, rejoicing that

their names are written in Heaven; though they are charged with being unconverted, and their names cast out as evil.

"There is a great deal of creaturely activity manifested in these days, and grounds to fear that there is much praise from the tongue and the lips, while the heart is far from Him. There is a departure from some of our well known principles and practices; a disposition in the minds of some to ridicule the idea of preaching from revelation, or in other words, to speak as the Spirit giveth utterance; denouncing silent meetings as something that ought not to be, [and affirming] that unless there is preaching, praying or singing, there is no worship. There appears to be a dissimilarity of views, tending to anarchy and confusion; declaiming against the plain appearance and sound Scripture language which has ever been held by the Society of Friends to be an outgrowth to the Christian religion; denouncing those who believed it right to make a plain appearance and use a pure language, as formalists and devoid of religion; using many abusive epithets, and unkind expressions. Notwithstanding all this, there are a considerable number who seem to be disposed to stand for the law and testimony, though they go upon their way, mourning, exclaiming in the secret of their souls, 'the Glory is departed from Israel, and the daughters of the uncircumcised rejoice; yet these have faith that the Lord will arise for the help of his people; that He will cause that the walls of Zion shall be rebuilt; that Jerusalem shall go forth in her beauty,—that her heavy-hearted shall rejoice, when He shall bring again the captivity of Zion, and Jerusalem shall be the praise of the whole earth.'"

"Having Christ in us."

*** The highest Christian life is one that is thoroughly pervaded, saturated, so to speak, with the life and spirit of Christ. Far more, certainly, is implied, than mere Divine influence over us or upon us from without, such influence as a friend exerts over a friend, a teacher over a pupil, or even a mother over a child. To become a Christian is to have a new spiritual life enter the soul, as when a seed with its living germ is planted in the dead soil: to grow as a Christian is to have this new life increase in strength and energy, making daily conquests over the old nature, extending itself, and expelling the evil by the force of its own good, and ultimately bringing the affections, feelings, desires, and all the activities, even the thoughts of the heart, into subjection to Christ.

Only as we get Christ into our hearts, and let Him dwell in us by his Spirit, shall we reach the true ideal of Christian life and experience. Then shall we do right, not by direction of written rule, but by the promptings of our regenerated nature, the Christ indwelling. Then shall our dull lives be transfigured by the light that shines in our hearts, and slowly changes all the earthliness to heavenliness.

The Bible emphasizes the fact that all growth of character must begin within. We are to be transformed by the renewing of our minds. Our hearts make our lives. What we are in heart, in spirit, in the inner life, we are really before God; and that, too, we shall ultimately become in actual character, in outward feature. — From J. R. Miller's "Silent Times."

God showed me that true religion was union of the soul with God, and Christ formed within us.—Widfield.

FOR "THE FRIEND."

The Vegetation of a Mud-bank.

On the southern side of the Pennsylvania Railroad Depot at Camden, N. J., there was a large dock, of which comparatively little use appeared to be made. The company, needing more space for tracks to accommodate its increasing business, determined to build a wharf on the river front, enclosing a large area, of which this dock formed a part. The means adopted for filling it, was to transfer there the material taken from the bottom of the Delaware by powerful steam dredges. The work was commenced early in the summer and is still progressing. A month or two since, my attention was arrested by the growth of vegetation on the part filled; which seemed to spring up with surprising quickness. And yet, on reflection, it was reasonable to expect a rapid growth where all the circumstances were so favorable—a rich soil, plenty of moisture and the light and heat of a summer sun.

On the afternoon of the 30th of the Eighth Month, on arriving at the depot, on my way homeward, I had half an hour to wait before my train left. So I concluded to gratify my curiosity, by such an examination as time would permit, of the vegetation that pretty densely covered the part of the dock first filled. The seeds from which it sprang, I suppose must have been almost entirely contained in the river mud; for it was too early in the season for them to have been matured by surrounding plants of the present year, and to have been sown by accident.

The mud had so far dried, that by cautious stepping one could move over the surface without being mired. The plants were abundant, and were mostly of those kinds that grow on muddy banks and in miry places. The tallest among them was the common "Reed" (*Phragmites communis*), one of the largest of our native grasses, which grows from 6 to 12 feet in height, and is abundant along the tide-water flats of the Delaware River. At a distance it resembles Broom-corn. Its seeds, which mature in the fall, are a favorite food for some of our birds, especially the Bob-o-link, which in its sober winter plumage, when it is known as the Reed-bird, visits them in flocks, and is shot in great numbers, as a delicate morsel for the epicure.

One peculiarity of the plants growing here was their vigor and size, stimulated by the abundant supply of nutriment and moisture. This was especially conspicuous in the large, almost bush-like specimens of the Burr-Marigold, or Beggar-ticks, or Spanish-needles (*Bidens chrysanthemoides*), ornamented with large and bright yellow flowers. The word *Bidens* means two-toothed, and has been given to this genus of plants, because the seeds are crowned with projecting awns or teeth, studded with backward pointing barbs like those of a fish-hook. When the seeds are mature, a person walking among plants of this genus, will often find his clothes thickly beset with the seed, which adhere firmly by aid of these barbs. The number of awns or teeth is not the same in all of the species, some having 3 or 4 instead of 2. The luxuriance of the leaves of these *Bidens* was very attractive to some large brown hairy caterpillars, which were rapidly devouring them.

In the mass of vegetation around me, I found also the Swamp Beggar-ticks (*Bidens canadensis*), which is less showy than its cousin, the *B. chrysanthemoides*, because the heads of flowers are destitute of the large, yellow rays, which render the other so conspicuous. They look very much as the others would, if one should carefully pull

off all their rays, and leave only the central florets.

There were numerous specimens of a Butter-cup, with small, inconspicuous yellow flowers, and a smooth, thick and hollow stem, much branched, which I recognized as the *Townsendia sceleratus*, or Wicked Butter-cup, so called by Linnaeus, because its juices are very acrid. It grows in streams and ditches, and had here found a locality well adapted to its needs, for the plants were unusually luxuriant.

There were four kinds of Knot Weed (*Polygonum*), a genus of plants closely allied to the cultivated Buckwheat, and some of which are exceedingly abundant in low and moist grounds in the fall of the year. The most conspicuous among my mud-bank weeds, was the Princes Feather (*P. orientale*), with long, nodding cylindrical spikes of bright red flowers. It is often cultivated as an ornamental plant in gardens.

One of the most attractive of the plants was a delicate grass which crept over the surface of the ground, rooting at every joint and sending up numerous short flower stalks, so as to form beautiful, feathery mats, some of them 2 or 3 feet in diameter. I wondered at the vital energy which had enabled this slender, thread-like grass to produce such a growth in so short a time.

Then there were Monkey flowers, with violet-purple blossoms; Arrow-heads, with white flowers, and Pickereel-weeds with purplish-blue spikes of flowers. One of the most interesting of them all (to myself) was the Mud-Plantain (*Heteranthera reniformis*), creeping over the surface, with round, kidney-shaped leaves of a bright green, whose cellular structure was similar to that of the leaves of the Arrow-head, Pickereel-weed, Egyptian lily, and other water-plants. It is described as a not uncommon plant, and yet I had never met with it before.

When my half-hour expired, I had barely entered on the inviting field before me, and I left with the intention of giving it a more thorough exploration at a future time. On subsequently making a list of the plants growing on it, I remembered 20 species, and there may have been others that I did not recall. J. W.

FOR "THE FRIEND."

Graft a tree with slips from another of a superior kind, and the tree will bear superior fruit just in degree as is the quality of the slips. But still, the original tree that is grafted will not be one whit better in its nature, and will still continue to put forth shoots of its kind, along the old trunk, and around the roots, which, if not stunted by the lovely grafted branches drawing all the sap, or by the husbandman pruning them off, would grow as rank as they ever did, and bear equally as bad fruit.

This is a true picture of man, and his old Adam nature, and of the entrance of the engraved word, which James says is able to save the soul. Dear Lord! strengthen thy gracts and continue the pruning. T. D.

[Illustrations of the work of grace, such as contained in this short article by T. D., are often interesting and instructive. Comparisons of the kind were frequently made use of by our Saviour; for, for example, where He says, "I am the vine, ye are the branches." A similar instance is that where Paul speaks of the believers as being "grafted" into the good olive tree. In all such cases, care should be exercised not to carry the comparison too far; and not to draw inferences from details or minor points, which were not in the intention of the one who endeavored to illus-

trate his meaning by the use of the comparison. —[Ed.]

SELECTED.

THE HARVEST.

When the world is radiant,
Rich with summer hours,
Wood and field and garden
Gleamed with brightest flowers,
When the wheat is golden,
Gleaming in the sun,
And the scythe and sickle
Harvest have begun,
May our thoughts turn often,
In our gratitude,
To the Lord of harvest—
Giver of all good!

He who in the winter
Crad the ground with snow,
He who in the spring time
Caused the seed to grow,
He who sent the showers,
And the dew at morn,
Then the sunny hours,
Ripening fruit and corn—
He is Lord of harvest,
And to Him we raise
Songs of humble gratitude,
Thankful songs of praise.

SELECTED.

HYMN.

There's not a leaf within the lower;
There's not a tree in the tree;
There's not a dew-drop on the flower,
But bears the impress, Lord! of Thee.

Thy hand the varied leaf design'd,
And gave the bird its thrilling tone;
Thy power the dew-drop's tints combined,
Till like a diamond's blaze they shone.

Yes: dew-drops, leaves, and birds, and all,
The smallest, like the greatest things—
Thee's the vast space, the earth's wide ball—
Alike proclaim Thee King of kings.

But man alone to bounteous Heaven
Thanksgiving's conscious strains can raise;
To favor'd man alone 'tis given
To join the angelic choir in praise.

—Opie.

SELECTED.

THE ATHEIST AND THE ACROR.

"Methinks the world is oddly made,
And every thing's amiss;
A dull, presuming atheist said,
As stretched he lay beneath the shade;
And instanced it in this:

"Behold," quoth he, "that mighty thing,
Is pumpkin large and round,
Is held but by a little string,
Which upward cannot make it spring,
Or bear it from the ground.

"Whilst on this oak a fruit so small,
So disproportioned, grows;
That who with sense surveys this all,
This universal casual ball,
Is ill contrivance knows.

"My better judgment would have hung
That weight upon its tree,
And left this mast, thus slightly strung,
'Mongst things which hang on the surface sprung,
And small and feeble be."

No more the caviler could say,
Nor farther faults decry;
For, as he upward gazing lay,
An avener, loosened from the stay,
Fell down upon his eye.

The offended part with tears ran o'er
As punis'd for the sin;
Fool! had that bough a pumpkin bore,
Thy whistles madly mark'd no more,
Nor skull had kept them in.

—Ann Finch, Countess of Winchelsea, 1720.

How a Heathen Village Became Christian.

[The following narrative of a change in profession of religion by the people of a Japanese village, and of the causes which led to it, was written by H. Loomis, an agent of the American Bible Society, and is taken from *The Independent*. In such wholesale changes, it must be expected that some will be influenced more by the example of their neighbors than by heartfelt conviction; and that the change to such persons is more in name than in substance. Yet the account is interesting in itself.]

"In the province of Chikugo there is a village of about forty houses called Oyama. The residents of the place are very ambitious, and not satisfied to live on in the old routine if they see that there is anything to be gained by a change. The chief occupation is the cultivation of rice; and about five years ago there occurred a dispute with the inhabitants of a neighboring village about the division of some land. At last they went to law about the matter, and when the decision was adverse to the people of Oyama, they appealed to the Superior Court in Tokio. The result was that they not only lost their case, but were compelled to pay the combined costs of the whole suit. This was a heavy affliction. Many had to sell their houses and lands to pay the debt, and so became very poor. In their deep poverty and grief, they sought the help of their idols or false gods. All sorts of devices were resorted to in order to secure the favor of their deities. Many of them went in the dead of night, in the depth of winter, and without clothing, to the top of a neighboring mountain in order to worship at a particular shrine, and to bathe in the icy water, in the vain hope that by this means the wrath of their cruel gods might be appeased and their distresses relieved.

"But no help or improvement came; and in despair they began to discuss what could be done for their relief. It happened that two or three of their number had attended a Christian service and had some idea of the teachings of the Gospel. One thing, at least, they were sure of, and that was that the religion of Jesus offered peace and blessing without money and without price. Some one then reported that missionaries would pay a considerable sum of money to all converts; and there was a general rejoicing in all that region, and as many as four hundred people resolved to be baptized, or submit to any other ordinance in order to get the needed funds. But further inquiry proved this report to be without foundation, and there was a great feeling of disappointment, and many gave up all further thought of becoming Christians.

"But the residents of Oyama were not so easily turned aside from their purpose. Even if there was no money to be gained, they had become dissatisfied with their old religion, and wanted something better. After much discussion, it was decided that they would become Christians and find some God in whom they could trust.

"The people of a neighboring village, hearing of this decision, resolved to prevent such an event, if possible. First they counselled the people of Oyama not to desert the faith and worship of their ancestors. But this advice not being heeded, they resolved to carry out their plan by force, and so went with their arms to compel them to adhere to idolatry. But the residents of Oyama assembled at the house of the head man of the village, named Anami Moritei, and resolved to take up their guns and

swords and sacrifice their lives rather than submit. The neighboring villagers, becoming aware of this decision, gave up their purpose and returned to their homes.

"Then the provincial Governor attempted to prevent them from giving up their old religion and adopting a new and hated form of worship. He was followed by a Buddhist priest and then a Shinto priest, who sought to change their minds and keep them in their old paths; but it was all alike of no avail. They threw away or burned all of their idols, removed their names from the Buddhist records, and the head man of the village, with one other, were sent to Nagasaki to procure a Christian teacher. In order to obtain such a person, a petition was drawn up and signed by the heads of twenty-six families, asking for some one to come and teach them the religion of Jesus. This paper was given to the delegates who went to Nagasaki, as Cornelius journeyed to Joppa to find Peter. And the same God directed their steps.

"On reaching Nagasaki they went to a hotel, and not knowing what was best to do, they began to make inquiries in regard to how and where they could find some missionary. A cunning fellow, learning of their wishes, said that if they would give him the sum of \$30 in order to get up a large fast, he would bring one of the foreigners, and so they could become acquainted with him. But the man had never met a missionary and knew nothing of their work or methods; yet the plan was agreed to and the money paid down.

"Then their crafty guide went to a store where Bibles were kept for sale, and said to the man in charge that there were two men who wanted to get a Christian teacher, and he wished to be introduced to such a man. The Bible-seller took the three men to the house of Mr. Hutchinson, and the object of their visit was stated and the written request presented. A careful inquiry satisfied Mr. Hutchinson that the men were honest in their request, and two native helpers were sent to instruct the people as they desired."

The result was that after a few months, it was learned that almost the whole village had determined to embrace Christianity, and accordingly, made profession of their belief in Christ as the Saviour.

Seizing the Opportunity.—An English magazine lately told the story of the keeper of a wine shop in Paris, named Drog, who, in 1871, at the close of the war with Germany, found himself utterly ruined, and with his family on the verge of starvation. In his cellar was a heap of empty sardine boxes. It occurred to him that the solder might be removed from them and sold, and the tin boxes themselves converted into little metal toys for children.

He set at work, succeeded, and in a year or two had established a factory in which thousands of waste sardine boxes were bought, melted and sent out again, glorious in paint, gilding and varnish, as toy soldiers, animals, chariots, Venetian lanterns and buttons.

One of the most prominent financiers in the Southern States found himself penniless and an invalid at the close of our Civil War.

His business had been solely in the manipulation of money, and neither he nor his neighbors had now any money to manipulate. His wife and three children looked to him for support. What should he do to provide them with bread? He would gladly have taken a position as a clerk, but nobody wanted his services.

He still owned a few acres of sterile land, on which once grew a wild plant, with a seed-pod of pungent flavor, from which the negroes expressed the juice to be used as a sauce on their master's table.

Colonel M—, in his perplexity, remembered this sauce. He visited the old patch and found but one bush yet standing. From the pods he distilled juice enough to fill a small bottle with sauce; and this he carried as a sample to the chief caterers and grocers in New Orleans, and took orders for the next season. The seeds were planted. Then followed two or three years of anxiety and hard work; and then came success.

Success in life often lies in trifles; but the keen eye, the ready wit, and above all, patient, tireless labor, are needed to bring it to his hiding place. The secret of the steam engine was within every tea-kettle for thousands of years. But only one man had the vision to see the hidden agent and the skill to set it free.—*Youth's Companion*.

To Richard Reynolds.

Manchester, Twelfth Month 25th, 1864.

My Dear Friend:—I will relate to thee, at this time, a short anecdote which I had from James Thornton, of America, one of the first of the first rank who have visited us from that quarter of the world. He said, when Anthony Benezet was in his last illness, and very near his death, he went to see him.

Anthony had been long distinguished as a lover and benefactor of mankind; but when James came into the room, he said he never had been more deeply impressed with a sense of spiritual poverty, than he was at that time; and, as he sat under these feelings, a view opened, how little all the merits of good works can avail, or be relied on, at such a time, or any thing short of our holy Redeemer. He took leave of him under these impressions, and the next man died I think very soon after, and James attended his burial; but, he said, when he entered into the house, it felt to him as if it were Divinely perfumed; something so like the opening of heaven, and a sense of the Divine Presence, as he had at no other time experienced.

What a striking conformity between the death of this good man and that of his blessed Master! I thought this little story deserved to be remembered.

With the salutation of love, in which I wish us both a continual increase.

I am thy affectionate friend,

JONN THORP.

—From *Thorp's Letters*.

It is not well to be credulous; neither is it well to be skeptical. But if we must choose between the two, it is better to believe too much than to doubt too often. The darkest creed in all the world is that of the man who says he will never believe what he cannot prove. Suppose a child were to start out with this theory, refusing to love his parents as his parents until he could prove they were his parents! Suppose that a man of any age were to live up to this theory, refusing to accept any truth on the authority of those better informed than himself!

What a life that would be, that was limited by the boundaries of mathematical demonstration! After all, the heart is a better guide than the head in matters of the heart; and the proofs which satisfy the heart, are to be preferred in this sphere to the proofs which appeal to the head.—*Sunday School Times*.

FOR "THE FRIEND."

Let all Things be Done Decently and in Order.

The writer has been impressed with the belief that through the medium of THE FRIEND, a word of caution might be extended to our ministers to guard against the growth of a practice of standing up to speak too quickly after another Friend has been engaged in ministry. Such a course does not seem consistent with a tender regard for the services of others.

The effect of communications in ministry following each other too closely is not wholesome. One of the most eminent ministers that ever labored in our Society, alludes to this subject in his Journal, and says of it, that it was "an indecency I have ever disliked." R. E.

ADELE M. FIELD, a Baptist missionary in Swatow, in a letter to *The Popular Science Monthly*, says, that what is nothing less than a great revolution has just taken place in the educational system of China. During the past year a remarkable change has been made in the scheme of the competitive examinations, whereby successful candidates for literary degrees obtain honors and offices. In the past only a knowledge of the native classics, with skill in the use of the native hieroglyphics, has been required of the scholar. Now, geography and natural philosophy have been added to the subjects for examination, and this action of the Government has turned the attention of students throughout the empire in a new direction. The indications are, in her opinion, that China is to follow Japan in the path of progress in Western science and philosophy, though it may be with the slow step that accords with the magnitude of the nation. *Erechange.*

How He Measured the Tree.—We sometimes call our Bob the young philosopher, for he is a boy who thinks a great deal. Whatever he sees that he does not understand he tries hard to study out for himself. And he solves some problems which would seem too difficult for such a little fellow.

Bob is the owner of a great rule and a yardstick, and he takes great pleasure in measuring garden walks, fences, and many other things about the place.

He will often guess at the distance from one point to another, and then measure it, to see how near he came. He had some difficulty when he tried to find out the length of his own shadow, for sometimes it was quite short, and at other times very long. At length, however, he discovered it was long in the morning, grew shorter till noon; it then grew longer all the afternoon till sunset, when it would disappear. He also learned that twice each day (once in the forenoon and once in the afternoon) his shadow was exactly the same length as himself.

There is a beautiful tree near the house which runs up tall and slim. Bob used to say that it almost touched the sky. He often longed to know its real height, but could see no way of measuring it. One morning he noticed the long shadow of this tree plainly marked on the smooth, green lawn. Just then a new thought came to him. Why not find out the height of the tree by the length of its shadow?

He drove a stake into the ground, and found that its shadow was longer than the stake. But he knew that shadows were growing shorter at this hour of the day, so he waited and watched. In about an hour the stake and its shadow were of the same length.

Then Bob ran to measure the shadow of the tree. He found it to be thirty-one feet, and he felt sure that this was the height of the maple. He was delighted with his discovery, and he talked about it a great deal, and said he should sometime try to measure the distance to the moon.—*Nursery.*

Natural History, Science, &c.

Artesian Wells in Utah.—It has recently been found that in a considerable area of country in Utah, lying in the San Pete Valley, running water may be obtained by boring artesian wells to a depth of 100 or 200 feet. The farmers are making use of this means of irrigating their lands, as involving less expense and trouble than the old methods of using irrigating ditches.

Manufacturing Salt at Salt Lake.—For this purpose a level meadow is selected only a few inches above the surface of the water in the lake. The ground is scraped and made hard and level. When a storm or high wind occurs, the water of the lake is driven on to this meadow, and is prevented from returning by a low wall. The water gradually evaporates, and leaves a layer of salt, which is afterwards gathered. It is not a very pure article, but is in general use.

Aztec Mummies.—The San Francisco Examiner describes some mummies which were discovered about two years ago by an explorer in a closed cave in the Sierra Madre Mountains in Mexico. The floor of the cave was nearly smooth and the vault covered with stalactites. In the far end of the cavern were found four dried bodies, in a sitting posture, carefully shrouded in their burial garments and placed with their faces toward the sun. No embalming process had been used for their preservation—they were dried by the air alone. The mummies were those of a man and woman and a boy and child. The man had so shriveled, that although he probably, when living, weighed about 200 pounds, he now weighs but 14 pounds and the little boy weighs only 3 pounds.

For Chafed Feet.—The *Scientific American* recommends sprinkling the inside of shoes and stockings with finely pulverized soap-stones, such as may be obtained from dealers in shoe-findings, to prevent the feet from becoming chafed and blistered in hot weather. A preparation for this purpose, used in the German army, is composed of 87 parts of soap-stone, 10 parts of starch, and 3 of salicylic acid.

A Vinegar Well.—The same paper gives an explanation of a mysterious vinegar well which flows out of a farm near Vincennes, Indiana. It appears that about twenty years ago, the owner of the farm had an abundant crop of apples, and made several hundred barrels of cider to be converted into vinegar. While the fluid was fermenting, about 100 barrels burst, and their contents were lost. The cider sank into the ground until it reached an impervious stratum of clay, where it lay until the well was dug on the same spot.

Experiments with Birds.—C. C. Abbott, in his *Upland and Meadow*, states that he tried the experiment of placing a nearly life-size chromo of a cat near the nests of different birds and watching the result.

"This," he says, "depended much upon the character of the bird, whether naturally timid or brave. When a song-sparrow found itself stared at by the cat, it rushed precipitately from the nest and did not return until the picture had

been removed. When the chromo was left for several hours near a nest, it was permanently abandoned. In no case did these birds offer to attack the animal, or express alarm, and so call other birds to their aid. It was otherwise with thrushes. I placed the same picture near nests of cat-birds, song-thrushes, and the brown thrush. Immediately a cry of alarm was uttered that brought birds of the same and allied species to the rescue, and the excitement steadily increased, as it was found that no amount of scolding caused the intruding cat to retire. It was particularly amusing to see their puzzled expressions when they chanced behind the picture. Then, of course, there was nothing to frighten, and they were proportionately bold. In one instance, a cat-bird, coming from behind, alighted upon the top of the picture; notwithstanding the warnings of the other birds. Chancing to look down, it saw the cat, and with a scream, gave a double backward somersault and left. This, however, seemed to open the eyes of the other birds, and they gradually became accustomed to its presence, as though they believed the animal to be dead. In no cases were the nests abandoned.

When the same chromo, although now rather dilapidated, was placed near a wren box, the occupants took matters very coolly, and after finding the cat, showed no disposition to leave, determined to drive it off. With impetuous fury they assailed it. Of course this experience soon told the quick-witted wrens that the cat was harmless, if a cat at all, and they paid no further attention to it. I found this to be true of both Carolina and common house wrens, in every case. Taking the battered picture to the nearby meadows, the marsh-wrens merely glanced at it, as they would at any unusual object, and passed by. They, at least, are not troubled by cats in the marshes.

The Opium Trade.—The *Daily News* (London) says: "Indian opium, which the Chinese in other days fought so hard to keep out of their country, is now reported to have become a very small and still diminishing article of import to the Chinese ports; but, unhappy as this is, it is only because the Chinese have taken to growing this pernicious drug themselves. Holland, Acting Consul at Newchwang, a Chinese port in the extreme north of the Gulf of P'ei chihai, states that the cultivation of the native opium appears to be a profitable labor among the poorer classes, and pays as well again as millet, their staple article of food, or any other grain. It was the extra tax of eighty taels per chest on foreign opium that gave to the native drug such an impetus."

Holland thinks it may safely be prophesied that not only will the foreign drug cease ere long to figure as an import, but the native drug will soon appear as an export.

In commenting on this statement, the *Christian*, of London, remarks: "Thus the poisonous plant which we forced upon China degrades and ruins the Chinese who use it; we derive no permanent advantage, even in money; and China will export to other nations, including England, her dependencies and colonies, that mischievous drug with which England obliged China to curse herself. Can we for a moment doubt that, under the righteous government of God, a terrible penalty will fall to the lot of Europe?"

The Colorado Indians.—The *Public Ledger* of Philadelphia, publishes the following article on the effort being made to induce the Southern Utes to surrender their lands and remove to another location.

Shall Such Injustice Ever Cease?

[The letter which follows is from a lady uncommonly well informed upon Indian affairs, by extensive travel in the Indian country, as well as by other

investigation and study, and who, moreover, has demonstrated her unselfish interest in the Indians by the expenditure of large sums of her own money (in co-operation with her sisters), and who endeavors to prove her faith by her works:]

FOR "THE PUBLIC LEADER."

Mr. Editor—A conference was held between the chiefs and leading men of the Southern Ute tribe and the Commissioners, near Ignacio, Colorado, on Thursday, August 9th. Judge Smith told the Indians, through an interpreter, that because of the rapidity with which the country is being settled by the whites, and the scarcity of game on the reservation, it would be to their advantage to sign a peace treaty, peacefully removing to the reservation.

We read in the report of the agent of the Southern Utes, August 6th, 1887, as follows: "Since my last annual report there have been no depredations committed by the Indians. They have lived peacefully among themselves and have had no trouble with the surrounding settlements. I have noticed quite a change in the general disposition of these Indians, a desire to desist from wrong and violent acts; also to comply more willingly with such instructions as are from time to time given them. This, I think, is greatly due to the free, and by me, unrestrained mingling with the better element of white society, particularly among the people on the reservation. If the Indians are to be civilized, they must have a chance to see almost daily how the white man lives, and I give them all required opportunity. Last winter being very open, we had an early spring, which enabled the Indians already farming, to get their crops in early, also to break up some of their land and do some fencing. The crop on these farms, 14 in all, consisting of about 250 acres, look flourishing, and an early harvest is expected, with a good yield of cereals and vegetables."

"What encouragement is there for Indians to become civilized, and to farm, and to become stock raisers, if their homes are to be broken up by those who are persuaded by commissioners to remove to other reservations in quest of game as soon as the country is being settled by the whites?"

Is it justice for commissioners who pretend to wish to civilize the Indian to use their influence in pointing out the "advantage" it would be to the Southern Utes, now engaged in farming and stock raising, to sign the treaty for their removal to Utah? The agent of the Utes says: "Upon the whole, I am satisfied that the Southern Utes are making much progress; they are becoming much better behaved, and make rapid advancement towards self-support. On the other hand, these commissioners, near Ignacio on Thursday last, pointed out the 'advantage' of removing to another reservation" on account of the "scarcity of game" on these Ute farms, and "because of the rapidity with which the country is being settled by whites?" This is literally civilizing Indians with a vengeance!

D. M. K.

Mohammedanism and the Slave Trade—In an address on African slavery, delivered at London by Cassin J. Legerie, he states that it is Mohammedanism that is making Central Africa a hell on earth. The men of this faith are those who burn villages, steal men, kill them ruthlessly when they are unable to march in the line of slave captives, and reduce peaceful homes to a wilderness.

After residing for twenty-five years in Interior Africa, he says, the number who are annually stolen is much larger than 500,000, the estimate given by Commander Cameron, without including the aged, the cripples and the weak, who are slain in the slave-hunts.

Labors on Behalf of Peace by English Friends—A Committee on Peace appointed by the London Meeting for Sufferings, prepared a Memorial urging the recognition of the nations as a substitute for the use of force in all cases of international disputes. Copies of this were presented to the Pan-Anglican Conference of Bishops of the Church of England; and to the Pan-Presbyterian Conference, held in London in the Seventh Month. The latter body adopted the following favorable resolution, respecting the Council of the Council, W. G. Blackie, D. D., one of the Clerks of Council:—

Resolved *intra alia*—The Council, having considered the Memorial from the Society of Friends on the subject of Peace and the use of Arbitration as a substitute for War, are happy to express their entire and hearty concurrence with the sentiments of their brethren. We hail with joy the settlements of international disputes already effected without an appeal to arms, and see no reason why this method of adjustment should not be applied in all cases whatsoever. In view, therefore, of the many miseries of war, and of the intolerable burdens which preparation for it imposes upon the nations, they commend the whole subject to the sympathies and prayers of the Churches they represent, in the hope that He whom we worship as the Prince of Peace will more and more incline the hearts both of people and rulers to settle all their differences by an appeal to reason and forbearance, and not by force. *Extracted from the Minutes of the Council, W. G. Blackie, D. D., one of the Clerks of Council.*

Take Things Easily.—A doctor warns vacationists that their chief danger is in going too fast. "The most common error at the start is overdoing." There is a walk of several miles on a mountain; or, if it is bathing in the sea, an hour is spent among the waves. "Degreedly to go into anything," says one of the old writers, "is reserved unto the wise men." He adds that any change of life that is made in our mode of life should be gradual. "The first exercise of any kind should be gradual. The first exercise of any kind should never be to the extent of fatigue." As to bathing, it is to be remembered that man is not an aquatic animal. The trouble with those who seek a summer's rest, is that they are carried away by the novelty of new situations, and do not content themselves with peacefully enjoying anything. This is particularly so of the women.

THE FRIEND.

NINTH MONTH 22, 1888.

A letter recently received from a friend on the subject of Family Prayer, has suggested the propriety of making some further remarks in reference to this important duty.

Robert Barclay, in his Apology, defines Worship to be "rendering that reverence, honor and adoration to God, that He requires and demands of us." In this sense, we should worship God always, for we should live in a reverent sense of our dependence on Him, seeking ever to be conformed to his will and to give Him the honor which is his due. But as to outward acts, such as vocal prayers or praises, he says, "We ought not to do it in our own will, where and when we will; but where and when we are moved thereto by the stirring and secret inspiration of the Spirit of God in our hearts."

We have no doubt that there are many experienced Christians, who live near to the Fountain of all good, and whose hearts are often turned in secret prayer to our Father in Heaven, who seldom, if ever, feel it their duty to offer vocal petitions to Him, either in their solitary musings, or when waiting on the Lord in the midst of their families, or when assembled with their brethren for public worship. The prayers of such are often fervent and effectual, though no ear hears them but that of the Lord of all; and the influence of their spirits is felt by others. If such persons were to follow the advice given by some superficial professors, and enter on vocal expression of their feelings, without first knowing the Divine command, they

would but dissipate the solemnity which had clothed their own spirits, encourage a formality which would not promote vital religion, and draw away the attention of others from the in-speaking voice of Christ.

R. Barclay expresses the views of the Society of Friends as to worship, when he says, "The great work of one and all ought to be to wait upon God; and returning out of their own thoughts and imaginations, to feel the Lord's presence, and know a gathering into his name indeed, where He is in the midst, according to his promise. And as every one is thus gathered, and so met together inwardly in their spirits, as well as outwardly in their persons, there the secret power and virtue of life is known to refresh the soul, and the pure motions and breathings of God's Spirit are felt to arise; from which, as words of declaration, prayers or praises arise, the acceptable worship is known, which edifies the church, and is well-pleasing to God."

To be sensible of the Lord's presence, and to learn to listen to and follow his guidance, is the most important lesson man can learn. Hence the value to be attached to all, of those frequent seasons of waiting on the Lord in reverent silence, into which early Friends were led; and which many in this day still observe. If these family gatherings are held with a living concern to be benefited thereby, a blessing will attend them; even if no words be spoken therein. For it is the Divine life and power which redems from evil, and to become acquainted with it, and feel it increasing in our hearts, "is the surest way to become a Christian."

Friends have never rejected vocal offerings in their meetings for worship, or in their more private seasons of drawing near to the Father of Spirits. But they have ever believed that the essential thing was obedience to the Lord's requiremets, whether these led into silent waitings or into outward expression. There may be a "withholding more than is meet, which tendeth to poverty" of spirit, as well as there may be the opposite error. And there may be a silence which is the result of coldness and spiritual sluggishness.

SUMMARY OF EVENTS.

UNITED STATES.—The Senate, on the 17th instant, by a vote of 29 to 21, refused to reconsider the vote passing the Chinese Exclusion bill, so the bill goes to the President.

In the House, on the 14th instant, the Senate joint resolution appropriating \$200,000 to suppress infection in our Inter-State commerce was passed.

In Jacksonville, Florida, on the 15th, there were 93 new cases of yellow fever, and one on the 16th, 74 new cases, and 9 deaths; on the 17th, 52 new cases, and 7 deaths. Total number of cases to the 17th, 1047 cases, and 133 deaths.

Professor Richard A. Proctor, the astronomer, died at the Willard Parker Hospital, in New York, on the 12th instant, of yellow fever, his death being preceded by black vomit. He arrived in New York, from Oak Lawn, Florida, on the 10th, and was immediately prostrated by the fever. He had engaged passage for Europe, intending to sail on the 15th.

A dispatch from Bay City, Michigan, says the forest fires in that vicinity on the 13th, were not subdued. News from various points show that the fires are beyond control. Aracua County is particularly a heavy sufferer. In many places, houses have been destroyed, and at others, people were fighting for their lives or trying to save them. In the Tawasa section the fires were still sweeping on.

Maryland peaches are being sent to Alabama, and this first year, probably in New York. It's only an experiment, according to the Birmingham *Age*, and if successful it is thought regular shipments of Northern peaches will be made to Southern cities next year.

Incidents and Reflections.—No. 167.

PEACE IN DEATH.

The Memoirs which Daniel Wheeler has preserved of his own life contain an interesting illustration of the danger of concluding, that because a person is willing to die, it is sufficient proof that he has passed through that spiritual change which is necessary to prepare him for happiness hereafter.

During the days of his estrangement from God, he had enlisted in the British army, and was sent about the year 1794, with a detachment of troops to Holland, to operate against the French, with whom England was then at war. The English forces were inferior in number to the French and were forced to retreat before them under the most distressing circumstances. They were often poorly supplied with shelter and provisions; and in addition to those who were killed in the frequent battles and skirmishes, many perished through exposure and from a peculiarly fatal form of typhus fever which attacked the disheartened troops. Daniel Wheeler gives a pathetic account of his own sufferings from fatigue and sickness. The retreating army had reached the town of Nimegeen, where they were crossing the River Waal on a floating bridge, amid frequent interruptions caused by the fire of the French upon it. When his own regiment came in sight of the bridge, his gradually increasing illness became so severe that he was unable to proceed, and leaving the ranks leaned against the wall of a house. As he beheld the last of the rear of the regiment pass on and leave him behind, there seemed no hope left, but, he says, "in adorable mercy, my gracious Lord was pleased to put into the hearts of some of the regiment to send two of the men back to endeavor to find me out, and render every assistance in their power." These men placed him in charge of a picket of cavalry, which was left to cover the retreat of the army through the city; and in the morning he was placed on board a vessel provided for the reception of the sick and disabled. In two or three days they reached the town of Rhenin, close to the bank of the Rhine, and he was transferred to an old monastery that had been fitted up for a hospital.

Whilst in this hospital, he says, "I was brought so near the brink of the grave, that, to all appearance, no alteration for the better could be

expected. I am not aware that I had even a wish to live; but my mind was so reconciled to the prospect of death, which then seemed near and inevitable, that I had given my watch into the hands of an acquaintance, with a request, that he would inform my family where I had ended my days. Indeed, when some expectation of recovery was at last held out, I could not help looking forward with a feeling of regret, to the probability of having again to encounter the series of hardships and distress to which I should unavoidably be subjected."

Many years after, in commenting on his feelings at this time, Daniel Wheeler makes the following instructive remarks: "I cannot avoid adverting to that period of my illness, when my mind felt so reconciled to the prospect of death, as before mentioned; and I now fully believe from what I have since been mercifully favored to experience, that so far from being in any degree prepared for such an awful event, a deceptive feeling must have been superinduced by the state of torpor and insensibility in which I then was, and which totally benumbed any better feelings and desires as to the future. To this may be added a predominating fear of having to endure more of those sufferings, of which I had had no small share; which, the probability of being again restored to health seemed to banish every hope of escaping. Truly awful is the thought which this view of my then lost condition occasions. And yet, when my end was apparently so near and inevitable, if such questions are frequently proposed on the like occasions had been put to me, I have little doubt but satisfactory answers would have been returned, as to my belief and hope in the essential truths of the Gospel. But alas! this would have been from hearsay and traditional report, and not from any heart-felt saving knowledge of my own; for it is now plain to my understanding, that no man can have saving faith in Jesus Christ, who is unacquainted with, and does not walk in, the light of that Divine Spirit, which is so justly styled the Spirit of faith. It is through this alone, that the death and sufferings of Christ and his whole sacrifice for sin are availing, and truly applied to all those, who through faith lay hold of Him, the true Light and Saviour of them that believe in his inward and spiritual appearance." "A man may yield an assent to all the great and solemn truths of Christianity; the miraculous birth, holy life, cruel sufferings, ignominious death, and glorious resurrection and ascension of our blessed Redeemer; he may believe, in the abstract, in his inward and spiritual appearance in the hearts of mankind by his Holy Spirit; and yet he may fall short of the prize immortal.—unless he comes to witness the saving operation of the Holy Spirit in his own heart, and to prepare thereby, through faith in it, a purifying preparation for the kingdom of righteousness, peace and joy in the Holy Ghost."

The deceptive quiet which is sometimes the result of the benumbing of the faculties on the approach of death, and of which Daniel Wheeler speaks, is no more an evidence of the peace and

favor of God than is the anxious concern which at others covers the mind at this solemn season, a proof of the Divine displeasure. The previous course of life furnishes much more reliable ground for confidence as to the state of preparation for futurity, than do the words of those whose faculties may be weakened by disease, or by the decay of nature. Yet even those who have lived godly and upright lives are often led to review the ground on which they are building their hopes, and made sensible, as expressed in his last hours by that dedicated minister Samuel Enlen, that "it is a serious thing to die."

Margaret J. Preston describes the struggles of mind passed through by a godly shepherd, as related in her hearing at Torquay, England, by a Scotch minister. The account is substantially as follows:—

"I was sitting in my study one evening when a message came to me that one of the godliest among the shepherds who tended their flocks upon the slopes of our highland hills was dying and wanted to see the minister. Without loss of time I crossed the wide heath to his comfortable little home. When I entered the low room I found the old shepherd propped up with pillows, and breathing with such difficulty that it was apparent he was near his end. 'Jean,' he said, 'give the minister a stool, and leave us for a bit, for I wad see the minister alone.' As soon as the door had closed he turned the most pathetic pair of gray eyes upon me I had ever looked into, and said, in a voice shaken with emotion, 'Minister, I'm dying, and—and—I'm afraid!'

I began at once to repeat some of the strongest promises in the Bible; but in the midst of them he stopped me.

'I ken them a', he said mournfully, 'I ken them a'; but somehow they dianna gie no comfort.'

'Do you not believe them?'

'Wi' a' my heart!' he replied earnestly.

'Where, then, is there any room for fear?'

'For a' that, minister, I'm afraid—I'm afraid!'

I took up the well-worn Bible which lay on his bed. 'You remember the twenty-third Psalm?' I began.

'Remember it?' he said vehemently 'I kenned it long afore ye were born; ye need na' read it; I've conned it a thousand times on the hillside.'

'But there is one verse you have not taken in.'

He turned upon me with a half reproachful and even stern look. 'Did I na' tell ye I kenned it every word lang afore ye were born?'

I slowly repeated the verse, 'Though I walk through the valley of the shadow of death, I will fear no evil, for Thou art with me.'

'You have been a shepherd all your life, and you have watched the heavy shadows pass over the valleys and over the hills, hiding for a little while all the light of the sun. Did these shadows ever frighten you?'

'Frighten me?' he said quickly. 'Na, na?'

Dave Donaldson has Covenanter's bluid in his veins; neither shadow nor substance could weel frighten him.'

'But did these shadows never make you believe you would not see the sun again—that it was gone forever?'

'Na, na, I cudna be sic a simpleton as that.'

'Nevertheless, that is just what you are doing now.' He looked at me with incredulous eyes.

'Yes,' I continued, 'the shadow of death is over you, and it hides for a little the Sun of righteousness, who shines all the same behind; but it's only a shadow; remember, that's what the Psalmist calls it; a shadow that will pass, and when it has passed, before it will be the everlasting hills in their unclouded glory.'

The old shepherd covered his face with his trembling hands, and for a few moments maintained an unbroken silence; then, letting them fall straight before him on the coverlet, he said, as if speaking to himself, 'Aweel, aweel! I have coned that verse a thousand times among the heather, and I never understood it so afore—afraid of a shadow! afraid of a shadow.' Then turning upon me a face now bright with an almost supernatural radiance, he exclaimed, lifting his hands reverently to heaven, 'Aye, aye, I see it a' now! Death is only a shadow—a shadow with Christ behind it—a shadow that will pass—na, na, I'm afraid nae mair.'

It is no unusual experience for those who have endeavored to serve the Lord in their time of active service, to be brought into deep thoughtfulness, and even anxiety of mind, as they approach the end of life. They are led to try the foundation on which they are building their hopes of happiness hereafter—like one preparing for a long journey, who examines and re-examines, to see whether he has provided every thing that will be needed, and has made all the necessary arrangements for the successful prosecution of his travels.

In such cases there is nothing that can give solid comfort and peace of mind, that can dispel the "shadows" of doubt and of death, but the shining of the "Sun of Righteousness" on the soul, the renewed sense of the love of God shed abroad in the heart, giving the consoling assurance that "amid all our conflicts of flesh and spirit, an interest is mercifully granted in Him who giveth the victory over death, hell and the grave."

J. W.

FOR "THE FRIEND."

A Vacation across the Atlantic.

Sixth Mo. 5th, 1858.—Once more I will note my wanderings in search of rest and health, and once more the ocean is supposed to afford the means by which these ends are to be obtained. This hastily written diary will, I trust, tell some at home of my few weeks' experiences.

The voyage so far has been an uneventful one. Our first day out was so very smooth that I had visions of escaping the horrors of sea-sickness; but by our second day a rougher sea brought me, along with a large majority of the passengers, to terms, and the inevitable tribute to Neptune was paid. The first day out on a big steamer cannot but afford amusement to anyone not sick. The poor victims, in spite of an assumption of cheerfulness, will gradually obtain a pale yellow or greenish hue; and one after another can be observed, with tottering steps, to seek the lower regions, there to battle it out with their relentless foe. My battle this time has lasted longer than usual.

The *Egypt* is a comfortable boat, and one of

the largest in the transatlantic trade, and although not as fast as some, is a steady vessel in an ordinary sea. The saloon accommodates 120 people, and is full on this trip. The table on our boat is pretty good, yet it had no charm for most of the passengers the first three days out. As usual on ocean steamers, the bread and butter is poor; yet the meats and fresh fish and strawberries have seemed very good. Still, on the ocean, one wants heavier food than on land, and even when part sea-sick, salt fish, ham, and bacon and hard biscuit are preferable to lighter diet. We have now been out six days, and have seen only two or three vessels. Constant rains and fog have been our portion, and the mournful fog horn has often broken sleep at nights.

There are on board the usual miscellaneous sort of travellers. There a few typical Englishmen, who, as usual, think "the States" are a fine country, with great natural resources; but that we have a very imperfect Constitution, and are very poorly governed. They have a right to their opinions, and are part right and part wrong. Then we have a good percentage of Western people, who have no especial grace of manner or conversation, but who possess a wonderful amount of hard common sense, and have apparently all the better a time, because they are not bothered with the conventionalities that cling to Eastern people. We have also on board six clergymen, some of whom I find to be excellent men. There are several families in the ship going out for their summer's vacation; and the heads of these families have on hand just about as much as they can manage. A small army of children make things lively—all sizes being represented—from those carried in their nurses' arms up. It is amusing to see the little people toddle up and down the deck, soberly succeeding in maintaining the centre of gravity in spite of the motion of the vessel. Little children seldom become sick on the ocean. In addition to all the above, there are a few stage-players, and the usual assortment of fast young men, who drink ale and wine on every possible pretext; also there are quiet and sensible people, whose hidden ability it is a pleasure to draw out. There are two Friends in the ship besides myself, whose company is exceedingly agreeable to me.

I pity the sailors on these ocean steamers. They are always kept busy at something or other, the officers rightly fearing that if unoccupied they may get into mischief. The poor fellows will run around deck in bare feet when my big overcoat feels good to me. They get \$15 per month and their board; and are generally guaranteed a good soaking some time or other during each voyage. The look-out away up on the prow most of stormy nights feel dismal enough, yet there he has to hang on in the spray and darkness, and at every strike of the bells, sing out, "all is well."

The stewards also get nominal wages and have to depend on fees for most of their pay. They are invariably nice, obliging men, and will do anything for you. Tommy, the deck steward on the *Egypt* and myself have had several conversations. He has followed the business eighteen years, has been almost everywhere, has waited on all kinds of people, and has learned the art of accommodating them all. He gets up at 5 A. M., and spreads out the 100 steamer chairs, and from that time on till night he looks after the sick ones with all their fussy ways. If any one thing will make people fussy and unreasonable, sea-sickness will; so his task

is a hard one. Then, at midnight, he sees that every one has gone below, piles up the chairs, puts out the lights, and turns in. Poor patient, cheerful Tommy! I wonder how long he will continue to carry bottles and glasses and soups and wraps for seasick and dizzy Americans.

9th.—The other evening one of the officers informed me that the glass had fallen very low for this season of the year. The next morning the effects were decidedly apparent, and we were in for two days of solid discomfort. A storm at sea is grand to look at, but after that is said, all is said. There is nothing to be frightened at, but entirely too much to feel. I have felt much used up with the unusual motion, and not being at all well, anyhow, I am glad enough that the sea has now subsided.

10th.—Going into the Liverpool docks is an interesting and tedious performance. The utmost care has to be exercised lest the huge boat should run against the massive stone walls. A big man, wonderfully arrayed in blue and gold lace, gave the orders to the panting tugs that pulled us around through the narrow gates, and finally, after several turns and much delay, we were hauled up to our pier. These docks are remarkable evidences of what man can do when he attempts to overcome natural obstacles; and there are over twenty miles' wharfage in the Liverpool docks. They are made necessary by the rise and fall of the tide in the river Mersey. We have nothing like them in America—not as the English like to intimate, because we are unable or unwilling to build them—but because our harbors do not require them, and to build such works would be a useless expense.

12th.—I came up to London yesterday. Everyone says "up" to London from all over England, just like in ancient days all roads led to Rome.

I went over the large conglomeration of buildings known as the Tower this morning. The far-famed crown jewels were first visited. They are kept in an eight-sided room, in the centre of which they are exhibited on a stand, formed like a large pyramid. On the top of this pyramid is Queen Victoria's crown, blazing with diamonds. There are also several other crowns, including those of the Prince of Wales, the Prince Consort, and some of the monarchs since the time of Charles II. The latter individual had a great many gold trinkets made for himself, and judging from this collection, must have been a very expensive sort of a person to have around. The "white tower" dates back to William the Conqueror's time, and is an immense structure, with stone walls 14 and 18 feet thick. In those days, I presume that walls were not built by money-making contractors, but were intended to last. In this tower are shown the arms and armor of former ages, besides suits of armor and coats of mail worn by different sovereigns for centuries back. Some of the workmanship displayed in these things is really beautiful; and they show that even 400 or 500 years ago more skill was displayed in manufacturing weapons of war than was devoted to the arts of peace. I also saw the old beheading block, with its ugly axe seats, and some old thumb screws, and other miserable instruments of torture. How thankful we may be that our lot is not cast in those "good old days," as some call them.

(To be continued.)

WHEN Melancthon, on his death-bed, was asked "Is there anything else you want?" he replied, "Nothing but heaven."

FOR "THE FRIEND."

Spiritual and Temporal Life and Death.

We might suppose that all Bible readers are sufficiently enlightened to see that a temporal life and death, and a spiritual one, are spoken of. But some appear to look upon things very imperfectly. And, having their eyes only partially anointed, they look, in a religious point of view, upon some of their poor fallen teachers as greater than they are; or "as trees walking." But the best of us, while in this state of unbelief, only see in part, and prophesy in part. But we see that there is a seed of sin which produces spiritual death, pervading the whole posterity of fallen Adam, until it is expelled, or removed out of the way by the effectual working of the law of the Spirit of life in Christ Jesus, who never fell, but who now offers himself in spirit to all mankind, as the light and life of the world. So it is now, in Him, the second Adam, the Lord from heaven, that we are made free from the law of sin and death which comes upon all as the effect of disobedience. For as in Adam all have died, or lost their spiritual life, so in Christ all have a chance to be made alive. But spiritual life and spiritual death, cannot dwell together, no better than light and darkness: for they are contrary one to the other. The one being from Christ, the other from B-lial. So their effects upon mankind are antagonistic; producing a warfare as between two opposing elements. But thanks be to God who giveth his saints that rely on Him for all their spiritual life and strength, the victory.

A few living ones are going about, often in sackcloth and mourning, with the living Gospel message, shedding forth the savor of life unto life: while such as think they are alive when they are dead, spiritually, are going about in their own strength, with a counterfeit gospel, giving forth the savor of death unto death to the deluded ones. "So be carnally minded is death; but to be spiritually minded is life and peace"; Death is the wages which we receive for sin and unthankfulness; while eternal life is the gift of God, which we receive as wages for righteousness and true holiness. So, if we live after the gratifications of our fleshly desires, a spiritual death will be our just reward; but if we, through the assisting grace of God, do mortify the deeds of the body, we shall live.

So the terms on which we obtain spiritual life or death appear to be conditional. If we do our part, in obedience to the Divine will, we shall live. But if we, through disobedience or neglect fail, and follow the lust of the flesh, the lust of the eyes, or the pride of life, we shall lose the little spiritual life which we in mercy have received.

It was said of Cain, after he had come under the condemnation of the Lord, "If thou dost well, shalt thou not be accepted? But if thou dost not well, sin lieth at the door." Paul, in allusion to his spiritual condition, said, "I die daily." And I suppose he did, until he witnessed the old persecuting, Saul nature to be overcome. Then he could say, "I am crucified with Christ, nevertheless I live," spiritually.

These expressions of Paul, about dying daily, and being crucified with Christ, and mortifying the deeds of the body, do not detract the views which some have of a sudden death of the sinful nature. Neither does the expression of John the Baptist, where he speaks of the axe being laid at the root of the corrupt tree, but it does signify that it is laid there, for use, until every tree that bringeth forth not good fruit, is hewn

down by repeated blows, and cast into the fire. We are not going to be alive unto God and to good works, until we are first dead unto sin. And while our faith stands more in the wisdom and eloquence and power of men, than in the living power of God, we shall remain under sin, and be left in death and darkness, and cease to be as lights in the world; because the light that was in us has become darkness, and the darkness is very great. Some have mixed and mingled with the world, that lies in wickedness, until strangers have devoured their strength, and they have not life and light enough to know it. But they have become partly sensible of the lack of Divine life, and are striving to supply a human life and power as a substitute. And this substitute is so mixed with the appearance of fervent devotion, that their religion has become popular; but when it is weighed in the balance it may be found wanting. For that which is highly esteemed among men, is abomination in the sight of God. I see that many, like Ephraim, have so joined themselves to their idols that we might about as well let them alone. But I do believe there are "a few names, even in Sardis," or in our once highly favored Society, that have not defiled their garments. These, I humbly hope, will continue to shine as lights in the world, and amidst a crooked and perverse generation, who have a name to live while they are dead.

But we, as a people, have great need of more spiritual life: especially in our religious organizations and meetings for worship. But how are we to get it, except as we ask of Him who giveth liberally to all who rely on Him? We shall not find it by seeking the living among the dead. We shall not get it in the ministry, except it comes through the Minister of ministers—the Minister of the sanctuary and of the true tabernacle which the Lord pitched and not man. This great change from death to life, is not of ourselves, lest any man should boast of his own ability to save himself. It is all the gift of God. But we have to do. And while we have the light, we must believe in the light, and walk in it. And walking signifies a moving forward, which requires an exertion of our own. So I do not believe in our sitting down as at ease in Zion, having a name to live while we are dead. Neither do I believe in so much mere human life, or activity of the natural man, as is generally used in propelling the machinery of the different churches. Yet I do not believe that a Christian's life is a life of idleness; but that we should be ready to communicate in all good things; not slothful in business, but fervent in spirit, serving the Lord; apt to teach, distributing to the necessity of saints; given to hospitality. So our life or death will be known by our fruits, whether good or evil.

When Christ was personally among men, He went about doing good to the bodies and souls of men. He opened the eyes of them that were outwardly blind, and raised the dead to life. So that the Jews marvelled that He who came to save others, could not save himself. But He came to save us from a spiritual death; and died that we might live; as He was the resurrection and the life. That as He was raised from the dead by the glory of the Father, even so we also might be raised from spiritual death and walk in newness of life as He did. He not only gave his life for us, but that we might walk in newness of life while here, but that He might redeem us from all iniquity, and prepare us to enter with him into the heavenly mansions, where nothing impure or unholy can ever come; and where death will be swallowed up in victory through

Him who has the power over death, both temporal and spiritual. D. H.

DUBLIN, IRE., Ninth Mo. 3rd, 1888.

Worship of the Dervishes in Cairo, Egypt.

BY CAROLINE E. WRIGHT.

While in Cairo we attended a morning service at the "Temple of the Dervishes." The temple, or building, is a most unpretentious looking edifice, nothing whatever indicating a place of worship.

It is built in circular form, and consists of one vast room, the center of this room (or auditorium) being separated from the visitors by a low, open railing, extending around the inclosure about twenty feet from the surrounding walls. In this space the visitors stand during the ceremonies. But in the entire temple there is not a chair or table, book or bench seen; the only visible object being an elegant oriental mat spread upon the floor near the rail opposite the gate of entrance.

In a few moments after our arrival the high-priest entered the inclosure, directing his steps to the mat, and, kneeling upon it, kissed it most fervently, then prayed (apparently) in the most devout manner to the mat, alternating his devotions in bowing, kissing and praying, with eyes fixed upon it. These devotions of the priest lasted about fifteen minutes before the members of the sect began to assemble, each on entering bowing devoutly to the mat before taking his seat on the floor, in close proximity to the surrounding rail, the audience having a clear and unobstructed view of all the ceremonies. There were no females to be seen among the worshippers; the men varying in age from 18 to 70 years. Those who were seated in a balcony built on the wall (opposite the entrance) were the musicians, who poured forth the most weird and unearthly music, when, at a certain strain (which proved the signal for the devotees to rise) they all rose, and, removing their wide-spreading mantle from their shoulders, folded it carefully, and put it on the spot they had occupied, thus revealing their peculiar dress, which consisted of wide, loose trousers, over which they wore a thickly plaited skirt, confined at the waist, but reaching to the neck, with open sleeves. On their heads they put a close-fitting felt hat, without a particle of brim, from twelve to fourteen inches in height.

At another strain in the music, the whole number commenced gradually to whirl around, with outstretched arms, increasing in the rapidity of movement, with such force that their skirts stood out from their waist like a large opened Japanese umbrella; yet strange to say, the movements of every one were so gracefully skilful, they never touched each other, neither did their extended arms come in contact. Continuing these exercises for twenty-five or thirty minutes (without a moment's cessation), one after another becoming weary, walked to their seats—and forgetting in passing, however, to offer their accustomed devotion to the mat.

After the necessary rest of ten minutes, the music again resounded through the temple, when all instantly arose, and with the accelerated strains of the music, commenced whirling with even greater rapidity than before. And it was a matter of great surprise to all the visitors to find the oldest men held out (apparently with less fatigue) longer in this laborious exercise than the younger members—doubtless owing to

their longer experience in this whirling worship. It was not only a comical, but wonderful sight, to witness such rapidity of movement, when the beholder could scarcely distinguish one skirt from another, or to which body the outstretched arm belonged.

When the second part of the services closed, the worshippers (after bowing to the mat) repaired to their seats, and made ready to follow the priest when he left the temple. One singular fact was that *not one word had been spoken* during the entire services, and none of them appeared to notice the large number of visitors present, being so rapt in devotion, with their eyes uplifted.—*The Christian Advocate.*

FOR "THE FRIEND."

What Constitutes a True Friend.

"Ye are my friends, if ye do whatsoever I command you." A true Friend is one that is following the blessed Master in the way of his requiring.

We have plain proof from the Scripture, that it is the privilege of the humble follower of Christ to know of being led by the blessed Holy Spirit, for it says: "When He, the spirit of truth, is come, He will guide you into all truth; will take of the things of mine and show them unto you; will bring all things to remembrance, whatsoever I have said unto you." His office is to "Convince the world of sin, of righteousness and of judgment;" bringing the unregenerate heart under conviction for sin; and, as this visitation is yielded to, leads to repentance and faith in the great atonement that was made for sin and transgression, applying the benefit thereof to the repenting, believing soul; for, "to as many as received Him, to them gave He power to become the sons of God, even to them that believe on His name."

There are no meetings that are better calculated to meet the needs of the masses of the people, than a good old-fashioned Friend's Meeting,—a meeting in which the people are gathered under the power and presence of the great Head of the Church, and in which the Master who has the right to rule and reign, directs the exercises.

I hope the time may never come when waiting in silence is looked upon as a waste of time. There is a silence that is worship, and there is a silence that may be entirely formal. "Keep silence before me, on islands, and let the people reverence thy strength; let them draw near, and then let them speak." Silence may not be the end of worship, but a means to an end.

When first meeting together, it is befitting a set of worshippers to drop into silence, that they may realize the Master's will. As we follow this, in simple obedience, we are enabled "to offer spiritual sacrifices, acceptable to God, through Jesus Christ our Lord." A ministry rightly brought forth by the anointing from on high, will reach the witness for truth in the hearts of the hearers, and prove a great blessing to the church. The truth as promulgated by Fox, Penn, and others, has never changed, and never will; yet the administration of the truth may change according to our surroundings and needs.

GEORGE BRIGGS.

NEW SHARON, IOWA.

SOME very good and thoughtful men have given it as their judgment that more can be done by parents at home in the proper care, control, and teaching of their children, from the first to the seventh or eighth year, to shape their future moral and religious character, than by all other means combined.

THE TRUE REFUGE.

[A minister in England died from the effects of cancer. One day, after his daughter had made him comfortable by placing three pillows under his head, a friend called and inquired, "How are you to-day, Mr. Parsons?" "Very comfortable, indeed. See! I lie on three pillows. They remind me of the pillows on which my soul lies." Putting his hand on the undermost one, he said: "This is the pillow of God's infinite power; the second is the pillow of God's infinite wisdom; the third and top one is the pillow of God's infinite love in Jesus Christ. 'The eternal God is thy refuge, and underneath are the everlasting arms.'"

Hast thou within a care so deep,
It chases from thine eye-lids sleep?
To thy Redeemer take that care,
And change anxiety to prayer.

Hast thou a hope, with which thy heart
Would almost feel it death to part?
Entreat thy God that hope to crown,
Or give thee strength to lay it down.

Whatever the care that breaks thy rest,
Whatever the wish that swells thy breast,
Springs before thee that wish, that care,
And change anxiety to prayer.

—Exchange.

SELECTED.

CHOSEN IN THE FURNACE OF AFFLICTION.

How long! how long! the furnace-fires rage high,
Hath God forgotten me as here I lie?
Is there no silence, in my soul all loss?
That I must witness trial, pain and cross?
Oh! for the Master's voice!
Will He forsake?
Here in the fires alone
Must my heart break?

"Be patient, suffering soul! I hear thy cry;
The trial fire may glow, but I am nigh.
I see the silver trial in which I refine,
Until my image shall upon it shine.
Fear not, for I am near
Thy help to be.
Greater than all thy pain
My love for thee is."

Thy love for me, Oh, Lord! is this the place
Where I may see the shining of thy face?
Here may I learn thy Holy will to know,
And into thy dear love nearer grow?
Unto this blessedness
May I aspire
To glorify thee
Even in the fire?

"Yes! even here! oh suffering one, be strong,
This trial of thy faith may not be long—
Even now, thy soul, submissive to my will,
Is learning how to trust me and be still.
My everlasting arms
Do thee enfold;
Precious thou art to me,
As most fine gold."

I hear thy voice, my Lord; I fain would rest
Secure in all my weakness on thy breast,
But even now, though furnace fires burn low
My spirit trembles underneath thy blow!
Must there be trial still?
Is there no sign—
No likeness yet, upon
This heart of mine?

"The silver truly may reflect thy face,
Yet must I fashion it until the grace
And fair proportion of its form I see,—
A chosen vessel, consecrate to me.

As ever is a love
I thus refine;
Thou shalt be fair indeed,
For thou art mine!"

I listen and am still; I doubt no more,
All quietly I rest—the strife is o'er,
Thy chosen one! can I resist thy will
Or fear to follow thee through joy or ill?
I may not understand
The way I go;
The perfect day will come
Then I shall know!

THE CHILD'S WISH.

SELECTED.

I think, when I read the sweet story of old,
How Jesus, when here among men,
Called dear little children, as lambs to his fold,
I should like to have been with them then.

I wish that his hands had been laid on my head,
That I had been there by his knee,
And had watched his kind look, as He lovingly said,
Let the little ones come unto me."

Even yet, to his footstool, in prayer I may go,
And ask for a share of his love,—
And if I but seek Him, and serve Him below,
I shall ever be with Him above,—

In that beautiful home, He has gone to prepare
For all, who are cleansed and forgiven;
And many dear children in glory are there,—
"For of such is the kingdom of heaven."

FOR "THE FRIEND."

"The Word of Life, Jesus Christ, which we have seen with our eyes," said the Apostle John, "and our hands have handled, do we declare unto you, that ye also may have fellowship with us, and truly our fellowship is with the Father, and with his Son, Jesus Christ."

It is true that John had seen Jesus with his natural eyes, and even laid his hands upon this God-man; yet now, in writing to the saints, many years after Jesus had ascended to Heaven, he desires that they also with him may have fellowship with Him; and adds, "truly our fellowship is with the Father, and with his Son, Jesus Christ."

By this, then, we see that John was still present with Jesus, that so loved him, and in a manner more real than when they travelled together over the hills and valleys of Judea. (Read John xvii: 21, 22 and 23.) For, no hands animated by blood can so really handle our risen Lord as can these spiritual hands, animated by the inflowing of that same Life, whereby He now lives in Glory; and a measure of which enters into all those who open their hearts to receive it.

Neither did earthly eyes ever see Him so plainly as do those eyes which are anointed with that True Light that cometh from Him, (Acts vi: 45, 56.)

It is evident, then, that it was this kind of seeing and handling that John desired the Christians of his day to possess with himself; so that they all might have fellowship together with their Lord.

And it is this earnest desire of our ever-loving Lord that we of this day would also enjoy the same oneness with Him.

T. D.

Frankness and Harshness.—How often a bitter speech, which has caused keen pain to the hearer, has been followed by such words as these, as if in justification of the unkindness shown:

"I'm a plain, blunt person, and I have to speak out just what I think. People must take me as the Lord made me."

Anything meaner than such an attempt to throw the responsibility for one's ugliness of temper off upon the Lord it would be hard to imagine. Frankness of speech is one thing, but harshness is a very different thing. The Lord never endowed any man with such a disposition, or put him in such circumstances, that he was obliged to make stinging, cruel remarks. Some people have more difficulty than others in being sweet-tempered and kindly spoken, but when one fails it is his own fault.—*The Work at Home.*

FOR "THE FRIEND."

The Outlook as to Peace and War.

In THE FRIEND several weeks ago, regret was expressed (editorially) that in the formal enunciation of principles or so-called "platform" of one of the two principal political parties, so much stress should have been laid upon the (asserted) need of more war vessels, and of sea-coast fortifications.

In the debate upon the urgent necessity for providing more guns, war-ships and coast fortifications, Senator Hawley asserted that "other nations had this country at their mercy," and that "the English themselves were surprised at the carelessness of the United States in regard to war preparations, and asked, was there ever such a happy-go-lucky reliance on luck since the world began." Alas, that such carnal arguments should be advanced by the legislators of a professedly Christian State! How far more truthful is the thoughtful reflection contained in this extract from a private letter from England:—

"If you once begin to spend money on fortifications, it will be merely the beginning of a sinking fund. Every pound spent raises a vested interest—a military interest, which will demoralize public opinion, and brutalize the mind so that life will be cheaper. We are watching you with very great interest. We see in it a great moral revolution, in which is involved an incalculable quantity of happiness, freedom and peace for the world-wide human race."

Referring again to the Senator's assertion that Englishmen were surprised at America's carelessness concerning its defenceless condition, I would quote the following opinion, expressed by a very sensible Briton, Charles Kingsley. In an address before the Ladies' Sanitary Association of London (1859), in drawing a parallel between the losses by bad sanitation and those incurred through war, he remarked: "War, we are discerning now, is the clumsiest and most expensive of all games; we are finding that if you wish to commit an act of cruelty or folly, the most expensive act that you can commit, is to contrive to shoot your fellow-men in war." Only a year ago, when the British delegation representing 224 members of Parliament were in this country as bearers of the arbitration memorial to our President and people, it seemed as though the sentiment in favor of the amicable determination of international differences was pretty generally accepted. With the rejection of the Fisheries Treaty, however, the long discussions in Congress over the navy, arsenal and fortification bills, and the grants for those purposes, we seem to have waxed much more belligerent.

It is not improbable, also, that we may have to confront, in the not distant future, a "Chinese Question," of more threatening character than any with which we have yet had to deal. A generation or two ago, the Mongolians were very much assailed for their injustice and folly in keeping themselves aloof from the civilizing influences of foreign nations. In what manner, as nations, have we commended to them our Christianity and civilization? When Hong Kong was opened to the English and French, the American consulate being on the ground, and identified as a party to the transaction, the concession was one which was granted at the cannon's mouth. It came with that opium-introduction war which brought unspeakable woe to the Chinese people. It is not often that we

get an unprejudiced declaration upon this subject from the papers of the Pacific sea-board, but within a few days I have seen an extract from a letter of evident fairness, published in the *Pacific*, a Congregationalist journal of San Francisco. The writer, who is a graduate of the University of California, writing from Hong Kong, says, that the ever-remembered wrong of the opium-war, with the anti-coolie persecutions and exclusions on the part of America and the British colonies "have developed such a bitterness among the people, that as I go along the streets with a missionary, ever and anon we hear the muttered words, 'foreign devil.' The lady walking with me said, 'If they called us no worse than that, we would be very well satisfied.'"

"No Christian can live or travel in China without being ashamed of the name America. Our treatment of the Chinese, to use a Scripture expression, has made our name to stink in the nostrils of this people."

"The greatest difficulty to-day that the missionaries have to contend with, is that they are foreigners, protected by foreign guns. As foreign nations, we have treated this people so brutally, that to-day, if the fear of cannon were for one hour removed, there is no doubt that every foreigner—man, woman and child, missionaries and others, would be slaughtered, saving only the miraculous intervention of God in their behalf. Not only so, but may God have mercy on us when this mightiest nation of earth awakes from her slumbers."

Had the person who penned the above lines foreseen that in the course of a few weeks, while a treaty between this country and China was pending, our Senate should have passed (as a mere political bid for votes, in view of the near-at-hand presidential election) a second and more rigorous Chinese Exclusion bill, he would undoubtedly have felt that the lives of all the Americans dwelling in that land were placed in extremest jeopardy. The most urgent missionary labor on behalf of China, at present, would seem to lie by way of Washington. May the veto of the President prevent the consummation of this hasty, unrighteous, and war-provoking legislation!

JOSHUA W. LEEDS.

FROM THE AUSTRALIAN FRIEND.

Why do Friends Meet in Silence?

Dear young Friends:—The most noticeable difference between Friends and others is in our mode of worship. I shall, therefore, in this letter endeavor to answer the query at its heading.

Our Lord Jesus Christ told the woman of Samaria that "God is a Spirit, and they that worship Him, must worship Him in Spirit and in Truth;" also, He said to his disciples, "Without me ye can do nothing." The Apostle Paul told the Athenians that "God dwelleth not in temples made with hands; neither is worshipped with men's hands, as though He needed anything."

We therefore cannot worship God acceptably by any thing we may do in our own will, without His assistance, and as our access to Him is through the Spirit, we consider it best to meet in emptiness of self, bringing nothing of our own, silently waiting for that Spirit which will enable us to worship in Spirit and in Truth; not necessarily requiring words, because He who is a Spirit understands the language of the Spirit.

However, words have a very useful place in our meetings, whether in prayer, praise or

ministry, when uttered under the influence of the Holy Spirit; and Friends wish to encourage the right exercise of such spiritual gifts by any of the congregation feeling it laid upon him or her—for in holding back from following the leadings of the Holy Spirit, not only the individual, but the meeting suffers loss.

If we, each one, younger and older, were more willing to take the part our Master would have us take in our Meetings for Worship, would they not show much more life than they do at times? Let us see to it, then, that we are each one doing our part, as members of the congregation, when we come together.

By our mode of worship we are not dependent on any one man—looking to Christ alone, and each individual worshipper is free to follow the dictates of the Holy Spirit in his heart—which is not the case with a pre-arranged service.

I will conclude with a quotation from Barclay: "The worship, preaching, praying and singing, which we plead for, is such as proceedeth from the Spirit of God, and is always accompanied with its influence, being begun by its motion, and carried on by the power and strength thereof; and so is a worship purely spiritual, such as the Scripture holds forth."

Your sincere friend,

T. B. R.

"HERE is a curious thing," said a doctor, as he walked through an Erie railroad train the other day. "This smoking car seats fifty persons, and yet there is seldom a chance for a seat after the train starts out of New York. The men in this car have gone into the country at considerable expense and disadvantage for the sake of their health. The only time they spend at home is at night, and most of it in their bedrooms, in heated houses, where the air is very little different from that in the city bedroom. They spend from two to four hours of the only leisure they have in this car, where the air is so vitiated with tobacco, that though I am an old smoker, it makes me as sick in fifteen minutes as did my first cigar. It is safe to say that the health of these men would have been better guarded had they stayed in town.—*New York Sun.*"

Natural History, Science, &c.

Flowers in China.—The Chinese have a passion for flowers. You may see, on the hundreds of canals that cut up the country around Shanghai, boats whose dingy and miserable appearance betokens the poverty, even the beggary, of their occupants; and yet near the stern, on the top of the *saw-bang* or cooking canopy—the "galley"—you will see from two to a dozen pots of flowers. Little Chinese girls nearly always place a sprig of some bright flower in their glossy tresses of raven black, and they sometimes show a good deal of taste in the arrangement of their nose-gays.

Just about the first of February, or near the Chinese New Year, one may see men and boys selling branches of a small bush that bears a yellow flower, somewhat resembling the Spice-bush flowers of Virginia. This flower has, to a Chinese, associations bright and pleasant as those that clung around the far-famed Hawthorn that bloomed in Old England on "Old Christmas Day." You can buy in the market for a few *chien* or *cash*, a little flower pot with a few balls of Daffodil in it, and by keeping it in the window of your room, soon have a few bright looking flowers. The Chinese do not

plant in their parks such elaborate flower beds as the Americans and Europeans, but they are very fond of pot-flowers.

The Dodder.—These singular parasite plants, known as dodders, start life by seed in the ground, and continue as terrestrial growers until they find a host plant along which they twine. Then they send out "hausteria"—a kind of penetrating sucker by which they extract the living juices from the plant they have embraced. From this time forward they sever their connection with the earth. In what manner they sever this connection has not been known until recently, when Haaker of Mt. Holyoke Seminary, discovered that the warm stem contracts, thus drawing the root up out of the ground, which root then withers and dies.

The Barramunda.—In the oldest secondary rocks of Britain and elsewhere there occur in abundance the teeth of a genus of ganoid fishes, known as the Ceratodus. The teeth reappear from time to time in several subsequent formations, but at last slowly die out altogether; and, of course, all naturalists naturally concluded that the creature to which they belonged had died out also, and was long since numbered with the Dodo and the Mastodon. The idea that a Ceratodus could still be living, far less, that it formed an important link in the development of all the higher animals, could never for a moment have occurred to anybody. As well expect to find a paleolithic man quietly chipping flints on a Pacific atoll, or to discover the ancestor of all horses on the isolated and crag-encircled summit of Iborama, as to unearth a real live Ceratodus from a modern estuary. In 1870, however, Krefft took away the breath of scientific Europe by informing it that he had found the extinct ganoid swimming about as large as life, and six feet long, without the faintest consciousness of its own scientific importance, in a river of Queensland at the present day. The unsophisticated aborigines knew it as barramunda; the almost equally ignorant white settlers called it, with irreverent and unskillful contempt, the flat-head. On further examination, however, the despised barramunda proved to be the connecting link between the oldest surviving group of fishes and the lowest air-breathing animals like the frogs and salamanders. Though a true fish, it leaves its native streams at night, and sets out on a foraging expedition after vegetable food in the neighboring woodlands. There it browses on myrtle leaves and grasses. To fit it for this strange amphibious life, the barramunda has both lungs and gills; it can breathe either air or water at will, or, if it chooses, the two together. Though covered with scales, and most fish-like in outline, it presents points of anatomical resemblance both to salamanders and lizards. It is very interesting to find that this fossil link between fish and reptiles should have survived only in the fossil continent, Australia. Everywhere else it has long since been beaten out of the field. In Australia alone it still drags on a lonely existence as the last relic of an otherwise long-forgotten and extinct family.—*Cornhill Magazine.*

The Home of the Guillemot.—A writer in the *London Friend* gives an interesting account of the collecting of the eggs of this sea-bird; which nests in great numbers on the high chalk cliffs which border the sea about Flamborough Head, on the coast of Yorkshire. The eggs are about the size of those of a hen "with a ground color of cream, buffish white, or pea-green, blotched and smeared and streaked and daubed with

bright red, a rich brown or black, in every fantastic pattern and line." The process of collecting them is thus described:—

"A party of four assign themselves a portion of the cliff; one of the number then puts on what he calls his 'breeces,' which consist of a piece of horse-girth under each thigh, with a strap round his waist, and this is connected with a strong line attached to the middle of his body, in front. His wrists are protected with strong calf-skin gauntlets, two bag-pockets are under his arms, his hat is felted, and tied upon his head, and he is armed with a sort of scoop-net, which is passed over his neck, leaving his hands quite free. Two ropes are then given him: the one is made fast to his 'breeces'; the other made fast to a spike on the top of the rock. The one is used to lower him down by; the other he helps to pull himself up with, and uses also for telegraphic purposes.

"All being ready, the three companions place themselves as near the edge of the cliff as they can well get, planting their heels in holes cut for the purpose, passing the tight rope over the edge, and the line attached to the climber through a small spiked swivel, which is driven into the top of the rock. The strongest man has a buckle of strong calf-skin over his waist, round which the line is allowed to run; and so he serves as a lever to steady his companion by. Now, then, over the climber goes into space, and down the ziddy height, and as you run round to some other point or promontory, in order to be able to witness his proceedings, you see him perhaps first of all, taking immense giant strides down the perpendicular face of the cliff; now touching the rock with one foot, and then again swinging off and striking it very many feet below with the other, until he comes to an underhanging piece, where he appears suspended in space, like a spider from his thread. Now a ledge is reached, and at a signal with his telegraph line he is instantly stayed, and begins to explore its recesses, putting the eggs into his bag-pockets, scooping them out with his net, and terrifying the poor lawful occupants of their homes with his presence. Again, answering to his telegram, he is off, lower, lower, until some 200 feet or more have been reached, and all the eggs within his limits have been gathered, when again, at the well-known signal, you begin to see him ascend, sometimes stopping, searching, examining and climbing, until, as you run round back again to your friends on the top, you see him emerge from out of the unlooked depth with his bags full, and a smile upon his face. Sixty-two eggs were counted from one haul."

The number of eggs collected during the season is about 30,000. Many of these are sold as specimens of Natural History; and a large number are eaten.

Items.

The Churches of the United States.—Under this heading *The Independent* of Seventh Mo, 26th, gives carefully prepared statistics of the different denominations of Christians for the present year; a summary of which follows:

Abolitionists.—These are divided into several bodies, the most of which are Congregational in their polity. They have in all 1563 church edifices and 100,411 communicants.

Baptists.—Including under this head not only the regular Baptists (much the most numerous of the divisions), but also the "Disciples of Christ," "Christians," "Church of God" and "Dunkards" who all baptize by immersion; the number of meet-

ings-houses is given as 45,434, and of communicants 3,571,885. The most of these are Calvinistic in doctrine.

Christian Union Churches.—This body arose in the West, a quarter of a century ago. It protests strongly against sectarianism and practices baptism by immersion. Meeting-houses, 1500; members, 120,000.

Congregationalists.—Among these all ecclesiastical power is vested in the congregations, which are thus independent bodies. The prevailing doctrinal belief is in accordance with what is called Evangelical. Meeting-houses, 4,104; communicants, 457,584.

Friends.—Orthodox Friends hold to the inspiration and sufficiency of the Scriptures, to immediate revelation by the Holy Spirit to the heart of the individual, and that the only baptism essential to salvation is the "washing of regeneration and the renewing of the Holy Ghost." The Lord's Supper is not to be observed by the use of the visible elements, and no one should exercise the ministry without being moved thereto by the Holy Spirit. There is much discussion at present concerning the Philadelphia Yearly Meeting. Friends there are usually called, date from 1827, and they are regarded as Unitarian in doctrine. "Orthodox members, 72,968; Non-affiliating Orthodox, including Philadelphia and Wilburite bodies, 12,000; Hicksite, 23,000. Total 107,968."

German Evangelical Church.—This body occupies the same position theologically as the State Church of Prussia, which was formed by the union of Lutheran and Reformed bodies. Meeting-houses, 675; communicants, 125,000.

Lutherans.—These are subdivided into several Synods. Meeting-houses, 7,992; communicants, 987,600.

Mennonites.—Mennonites baptize penitent believers by pouring or sprinkling practice, take communion, observe fast-weeking, refuse to take judicial oaths, are non-resistants, and use the ban against unworthy members. Their bishops, elders, or ministers, and deacons are chosen by lot. The number of ministers always exceeds the number of places of worship, as there are almost always two ministers to each church; but many of the churches have two and sometimes three places of worship. The literal ban is not in general use among the Old Orthodox Mennonites; nor among the New School. The Amish Branch and the Reformed Branch, however, hold strictly to the ban. The chief cause of separation between the Old Mennonites and the Amish, about A. D. 1790, was the ban. The chief cause of separation of the New School, in 1848, was a determination on the part of the New School representatives to enjoy a greater degree of worldly conformity, both in doctrine and practice. "Old Mennonites, 60,000 communicants; Amish, 30,000; Reformed Mennonites, 3,000; New School Mennonites, 10,000.

Methodists.—These are divided into numerous branches; most of which have bishops at the head of their organization; but others are Presbyterian or Congregational in their polity. They all substantially agree in doctrine and practice. Several of the divisions were the result of slavery. Total number of communicants, 4,639,529.

Moravians, whose official title is *Unitas Fratrum*, have 10,966 communicants.

Presbyterians.—The divisions among these are principally due to doctrinal differences, and to the influence of slavery. All accept the Westminster Confession of Faith, save the Cumberland Church, which was organized near the beginning of the present century, in the Cumberland Valley. It takes a theological position between Calvinism and Arminianism. Total number of communicants, 1,136,685.

Episcopalians.—Including the Reformed Episcopalians to reject certain doctrines in the Prayer Book which they regard as erroneous; and oppose the ritualism which is spreading in the old church, there are 446,785 communicants.

German and Dutch Reformed have 209,525 communicants.

Roman Catholic.—The total population is estimated at 7,200,000. The number of communicants is probably about equal to that of the Presbyterians; and considerably less than that of the Methodists.

There are a few other small bodies of professors, including among the grand total is about 19,800,000 church members; showing an increase during the past year of about 775,000.

Philadelphia Meeting for Sufferings.—At a meeting of this body, held Ninth Mo. 21st, a satisfactory report was received from a committee appointed several months ago in reference to the rights of our American Indians. They had had a relieving opportunity with the President of the United States, and had presented to him an Address, in which they endeavored to persuade him to exercise the discretionary powers entrusted to him in such a manner as to protect the Indians from injustice and oppression.

Two appropriations out of the Charles-ton Estate, were directed to be made to aid in the erection or repairing of meeting-houses in North Carolina. In the consideration of these cases, some reference was made to the care exercised by the Trustees of said Estate, not to recommend appropriations in aid of any meetings where the manner of public worship hitherto maintained by the Society of Friends was not in good degree observed; and to the amount of correspondence and exercise of mind which accompanied a conscientious discharge of this part of the duties entrusted to them.

When some ministers were disputing at John Newton's house, whether faith or repentance were first, he was silent till the debate was ended. Then, he said, "I have a question to ask. Are not the heart and the lungs of a man both equally necessary to the life of a man?" Yes, surely. "Well, tell me, which of these began to play first?" This resembles the point you have been discussing."

The Wrong Excuse.—Two workmen were talking about a comrade who had lately "got into trouble," as the saying is.

"He oughtn't to say he was led into it," said one; "he *lent* himself to it."

"The remark struck me as a thoughtful one. When a man, open-eyed, goes into dangerous places, associates with questionable characters, surely he lends himself to evil—he is not led into it.—*Selected.*"

THE FRIEND.

NINTH MONTH 29, 1858.

We have received a communication from our esteemed friend, Josiah W. Leeds, commenting on some of the warlike tendencies exhibited in this country at the present time. The only hesitation which we felt to publishing it, arose from the fear lest any person might suppose it was inserted in our columns from a desire to promote the interests of some one of the political parties existing in our country. We should much regret giving just occasion for any such supposition; for the object of THE FRIEND has ever been, not to promote the success of any political party, but to promote the welfare of the whole community by its advocacy of those principles of morality and religion which underlie its spiritual and temporal prosperity.

But in its support of these principles THE FRIEND has often, in the past, found it necessary to criticise and condemn those movements which were adverse to them; and we trust this will be its course in the future, independently of the consideration as to who may be affected thereby. The views advanced by our friend, J. W. L., have such important bearings, that we have not felt satisfied to withhold them. The danger that our country may be placed in a

hostile position towards other countries, with whom she ought to hold the most friendly relations, is greatly increased by the strong tendency among active politicians to subordinate national interests to party claims. Of this, we have recently had several examples, calculated to cause blushing and confusion of face to those who love their country and desire to preserve its honor untarnished. The effect of this wicked political system is to deprave the national conscience, and to lead many to sacrifice right and justice to what they regard as present expediency—to do evil that good may come. It is a well-established principle, that national crimes merit with national punishments. And it would not be very surprising if contingencies should arise in which a desire to conciliate popular favor should so overbalance the good sense and right feeling of those in positions of influence, as to induce them to support measures that may lead our country into the expenses and horrors of war.

In reference to the political contest now carried on in this country, we believe it is very desirable that our members should be on their guard, not to become too much imbued with a party spirit; while they may take an intelligent interest in the discussion of measures which will affect them in common with the rest of the community. The following minute of advice adopted by Philadelphia Yearly Meeting in the year 1800, seems appropriate at the present time:

"The necessity of a faithful maintenance of the testimony to the purity and increase of the kingdom and government of the Prince of Peace, which we in an especial manner believe ourselves called to, being with renewed weight, and in lively pertinent observations spread before us, it is afresh desired that our members may be duly sensible of the magnitude and extensive importance of this profession; that it becomes us to dwell much alone in order to experience preservation from mixing with the unsettled restless disposition prevalent in party disputations and plausible reasons relative to human policy and the exercise of civil government, in which the spirit of man is often or mostly involved; by countenancing or joining therein, some have been imperceptibly drawn from a tender feeling of the influence of that heavenly principle of Gospel love which embraces the well-being of the whole bulk of mankind."

A letter has been received by the Editor, commenting on the Editorial in the last number of THE FRIEND, on the pecuniary support of ministers. With the views expressed in that Editorial, the writer unites; but he thinks that it would have been well to have gone further into the subject of the ministry. An extract from the letter will explain his feelings.

"What is said is very good so far as it goes; but it is to my mind more important to insist that the first question is that the ministry that is exercised among us must be, to be what it ought to be, the outcome of a Divine gift, and from that only. Not from mere recollection of subjects, or from a desire to be made use of to promote the cause of religion, or suggested to the mind by any circumstances; none of these rise to the character of a ministry exercised in the authority of the Truth; and the result of all this is sensibly felt by the mind that is capable of right discernment. And in a word, says Robert Barclay, 'We are for a holy, spiritual, pure, and living ministry, where the ministers are both called, qualified and ordered, actuated and in-

fluenced in all the steps of their ministry, by the Spirit of God; which being wanting, we judge they cease to be the ministers of Christ.'

So I verily believe such ministers, so called and qualified, could never be found in our Society willing to receive pecuniary or other consideration by way of compensation for such ministry."

Similar views have so often been expressed in our columns, that it is scarcely necessary for those who have long been readers of THE FRIEND to be assured, that they are those which the Society of Friends have upheld from the early days of its existence as a distinct body.

We believe that no other doctrines so practically distinguish our Society from most other bodies of professing Christians, as the views we hold on worship and ministry; and that a departure from these will open the way for such changes as will destroy our right to claim the ancient and honored title of the *Society of Friends.*

Henry B. Leeds, of Moorestown, Burlington Co., New Jersey

Luna Otis Stanley, Danville, Hendricks Co., Indiana

Clinton E. Hampton, Dwight, Morris Co., Kansas.

Have been appointed Agents for THE FRIEND—the last named one in the place of William D. Smith, who has removed to another neighborhood.

SUMMARY OF EVENTS.

UNITED STATES.—The President has received official information of the refusal of the Chinese Government to ratify the amended treaty.

The large new silver vault in the Treasury building at Washington is so damp that the canvas bags containing the silver stored there are actually rotting away. Measures are being taken to improve the ventilation of the vault, and arrangements are also being made to substitute small rough pine boxes for the canvas bags for holding the silver. These boxes will each hold 3000 silver dollars, and it is proposed to store 50,000 of them in the vault. The silver is still coming in at the rate of \$500,000 a day.

Eight hundred pounds of quartz, carrying \$8000 in gold, is said to have been discovered by a single blast at the Michigan mine, at Ishpeming, on the 19th inst. The shaft is now 14 feet deep, and over \$20,000 of gold has been taken from it in less than a month. The Lake Superior Company is getting gold from the west end of the Michigan, but no one is allowed to know how much, or to enter the workings of the mine.

Libby Prich, was sold at public auction in Richmond, Virginia, on the 20th instant, for \$11,000. It was sold privately some months ago, to W. H. Gray, of Chicago, for \$25,300. He paid one-fourth cash and resold it to a Chicago syndicate, who failed to make the second payment; hence the second sale.

On the 18th instant, several cities in Wisconsin voted whether to fix the saloon license fee at \$500 or retain it at \$200. The vote was carried in Dodgeville, Marinette, Depre, White Water, West Deper; and low license prevailed in Oshkosh, Janesville and Mauston.

The city of Winchester, Virginia, voted on local option on the 20th, and went "wet" by a 111 majority. Two years ago it went "dry" by a majority of 165.

Massachusetts is beginning to rank high as a beer-drinking State. According to the Internal Revenue Department, the revenue from malt liquors manufactured in Massachusetts for the fiscal year just ended, amounts to \$959,492. The Collector at Boston says: "This represents considerably over 1,000,000 barrels of malt liquors, containing 31 gallons each. The population of the State, in round numbers, is 2,000,000. This would give every man, woman and child half a barrel apiece. But 500,000 barrels of malt liquors are imported into the State every year. This would raise the amount to 23 gallons per capita, or 368 half-pints—a schooner a day for every one."

The total visible supply of cotton for the world, is 761,182 bales, of which 491,282 bales are American, against 1,345,940 bales, and 765,840 bales respectively last year.

During the week ending Ninth Month 23th, there were 944 new cases of yellow fever, and 84 deaths reported in Jacksonville, Florida. In Decatur, Ala., and in Jackson, Mississippi, a few cases have occurred, but the disease appears to be abating in these places.

It is now believed that many hundred colored people have had the fever, and recovered without treatment of physicians. The old theory that negroes are not liable to the disease is exploded; but it seems that the fever is rarely or never fatal with them, unless complicated with organic diseases. An old and eminent physician has written the following as saying: "Negroes never die of yellow fever unless they call in a doctor."

Deaths in this city last week numbered 329, a decrease of 29 from the previous week, and a decrease of 22 compared with the corresponding period last year. Of the foregoing 180 were males, and 149 females; 56 died of consumption; 23 of typhoid fever; 22 of marasmus; 16 of cholera infantum; 16 of convulsions; 16 of diseases of the heart; 15 of old age; 14 of inanition; 13 of inflammation of the stomach and bowels, and 11 of paralysis.

Markets, &c.—U. S. 1/2's, 107; 4's, reg., 129; cotton, 120; currency 65, 121 1/4.

Cotton was very scarce and official quotations were 10¢ cts. per pound for middling uplands, but sellers were not numerous.

Flour and Meal.—Sales of 125 barrels Pennsylvania straight, at \$47.5; 250 barrels Ohio and Illinois straight, at \$5; 125 barrels winter patent, at \$5.10; 375 barrels do., do., at \$5.55; \$5.50; 250 barrels Minnesota, clear, at \$5.10; 125 barrels do., straight, at \$5, and 500 barrels do. patent, at \$5.75 a \$5.90. Rye flour was scarce and firm, at \$3.30 per barrel for choice.

Grain.—No. 2 red wheat, 97 1/2 cts.

No. 2 mixed corn, 51 1/2 a 52 1/2 cts.

No. 2 white oats, 34 1/2 a 35 cts.

Beef cattle—Extra, 5 1/2 a 5 3/4 cts; fat, 5 a 5 1/2 cts; medium, 4 1/4 a 4 3/4 cts; common, 3 a 4 cts; good cows, 2 a 3 1/2 cts.

Sheep—Extra, 4 1/4 a 4 3/4 cts; good, 4 1/4 a 4 1/2 cts; medium, 3 1/4 a 4 cts; common, 1 1/2 a 3 1/2 cts; lambs, 2 a 3 1/2 cts.

Hogs—Extra western, 9 1/2 a 9 3/4 cts; common, western, 9 a 9 1/2 cts; State, 8 1/2 a 8 3/4 cts.

Milk cows moved slowly at \$25 a \$55.

Milk calves were active at \$3 a 61 cts.

Wheat—Two cargoes of wheat have each been consigned at Arklow to six weeks' imprisonment, without hard labor, for inciting their parishioners to boycott certain residents of their parish. John Dillon, who is to appear before the Farnell Commission, at its next session, has been released from the Dublin Jail. His release had no connection with the action of the Farnell Commission. The Marquis of Londonderry, Lord Lieutenant of Ireland, on account of the medical report on the state of J. Dillon's health, granted him an unconditional release. The full term of his imprisonment would not have expired until the 15th inst.

General Bazarine, a famous French Commander under Louis Napoleon, died in the city of Madrid, of heart disease, on the 23rd inst.

An abstract of a diary kept by the late Emperor Frederick, of Germany, has been published. It shows that the writer, and not Bismarck, was potential in the unification of Germany. Altogether the impression is left that Frederick was a statesman of high order, and one of the most remarkable men of his time.

It has been previously stated in these columns, that the report that Switzerland is professedly disposed toward an alliance with France.

The Hague, Ninth Month 21st.—The Minister of Finance to-day presented the Budget to Parliament.

It is believed that the deficit of 1888, will amount to \$325,000,000, and the total deficit at the end of 1889, to \$10,417,000. The credits required for the national defenses in 1889, exceed the amounts expended for the same purpose in 1888, by \$86,000,000.

The Finance says he will be able to avoid new loans for a long time in consequence of the abundant amount of money in the treasury. He states that it has not yet been necessary to provide for the demotionization of silver.

The volcano on the Island of Stromboli is in a state of great agitation. Steamers passing the island report that instead of the usual thin vapor which arises from the crater, there is a constant column of flame.

The deck of the steamer Duchess of Sutherland, while passing the island on her way to Naples, was covered with

ashes. Clouds of dust surrounded the mountain for a distance of ten miles.

The *Swabobis* of Sophia, in a threatening article, says: Unless the Porte leaves Bulgarians in Macedonia from the Danube to the Greek frontier, and grants autonomy in conformity with the Berlin treaty, and surrenders the administration to Bulgaria, the Eastern question will soon be re-opened.

One hundred and fifty square miles of land in the Bonduva district of Bengal is to be sold. The crops in Bonduva and Deccan are threatened by drought. The Government is preparing to take measures of relief.

The number of deaths in Havana from yellow fever during Seventh Month, was 66. During Eighth Month the deaths numbered 111.

Remittances received after Third-day will not appear in the Receipts until the following week.

CORRECTION.—In the account of North Carolina Yearly Meeting, in No. 7 of THE FRIEND, there are some mistakes which require correction. In the 4th paragraph, the statement respecting Quakers should read "from other Yearly Meetings," instead of "from other Quarterly Meetings." In the proceedings of Second-day, 15th, there should be a full stop at the word "minutes"; and the following should be read "The following were sitting a minute was read from women Friends," &c. In the next paragraph, there is an omission, in not stating that the "strong set of resolutions adopted," related to the Temperance cause. We regret that there should be occasion to make so many corrections in one article; but we do not know who is to blame, whether the writer of the account, the printer or the proof-reader.

The Friend who forwarded the obituary notice of Hannah Ford, (published in No. 7 of THE FRIEND,) omitted to mention her age; she was in her 46th year.

NOTICES.

WESTON'S BOARDING SCHOOL.—The Committee who have charge of the school meet in Philadelphia on Sixth-day, Ninth Month 25th, at 11 o'clock.

The Committee on Instruction meets the same day at 9 A. M., and the Committee on Admissions at 9:30 A. M.

The Visiting Committee meet at the School on Second-day evening, Ninth Month 24th.

For the accommodation of this committee, conveyances will be in waiting at Weston Station on the arrival of trains which leave Philadelphia at 2:47 and 4:55 P. M.

WM. EVANS, Clerk.

THE CORPORATION OF HAVERFORD COLLEGE.—The Annual Meeting of the Corporation of Haverford College will be held in the Committee-room of Arch Street Meeting-house, Philadelphia, on Third-day, Tenth Mo. 9th, 1888, at 10 o'clock.

ELIOTT S. MORRIS, Secretary.

DIED, on the 1st of Fourth Month, 1888, at her home, near Springdale, Iowa, MIRIAM, wife of Thomas Heald, aged 83 years, 11 months and 2 days. She was a member of Hickory Grove Monthly and Particular Meeting. During eleven weeks of illness she suffered much, at times, but was enabled to bear it with patience and Christian fortitude, and prayed to be released from her sufferings, and enter into the joys of her Lord.

—, on the 4th of Fourth Month, 1888, at his home, near Springdale, Iowa, THOMAS HEALD, an esteemed member and elder of Hickory Grove Monthly and Particular Meeting, aged 89 years, 10 months and 9 days. During a long life he had borne a faithful testimony to the principles of the Society of which he was a member, often mourning over the many innovations that have crept in, laying waste the unity among members. His last words were, "I am glad that my name will be in a peaceful quiet state, he expressed a desire that he might go with his beloved companion (who deceased three days previous to him), rehearsing the Scripture language—"Oh death, where is thy sting? Oh grave, where is thy victory?" The remarkable occurrence of these Friends having lived united as husband and wife for more than 66 years; retaining their faculties so near the close, their deaths occurring only three days apart, and their being laid in the same grave, seems worthy of notice; and calls to memory the language of Miriam, "I have seen 80 and 100 years, and my Lovely and pleasant were they in their lives, and in death they were not divided.

—, on the 18th of Sixth Month, 1888, at the home of his daughter, near West Branch, Iowa, JOHN HIRST, aged 82 years, and 39 days, a member of Hickory Grove Monthly and Particular Meeting. Although for many years previous to his decease he was afflicted with partial paralysis, yet he manifested a mild and amiable disposition toward all around him, often referring to the time of his departure with a willingness to be released from his earthly home. When nearing the final close, although unable to hold converse, yet the brightness of his contentance, and the tenderness and sweetness of his spirit, evinced to those around him that his was a peaceful close.

—, at her home, near Port Burwell, Elgin Co., Ontario, on the 7th of Fifth Month, 1888, EVELYNDA, widow of David D. Willson, in the 82nd year of her age. She was the daughter of Peter and Catharine Lossing, formerly of Dutchess Co., N. Y. She passed through an suffering illness, with patience and resignation, often uttering to be released; believing an acceptance into a mansion of peace was granted to her by the Redeemer of sinners. She was a member of Norwich Monthly Meeting of Friends, and firmly attached to the principles of religion as professed by early Friends.

(Western Friend, please copy.)

—, on Sixth Month 28th, 1888, at the home of her daughter in New York City, HANNAH L. JENNINGS, in the 75th year of her age. She was a grand-daughter of Peter Lossing, formerly of Dutchess Co., N. Y., also grand-daughter of Peter and Abigail Howard, of Cranston, Rhode Island. She had a clear understanding of religious truth as promulgated by early Friends, and was a devoted member of the Friends of her friends. She suffered many years of feebleness of body. In a letter to a sister she expressed that "God was near." We trust her close was in peace.

(Western Friend, please copy.)

—, at his residence in Vaneyde, Marshall Co., Iowa, on the evening of the 20th of Ninth Month, 1888, after an illness of 3 weeks, THOMAS E. BREWY, in the 50th year of his age. Possessing a kind and generous heart, his sympathies were enlisted from youth up in the cause of the oppressed of whatever nationality or color, as well as the too often abused rights of the colored people of our own country. His influence was given, as occasion opened, to spread correct principles among others, while his pure, earnest nature won him many sincere friends. It is believed he has been gathered from the toil and weariness of the rest prepared for the merciful and pure in heart.

FOR "THE FRIEND."

Incidents and Reflections.—No. 163.

FAITHFUL TESTIMONY BEARING.

The servants of Christ are sometimes brought into situations in which faithfulness to their principles compels them to decline conforming to the practices of those around them. The Journal of Stephen Grellet mentions an instance of this, in which his adherence to his own convictions opened the way for profitable service to others. When he was at Madrid in Spain, in 1833, he visited a nunnery chiefly used for training young women for hospital work. A hospital was connected with it, and some of the nuns accompanied him through its wards, and interpreted to the patients the words of counsel and consolation which he felt it his duty to offer. The Journal says:—

"Their chapel stands in the centre of the wards, by which we were brought several times into straits; many wax-lights were burning on the altar, before which we had to pass in going from one ward to another. On entering the chapel some of the nuns, dipping the finger in a basin containing their 'blessed water,' held it to us to make the sign of the cross as they did. I succeeded in making them understand, quicker than I expected, our reasons for not conforming to such a practice; but, when we passed close before the altar, they all knelt down, and those by me, taking hold of my hand, urged my doing the same by saying, 'The holy sacrament (i. e. the consecrated wafer) is now exposed.' I could then only say, 'By and by I will tell you why we cannot do this.' And though our going in and out of the wards brought us repeatedly through the chapel, they did not ask us again to bow down to the altar, and they finally omitted to do it themselves, neither did they take any notice of our keeping our hats on except when we were engaged in proclaiming the Gospel of Christ to the sick. Our visit to these being accomplished, I said to the nuns, 'Now I will explain to you what are our reasons for not using your *blessed water*, as you call it, or bowing before your altar,' upon which the Superior brought us to her apartments, where, with most of the nuns, we sat down. They very quickly understood that the sign of the cross, as it is called, cannot be the real cross; or that cross that a man must bear if he will be a disciple of the Lord Jesus Christ. The Superior said, 'My

dear father used to speak exactly so.' Then respecting the chapel, the altar, the burning of tapers upon it, the consecrated wafer to which they bowed and worshipped, I opened to them those various subjects, according to the Scriptures; a wide door also was open to preach to them the Lord Jesus Christ; the nature of the offering that He has made of himself, once for all, for the sins of the world; that the temple in which He is to be received by faith, is that of the heart, where He is to be found ever present, and to be worshipped in spirit and in truth; there also it is that the true light, Christ the Light of life, is to shine with brightness. The nuns seemed to feel deeply, and several times the Superior said again, 'My dear father, my pious father, used to speak to us exactly so.' We parted from them in Christian love, and they evinced much tenderness."

Stephen Grellet's religious engagements often brought him into the presence of the great men of the earth, and of those who were not accustomed to see men stand before them with hats on their heads. He regarded the removal of the hat in honor of man as a compliance with a corrupt custom, which he was conscientiously restrained from yielding. Frequent reference to his trials on this account are contained in his Journal. When at Naples, in 1819, he went to the Police to present his passports. He says,— "They were much offended at my hat; neither could they for some time understand the reasons I gave them for keeping it on. Finally they asked what I should do if I met what they call 'Saint Sacrament' in the street, when carriages stop and every body uncovers himself, whatever be the state of the weather; many even falling down on their knees. I explained to them why I could not even then uncover my head, as a mark of veneration or religious worship to this, or to any kind of imagery. "Then," said they, "you must abide by the consequences!"

On reaching Rome, he called on the Cardinal Consalvi, the Pope's Prime Minister, for whom he had letters. While waiting for the Cardinal's appearance, among a crowd of priests, monks, military and strangers from all nations, who were all uncovered, his own dress and hat attracted general observation. "As the Cardinal came, each as he passed, presented his papers, which were placed in the hands of his attendants. As he came towards me, by my dress, he probably recognized who I was, so that before I could hand him my letters, he politely asked, 'Are you not Mr. Grellet?' to which answering in the affirmative, he said, 'Please to call on me at my own palace to-morrow morning.'" At the interview next day, S. Grellet says, "I had to expose pretty fully some of the superstitions of the Romish Church, and to make my confession that the Lord Jesus Christ is the only Head of his Church, and the Saviour of man. I also gave him a full statement of the conduct of their missionaries in Greece, the mischief they are doing there; I represented to him, also, the very unchristian and unbecoming conduct of those who in the south of Russia, did hang and then

burn the Scriptures; and of the public burning of the Bible, at Naples, by the bishop and his clergy." Neither his plain dealing, nor his hat, seems to have offended the Cardinal, who showed his friendly feeling by opening the way for such visits to prisons and other places as S. Grellet felt required of him to make. In these visits, he felt himself to be an object of much curiosity; but the Lord made him "as an iron wall, and a brazen pillar," and strengthened him to proclaim his holy name, without equivocation, in simplicity and truth. Yet he felt at times as if he was among lions and serpents, and treading over scorpions.

In an interview with the king and queen of Spain, when their little daughter was present, S. Grellet says, "I noticed that the young princess looked at us with great earnestness, which the queen also observing, I said that it was probably the first time that she had seen two persons like us, stand with their heads covered before the king and queen. This led to subjects of a religious nature, and an inquiry into some of our Christian testimonies and practices. Then, under a sense of the Lord's power and love, I uncovered my head and proclaimed to them, as the Lord through his Spirit gave me, the word of reconciliation and of life and salvation through faith in Christ."

That this visit was kindly received appears to be shown by the fact, that an order from the king was published in the Madrid *Gazette*, to the Governors of the Provinces and the public authorities, and the people where they might travel, directing that due civilities should be shown to the strangers by all, and that free entrance should be allowed to any place they might wish to visit. The order stated that they were members of the Society of Friends called Quakers; that it is a part of their religious scruples to enter all places and appear before every body, without uncovering the head, considering that real honor or respect cannot be properly manifested by taking off the hat; that accordingly they had been before the king and queen, and their young princess, with their hats on. No molestation was to be offered to them on this or any other account.

In reference to this, S. Grellet remarks: "We are thereby rendered very public characters. It places us, in some respects, in a trying situation; but in others, the Lord's hand may be seen in it, for it furnishes the object for which we have come to Spain; pious and serious persons are attracted to us, with whom we might not otherwise be able to become acquainted."

J. W.

The Apostate Burned.—Richard Denton, a blacksmith, residing in Cambridgeshire, was a professor of religion, and the means of converting the martyr William Woolsey. When told that holy man that he wondered he had not followed him to prison, Denton replied, that he could not burn in the cause of Christ.

Not long after, his house being on fire, he ran in to save some of his goods, and was burned to death.

A Vacation Across the Atlantic.

(Continued from page 66.)

The visitor, passing from the above relics of a bygone age, goes through a court-yard over the spot marked by a tablet, on which Anne Boleyn and Lady Jane Grey and other unfortunatees were executed. Then we pass on and up into the Beauchamp Tower. I had an old man to escort me through, who was dressed in a suit doubtless intended to be very effective in appearance, but which, with its blue cloth and wide skirt trimmed with red ribbon, made it look wonderfully like an American sea-side bathing suit. He was a very nice old man, however. The Beauchamp Tower was used for the imprisoning of political offenders. Doubtless many an innocent man has suffered here. Some of the prisoners cut on the stone walls strange figures, or verses of Scripture, or words of their own composing, moralizing on the uncertainties and trials of life. Some of these inscriptions are quite original and ironical in tone, being carved in both the English and Latin languages.

Almost in the centre of the buildings constituting the Tower of London, is a large open space, in which I saw a company of red-coated young soldiers going through a drill. It was a pretty sight to watch the precision of their movements—they all moved like machinery; it was unquestionably fine gymnastic exercise, yet it was sad to think that these bright and active young men were being trained for purposes of war. Even in quiet times, life in the barracks must be demoralizing to those who could far better promote national prosperity by following the pursuits of peace.

To-day I went out to see George Fox's grave. It is near St. Luke's Hospital, in the E. C. In his day it was out in the open country, but now is surrounded by huge factories and warehouses. It is in a lovely little park, about an acre in extent, I presume; and pretty walks and trees and flowers are to be seen around, while a high brick wall separates it all from the street. The grave is the only one remaining in the place. There is no mound—only a plain head-stone about eighteen inches high, on which are recorded the name and dates of birth and death of the deceased. It is a quiet resting-place, in the heart of the great city, of one who, although a constant warrior for Christ, was yet a lover of peace and quietness. Adjoining the park are several large buildings devoted to benevolent purposes by and under the care of Friends. A self-sustaining coffee-house is also included. In these buildings, some temperance or children's or mothers' meetings are held. Their First-day school has several hundred pupils. A physician attends three times a week to the needs of the poor in the locality, who call and receive his care and advice in exchange for any little sum they may feel able to give him.

Sixth Mo. 13th.—Having often heard of the Jordan's graveyard, where William Penn is buried, and this being a delightful morning, I resolved to hunt it up and view its interests for myself. Taking the Great Western R. R., I went to the little old town of Uxbridge. Here I interviewed a cabman, who, sizing me up, at once inquired if I was not an American, and if I was not wanting to go to Jordan's. We soon struck a bargain, and immediately drove out into the country, which here is only about fifteen miles from London. The distance over

to our destination was eight miles, and was through typical English country scenery all the distance, everything seeming very primitive, considering the short distance from London; and not even a railway is met with during the whole drive. On the way the little country inns bear names indicating an old time love of sport—such as the "Fox and Hounds," the "Hare and Hounds," and the "Dog and Duck." When near Jordan's we passed Stoke Pogis, once the residence of William Penn, but now occupied by a clergyman of the Church of England. It is situated in a very pretty park, in which is massed the beautiful foliage of grand old trees. As we neared Jordan's, the narrow lanes romantically wound into a most lovely bit of country; and suddenly descending a steep hill, the old meeting-house and adjoining graveyard opened to our view. There they were, down in the tiny valley, hedged on all sides by the fragrant woods, and only the narrow highway, with its old brick wall, to indicate that humanity ever trod the quiet spot. Truly it seemed a fit resting-place for the mortal remains of one who in his day had sought to live at peace with all mankind.

After a general survey, I went into the old meeting-house. It is built of brick. The cellar has a stable, in which the horses could be hitched during the hours of worship. The meeting-room is, I should say, about thirty feet by twenty feet in size, with a good high ceiling, and is paved with brick. The windows admit light through little diamond-shaped panes of glass. At the far end was the one ministers' gallery, with its quaint and angular railing, and facing it were the un cushioned and narrow forms. There are now hardly any Friends in that section, and this old house, once the scene of pure religious zeal, has a Monthly Meeting held in it once a year. A Monthly Meeting convened there a week or two previous to my visit, and I am told, that after a luncheon, the assembled Friends had their pictures taken in a group, amid these beautiful and historic surroundings.

The graves of the Penn family lie only a few feet away from the side door. They are marked by headstones, which give the names only. William Penn's grave and that of his wife are in the same row with those of Isaac and Mary Penington, whose names are also inseparably connected with the history of the early Friends. Penn's children are buried at his head and feet; and just a little piece in the rear two stones tell us that the good and able Thomas Ellwood and his wife also rest in this quiet spot. After looking around a little further, I left this beautiful yet simple resting-place of the honored dead, and was driven back to Uxbridge.

14th.—I came up to London, because one can always have something new to see in London. I like to walk around the busy streets, and see the people, and look in the shop windows, with their splendid array of goods. The people all walk just as fast in the streets as Americans do. I have yet to find the Englishman who does not think that we on our side of the ocean are always in a rush. Doubtless we are; yet in their great cities I see just as many people running for the trains. There is more nervous haste observable in crowds and at stations, and there are more shop windows open late in the day than can be seen in our big towns. London looks like it did three years ago, only I see that it has grown since then. The men with their tall hats and umbrellas and walking-sticks, are as numerous as ever. The magnificent pave-

ments are crowded with all kinds of vehicles, drawn by splendid horses; while the never-ending line of two-storied omnibuses seem to forever carry their human burdens. The tall and polite policemen disperse the crowds that threaten to block up the street corners. The street vendors cry their wares in husky tones. Out of doorways and recesses dart poor, ily-clad flower girls and thin-faced little match boys, begging you to buy only a penny's worth. Out in the west-end, in the broad streets and great parks, is displayed every afternoon on the immense wealth gathered by the money-making English from every corner of the globe. So this mass of humanity continually jostle each other; and one wonders how long marvellous London will continue to grow, and what dimensions it will finally reach. How do the great majority manage to live? Is it not wonderful that nearly five millions of people, nearly all of whom are seeking their own interests, do not clash oftener than they do; and that such perfect obedience to the law can be maintained in such a mixed community!

(To be continued.)

FOR "THE FRIEND."

Divine Visitations.

How shall we attempt to limit the power of Divine visitation? From childhood to (at times) old age, we find ourselves under the influence of these visitations, and why is it that they are repeated from time to time, even when we reject these heavenly calls? Is it not the great love of a long-suffering God, "Who willeth not the death of any; but that all should repent, return and live?" What a clear view the Apostle Paul had of the long-suffering on the one hand, and the proneness to reject on the other, when he wrote to the Church of Rome saying, "Despistest thou the riches of his goodness, and forbearance, and long-suffering; not knowing that the goodness of God leadeth thee to repentance? But after thy hardness and impenitent heart, treasurest up unto thyself wrath against the day of wrath, and revelation of the righteous judgment of God."

Oh how lovingly the Lord calls! times without number, and still we, too often, put away carelessly, or it may be, rashly, his gentle entreaties again and again, till the language is sometimes, nay often, applicable to our condition, "He that, being often reproved, hardeneth his neck shall suddenly be destroyed, and that without remedy." Some there are who will not think that He who is a loving Heavenly Father, will ever cast any away. True, He never does so without first calling many times in many ways; but He has plainly laid before us the dread truth of a possibility of too often shunning his blessed calls.

In early Bible history we find the language, "My Spirit shall not always strive with man." How necessary, then, that we take heed to his tender entreaties whilst time and opportunity are afforded us, whilst our day of visitation is lengthened out to us. We cannot of ourselves come in a time to suit ourselves and offer ourselves to God. It is only through his Spirit that we are brought to feel our sinfulness and the need of a Saviour, and our duty to Him who has done so much for us.

Some may say in their hearts, "I have never had any Divine visitations." We are assured that the "Spirit is given to every man to profit withal." Even very young children experience Divine visitations, as Samuel who was called whilst still so young that he knew not who called

him. It is the influence of this Spirit, or witness in the heart, which makes even very small children feel guilty when they do wrong, and happy when they do right. There have been many instances of quite young children being much broken and tendered thereby.

How apparent then it is, that these Divine visitations are bestowed on *all*; on the sinner to lead him to repentance; and on the Christian in order that he may be led as he can bear it, into the mysteries of the Kingdom of Heaven; for it is in this way that we are enabled to sup with Christ, to enter into that communion of spirit which will build us up in the most holy faith, and at last enable us to triumph over death, hell and the grave. M.

Blind, Deaf and Dumb.

Such is Helen Keller, whose very remarkable history is likely to surpass in interest the famous case of Laura Bridgeman. Helen Keller was born June, 1880, at Tuscumbia, Alabama. When she was nineteen months old, just as she was beginning to talk, a violent attack of disease left her without sight, hearing and speech. In a few years she gave evidence that her mind was not impaired. She was animated, and evidently trying to find out what was around her. She would pass her little fingers in all directions around an object and her countenance would indicate that she was studying its nature. A shade of perplexity or a smile of satisfaction would cover her face.

By touch she learned to distinguish the several members of the household. Her parents were persons of culture and discrimination, and when Helen was six years old it became evident to them that signs and gestures were insufficient to them that signs and gestures were insufficient to the child. Her mind seemed to be growing as well as her body; but she could not make known her thoughts. Then her parents determined to place her under the care of some competent teacher. But to find one who would be equal to the task was no easy matter. At last, through the agency of Mr. Nuagnos, who married a daughter of Dr. Samuel G. Howe, who was one of the pioneers in the education of the blind in this country, and bequeathed the work to his son-in-law, who is now at the head of Perkins' Institution for the Blind in Boston, a suitable teacher was procured, Miss Sullivan. She entered with devotion and enthusiasm upon this strange work; and soon found that she had a remarkably apt and even gifted scholar. Already Helen had discovered some things by herself. She would run around and play "tag" with the children, and this she enjoyed exceedingly. She felt the vibrations of the ground through her feet so that she knew which course to take and what to avoid. Just as sound is conveyed to the auditory nerve through an audiphone, many sounds seem to be recognized by Helen by the delicate vibrations which they produce upon her nerves. She knows when an organ is played in church, and in some way great delight is created in her by it.

She is very fond of dancing, and learned in this way. She tried one day to join a little group of children who were dancing, but she could not keep step with them. Suddenly she stooped down on the floor and motioned the girl, whose hand she held, to go on with the motion while she felt the movement of the feet and the bending of the knee. This was enough, she sprang to her feet again, having caught the motion through her fingers, and then danced in unison with the other girls.

Her sense of smell is so keen that she will

recognize different roses by their fragrance, and by the same sense she can separate her own clothes from the garments of others. This marvellous delicacy of touch was possessed by Laura Bridgeman. One who witnessed the experiment, told me that he was at the same table with Laura when he was on a visit to the institution where she was educated; and he saw another cup returned to her in place of the cup of tea which she had emptied. Immediately she detected the change, and her countenance displayed the displeasure she felt.

Such was the bright girl of seven years whom Miss Sullivan took in charge for the purpose of making known to her the things she could not see and the words she could not hear. It seemed well nigh a hopeless task, yet her pupil achieved with almost incredible facility. The method with which she began was this: Miss Sullivan took a doll, and after Helen had felt all over it she made the letters S-O-I-I very slowly in the finger alphabet, while Helen felt the motion of her fingers as she made the letters. This was repeated several times. Helen was made first to feel the doll, and then to feel the motions of her teacher's fingers. Finally the doll was laid aside, and she was induced to follow the movements of Miss Sullivan's fingers with one hand, while with the other hand she made the same motions. This lesson was repeated, and then she was made to feel a table and spell out its name in the same way. By this method she was taught that every object had a name. She grasped this idea with quick intelligence; and then an almost insatiable desire for knowledge was manifested. The readiness with which she comprehended that these letters formed an alphabet, and that by them thoughts were expressed, appears like an intuition, rather than as the results of teaching.

The next step was to teach her verbs. She was seated, and then the letters T-O-S-T were formed on the fingers. In like manner she learned the verbs *to stand, to walk, &c.* Then she was taught the alphabet, in raised letters, and how to spell words and read sentences. In four months she mastered nearly five hundred words which she could use and spell correctly—so rapid was her progress. She had learned to read raised letters readily, and to converse freely with the manual alphabet, and to write and to cipher. She is very fond of reading to her mother; which she does by feeling the raised letters with one hand and forming them with the fingers of the other hand. She writes by the process, in use among the blind, of pricking the letters. In this way she keeps a diary, in which she puts down what she has learned and what she does.

A few sentences taken from this diary will illustrate her mode of expression as well as her acquisitions. On the 26th of March she wrote: "I had letter from Mr. Nuagnos. He does love me. He has thirty-four little blind boys in Nashville, Tennessee. To-day I did learn to write examples on the type slate, and I learned many new words. Flock does mean many birds run together. Brood means six little chickens."

She easily comes into connection with the new circumstances into which she may be brought. For example, she was taken to a menagerie. She learned the names of the animals at once, and made many inquiries about their habits and why they were there. When riding on a railroad train she inquires how many are in the car and the name of every station where a stop is made; how many get in and go out. She was

delighted with a visit to the Memphis Exchange where she received many attentions, and remembered the names of those members she met. A convention of clergymen met at Tuscumbia a few months ago and some of them were entertained at Mr. Keller's house. They were charmed by her cheerful disposition, and she was delighted to communicate with them in her way.

Now, when we remember that this girl is only eight years old, and compare her with children of that age who are blessed with sight and hearing, we must confess that she is one of the prodigies of the age. The readiness and fitness with which she has come into fellowship with the unheard and unseen, almost surpass belief. The intuitive quickness with which she has laid hold of that which could be presented to her so inadequately, furnishes a most instructive psychological study. Could she recall the action of her mind, and adequately express it, we might have light thrown upon the query how far we can think without a language. For in her first efforts to discover what these things are which she could touch and feel, but could neither see nor hear, she was led by a spirit of inquiry which we might call elevated instinct. And yet when that was satisfied, as for example, when she found the difference between persons, could she think about it? And if she did she could not think in a language, because she knew nothing about words.—George S. Mott, in the *Presbyterian*.

FOR "THE FRIEND."

Further Appeals for Simplicity.

The following letter was lately addressed by Elizabeth Thompson to Frances E. Willard. The latter describes the writer as one "who gives her entire income, which is very large, to various enterprises for the benefit of humanity, retaining for herself only enough to meet the simple needs of her quiet home life." E. T. writes:

"I wish the women of the world would call on the men to give up this wild, ungovernable chase for more money, and the women govern themselves accordingly. Who is the happier for such extravagance in dress, furniture, useless decorations, grand equipages, &c.? Are they not more or less procured at the expense of the moral and spiritual nature? What is there that many men, and women too, will not sacrifice for a few dollars more to be spent for that which enriches them not, but makes them poor indeed? Are they wiser, better, or any way happier for having gained this surplus sum? In my experience I have found more health, more contentment, more kindly feeling, among the better laboring class, than I have ever seen among that class who make money merely for the sake of display. There is more truth than poetry in the saying that 'enough is as good as a feast.' Few realize the true significance of industry and economy. But why do I talk? I am so weary of words, words, words; and yet some good may come of words. Are not all great and good things simple? And might it not be well for more people to set the example of a simple and well-ordered life, that the young might not be tempted into such extravagance as is now the bane of life?"

One of the editors of the *Union Signal*, in the course of some very sensible counsel addressed "to country girls", remarks:

"I have seen women whose daily life led them to the performance of hard and responsible toil, who dressed themselves and comported themselves like giddy revellers at a fancy ball. They resemble cheap fashion plates rather than earnest

bread-winners, responsible to the Lord for the fulfillment of every task, the meaneast as well as the grandest. The outlay for dress forces them into cheap and demoralizing boarding-houses. So that while their outward adornment is brave and fine, their souls, like carelessly handled laces, are acquiring the soil of imperishable defilement. The love of dress and the desire to attract attention are the foundation follies of half the lives that go astray. A pink-checked girl who has always worn calico and sunbonnets in her country home, makes up her mind to accept an offered situation in the city, and straightway the calico is dropped, and on comes the flashy suit and the cheap jewelry. * * * The hand of Providence may interpose between you and your fate; but the moment a girl gives way to an inordinate love of display in dress, she is on the main track to ruin. * * * Never be ashamed to adhere to your principles. If you have been brought up to believe that old-fashioned truth, and modesty, and loyalty to God and friendship, are worth adhering to, do not be turned from such faith by the laughter of fools. Be quiet in dress, remembering that, although the peacock wears fine feathers, it is not a favorite bird.

Whence do the fashions that so please the world generally, originate? A recent writer, in speaking of some of the much affected styles of female attire, says: "The Paris dress is the originator of fashions in the female dress. The costumes of the actresses in the Comédie-Française are those usually copied by the society leaders of Paris, and when these ladies adopt a style, the whole world follows suit."

I believe the above to be no fanciful statement. It was only yesterday that the daily papers announced the reconciliation, at Paris, of two much talked-of rival actresses, their "exhibiting to each other master works of milliners' art"—with other like prattle of "Vanity Fair."

Surely the testimony of our Society concerning simplicity of attire is well-taken, on many accounts. Two years ago a physician in a Western city, after stating that in the course of his professional visiting he had observed that it was the love of dress which had led so many young women astray, remarked, that he hoped "the Quakers would maintain their high standard as to dress, and continue to let the light of their testimony shine in that matter."

FOR "THE FRIEND."

Prayer is the desire of the heart begotten there by the Spirit of God, which breathes upon the soul, giving life and begetting petitions and thanksgiving unto God, who is the author of every good and perfect gift. "He who searcheth the heart, knoweth what is the mind of the spirit, because He maketh intercession for the saints according to the will of God." And if we are in accordance therewith, we may expect that He will both hear and answer such prayers. We are commanded to pray, consequently it is our duty and privilege to pray always in the spirit, watching thereunto. "Watch and pray;" watching precedes prayer: watching to know the mind of the Spirit. R. Barclay says, they that are neglecting prayer do sin, or "such sin as are neglecting prayer." But their sin is in that they come not to that place where they may feel that which would lead them thereunto. "So that through neglect of this inward watchfulness and retidness of mind, they miss many precious opportunities to pray, and thereby are guilty in the sight of God." I believe if there were more

watchfulness unto prayer and obedience, we would more often hear the voice of supplication, thanksgiving and praise among us.

FOR "THE FRIEND."

ANOTHER BIRTH-DAY PIECE.

My years to-day, through mercy given,
Are lengthened out to eighty-seven,
But still with tottering steps I go
On little errands to and fro;
And to our meetings, mostly walk;
And sometimes, in that talk
Of heavenly things, and strive to show
That all, while living here below,
Must walk within that narrow way,
Which leads from darkness into day.
But 'tis a tribulation's road,
That leads through crosses up to God,
Though, if our trials we abide,
We find we are more purified;
And that they wisely were designed,
To subjugate the wayward mind;
And fit us for that home above,
Where all is harmony and love.
So, fellow travellers, let me say
To those who are now on the way,
But who have not yet lived so long,
We plainly see that right and wrong
Are placed before us as we go;
Through checkered scenes of joy and woe;
And that we have the power to choose
The good, and evil to refuse;
So that our fate will, in the end,
Quite much on our own choice depend.
"But through the journey I have past,
I've met with many a bitter blast;
Upon my head the storm has beat,
While many a thorn has pierced my feet."
I strive to bear and to forbear,
And seek God's helping grace and care.
I've fought through inward battles sore,
But hope for rest, without much more.
So now, in thankfulness I raise
A grateful heart in cheerful praise,
And when my time of life shall end,
If Christ should then be still my friend,
A crown of life He will bestow,
Which compensates for all the woe
And tribulation, which are given
To fit us for the joys of heaven.
But if I should not live to see
Another birth-day come to me;
I hope to reach that brighter shore,
Where solar lights need shine no more.
For there all darkness flies away,
Or is absorbed in endless day.

DEBEN, IND., Tenth Mo, 6th, 1888.

A MEMORIAL OF MARY DYER.

ONE OF THE EARLY WORTHIES AND MARTYRS IN
THE SOCIETY OF FRIENDS.

We, too, have had our martyrs, such wert thou,
Illustrations woman; though the startery crown
Of martyrdom has sat on many a brow,
In the world's eye, of far more wide renown.

Yet the same spirit graced thy fearless end,
Which shone in Litchfield's awful scene;
Upon whose hallow'd memories still attend
Manhood's warm reverence, childhood's guiltless tears.

Well did they win them; may they keep them long;
Their names require not praise obscure as mine;
Nor does my muse their cherished memories wrong,
By this imperfect aim to honor thine.

Heroic martyr of a sect despised!
Thy name and memory to my heart are dear,
Thy fearless zeal, in early childhood prized,
The lapse of years has taught me to revere.

Thy Christian warm demands no poet's lay,
Historian's pen, nor sculptor's boasted art;
What could the brightest tribute these can pay
To thy immortal spirit now impart?

Yet seems it like a sacred debt to give
The brief memorial thou mayst well supply;
Whose life displayed how Christians ought to live;
Whose death—how Christian martyrs calmly die.
Bernard Barton.

"BEAUTIFUL HANDS."

The beautiful hands are the useful hands
That are ready for any work;
That improve the moment, that others waste
And the duties of life never shirk.

The beautiful hands are the helpful hands
That lighten a mother's toil;
That cheer up her heart—weighed down with care,
And bring to her lips a smile.

The beautiful hands are the loving hands
Which soothe a father's brow,
When it aches with the worries and cares of life,
Or smarts 'neath affliction's blow.

The beautiful hands are the clever hands
That make home attractive and bright,
With their skill and cunning, in many odd ways,
To charm and gladden the sight.

The beautiful hands are the willing hands
That gladden many a home,
With their tireless devotion, and ready aid,
When hours of affliction come.

The beautiful hands are the kindly hands
Disposing good to all;
Smoothing the pathway for others' feet,
And raising those who fall.

The beautiful hands are the reverent hands
Which, clasped in earnest prayer,
Bring blessings down from heaven to earth
For weary hearts to share.

—Philadelphus Ledger.

My dear friend Samuel Emlen—Thy acceptable favor of the 19th came in course, and I had sooner acknowledged it, had not an event daily expected for two weeks suspended my writing until I saw the issue.

Our worthy friend and kinsman, G. T., had been in a declining state for some time, and of late seemed to decay so very fast as to call in question his surviving one day: he finished his course about midnight, Sixth-day last, and is to be interred to-morrow. I have often been with him to my humbling instruction. For some time his journeying was in the region of the shadow of death. I have often sat by and accompanied his spirit under the load of death, and the heavens as brass, sensible of deep distress, but seemingly excluded from good. This led to deep searching of heart; even as he said, to holes and corners he had not suspected. He said that he had been short in the performance of that service Truth would have led him into, had he been truly dedicated in heart to know and do his Master's will. But adorable descension visited afresh, revived a degree of hope, fed him with a little bread when nigh to faint, and caused a part of that crystal stream, which, is the sanctification and consolation of the whole city of God, to rise in his soul, and it increased from time to time, until it became like the waters Ezekiel saw issuing out from the threshold, in time a river to swim in; a river that can never be past. The holy canopy was often over our spirits when I visited him, which I often did, to my comfort. I never so fully, my dear friend, understood the force of the remark, "if the righteous scarcely are saved." The applause and esteem of injudicious and judicious, regularity of conduct, his arrival at Bethel, the remembrance of many beloved seasons, all proved insufficient for his repose, and were amongst the heavens that might be shaken, and must be removed; that which cannot be removed may remain. He languished long in great pain. Great was the conflict previous to the separation of body and soul, and it livingly opened to my mind, with the conviction of an audible voice, that had his spirit

been more disentangled from the love of lawful things, his warfare would have been more easily accomplished, the fetters of mortality more easily broken and his spirit sooner rose triumphant over death, hell and the grave, and on the wings of refined, seraphic love, with holy ease ascended to the realm of purity, peace and love. But all is well, and he admitted to peace, and through his deep wadings, instruction given to us with diligence, yea with all diligence, to fill up the measure of revealed duty, and to stand on the watch for further discoveries, what is the will of the Lord our God respecting us. I may have been too prolix on the subject, but Oh, my heart is fuller than to gain adequate vent by my pen.

SAMUEL FOTHERGILL.

FOR "THE FRIEND."

Botanical Notes.

Last spring I noticed in the yard about our humble dwelling, a number of blue Violets, the leaves of which were heart-shaped, and in their young condition the two lobes at the base of the leaf were curled over so as to form a kind of hood. It was the *Viola cucullata*. So far as I observed, very few of the flowers were followed by seed-vessels. I think they generally withered without producing fruit. Yet as the summer came and went, and autumn approached, the number of these Violet plants in the yard appeared to increase, till now they are so abundant that they must be treated as weeds (*i. e.* plants out of their proper place) and be rooted up. By what means have they managed so to multiply?

To answer this question, I this morning (Ninth Mo, 25th) dug up a vigorously growing Violet, and found numerous short flower or fruit stalks projecting from the fleshy root-stock, on the surface of the ground, or just beneath it. They were in all stages of development, from minute buds to fully matured seed-pods. There were no traces of the colored petals that give such beauty to the flowers that are exposed to the light and air,—they were simply seed-pods, and nothing more. On cutting open one that seemed riper than the others, I found the oval pod contained upward of 60 seeds, each of which might produce a new plant. I counted 25 of these pods on this Violet, and it is quite likely that others might have been produced (if the plant had been allowed to grow) from some small projections with which the root-stock was studded.

So it would seem that this plant while it bears aloft a beautiful blue blossom to please the eye of the spectator, quietly produces its seeds underground, out of sight, and more out of the way of accident and injury.

Two evenings ago, while at the house of a friend, my host came into the room holding in his hand the unexpanded bud of a species of large-flowering Morning Glory. As I watched it, I could see the bud gradually untwisting itself, showing more and more of the thin white membrane which connects the outer green portions of the flower, till, in the course of a few minutes it had unfolded itself into a beautiful white flower of more than 4 inches in diameter. Such a rapid exertion of vital energy in a plant I had never before witnessed; and it was very interesting. The vine which produces this flower is the *Ipomoea bona nox*, or Moon-plant. The flowers open soon after sunset. The plant is a vigorous grower, and to see 30 or more blossoms opening themselves so rapidly on a single vine in close succession, or at the same time, is a curious and attractive exhibition.

J. W.

The Heights of the Himalayas.

The highest mountains in the world are these Himalayas, stretching for fifteen hundred miles along India's northern frontier, where the Aryan and Turanian meet; but which of the peaks is the highest is not really known. The Hindus, following the great rivers as they came southwards and settling first on their banks, naturally looked on the mountains in which the rivers rose as the highest and most inaccessible.

The world's highest peak is yet to be found. The eucalyptines tell us it is Mount Everest, and give its height in due number of feet, 29,002, but they do not mention that this is merely the greatest height yet measured by an Englishman; that no Englishman is at present allowed by the Nepalese Government to go within eighty miles of the peak so measured, and that the ranges to the north are still unexplored. Only five persons thought competent to judge have yet seen this northern region, and returned to us, and they all report mountains of enormous height, seemingly higher than Everest. But until such measurements cease to be matters of estimate and become matters of fact, Everest may well retain its position in our books as monarch of the hills.

W. Graham found the snow ten thousand feet above the sea; the rhododendrons, in a thick impenetrable jungle, rising above the trees and leading up to it. From his camp on the moraine of the noble saddle glacier, on the summit of the Kaugla pass, Kinchinjanga lay to the north-east of him; to the north of him lay Junnoo, with its awful southern cliff; to the east lay Kabru, with its western face like a wall, over which hung glaciers as a cornice breaking off into thundering avalanches. Up among the avalanches and the granite peaks he made his way; but he was too early in the season for his enterprise, and Kinchinjanga remained unwon. Later on in October, he attacked Kabru and reached the greatest height on this earth yet trodden by civilized man. His way lay up the mountain's eastern glacier.

"On its banks" he writes, "we met with immense quantities of Edelweiss, the climber's flower, and success was prophesied accordingly. We climbed up the highest moraine I have seen, 751,800 ft. to the base of the eastern cliff of Kabru. There was only one route to the higher slopes, and that we could not find in the mist. Heavy snow fell, and we camped where we were. Next day we found our opening, and worked up it. We then went on ahead, and pushed straight up the face of the ridge, intending, if possible, to camp on its summit. This we reached at midday, but found that we were cut off from the true peak by a chasm in the arête, so that we were on a detached buttress. We descended, met the coolies ascending, and turned north along the steep snow-slope, finding at last a small ledge just big enough to accommodate the Whymper tent. This was I think the highest camp we had, being certainly 18,500 feet. The night, however, was mild and the coolies, who were very tired, preferred to stay up instead of descending as before. We were off next morning at 4.30, and found at once all our work cut out for us. The very first thing was the worst. A long couloir like a half funnel crowned with rocks had to be passed. The snow was lying loose, just ready to slide, and the greatest possible care had to be taken to avoid an avalanche. Then a steep ice slope led to a snow incline, and so to the foot of the true peak. Here we had nearly 1000 feet of most delightful rockwork,

forming a perfect staircase. At ten we were at the top of this, and not more than 1500 feet above was the eastern summit. A short halt for food and then came the tug of war. All this last slope is pure ice, at an angle from 45° to nearly 90°. Owing to the heavy snow and the subsequent frost, it was coated three or four inches deep with frozen snow, and up this coating we cut. I am perfectly aware that it was a most hazardous proceeding, and in cold blood I should not try it again, but only in this state would the ascent have been possible in the time. Kauffmann led all the way, and at 12.15 we reached the lower summit of Kabru, at least 23,700 feet above the sea. The glories of the view were beyond all compare. North-west less than 70 miles, lay Mount Everest, and I pointed it out to Boss, who had never seen it, as the highest mountain in the world. "That it cannot be," he replied; "those are higher"—pointing to two peaks which towered far above the second and more distant range, and showed over the slope of Everest, at a rough guess some eighty to one hundred miles farther north. I was astonished, but we were all agreed that, in our judgment, the unknown peaks, one rock and one snow, were loftier. Of course such an idea rests purely on eyesight; but looking from such a height, objects appear in their true proportions, and we could distinguish perfectly between the peaks of known measurement, however slight the differences. We had no long time for the view, for the actual summit was connected with ours by a short arête, and rose about 300 feet of the steepest ice I have been. We went at it, and after an hour and a half we reached our goal. The summit was cleft by three gullies, and into one of them we got. The absolute summit was little more than a pillar of ice, and rose at most thirty or forty feet above us still, but independently of the extreme difficulty and danger of attempting it we had no time. A bottle was left at our highest point and we descended. The descent was worse than the ascent, and we had to proceed backwards, as the snow might give way at any moment. During the ascent we saw a pair of snow-white hawks at a height of quite 22,000 feet, and their flight did not seem to be in the least impaired by any atmospheric effect."

This is the highest climb yet recorded. Mount Blanc is, it will be remembered, 15,781 feet, and this was half as high again! But there are many mountains higher than Kabru. Kinchinjanga is 28,160 feet above the sea, and the so-called K2, once claimed to exceed Gaurisankar, attains 28,278 feet. In the central range, near the Dras Pass, are Nun and Kun, each over 23,000 feet, and Nanga Parbat, whose summit has been seen from a distance of two hundred and five miles, has an unbroken slope of almost as much and a total height of over 26,000.

Such a gathering of giants cannot but be impressive. Taking the range as a whole, with its three parallel chains, it is, at a moderate estimate, fifty miles wide, and fifteen hundred long, and there must be quite a hundred peaks in it over four miles high.—*Sunday at Home.*

Palestine in the Time of Christ.

PRAYER.

Every morning and evening the Jew repeated a prayer called the *Shemá*, because it began with this word, which means "Hear." Women, children and slaves were alone exempted. This *Shemá* was indeed rather a repetition of verses than a prayer. It consisted of three passages: "Hear, O Israel; The Lord our God is one Lord," "Blessed be the name of His glorious

kingdom forever.") "Thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might. And these words, which I command thee this day, shall be upon thine heart; and thou shalt teach them diligently unto thy children, and thou shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou best down, and when thou risest up. And thou shalt bind them for a sign upon thine hand, and they shall be for frontlets between thine eyes. And thou shalt write them upon thy doorsorts of thy house, and upon thy gates."

This Shema was used everywhere—in the synagogue, on the market-place, in the streets, in the houses—in a word, wherever anyone might happen to be when the set time came. "A man surprised by the hour of prayer while in a tree, gathering fruit, is bound to say his Shema." Christ was evidently protesting against this vain repetition when He said: "And in praying, use not vain repetitions, as the Gentiles do." We have in the Jewish liturgies numerous examples of these "vain repetitions."

In the morning, beside the Shema, three forms of thanksgiving were used, two before reciting the Shema, and one after. In the evening, there was one more form of benediction, making four in all. Nor is this all. There was another vain repetition in as common use as the Shema, and still longer, against which Christ also protested. We refer to the *Shemoneh esreh* (meaning eighteen) called also *Amidah*. This was the name given to the eighteen thanksgivings which every Israelite—man, woman, child or slave, was bound to recite three times a day—in the morning, in the afternoon at the hour of sacrifice, and in the evening.

The most beautiful of all prayers, however, may become a "vain repetition" if uttered mechanically. The rabbis sometimes tried indeed to set themselves against these meaningless repetitions. "If a man says his prayer as if to get through a set task, that is no prayer." "Do not look upon prayer as a formal duty, but as an act of humility, by which to obtain the mercy of God." This last utterance is attributed to Rabbi Simeon, who lived at the very time of which we speak; but these protests of the rabbis went for nothing. There was but one remedy; to do away with these daily repetitions; and this was what the first Christians made up their minds to do.

Natural History, Science, &c.

Two Good Swimmers.—One bright summer morning, as I was strolling toward the beach on the Island of Mackinac, I saw, a short distance ahead of me, two little pigs, one perfectly white and the other perfectly black, both the same size, trudging along side by side in the same direction as myself.

They seemed so out of place, and I was so curious to know whether they were bound, that I followed them unobserved. They did not walk aimlessly, but as if they had some special object in view, and some definite destination.

I wondered what they would do when they reached the water. I was not long in being answered. Without a moment's hesitation they plunged into the waves, side by side, and swam out and away toward another island, six miles distant. I stood and watched them until their two little heads looked like balls bobbing up and down, side by side all the time.

When I related the incident to the landlord, a little later, he looked astonished and annoyed.

"Those pigs," he said "were to have been served up for dinner to-day. They were brought here this morning in a boat from that island, six miles away, and we thought we might allow them their freedom, never thinking of their making an attempt to go home."

"And did you notice," he continued, "they chose the point of land nearest the island where they came from to enter the water? Singular that the little animals should have been so bright. And furthermore, they weren't landed there; that makes it more strange."

I, too, left the island that day, and I have never heard whether these brave little pigs ever reached their destination or not.—*Harper's Young People.*

Yellow Fever.—A writer in the "Sanitary" column of *The Independent* says of this dreaded disease, that if once it gets a foot-hold in any Northern city, it is not more likely to be checked than in a Southern city, except by the occurrence of frost." Some suppose that it was the bilious fever of Africa modified and made more deadly by the animal accumulations in the slave ships during the long voyages. To prevent its spreading, the most scrupulous isolation and careful disinfection are needed. When the disease occurs frequently there can be no doubt the ships and the ground become intensely infected. It will apparently travel along the ground, making about so many yards of distance each day. Physicians acquainted with the locality, can almost calculate what will be its spread from day to-day. In the case of one of the last epidemics in New Orleans, Dr. White the health officer, caused a certain infected district to be surrounded by a small stream of water from the Mississippi River and the disease, or contagion, did not cross the stream. It is wonderful how quickly it will disappear from the inhabitants of a locality when they are quickly removed to an encampment in the country. It is for this reason that depopulation, if conducted with the precision of military discipline, checks and well-nigh conquers the disease.

The Drying of Mosses.—The power of the mosses to endure repeated desiccation has recently been experimentally treated by G. Schröder, who obtained the interesting results that many of these plants can not only resist months of dryness without any harm, but also that they do not perish even under the strongest desiccation carried on in a drier with the aid of sulphuric acid. Plants of *Barbula muralis*, which were exposed for eighteen months in the drier, after a few wettings resumed growth in all their parts. Other species of *Barbula* behaved similarly. A curious experiment was performed with *Grimmia paleinata*, in which a stock which had been cultivated for some time in a moist atmosphere under a bell-glass was suddenly exposed, to a warm and perfectly dry current of air. It became so dry in a short time that it could be pulverized. Then it lay in a drier for ninety-five weeks. But the quickening moisture was still competent to awaken it to renewed life. The most rapid drying which could be performed in the laboratory could not destroy the plant. It even showed greater power of resistance than would correspond with its real necessities, for so speedily and complete a drying out as was effected in the experiments never occurs in Nature.—*Popular Science Monthly.*

The Tsetse Fly of Africa.—This fly in its bite or sting cuts a red, deadly poison, capable of destroying an ox in a minute of time. Livingstone declares that about twenty of these flies

killed forty-three oxen in about as many minutes. Specimens of these flies are now advertised for sale in Prague, by a dealer in Natural History objects.

The Kangaroo Grass.—The Kangaroo grass of Australia, follows the track of these creatures much as the Buffalo grass followed these cattle in our own country. The botanical name of the Kangaroo grass is *Anthistia Australis*. Its drought-resisting qualities are said to be at least equal to any grass known, and the French are taking measures to introduce it for forage in their dry possessions in Africa.

How Gourds Climb.—The way the gourds climb is by means of spiral, curled tendrils, which are in reality small abortive stipules or leaf appendages, specialized for the work of clinging to the external object, be it bough or stem of some other plant, over which the beautiful parasite rapidly spreads itself. The tendrils push themselves out on every side, revolving as they go, till they reach some tender twig or leaf stalk to which they can attach themselves. It is curious and interesting to watch them as they grow, and to see how closely their movements simulate intelligent action. The little curled whorls go feeling about on every side for a suitable foot-hold, groping blindly, as it were, in search of a support, and revolving slowly in wide-sweeping curves, until at last they happen to lay hold with their growing end, of a proper object. Once found, they seem to seize it eagerly with their little fingers (for in the gourd the tendrils are branched, not simple), and to wrap it round at once many times over in their tight embrace. It is wonderful how far they will go up out of their way in their groping quest of a proper foot-hold, and how, when at length they stumble upon it, they will look for all the world as if they had known beforehand exactly when and where to search for it. These actions come far closer to intelligence than most people imagine; they are deliberately performed in responsive answer to external stimuli, and only take place when the right conditions combine to excite them.—*Popular Science Monthly.*

Arctic Flowers.—Lieutenant Schwatka told us in *Woman* that there are 762 kinds of flowers in the Arctic regions, while within the Antarctic circle not a flowering plant has yet been found. About one-half of the 337 flowering plants on Alpine heights—that is, between 8,000 and 13,000 feet above the sea—originated in the Arctic regions, and came from Scandinavia with the ice of the glacial period. They were "stranded on the Alps when the ice receded, as a floating object is left by the ebbing tide."

The polar flowers seldom have any perfume, and the few that exhibit that delightful quality however feeble, are from that class that have crept over the cold border marked by the Arctic circle; none of the finer Eskimo flowers have any appreciable odor.

"The colors of these boreal blossoms are generally of the cold tints, white and yellow predominate."

"Nearly all the plants of these cold countries are of the biennial or perennial sorts, as the season is too short to give annuals the whole length of time they demand for the maturing of their fruit to insure the next season's growth. These perennials act like our hardy spring flora, by rapidly pushing their growth before the snow is all off the ground, and with the very first cessation of the normal cold. I have seen flowers in bloom so close to the snow, on King William's

Land, that I think the foot could be put down and leave an impression on the edge of the snow and crush the flowers at the same step; while Müldendorff, a Siberian traveller of note, says that he has seen a rhododendron in that country in full flower when the roots and stem of the plant are completely encased in soil frozen as solid as a stone.

"In that border zone, and in the snow-swept mountains, we find another kind that actually love to burrow and spread their species in and on the bare snow and ice itself. Naturalists have succeeded in separating forty-two species of purely snow and ice plants from the many that were had submitted for examination. All these require the microscope to determine what they are in the kingdom of nature, and nearly all of them depart from the rule of pale hyperborean hues, and give us rich crimson, or some of the tints of red, which would look cheerful enough in this desolate region, were it not for the fact that the great red splashes on the snow resemble blood."

A lecture on Lapland and the Lapps, told us last winter that the beauty of the Lapland flowers is marvelous. Acres on acres of the richest bloom are spread out before the eye. Some expanses are blue with violets, some purple with a flower whose name we cannot recall, and the richest golden bloom covers other large areas. In the long summer's day, when the sun is never below the horizon, but "ricochets" from hill-top to hill-top, from the east point round to the same point again, every twenty-four hours, vegetation makes wonderful strides: "barley stalks have been known to grow two-and-a-half inches during this interval," and in one place in Norway, on a certain farm, three crops were grown in one season. It is not unusual in Norwegian valleys to secure two crops in one season. So the "rapidity of polar growth under a never setting sun" gives some of our Arctic brethren abundant bloom and cereal growth.—*Christian Advocate.*

Items.

School Savings Banks.—In France in 12 years, 23,000 school saving banks have been opened, which now hold \$2,225,000, owned by about 500,000 children.

Evil Tendencies of Clubs.—In a sermon before the Social Purity Alliance, Rev. John Farrer drew a vivid picture of the "moral maelstrom" that there were in the city 4,000 clubs which initiated young men into the ways of vice. There *may* be clubs, of course, for praiseworthy purposes, but, as they are now being established in all our cities and some towns, they are generally for the indulgence in those amusements which are by common consent thought unfit for the home. Here fathers, sons and husbands, free from the restraints of home associations, indulge, under special fascinations, in things of more than doubtful propriety, while mothers and wives are left to the loneliness of the long evenings. If these could settle the matter, the whole business would be abandoned instantly and almost unanimously. Even if the things done at the club were innocent in themselves, the system is evil, and that continually, because it does not permit those whom business claims during the day to return to the family in the evening; but in most clubs the things done are grossly evil—gambling, drinking, lessons in libertinism, &c.

The Ninth Centenary of Christianity in Russia.—On the 6th of Seventh Month, Russia solemnly celebrated the ninth centenary of the official introduction of Christianity into that country. In 988, on his return from the Khersonese of Tauris, where he had accepted Christianity, Prince Vladimir ordered that all the residents of his capital city of Kiev, should appear on the shore of the Dnieper and be

baptized by Byzantine clergymen. This order was duly obeyed, and thus paganism, in the form of polytheism, was replaced in Russia by Christianity according to the teachings of the Greek-Eastern Church. Since then that Church has been the established Church of Russia.

In compliance with the order of the Holy Synod of Russia issued some years ago in all the cathedrals, churches and chapels of that country, counting about sixty thousand, there was performed a solemn liturgy and a special thanksgiving service in which the Orthodox people, over sixty million strong, thanked God for saving their country, eradicating the "idolatries" which had hitherto been the darkness of idolatry and for shedding on it a light of the true faith." After these services the clergy, counting over a hundred thousand, led their parishioners respectively to rivers, lakes, springs and wells, where the service of consecration of water was performed. On this occasion there were formed grand religious processions perhaps never witnessed in any land of Christendom. Resplendent holy and (so-called) miraculous images, glittering crosses, costly banners of golden brocade, and the books in jeweled bindings were carried in every town and village of the Empire, followed by the clergy, the monks and nuns, the religious brotherhoods, the pupils of every kind, civilian authorities, the parishioners and the military regiments in full uniform, while all the church bells were ringing.

When in the seventeenth century the Rascol, or schism, took place in the Orthodox fold of Russia, the Church authorities instituted a persecution almost equaling the one pursued under the auspices of Roman Catholic Inquisition. Tortures, gibbet, imprisonment for life, or exile to Siberia or to the Caucasus were freely resorted to against those who refused to pray according to the newly translated books, or who protested against the centralization of the religious authority in one person. And even today, over fifteen millions of Rascolniks are deprived of many civil rights solely because they dare to hold a different opinion from that of the established Church, on some insignificant rites.

A strange condition of *double belief* has been developed under the pressure of a law ever changing their faith. A man, Orthodox for his majesty's and the Holy Synod's sake, and Protestant in his conscience, such a man could be raised only in Russia, under the despotic lay and clerical regime. And as the double-belief at length leads to *no belief*, it can be safely stated that the Government of Russia is systematically fostering infidelity. Thus despotism undermines itself, and when the last hour of Czarism shall strike, it will be also a funeral bell for the Orthodox Church.

For the time being, Protestant subjects of the Czar are treated as harshly as the ones holding liberal political views. While the Catholic, Jew and Protestant pastors always labor under the fear lest they should meet somewhere some one who, perhaps unknown to himself, has been registered in an Orthodox fold.

The Roman Catholics of Russia fare still worse than the Protestants do. Every Catholic, male or female, and of every age, is doubly a Russian person. The Nicholas bayonets have been repeatedly resorted to in order to convert the Catholics to the Orthodox faith. Later on milder means were used for the same purpose. Catholic children were forced to attend the schools placed in charge of the Russian Orthodox churches. The Russian Government has made an obligatory one in all official transactions. And now the Czar is negotiating with the Pope with view of introducing the Russian language into the Catholic churches.—*The Independent.*

Close of the Summer Session at Westown.—The last session of Westown Boarding School closed Ninth Month 1st. The school, being a boarding school, and a graduating class numbered ten, very many visitors, mainly their relatives and friends, were attracted to assemble in the new lecture-room, the seating capacity of which was taxed to accommodate all the audience being estimated at not less than 550. Nine girls and one boy, and six young men, having followed the classical, and six the scientific course. The essays were creditable to

the class, and were well delivered—a member of the committee afterwards addressed them briefly.

During the last session, eight horizontal and two large upright cases have been placed in the museum, and two of the teachers have been industriously engaged, in spare hours, in preparing, labeling and arranging mineral specimens. It is contemplated to place a revolving dome upon the tower of the center building, to cover the 4½ inch telescope lately presented to the school. The grading about the school-house has been completed, and the grounds sown with grass seed. The effect of the recent rains has been to cover the earth with a lively green, presenting a beautiful appearance.

A PASSIONATE reproof is like a medicine given scalding hot; the patient cannot take it.

THE FRIEND.

TENTH MONTH 6, 1888.

At Iowa Yearly Meeting (the Larger Body), in the early part of Ninth Month, a meeting was held of the ministers of that body and of some of the other members. At this conference the statement was made, that the previous year there were four *regularly supported pastors* retired; but this year the number had increased to sixteen, together with about twenty others who spend quite a portion of their time in pastoral work.

We suppose the duties expected of a "regularly supported pastor," are to preside over the meetings for worship, provide a sermon on every occasion when no one else is likely to officiate, visit the members, and in a general way perform the same services which are expected of ministers in other religious societies, excepting such difference in duties as grow out of differences in church organizations.

It is not stated whether the twenty persons who "spend quite a portion of their time in pastoral work" receive any measure of pecuniary support or not. However this may be, the whole statement discloses on the part of that Yearly Meeting a most sorrowful and rapid departure from the principles and practices of Friends—a departure which, if not arrested, must eventually deprive that body of any just claim to be regarded as a true representative of the doctrines and testimonies of our Society.

There is perhaps no more characteristic feature in the system of Quakerism, than that true worship consists in drawing near unto God in spirit, and endeavoring to feel the extension of his Divine life and power, which alone can qualify us to worship Him in spirit and in truth; that in meetings for worship, it is the duty of every individual thus to feel after God, if haply they may find Him; and that this is a work which no one can perform for another.

Vocal ministry holds but a second place in this system; and unless it flows from the fresh feeling of Divine life impressing on the mind of the speaker a sense of present duty to speak, it will be a hindrance instead of a help in the performance of spiritual worship. Where it is stately exercised in a meeting, there is a strong tendency for the hearers to depend upon it instead of laboring for themselves to draw near to the Fountain of life in their own hearts. The employment of persons to preach in our meetings, no matter under what plausible excuses the practice may be defended, is a radical departure from our principles.

Scarcely less objectionable is the system of

hiring a man to spend his time in looking after the spiritual interests of the individual members of a meeting—which we suppose to be one of the objects contemplated in the appointment of a "pastor." It is the duty of *all* the living members of the Church to watch over one another in love, to caution a brother who seems in danger of going astray, to encourage those who are depressed, and to sympathize with those in distress. To those who are alive in spirit, services of this kind will be assigned by the Head of the Church, as He sees meet, and as their degree of spiritual experience may qualify. These individual duties cannot rightly be deputed to another. We cannot hire a man to do them for us, and hope to receive the blessing which attends the faithful performance of duty. The extension of such a system of doing duty by proxy, when fully developed, ends in priestcraft—where a man is employed to attend to the spiritual interests of others, who in the meantime will give their time and thoughts to merely worldly pursuits, and yet vainly hope to secure the favor of Him who looketh upon the heart.

In the Christian dispensation, Christ himself is the only High Priest of his people; and all the true members of his Church, as the Apostle Peter declares, become "a holy priesthood, to offer up spiritual sacrifices, acceptable to God by Jesus Christ."

SUMMARY OF EVENTS.

UNITED STATES.—On the 1st instant the President approved the Chinese Exclusion bill, and submitted to Congress some recommendations on the subject.

The Senate joint resolution appropriating \$100,000 for the relief of yellow fever sufferers, was passed on the 12th of Ninth Month, amended so as to make the appropriation for the purpose of "preventing the spread of yellow fever and cholera."

The President has approved the joint resolutions appropriating \$200,000 to suppress infection in the interior of the United States, and to make the same available for the relief of sufferers.

The conferences on the Sundry Civil bill have reached an agreement on the only point of difference left—that in relation to the new Library building. They have fixed a limit at four millions for the cost of the entire building, and appropriate \$500,000 for this year.

The present session of Congress has now become the longest in American history. The longest preceding session was that of 1850, the year of the Missouri compromise, which adjourned at noon on Ninth Mo. 30th. Constructively, the session of 1868, following the impeachment proceedings against President Johnson, was longer, the adjournment *sine die* having taken place on Eleventh Mo. 10th, but, as a matter of fact, Congress took a six weeks' recess from Seventh Mo. 27th, and never afterwards had a quorum or attempted to transact any business.

The conference with the Indians at the Lower Brule Agency, in Dakota, has resulted in a failure. The Indians refuse to sell their lands at the price fixed in the bill, and the Commissioners will return to Washington.

"The prospect is that some concessions will be made to meet new bills."

Our Consul to Guatemala, in a report to the Secretary of State, says there are few factories worthy of the name in Guatemala, and that there are favorable inducements for the establishment of factories for glass and china ware. Total value of the principal manufactures, cotton and woolen goods, all of which, and many others, are now imported and command exorbitant prices.

Many retail bread dealers in Chicago have raised the price of bread one cent per bar, owing to the continued advance in wheat and the consequent increase in the price of flour.

The debt statement issued at the Treasury Department on the 1st inst., showed that the decrease of the public debt during the Ninth Month amounted to \$7,217,025. Total cash in the Treasury \$75,275,227.

The total collection of internal revenue during the first two months of the present fiscal year amounted to \$20,951,225, an increase of \$1289 on the collections for the same period of the last fiscal year.

The number of immigrants arriving in this country

from the principal foreign countries during the Eighth Month was 35,812. For the eight months ending Eighth Mo. 31st, the number foetus was 562,853.

There were 734 smallpox fatalities, and 20,000 deaths by violence in Jacksonville, Florida. The cooler weather which prevailed during a part of the week had the effect of reducing the number of cases; but on the 1st instant an increased number were again reported.

The total number of new cases during the week ending Tenth Mo. 1st, was 734, and 49 deaths. Twenty-five new cases of the fever are reported under treatment in Fernandina. Seven new cases and three deaths are reported in Decatur, Alabama. Two new cases and two deaths are reported in Sanderson, and one new case at Callahan.

Deaths in this city last week numbered 329, the same number as in the previous week, and a decrease of 33 compared with the corresponding period last year. Of the foregoing, 40 died of consumption; 27 of marasmus; 21 of typhoid fever; 15 of cancer; 13 of disease of the liver; 16 of convulsions, and 19 of old age.

Markets.—U. S. 4 1/8's, 107 1/2; 4's, 125 1/2; currency 6's, 124 to 130.

Wheat—In light supply and firm. Official quotation was still 10c per bushel for milling uplands.

Flour and Meal.—Flour was in light supply and held with increased firmness, in sympathy with the sharp advance in wheat. Nearly all desirable brands were limited above jobbers' views. Quotations: Western, No. 1, \$4.30; No. 2, \$4.20; No. 3, \$4.10; No. 4, \$4.00; No. 5, \$3.90; No. 6, \$3.80; No. 7, \$3.70; No. 8, \$3.60; No. 9, \$3.50; No. 10, \$3.40; No. 11, \$3.30; No. 12, \$3.20; No. 13, \$3.10; No. 14, \$3.00; No. 15, \$2.90; No. 16, \$2.80; No. 17, \$2.70; No. 18, \$2.60; No. 19, \$2.50; No. 20, \$2.40; No. 21, \$2.30; No. 22, \$2.20; No. 23, \$2.10; No. 24, \$2.00; No. 25, \$1.90; No. 26, \$1.80; No. 27, \$1.70; No. 28, \$1.60; No. 29, \$1.50; No. 30, \$1.40; No. 31, \$1.30; No. 32, \$1.20; No. 33, \$1.10; No. 34, \$1.00; No. 35, \$0.90; No. 36, \$0.80; No. 37, \$0.70; No. 38, \$0.60; FOR "THE FRIEND."

Incidents and Reflections.—No. 169.

CONFESSION AND RESTITUTION.

The *Parish Visitor* relates an incident which shows the necessity of confession and restitution, if we would have peace of mind and would walk in that path which leads to everlasting life. The narrative, it says, is true from beginning to end. The person who related it, told it about himself.

He said that when he was a little fellow he was playing one winter day with some of his boy friends, when three cents, belonging to one of them, suddenly disappeared in the snow. Try as they would they could not find them, and the boys finally gave up the search, much to the disappointment of the one who owned them. "The next day," said the person, who was telling us the story, "I chanced to be going by the spot, when suddenly I spied the three cents as they had been looking for. The snow which had covered them the day before had melted, and there they lay in full view. I seized them, and put them in my pocket. I thought of the candy I could buy with them, and how fortunate I was to have found them; and when conscience wouldn't keep still, but insisted on telling me what it thought of me, and above all, what God thought of me, I just told it to be quiet, and tried to satisfy it by saying that Charlie B—— had given up thinking about his three cents by this time and that the one who found them had the right to them.

"Well, to make a long story short, I spent the money, ate my candy, and thought that was the end of the whole matter. But I was never more mistaken. Years passed on. I grew from a boy into a man, but every now and then 'those three cents' would come into my mind. I couldn't get rid of them. They would come. However, in spite of them, I had all along a strong desire to be a good boy, and to grow up to be a good man—a Christian man. This desire grew stronger and stronger, for God never left me, and so I gave myself to Him. Now perhaps you may think my trouble was over. But no; every now and then, 'those three cents' would come into my mind as before. Especially when I would try to get nearer to God, there were 'those three cents' right in the way.

"At last I saw what God had all along been

trying to make me see, that I must tell Charlie B—— that I had taken them! To be sure, he was a man by this time, and so was I, but no matter, God told me, as plainly as I am telling you now, that till I had done this, He could not bless me. So, then and there, I sat down and wrote to Charlie, inclosing in my note twenty-five cents—the three cents with interest. "Since then I have had peace, and God has blessed me."

Jerry McAuley, of New York, who had been a notoriously bad man, but afterwards became a preacher of righteousness, on one occasion related the following incident from his own experience. He said:—

"I remember a short time after I was converted, I was sitting in a mission down town, reading, when in came a man who was captain of a vessel. He looked around until he saw me, and said to the man who kept the place:—
"What are you doing with that rascal in here?"

"The captain was told I was a convert, and lived a Christian life.

"He a Christian?" said the captain; "yes, a pretty Christian he is. He stole a hundred dollars' worth of sugar from me once, and if he got his deserts he would be in the penitentiary." Then, walking up to me, he said, "If you are converted, and pretend to be an honest man, pay me for that sugar you stole from me."

"My friends, that was a trying time for me, and the devil tempted me to deny the whole thing, and face him down in it; but I lifted my heart to God, and He helped me. I went up to him, and said:—

"Captain, I did steal that sugar from you; and if you will walk to my home with me I will pay you for it."

"I had got steady work, and had saved a hundred dollars, and had put it away, the first hundred dollars I had ever saved by honest work. I hated to part with it, we needed things so bad; but the Lord helped me, and I said, 'Come on; walk right home with me, and I will pay you for that sugar.'

"Yes," said he, "you look like paying a hundred dollars. I ain't fooled quite so easy as that."

"I took him by the arm and made him walk right along, and the Lord helped me every step I took. He was silent for awhile, when he said, in a kinder tone:—

"Now, Jerry, you don't mean to pay me that money; you can't spare it."

"I said, 'Yes, I can. The Lord will help me to spare it.'

"Jerry," said he, "I believe you *have* got religion. Now hold on; I ain't going to take that money. It is diamond cut diamond. I stole that sugar, and you stole it from me. Suppose we call it even."

"Well, he would go no farther, and I saved my hundred dollars. If I had tried to shirk the matter and run away from that man, I would have lost my own enjoyment, and lost the chance of showing the captain how the grace of God in

the heart makes a man honest. Oh, my friends, if you only get honest with God, and honest with yourself, you can defy the world."

An anecdote is told of a man who was a parishioner of Adam Clarke, the well-known Methodist minister and commentator. He came under deep conviction for sin, but could not feel that settlement of mind and peace which he longed for. Shortly after he was confined to his chamber by sickness, and sent for A. Clarke to visit him. These visits were repeated from time to time; but although there was much apparent sincerity in the distressed invalid, there was not a sense of forgiveness and acceptance. Finally, as his end seemed to be drawing near, Adam said to him, he thought there must be some cause for this withholding of Divine favor; that he must have left something undone which it was his duty to do.

"The man looked intently on the minister, raised himself up in bed, and with an appearance indicating that he was resolved to make a full disclosure, proceeded to give an account of a strange transaction in which he had originally had no guilty complicity, but with which he became so connected that he was drawn into a wrong course, and very serious evil, which he could have averted, resulted from it to an individual who had since died without any reparation or confession being made to him.

"The conscience-stricken man, now making his confession to A. Clarke, told him that he had tried long to stifle conscience with the business and diversions of the world, but in vain. At length, he heard the minister preach upon a theme that applied directly to himself; and then it was that the voice of God sounded in his soul, and reasoned with him of 'righteousness and judgment to come.' He was in deep distress; he agonized for mercy in the name of Christ; but his prayer was not answered.

"The injured man was dead, but his widow and fatherless children still lived. The minister told the dying penitent that God claimed of him, not only repentance, but confession and restitution. He readily assented, and full restitution was made. Very soon the troubled mind of the dying man calmed. God gave him that 'peace which passeth all understanding;' and in the assurance of mercy through the merits of the Saviour he entered into eternal rest."

The Editor of *The Earnest Christian* mentions that soon after the close of the civil war he was at a large union meeting in New York city, where he spoke for a few minutes on the importance of "bringing forth fruits meet for repentance;" and referred to the effect produced by the preaching of Paul at Ephesus:—"Many that believed came and confessed, and showed their deeds. Many of them also which used curious arts brought their books together, and burned them before all men."

At the close of the meeting, a person who was present desired a private interview. He said that he had professed to be converted the pre-

vious winter, but he had defrauded the government, as nearly as he could make out, of about \$300,000. The preacher told him, there was no use in his professing to be converted unless he was willing to make restitution. This he did not seem prepared to do, but went away sorrowful, like the young man who asked our Saviour what he should do to inherit eternal life, but shrank from the unreserved surrender of all that he had. He kept his profession of being a Christian, and became a popular worker in a popular religious revival, but afterwards was sent to State prison for a crime committed while engaged in his evangelistic labors.

Such a result is not to be wondered at. For it is only the preserving power of the Grace of God that can keep any of us from yielding to temptation; and when a man habitually resists the teachings and despises the reproofs of that grace, the time will come in which he will verify in his own experience the truth of the declaration, "He that being often reproved, hardeneth himself, shall suddenly be destroyed, and that without remedy."

But what a blessed truth it is, that "he that confesseth and forsaketh his sin shall find mercy." May we not believe that this was the experience of the poor woman whose case is related by the late John B. Gough. Hugh Miller, then living at Edinburgh, received a letter from a towns-woman, who for years had been a disolute character, but was then lying on the bed of death in a wretched den in that city. He called upon her on a Seventh-day evening, and gave her half-crown, the only money he had with him, and promised to see her again the next morning. When he came back, she was dead. At the funeral he saw a woman evidently affected, and asked her if the deceased was a relative.

"Oh, no!" she said; "no relation, poor thing. When she was a gay, flaunting girl, with her ribbons and her furbelows and her flounces, she purchased things of me, and she owed me half-a-crown, and I could never get it; she would laugh at me when I asked her for it; and evidently seemed bent upon cheating me. Last Saturday night I was astonished to see that poor creature come into my shop; she only had one garment on her; it was a drizzly night; her cheeks were hollow, her eyes sunk down deep in the sockets, her fingers like the claws of a bird; and she came tottering in and laid down the half-crown, and said, 'There is your money, ma'am; it lies heavily on my conscience; it is your due—I owe it to you, and I did not mean to cheat you; I must pay you before I die,'—and went back to her wretched room to die."

SELECTED.

Twelfth Mo. 9th, 1841.—Whatever may be the overturnings that may yet be permitted in the visible church, whatever the power given for a time, in the unsearchable counsels of the Divine will, to the beast and to those who have received his mark and the number of his name, I do believe the Lord has a work for us as a people, and that in doing or in suffering, according to his holy will, the language to us is, "Be thou faithful unto death." Give it unto us, O Lord, we beseech thee, and to our precious children, so to appreciate the value of those truths we have been taught, and that we may "hold fast our profession of our faith without wavering" in every day of trial, and may be known for ourselves the truth of that blessed declaration, "They that keep his name will not trust their trust in thee; for thou, Lord, hast not forsaken them that seek thee." Amen.—*Maria Par.*

FOR "THE FRIEND."

A Vacation Across the Atlantic.

(Continued from page 74.)

Out at Hyde Park in the evenings an interesting scene is witnessed. People go there for rest. The drives are crowded with elegant equipages; and the broad walks are thronged with the humble and more sensible class of people, while the children romp and play through the tardy twilight, until 10 o'clock. Here and there we can see little groups collected on the lawn or under the trees; and upon approaching will find some earnest speaker haranguing on such subjects as socialism, politics, or religion. English rulers are wise in permitting a good degree of freedom of speech—even if all that is said may not be quite satisfactory. Thus, while statesmen drive in one end of the park, the masses air their opinions at the other end, and both parties seem to be well pleased with such an arrangement.

Sixth Mo. 15th.—This was one of the rainy days that make London streets look dismal, so I went out to the museum. At the British Museum one sees nearly everything he has never seen before. It would take days to examine even a small part of the wonderful things exhibited, and my observations were necessarily limited to only a few subjects that, as it were, I accidentally run against. I wandered into the mummy room, and here saw a coffin and the mummy of a man who was buried when Adam was 800 years old—that is if Egyptian records are correctly read by leamings of our day.

There are plenty of mummies of people who were contemporary with Moses. The wooden coffins must have been prepared so not to decay, as they are in perfect condition, and the figures and inscriptions on them are legible. The remains of Cleopatra have also been dug up and brought to this museum by enterprising Englishmen. I have never before cared much for such ghastly relics, but confess that these did for once interest me. I also was much entertained with looking at some ancient Assyrian documents. That wonderful people did their writing on terracotta tablets, which are imperishable; and many of their records and writings have been excavated from the ruins of Nineveh and Babylon, and brought to England. The language is understood by modern men of learning, who have made a study of these old inscriptions. I saw to-day, bills of sale, transfers of property, and many other writings connected with daily life, which show that that old nation did a good many things just about as we now do them. Some of these tablets tell of the conquests of the Assyrian kings, and many other items of ancient history; and a few of them have remarkably explained and verified some of the previously questioned historical facts recorded in the Old Testament. In this museum is an account on terra-cotta of Sennacherib's wars.

There is an immense display of pottery and vases, all arranged to illustrate the advances made by different nations in the art, down to the present time. The observer can here see that knowledge in this useful industry has steadily advanced with the addition of years, excepting that the ancient Greeks were centuries ahead of the nations around them. In a room where comparatively few enter, is kept the celebrated Portland Vase. It is believed to have been made by the Romans, and is very beautiful, although broken years ago. Wedgwood, the great manufacturer of years ago, has been the only man who could imitate its peculiar construction, and he made one hundred fac-similes of it, and the secret of their manufacture died

with him. It is only a few inches high, and yet because of its great rarity has been sold for many thousand pounds.

In the same room are exhibited a collection of precious stones, which are exceedingly rare and of great value. They are arranged in cases so that the daylight is made to pass through them, thus producing a most exquisite effect, and showing off the delicate and charming shades of color that nature has given to them.

Sixth Mo. 19th.—I have been having a most enjoyable visit with my cousins in Surrey. The hills down there are very fine, and seem perfectly charming after the heavy air and ponderous museums of London. Surrey is a rolling country, and from its broad hill-sides lovely views are obtained of parks, fields, and woodland, interspersed with thriving, old-fashioned towns. Being near London, this section is much used by rich people and London merchants as a place of residence, and some of their well-kept lawns, and brilliant flower-beds, and long hedges and quaint, old gabled, ivy-covered houses, all add to the attractiveness of the scene. I like to walk through English country. And what long walks these people give you! Up hill and down, through narrow lanes and over broad stretches of turf, along the dusty highway or through damp meadows, they lead the unaccustomed American, until he absolutely marvels at the extraordinary ability of his English cousins at getting over ground on their own feet.

I believe that the climate makes the people over here want to walk. They can't help themselves,—they have to do so to keep the blood stirring. I can walk three times as far here as in America, and feel no more fatigue for doing so. The damp, cool air, makes exertion a pleasure. The summers are to me delightful, inasmuch as they are not so hot as in America, and also because they do not have any mosquitoes, and but few flies. This last fact is enough to recommend the English summers to some of us. Still, sometimes the clouds become depressing enough; and the other day the London newspapers joyfully recorded the fact that the previous afternoon the sun had actually shown in that big town for four whole hours in succession. They had had rain and fog for the two weeks previous, and no wonder they were glad to see the sun. Just now I read that at home the thermometer is over 90°, and that people are dying of stroke; here the days seem to become cooler and cooler, and each morning when I get up I can see my breath in the room just like we can at home in mid winter.

Sixth Mo. 20th.—When I was last in England I did not see the inside of the House of Parliament, so to-day being armed with a letter of introduction to a member of Parliament, I made another effort. After passing several policemen, all of whom separately wanted to know my business, I finally found myself in a beautiful lobby where a number of other people were also waiting to obtain interviews with members of Parliament. Soon I found that the gentleman to whom my letter of introduction was addressed, was not in. Meanwhile I had become engaged in conversation with another gentleman, who, ascertaining my errand, kindly offered me a pass into the House of Commons, made out for some one else. As accepting it would involve my stating that my name was the same as that of the party for whom the pass was intended, and as I did not feel like telling the necessary "fib" to attain the end, I declined with thanks. My new found friend seemed to feel sorry that I was disappointed, and as I was preparing to leave said,

"I will get you another pass to get you in, and will get you into the House of Lords if you wish." Truly, thought I, virtue has some reward after all. Almost before I knew what was up, he introduced me to a nobleman, who led me into the House of Peers, and who in turn introduced me to a gentleman who took pains to point out some of the most prominent of its members. I endeavored to find out the name of my new and kind acquaintance, who also procured the promised pass into the House of Commons, but could not. He seemed to know everybody around. He was another example of the kind English desire which I had often before noted, to aid Americans in their sight-seeing. I hope that when we at home find them wanting information or aid, we may in turn do all in our power to assist and add pleasure to their visits in America.

(To be continued.)

FROM THE BRITISH FRIENDS.

"Without Money and Without Price."

Every Christian and earnest Bible reader is familiar with the above quotation, and is well acquainted with the fact of its reference to the Gospel of Christ: "The gift of God is eternal life through Jesus Christ our Lord." This knowledge is [taught in] the Scriptures, which are within the reach of all; and from which Scriptures the stipendiary ministers have received this knowledge, and declare the same on the First-day of the week and at other times, receiving stipulated salaries, rating from hundreds to thousands per annum, extracted from the pockets of their audiances; their vocation being looked upon in the present day as one of the professions, and entered into after having previously gone through a collegiate course of study, appointed by man, to fit them for this mode of procuring a respectable livelihood for themselves and their families. This is the case among the great majority of denominations. There are, however, a few honorable exceptions, first and foremost of which is known as the "Society of Friends," who commenced their testimony against the system of a paid ministry between two and three hundred years past. Others have followed in their steps, and more may follow.

To a paid ministry may be attributed much of the strife and divisions that have existed in the churches; and the tendency thereof has been to lead the people from Christ to the minister rather than from the minister to Christ. The preaching of the Gospel has often been rendered void by excellency of speech, and man's wisdom, or, as the apostle puts it, with "enticing words of man's wisdom," and faith, to a greater or lesser degree, has stood in that wisdom instead of in the power of God.

Every true Christian united to Christ by a living faith is a practical preacher of righteousness, and his path as "the shining light that shineth more and more unto the perfect day." The one man ministry tends considerably to lessen the feeling of responsibility in every true Christian for the salvation of his fellow-man. There is no such a word as a layman in the Scriptures. Christ is the true Teacher, in accordance with Old Testament prophecy, viz: "Thy children shall be all taught of the Lord, and great shall be the peace of thy children;" and in the New Testament, "This is my beloved Son, hear ye Him;" also, "Learn of me, for I am meek and lowly in heart, and ye shall find rest to your souls;" and being thus taught by the Lord, they are the honored instruments in

his hands of the conversion of souls by precept and example.—*Henry Hine Newman.*

Why He Never Had a Home.

While engaged in the town of B—, I called into a wagon shop to see a certain man, and was introduced to one of the wood workers. He was a moderate drinker. During the conversation he said, "I would like to know how it is that D— has paid for a home worth \$1,200, has sent his three children to school for four years, and has \$1,000 U. S. bonds. We have worked here together in this shop for fifteen years; he has received \$2.00 per day, and I \$2.50. I can't understand how he has a home and \$1,000 at interest, and I have neither." "Don't you save anything from your wages?" "No, sometimes at the end of the year I am \$35.00 ahead, and sometimes the same amount in debt." "Have you any children?" "No." "Do you drink?" "Not much; only beer, and I buy that by the quart, so I get it cheaper than by the glass." "How much do you use a day?" "You see that pail; well, I get that full twice each day, and it costs 25 cents a pail; it don't amount to much." "Do you get your pail filled on Sunday?" "Yes, just the same as week days." "Now, if you multiply 365, the number of days in a year, by 50 cents, you will see it does amount to something—it amounts to \$182.50." "Well, that is so; I never reckoned it up before." "Do you use tobacco?" "Yes, smoke and chew both. I get my box filled every morning, which costs 5 cents, and smoke three 5-cent cigars a day. I wonder how much that amounts to." "We can soon tell. It is 355 multiplied by 20, the amount spent each day, and it amounts to \$7300.00." "Then both amount to \$2550.00?" "Yes, sir, you are correct. Is there any other habit you indulge?" "I don't know whether you would call it a habit, but I never work on Saturday. I take that as a holiday." "How do you celebrate your holiday?" "Well, I might just as well make a clean breast of the whole matter; I generally sit in the bar-room, play now and then a game of pedro for the beer, to amuse the boys." "How much do you think amusing the boys costs you each Saturday?" "Oh, half a dollar I guess will cover it." "Did you know it cost you \$3.00 each Saturday instead of 50 cents?" "No, I cannot see it so." "Let me show you. If you should work every Saturday, you would earn \$2.50; you would have this amount Saturday night in your pocket. Now, if you don't work you are short \$2.50, and not only that, but the 50 cents you spend to amuse the boys coming out of Friday's wages. Do you see it?" "Now we will sum up the whole business:

For beer, one year,	\$182.50
" tobacco, one year,	73.00
" lost time, " "	131.00
" amusing the boys,	26.00
Total	\$412.50

"If you saved this sum every year, and put it in the savings bank at 6 per cent interest, how much would you have now, do you suppose?" "I have no idea; but I can see now why my friend D— has laid up money; for he neither drinks, uses tobacco, nor plays cards; he works every day. Will you figure it out, Burdick? I am anxious to know just how big a fool I have been."

I had done all the figuring on a pine board in the shop. He stood looking over my shoulder all the time, muttering to himself. The amount

astonished him. It amounted to \$9,676.07—enough to astonish any man. He said, "All in liquor, tobacco and cards! Almost \$10,000 have I squandered, and never dreamed that I was the only one to blame!"

He had the pine board framed and hung up over his work-bench, and he shows it to every one who comes in, and asks them, "How is it with you?"

There are thousands of men who are thoughtless and careless in regard to their interests, and then curse "ill-luck," "fate," &c., when no one is blameable but themselves.—*Selected.*

[The writer of the article which follows, is a member of the Yearly Meeting of Iowa (Larger Body). We publish it as one of many evidences that a more correct understanding than was before had of the position of Philadelphia Yearly Meeting, is spreading among the members of our Society in various parts of the world.]

FOR "THE FRIENDS."

There has been considerable fault found with Philadelphia Yearly Meeting, perhaps without understanding fully her surroundings. At the time of the separation in Ohio, in 1854, she received the epistle from the larger body of which Benjamin Hoyle served as clerk, and had occupied that position for some twelve years; by the representatives reporting they could not agree. This part of Ohio Yearly Meeting was recognized as the original Yearly Meeting; but finding some of her members were not satisfied with continuing a correspondence with it, epistolary correspondence was stopped with all Yearly Meetings, for the sake of peace and harmony. Philadelphia Yearly Meeting certainly acted wisely in this, and has been favored to get along with but little trouble on this line; and it is to be hoped she may be favored to labor for the peace of Jerusalem, receiving as she does certificates of right of membership from all Orthodox meetings. It certainly would be cause of rejoicing if there could be a building together, not upon any false basis but in the truth as it is in Jesus.

The eyes of other Yearly Meetings are upon her. May she keep a single eye to Him who has promised to be not only Head over his Church, but head over all things pertaining to his Church.

May it not be said of our once highly favored Society, as it was of Jerusalem, that her walls have been broken down and her gates have been burned with fire. May the Lord in his own time and way, raise up Nehemia's who will be rightly called and qualified to labor to the up-building of the walls. We find He set every one to build right at home, even against his own house, that we may no longer be a reproach in the world. The Friends' Society has not finished her mission in the world in upholding those living testimonies given her to promulgate,—that of peace, and the spirituality of the Gospel dispensation,—the right call and qualification for a true Gospel ministry, as well as many others. GEORGE BRIGGS.

NEW SHARON, OHIO.

MUCH is said and written now-a-days in discussion of the wisest and surest cure of intemperance. But not so much is said as might be of total abstinence as a certain preventive of intemperance. It is a question whether a person who has become intemperate will be rescued from the end and doom of the intemperate. It is not a question whether a person will escape that peril, if he continues a total abstainer.—*Selected.*

FROM THE BRITISH FRIEND.

Women's Work in Harris (Hebrides).

In the year 1857 the Hydrographic Survey reached the Long Island (Lewis), the largest of the Hebrides or Western Islands. The Survey was being conducted by the late Captain F. W. L. Thomas. He was accompanied by his wife, and, to make living in Harris, which is the southern and most barren part of the Long Island, possible, they had a wooden house erected on shore. They had recently met with a very severe domestic bereavement; but, far from wrapping themselves up in their own sorrows, they were on the watch to relieve those who were suffering in other ways. Captain Thomas called the attention of his wife to the extreme poverty of the Islanders, and suggested that she might do something to help them. Thereupon this delicate young English lady made a tour of investigation, and, as she understood no Gaelic, there was no danger of being imposed upon by tales of hardship. But her own quick powers of observation furnished abundant material to stir to its depths her warm heart, and to set her active brain to work. For the men of this district there was no employment, except scratching the poor soil that barely covers the rock, of which the south-eastern and most wretched part of Harris is composed. Sometimes they can go away to the fishing; but fish caught about their coast, though affording a precarious supply of food, cannot find a market, owing to the cost of transit to the mainland.

The women's work, however, suggested possibilities to their philanthropic visitor, who had a pair of stockings knitted by a poor widow. They looked as if meant for a pony, they were so queerly shaped, or rather misshapen; and the worsted, which claimed to be white, had taken into its embrace every stray fibre of heather, wool or hair; while variety of shade as well as texture united to produce a most repulsive looking garment for the human foot. Nothing daunted, the brave little Englishwoman resolved to teach the women of Harris to knit wool and to shape well. When she returned to Edinburgh for the winter, she told every person she met of their work and their privations; and all this she has continued to do unrelentingly for about thirty years, with such good effect that the Harris stockings got the first prize at the Edinburgh Exhibition of 1886; and from Ceylon to Labrador, and in all the wide stretch between, Harris stockings and socks have added comfort and health to many a household.

By this industry Mrs. Thomas is able to keep four hundred women in constant work. But she has also been the principal means of developing another department of women's work—the making of homespun. It struck her, on first visiting the people, as an excellent wear for our fitful climate; and about the same time, the late Dowager Countess of Dunmore, to whose young son the island belonged, conceived the same idea. To these two ladies is due the introduction of tweed as a dress material for gentlemen, and even for ladies. There are endless imitations of the real Harris homespun, but they can easily be recognized by anyone acquainted with the genuine product. The women card, dye and spin the wool, and then weave the thread into cloth on old-fashioned hand-loom—some of which may be seen going at the Glasgow Exhibition. The wool is dyed from products of the islands—such as peat soot and lichen from the rocks. The tints are the true art colors,

now so fashionable, and always favored by Friends. They are hygienic, too, which many chemical dyes are not. At the Edinburgh Exhibition the tweed gained the medal for stock-ings sold in amount to more than £2,000. The kind foster-mother of the poor Harris people devotes life and living to their interests, and goes through an amount of head-work and bodily toil which would do credit to twenty persons of more than average capacity.

She has helped between 700 and 800 of them to emigrate to Canada, where they have got on remarkably well. She has also brought to Edinburgh many girls, who have creditably acquitted themselves in domestic service; she has also brought up boys to be taught trades. She has also provided some food for the children at various schools, and the Inspectors remarked with good results! During the past winter, no riots or law-breaking occurred in Harris, though the people are much worse off than those in Lewis.—*J. N. Sinclair.*

HOME.

A man can build a mansion,
And furnish it throughout;
A man can build a palace,
With lofty walls and stout;
A man can build a temple,
With high and spacious dome;
But no man in the world can build
That precious thing called Home.

So 'tis a happy family
Of women fair and wide
To turn a cot of paste
Into something else beside,
Where brothers, sons and husbands tired,
With willing footsteps come,
A place of rest, where love abounds,
A perfect kingdom, Heaven's abode.
—*Christian Intelligencer.*

IT IS WELL.

Yes, it is well! The evening shadows lengthen;
Home's golden days shine on our ravished sight;
And though the tender ties we try to strengthen
Break one by one—at evening time 'tis light.
'Tis well! The way was often dull and weary;
The spirit fainteth off beneath its load,
No sunshine came from skies all gray and dreary,
And yet our feet were bound to tread that road.

'Tis well that not again our hearts shall shiver
Beneath old sorrows, once so hard to bear;
That not again beside Death's darksome river
Shall we deplore the good, the loved, the fair.

No more with tears, wrought from deep, inner anguish,
Shall we bewail the dear hopes crushed and gone;
No more need we in doubt or fear to languish;
So far the day is past, the journey done!

As voyagers, by fierce winds beat and broken,
Come into port, beneath the calmer sky,
So we, still bearing on our brows the token
Of to-morrow's past, draw to our haven nigh.

A sweeter air comes from the shore immortal,
Inviting onward at the day's decline;
Almost we see where from the open portal
Fair forms stand beck'ning with their smiles divine.

'Tis well! The earth with all her myriad voices
Has lost the power our senses to enthrall,
We hear, above the tumult and the noises,
Soft tones of music, like an angel's call.

'Tis well, O friends! We would not turn—retracing
The long, weary years, nor cease our feet, youth back;
Gladly, with spirits freed, the future facing,
We leave behind the dust, foot-worn track.
—*Chamberlain's Journal.*

If we seek for Divine grace as earnestly and watchfully as the grasping miser seeks for earthly treasure, we surely shall not seek in vain.

The Second Commandment.

In the covenant that the Lord made with the people of Israel, in the wilderness of Sinai, the second of the conditions which He required, was that they should not make any image or likeness as an object of worship—that as a Spirit, God shall be worshipped in spirit by his people.

On this command, or condition, H. Clay Trumbull, in the *Sunday School Times*, remarks, that it is "the recognition of a vital truth. Because God is Creator of all, no creation of God can be like God. Because God is a spirit, the human mind can best commune with Him spiritually, without having its conceptions of Him degraded by any image or representation—which at the best must be wholly unworthy of Him."

"In the Egyptian home, from which the Israelites had just come out, images in great variety were the objects of worship. As the covenant people of God, the Israelites were to refrain from the polytheism of their ancestral home in the far East, and from the grosser image worship of their more recent home in the West. And so it must be with the people of God at all times; they must worship only God, and they must worship God without any help from a material representation of the object of their worship.

"As there is still a temptation to give a divided heart to God, so there is still a temptation to seek the help of some visible representation or symbol of God's presence in his worship. The Christian believer does not bow down to an idol, but many a Christian believer thinks that his mind can be helped upward in worship by looking at some representation of his Saviour's face, or at some symbol of his Saviour's passion. But just because God is infinitely above all material representations and symbols, so God can best be apprehended spiritually. Anything coming between man's spirit and God the Spirit is a hindrance to worship, and not a help to it. There can be no doubt that we can best come into spiritual communion with God by closing our eyes to everything that can be seen with the natural eye, and opening the eyes of our spirit to the sight of God the Spirit. This is no arbitrary requirement of God; it is in the very nature of his being and of our own."

WHEN Domi Pedro, [Emperor of Brazil] visited Boston some years ago, he caused much disappointment in the higher social circles of that intellectual capital by declining to join any of their reunions, alleging that it was his purpose to study Boston and its people quietly, by and for himself. It became known, however, that there was one man whom his Imperial Majesty desired to meet, and that that man was the poet Whittier. Years before, some thrilling lines of the poet's (which have for their scene a reach in the vast food of water which the Amazon rolls seawards—a scene therefore in Dom Pedro's own dominions) so deeply impressed the Emperor that he translated them into Portuguese verse and sent an autograph copy of the translation to the poet. He would go to an entertainment if the author of those lines were present. A lady, a leader of society, was equal to the occasion: she secured the presence of Whittier, and then invited all that Boston possessed of intellectual and famous, to meet the Emperor. Her salons were full—Emerson, Wendell Phillips and Longfellow, it is believed, were all there. Upon his arrival, without discourtesy, but with great abruptness, Dom Pedro pushed through the crowd of dis-

tinguished men and women, declining to speak to anyone until after he had been conducted to the further end of one of the rooms, where the humble-minded and somewhat shy Quaker poet was standing, whom, without a moment's hesitation, he folded in his arms, kissed on both cheeks, and clasped to his heart.—*Leisure Hour.*

FROM THE EPISCOPAL RECORDER.

A Remarkable Career.

BY BISHOP CHARLES EDWARD CHENEY.

There has recently been printed, for private circulation only, a modest autobiography—the life of Gurdon Saltonstall Hubbard, of Chicago.

He was born in Vermont in 1802. When not yet sixteen years of age, a native love of adventure combined with a praiseworthy desire not to be a burden upon his father, who had become financially embarrassed, led him to engage in the service of the American Fur Company—a corporation having its headquarters at Michilimackinac, where the two great inland seas of Michigan and Huron mingle their waters. With heavily laden "bateaux," or open Mackinaw boats, stored with every variety of goods to be exchanged for the furs of the Indian hunters and trappers, the little fleet pushed its way from Montreal up the rapids of the St. Lawrence. From three to five miles was a full day's journey. One entire month was consumed between Montreal and Toronto. Avoiding the course around Niagara, and the long trip through Lake Erie, the voyageurs crossed to Lake Simcoe. Beyond Lake Simcoe was a region of swamp and forest, where boats and goods had to be transported overland to one of the rivers flowing into Lake Huron. Here, almost devoured by mosquitoes and gnats, the party were obliged to consume an entire week of exhausting effort in making a portage of six miles. Beyond that point the work was comparatively easy. The Nottawasaga River bore them to Lake Huron, and along the coast they made their way to Mackinac.

This beautiful island, now a frequented summer resort, was then a frontier outpost beyond all the bounds of civilization. A fort, garrisoned by two or three companies of United States troops and a local population of some five hundred Canadian French and Indian half-breeds made up the permanent constituency of the place. G. S. Hubbard states that "there were not more than twelve white women on the island, the residue of the female population being either all or part Indian." Here, during the summer, the traders of the American Fur Company assembled, bringing their valuable collections gained by barter with the wild tribes from all that vast region stretching from the British possessions on the north to the white settlements of the Lower Mississippi, and from the Missouri River to the populated regions of the St. Lawrence Valley. They numbered not less than three thousand. To this large but transient population were added during the summer months at least three thousand Indians. "Their wigwags," says Hubbard, "lined the entire beach two or three rows deep.

Into the strange life of this savage emporium, G. S. Hubbard, then a mere boy, entered with singular zest. At first he was occupied in the counting and assorting of the furs gathered into the depot at Mackinac; but his precocity in business, and intense mental and physical energy, soon made it manifest to his superior officers that he was fitted for the more responsible and difficult duties of a winter expedition,

sent out to traffic with the Indians in their remote forest recesses.

His first winter was spent in the Illinois Valley, which he reached with his trading party by the way of Chicago—then a small military post known as Fort Dearborn. His lonely cabin was located on the banks of the Illinois, some fifty miles below Peoria, which was then called Fort Clark. Here an Indian chief became so attached to him that he adopted young Hubbard into his family in the place of a son whom he had lost a little while before.

In this long winter he learned the Indian language, acquired skill in Indian methods of hunting, became the rival of his savage neighbors in wood-craft, and adopted the usual Indian costume. He says: "My clothing during this winter, and the subsequent years of my life as a trader, consisted of a buckskin hunting shirt or blue capote, belted in at the waist with a sash or buckskin belt, in which was carried a knife and sheath, a tomahawk, and a tobacco-pouch made of the skin of some animal—usually otter or mink. In the pouch was carried a flint and steel and a piece of punk. Underneath my outside garment I wore a calico shirt, breechcloth and buckskin leggings. On my feet neeps—i. e., square pieces of blanket folded over the feet instead of stockings—and moccasins. Sometimes in winter I wore a red knit cap on my head; but I later allowed my hair to grow long, and usually went flowing."

Returning in the spring from his long exile from the society of white men, he was witness of one of those tragedies which are only known where Indian custom holds absolute sway.

An Indian in a drunken rage had killed one of a tribe into which he had married. He had fled, but left word that he would ransom his life from "the avenger of blood" by the fruits of his winter's hunting. The Great Spirit did not bless his efforts, and so, with savage honor, he returned with the opening of the spring to give himself up to punishment. Hubbard thus describes the scene: "Not a murmur was heard from the Indian or his wife and children. Not a word was spoken by those assembled to witness. All nature was silent, broken only by the singing of the birds. Every eye was turned upon the victim, who stood motionless, with his eyes firmly fixed upon his executioner, and calmly received the blow without the slightest tremor. For a few moments he stood erect, the blood gushing from the wound at every pulsation. Then his knees began to quake; his eyes and face assumed the expression of death, and he sank upon the sand."

Another winter was passed by Hubbard in the dreary wilderness of the Muskegon Valley, on the Eastern shore of Lake Michigan. Here, in the depth of a Northern winter, with Muskegon Lake wholly frozen over, this mere boy of seventeen was left in a little log but in absolute solitude for a whole month, while his comrades penetrated the interior on snow-shoes. "Every night a wolf came and devoured the remnants of fish which I had thrown out. I could see him through the cracks of my house, and could easily have shot him, but he was my only companion, and I lay awake at night awaiting his coming."

Space forbids further allusion to the perils of this brave man's early life. The winter in the Muskegon region saw him lost through the wilful blundering of his French Canadian superior officer, while for four days and nights they wandered without food or shelter in snow lying three feet deep on a level.

Later, having returned to his old camping ground in the Illinois Valley, an Indian whom he had offended, came stealthily into the latter's cabin, and from behind aimed a killing blow with his tomahawk at the head of his victim. The alert white man warded off the stroke, pinned the savage to the floor, and choked him till he begged to be allowed to sneak away. His remarkable physical strength is illustrated by his swimming the Kankakee River full of floating ice; by his crossing the Grand River in Michigan by swimming from shore to shore in the month of January; and by his walking from the Fox River, west of Chicago, to Hennepin, on the Illinois River, a distance of *seventy-five miles*, in a single day.

When the Reformed Episcopal Church was founded, he became one of the wardens of St. Matthew's Church, and to the last of his long life retained his interest in it.

For some time previous to his death he was wholly blind. But he bore the sorrow with a sweet and resigned submission to his Father's will. He lived to see the spot where he had camped amid the howling of wolves become a city of three-quarters of a million of souls; and in a good old age, in perfect peace, entered through Christ only, into that city which hath foundations, whose Maker and Builder is God.

Determined to Succeed.—The following is one of the traditions of a manufacturing firm in Glasgow, Scotland. Thirty years ago a barefoot, ragged urchin presented himself before the desk of the principal partner and asked for work as a errand-boy.

"There's a deal o' running to be done," said Mr. Blank, jestingly, affixing a broad Scotch accent. "Your first qualification wuld be a pair o' shoon."

The boy, with a grave nod, disappeared. He lived by doing odd jobs in the market, and slept under one of the stalls. Two months passed before he had saved enough money to buy the shoes. Then he presented himself before Mr. Blank one morning, and held out a package.

"I have the shoon, sir," he said quietly.

"Oh!" Mr. Blank with difficulty recalled the circumstances. "You want a place? Not in those rags, my lad. You wuld disgrace the house."

The boy hesitated a moment, and then went out without a word. Six months passed before he returned, decently clothed in coarse but new garments. Mr. Blank's interest was roused. For the first time, he looked at the boy attentively. His thin, bloodless face showed that he had stinted himself of food for months in order to buy these clothes. The manufacturer now questioned the boy carefully, and found, to his regret, that he could neither read nor write.

"It is necessary that you should do both before we could employ you in carrying home packages," he said. "We have no place for you."

The lad's face grew paler; but, without a word of complaint, he disappeared. He now went fifteen miles into the country, and found work in stables near to a night school. At the end of the year he again presented himself before Mr. Blank.

"I can read and write," he said brightly.

"I gave him the place," the employer said, years afterward, "with the conviction that, in process of time, he would take mine, if he made up his mind to do it. Men rise slowly in Scotch business houses, but he is our chief foreman."—*Western Record.*

Mother's Work.

A chapter of A. M. Diaz's "Bybury to Beacon Street" is full of sound counsel to the young people of the day, and is worthy of wide distribution. The mother of a family, after a hard forenoon's work, has given up to tears, for her girl and boy had gone away leaving their tasks undone, and the burden of the day seemed to be growing greater than she could bear.

Her husband, finding her thus discouraged, inquired into the matter, and came to the conclusion that their children should be made to realize that a part of the household work belonged to them, and not that they were generously "helping mother" when they gave any assistance.

"So, one evening, after Laura had finished her examples, her father asked her to write down all the different things I had to do in the different days of the week." She began to write, her father and Fred prompting when her memory failed.

"The list covered both sides of the slate. 'Husband wrote at the beginning, for a title 'Mother's Work,' and then remarked that it was a good deal of work for one person.

"I help her some," said Laura.

"Yes," said he, "I suppose you call what you do helping her, but that Fred calls what he does, helping her, but after all, you are only helping yourself. Mother eats a small part of the food she cooks, and wears a small part of the clothes she makes, and washes, and irons, and mends. So all this work is not really hers, but only hers to do."

"Then he rubbed out the title, and wrote in its place, 'The Family Work which is called Mother's Work.'

"Now, I should like to know," said he, "why members of the family consider it a favor to mother when they do parts of their own work?"

"For instance, I have noticed that, to get a meal and clear it away, there must be wood and water brought, vegetables got, cleaned and cooked, other things cooked, the table set, dishes washed, knives scoured, and some tidying of the room afterward. Now it doesn't seem right for one person to do all this labor and for other persons to feel that their part is only the eating part. That isn't fair play."

Having thus convinced the children that it was not, indeed, fair play, the father proceeded to allot them a certain portion of the family work for their own doing. Reader—big boy or little girl—profit by the hint, no longer blaming yourself on "helping mother," but honestly assuming the labor which belongs to you.—*Exchange.*

Confessing Sin, but Denying Sins.—Most men are willing to acknowledge that they are sinful. Those who pray are sure to do this in their prayers, and those who do not pray are ready to acknowledge, in a general way, their faults to one another. "Yes," they say, "I know that I often do wrong and make mistakes; I am not what I ought to be; I am a sinful man." But now, on the very day when the man has made this confession, he is confronted by some one in regard to a specific, individual fault or sin. He is kindly but frankly told that he has shown toward some neighbor an uncharitable, harsh and censorious spirit; that he has wronged some one by the utterance of an unfair judgment; that he has shown a blind or unreasoning passion, utterly unworthy of him. Who is so unacquainted with human nature as not to

know that, in the majority of cases, he will resent the arraignment and justify himself? Who has not known men who, in their daily prayers, confessed sin in the strongest terms, and during the entire day denied every fault and sin of their lives by perpetual self-justification? It is easy to make a vague and general confession; it is hard to acknowledge frankly and honestly that, in particular cases, one has acted meanly and spoken wickedly. Thousands of Christians confess their "manifest sins and wickednesses," who constantly exert themselves to deny their individual sins or wickednesses. The former confession is so general that it easily becomes meaningless. For a man to admit in general terms that he is a sinner, involves no particular humiliation, since it is generally admitted that all men are sinners; but to confess specific sins means real humiliation and abasement of soul. Hence, the apostle urges that we "confess our faults" one to another, meaning the acknowledging of particular acts of wrong-doing.—*S. S. Times.*

HENRY HULL, accompanied by three Friends, came to pay a visit to our meeting; his communication was very instructive; particularly cautioning against self-activity, recommending us to be as ready to receive as to give counsel, and to wait reverently for the gentle constraints of the Spirit of Truth. He remarked, also, that diffident minds, to whom this caution least belonged, would be the most disposed to take it to themselves, and thus, he feared, to let in discouragement. He pathetically addressed the youth, calling them into simplicity and early obedience, that they might obtain the inestimable ornament of a meek and quiet spirit.—*Mary Copper.*

Natural History, Science, &c.

Night-blindness.—A correspondent of the *Lancet* directs attention to some remarks published by the *Cologne Gazette* on the confusion, in some night manoeuvres in Russia, resulting from a large number of the troops being affected with night-blindness. The affection is well known to result from imperfect nutrition. The following account, given by Dr. Meissner, sufficiently demonstrates the nature of the affection:

"In a small town of Podolia more than one hundred cases of the complaint occurred. It was the time of the Greek fast, when the inhabitants eat no animal food, but live chiefly on bread and groats prepared with oil. When Easter came they ate the liver of a blackcock or black swine, and were cured in a few days. Meissner examined, both by day and night, many of those affected, but perceived nothing particular in their eyes, except great immobility of the pupils. They maintained they were in perfect health, and would recover their vision in a fortnight. Two of those he examined began to eat liver and animal food, and saw as well as ever on the third day. By the following Sunday all those affected were completely cured. The affection occurs sometimes in nursing women who are ill-fed, among the poor."

Rose Plantations.—Between Tatar Bazar and Adrianople, the horse-man following the post-road, rides mile after mile through enormous rose plantations, blazing with scarlet and crimson, and giving out odors wild-high as over-powering as that of the ottar distilled from their gorgeous blossoms.

The uncounted millions of roses grown in Roumania are not merely turned to account by

the rose-farmers for sale to the preparers of that powerful essence, which, enclosed in long, slender, carefully stoppered bottles, lettered with gold, is still so popular throughout the East, although it has quite gone out of fashion in this country.

Many tons' weight of their leaves, gathered and packed while they are fresh fallen, are converted into rose jam, one of the exquisite conserves, which under the generic name of "dulchaz," are so admirably confectioned in Turkey, Greece and Rumania, and constitute a leading feature in the light but toothsome refectory offered to the casual visitor in every well-to-do Oriental household.—*Viek's Magazine.*

A Giant Among the Bell-flowers.—A magnificent species of Bell-flower, discovered in Bokhara, has been introduced into the European gardens. It produces a stem five feet high, along which are arranged the flowers—huge bells, more than six inches in diameter, of a pale lavender color.

Loss of Life from Snake-bites.—The returns for 1886 show that 23,134 human beings died from snake-bites in India, while the number of cattle killed was 2,514. It is also reported that 417,596 snakes were destroyed, and that 25,300 rupees were paid by the Government as rewards for their destruction. The mortality from snake-bites in Bengal is much larger among women than among men. They are usually bitten in the early morning, or at dusk, when going out of their huts. During the rainy season, when nearly all the rice-fields are flooded, the cobras, &c., take refuge on the higher plots of land, where the villages are built.

California Woodpeckers Storing Dead Trees with Acorns.—A correspondent of *The Independent* states that this practice is not followed by the Woodpeckers for the sake of using the acorns for food, for they do not eat them—but for the sake of the worms which will be after a time found in them. He adds: "Several years ago I lived for a time near the coast, where they filled the limbs of dead trees so full as to cause them to break off with the added weight."

Austrian Superstition.—The Burgomaster of a village in Galicia has instituted a prosecution before the criminal court, against a man for having, "by his malicious sorceries and incantations, caused a hail-storm to devastate the fields."

Experiments with Birds.—C. C. Abbott relates the result of some experiments designed to throw light on the differing mental qualities of some of our small birds. He says:—

"A small mirror placed near a nest produced conflicting emotions. The bird was usually indisposed to leave her nest, and yet was much annoyed by the apparent intruder. I do not think in any case the bird learned to recognize it as but a very vivid shadow of itself. Sparrows and warblers were rendered timid, and expressed their alarm so frequently as to keep their mates near by, but in no instance was the supposed intruder assaulted. As I expected, the case was very different when wrens were tested. These immediately became very angry, and finally an over-excited house-wren pitched headlong at the supposed intruder, with the doubly fatal result of killing itself and breaking the glass. Subsequently, taking a larger glass, that was thick enough to withstand ordinary attacks by wrens or larger birds, I placed it on the ground, and soon found that it was visited by the water. Chickens tried in vain to drink, as did small birds; and none seemed to be surprised at seeing their own reflections. It would

seem, from this, that such reflection in water is a common occurrence, and they gave it no thought, but recognized a difference when they found the glass in a perpendicular position, near their nests. Did they realize that in this latter instance it could not be water? If so, birds have gotten so far as to have some knowledge of physics; which, after all, is not so much to be wondered at, when they are, all of them, excellent mechanics.

Experiments of another character were as follows: I placed a series of short pieces of woollen yarn, fastened together at one end, near the tree, containing a partly constructed nest of a Baltimore Oriole. These yarns were red, yellow, purple, green and gray. An equal number of strands of each color were thus offered to the orioles as building materials. I purposely placed the red and yellow strands on the outside of the tassel-shaped mass, so that these would be first taken, if the color was not objectionable. To my complete surprise, the gray strands only were taken, until the nest was nearly finished, when a few of the purple and blue yarns were used. Not a red, yellow, or green strand was disturbed.

Here we have an instance of the exercise of choice on the part of a bird, which is full of interest. The woollen threads being otherwise identical, it was the color only that influenced the choice of the birds; they realized that red or yellow yarns would render the nest conspicuous, although well protected by the foliage of the branch to which it was attached. Why the green threads were not taken I cannot imagine. As a result of this experiment, I anticipated that the orioles would reserve the brightly-colored yarns for the lining of the nest, and the gray and green for the exterior. This was a result obtained two years ago, when I tried a similar experiment; but the use of red yarn as a lining may have been merely accidental.

Items.

The Decline in the Observance of the First-day of the Week.—The *Christian Advocate* says this decline in this country has been in the following order:—"First, increase of travel, railway trains, steamers, and stages; then excursions to suburban places, excursions to mountain regions and summer hotels, several hours' distant; next 'Sunday papers,' with special trains to carry them through the country. Then amusements come in, first as 'sacred concerts,' and then in the cities whose population is largely foreign, opening the theatre, minstrel shows, and other things of the kind. More recently political and moral lectures are held, where platforms are read and expounded, and party organizations perfected.

All these things make a great deal of work, but after this comes general business. On the Continent of Europe, along with the readiness to be amused on Sunday, goes also readiness to work. Referring to this latter point, the writer recently took the above quotation some months ago, says:

"It seems difficult, if not impossible, to enforce a rule which allows people to play lawn tennis, or go to the theatre, or sit in beer-gardens, but forbids them to work in factories or keep their shops open. The experience of Germany, which has recently been collected, though in a somewhat imperfect way, by a Prussian official in a report which we took the greatest deal of instruction on this point. From returns obtained from thirty out of thirty-five provinces, or departments, containing 500,156 manufacturing establishments and 1,582,591 workmen, it was found that 57.75 per cent of the factories kept at work on Sunday. On the other hand, the same returns showed that 919,564 rested a larger number of days. As regards trade and transportation, it was found that in 29 provinces (out of 35), of 147,318 establishments of one sort or another, employing 245,061 persons, 77 per cent were open on

Sunday and 57 per cent. of the employees worked on that day."

"It is certain," says the *Advocate*, "that the Sunday amusements are foes to working-men; to homelife, which they tend to break up; to getting a competence, by the temptation which they furnish to extravagance; to the increase of knowledge, by breaking up the habit of reading on the Lord's Day; to temperance, by the opportunities they create for drinking; to religion, by using the day which God set apart for his worship; and to refinement and social improvement, by withdrawing the workman and his family from the elevating society of Christian congregations."

Gradually Undermined.—The moderate drinking of intoxicating liquors often produce no visible effect for many years. The drinker is prosperous in business, respected by the people, and seemingly in good health. There comes a time when changes take place so rapidly in him as to surprise all. Such a case was brought before the Police Court in Cleveland, Ohio, a short time ago. The defendant was Otto Pandan, who so recently as two years ago was a respectable, well-to-do citizen, and a civil engineer of ability. To-day he is a typical drunkard. On his first appearance in Court he was well dressed. With each succeeding visit his appearance was more and more dilapidated, until now he resembles an old sot. By the moderate use of beer and other liquors his appetite grew, and his resisting force diminished, until he wholly lost self-control. This is the history of many respectable men who, on their first appearance in Court he was well dressed. At fifty they are seen drunk; and from fifty-two to fifty-six they become toppers. Occasionally their ruin is delayed until seventy, and an honored family has then the burden and disgrace of a once venerated parent and grand-parent transformed into a bear-eyed, driving sot.—*Christian Advocate*.

Testimony Against Licentiousness.—Friends of Springfield Monthly Meeting, Guilford Co., N. C., having been stimulated by a murder committed by a mob in that County, adopted and directed to be printed, on the first appearance in Court he was well dressed. The following testimony against lawless violence:

"In view of the sacredness of human life and the dangers to society arising from mob law, we, of Springfield Monthly Meeting, N. C., feel called upon to enter our protest against the same.

The number of persons who have been put to death without due process of law in our State and nation recently, shows that men place too light an estimate upon human life and have too little regard for the law.

"We therefore call upon all Christian people and lovers of good government, to join with us in using their influence to prevent any further such violations of law."

Roman Catholic Contributions for Church Purposes.—In an article on the Roman Catholic Church in the American, written for *The Independent* by a Catholic layman, a complaint is made of the heavy burdens laid upon the members of that Church, many of whom are poor, by the magnificent and costly buildings erected for places of worship, &c. "The poor are heavily, I might almost say cruelly taxed to pay the heavy mortgages on those churches, and with little hope of reprieve. In the case of 'a Catholic Church,' called St. Stephen's Church, in New York City, lately occupied by Dr. McGlynn, announces that although the debt on it now amounts to \$140,000, he is about to increase it by \$60,000 more, in order to put up new school buildings. The article referred to says:

"The amount of money obtained from the Catholic poor will never be known in this world, and is very little suspected. A priest, at his own will and pleasure, announces that a certain sum of money will be required weekly or monthly from each person; and wo the unhappy individual if the demand is not met promptly. We know churches where the collections are demanded and obtained at each mass on Sunday from a patient though often indignant people.

"As in the case of Dr. McGlynn's successor, each new priest must do some new work to get credit for his zeal. But all this is done at the expense of the

poor of his parish. The priest gets all the honor and the poor get all the burden."

Deaconesses.—The Reformed Presbyterians have been in controversy for some time on the question of ordaining deaconesses. The question recently came before the Synod, and it decided by a vote of 93 to 24 that the ordination of a woman as deacon is in harmony with the New Testament and the constitution of the Apostolic Church.

United States Pensions.—The Annual Report of the Commissioner of Pensions for 1888, gives the total number of pensioners on the rolls at the close of the fiscal year, 452,557. During the year 69,252 names were added to the list, besides increase of pension in 45,716 cases. The number dropped was 15,730. The amount paid during the year was nearly \$79,000,000. There are still left 87 revolutionary pensioners, the widows of men who served in that war.

The total amount paid for pensions since 1861, has been \$263,086,444.

The Birds' Advertisement.—The *Journal of Geneva*, a Swiss newspaper, contained, during a severe "cold snap" last spring, the following advertisement:

NOTICE TO THE CHARITABLE.

"On account of the heavy snow-fall and the extreme cold, the resident birds and birds of passage in Geneva make this pressing appeal to a generous public. They earnestly request that the reader will place, in some place not likely to be covered with snow, a plate containing seeds or a modest provision of bread crumbs. In return for this favor, they hereby engage, as soon as the warm weather returns, to wage unrelenting war against destructive insects of every variety."

This pathetic advertisement was very generally "answered," and the birds of Geneva yielded very well as long as the snow lasted.—*Youth's Companion*.

THE FRIEND.

THIRD MONTH 13, 1888.

We do not doubt that many of our readers are interested in the efforts now being made by the Committee set apart by our last Yearly Meeting to carry out the concern which was felt by that body, for the strengthening of its members in the performance of their religious duties, and for the spread of the principles of the Gospel.

In the performance of the services entrusted to them, the Committee subdivided itself into small companies, assigned to the care of each of the Quarterly Meetings, accordingly as the members felt their minds drawn. These sub-committees, generally in connection with different operating committees, appointed by the different Quarterly Meetings, endeavored to feel out what it might be right for them to do. A large part of their services thus far has been in the attendance of different meetings, especially some of the smaller ones, by one or more of their number at a time. But the way has also opened, to an extent probably scarcely anticipated by some of their number, to hold meetings of a public character in various places, in which the spiritual truths of the Gospel of Christ have been set forth; and misunderstandings as to the position of the Society of Friends, have been removed.

Occasional notices of some of these public meetings have appeared in our columns under

the head of "Items." Three were held, on the afternoon of First-day, Ninth Mo. 23rd, one at Uchelman in Chester County; one at Wrights-town in Bucks County; and one at Newtown in Camden County; the latter being intended more especially for the colored residents of Camden.

In that at Uchelman, it may thankfully be acknowledged that there was a continuance of that Divine favor which has attended the similar meetings heretofore held under the concern which the Yearly Meeting's Committee had been appointed to carry out. Such occasions are seasons of trial of faith to those who feel the weight and responsibility of them; for they feel that unless the Lord condescend to help the opportunity, all human efforts will be in vain to promote the religious welfare of the community, or to preserve unimpaired the reputation of the Society of Friends as a body of spiritual worshippers. When his presence and power are manifested by the glowing of solemn feeling over the minds of those assembled, it relieves the anxiety which had been felt, and confirms the belief of those who were instrumental in the appointment of the meetings that the step taken had been in accordance with the Divine will.

Among the subjects brought to view in the vocal exercises, was the necessity of knowing the power of Divine Grace to so operate on the mind as, through man's submission thereto, to bring him into fellowship with Christ, the Saviour of those who walk in obedience to his light; in accordance with the Scripture declaration, "If we walk in the light, as God is in the light, we have fellowship one with another; and the blood of Jesus Christ, his Son, cleanse us from all sin."

Earnest were the appeals made, especially to the young, to heed the voice of their Saviour, which would teach them to forsake everything that is evil, and lead them in the paths of virtue, happiness and peace.

So far as could be ascertained, the meeting was held to the general satisfaction of the people of the neighborhood who attended. At its close some tracts and small treatises setting forth the religious doctrines of Friends, were distributed, and seemed to be gladly received; and on the whole, it is believed that the opportunity was one which tended to the promotion of the cause of Truth.

The two other public meetings held on the same afternoon, were both well attended; and were comfortable and satisfactory meetings. In addition to these meetings of a more public character, at least nine of the usual meetings of Friends held on the morning of the same day, were visited by different members of the Yearly Meeting's Committee. Several of these are among the very small meetings, the encouragement of whose members was an especial object of concern to the Yearly Meeting.

It is devoutly to be hoped that the labor into which Friends have been led (we trust by the Head of the Church) will not be without fruit—but that a knowledge of our doctrines and testimonies may be more widely diffused through the community; that others may be led into a fuller appreciation of the spiritual nature of true religion; and into an increased willingness to submit to the government of Christ, as He reveals his righteous law in their hearts; and that his kingdom may spread among men. And that our own members may increasingly see and feel the dignity and purity of their profession, and become more and more concerned to be living examples of the effect of the heart-changing power of Christ, so that their whole course of life may speak to others in the inviting lan-

guage, "Come and have fellowship with us, for truly our fellowship is with the Father and with his Son, Jesus Christ."

The Post-office address of Lama Otis Stanley, recently appointed an Agent for THE FRIEND, is Hadley, Hendricks Co., Indiana—no Danville.

SUMMARY OF EVENTS.

UNITED STATES.—In the U. S. Senate, on the 3rd inst., Senator Allison, from the Committee on Finance, reported the substitute for the House Tariff bill, and it was placed on the calendar and ordered to be printed. The House of Representatives, on the 27th inst., and the general debate on the measure was opened by Allison in support of the bill.

The President has approved the Sundry Civil Appropriation bill.

The conferees on the General Deficiency bill have reached an agreement on all points in dispute.

During the laying of the corner stone of St. Mary's Polish Catholic "Church" in Reading, Pa., on First-day last, part of a temporary floor laid upon the wall of the building, which had been carried up one story, gave way, and about 200 men, women and children were precipitated to the ground, fifteen to eighteen feet below. About 148 persons were injured, 23 dangerously.

The Collector of Customs at San Francisco has given formal notice that no Chinese return certificates will hereafter be issued, and the Chinese Bureau will remain closed to the public from date.

A telegram from Chicago says that city "is to have Libby Prison after all." A new company has been organized, and has applied for letters of incorporation. The office of the building has already been made, and a new company are now negotiating for a site on which to place it. The building will be moved to Chicago in the spring, and will be fitted up as a permanent military museum.

On the 1st of the present Month there was a net increase of \$23,477,123 in the circulation, and a net decrease of \$1,793,770 in the money and bullion in the Treasury. The total money and bullion in the Treasury is \$579,580,796, and the total circulation \$1,384,390,280.

On the 25th inst. the Yellow Fever at Philadelphia, had 852 inmates on Ninth Mo. 30th, and 1115 on the same date last year. The Directors attribute the falling off to the decreased number of saloons.

The yellow fever in Florida is decreasing, the number of new cases for the week ending on the 24th inst. being 402 in Jacksonville, and 29 in Decatur, Alabama; and the number of deaths 31 in the former and 2 in the latter place. Total number of cases and date in Jacksonville 3208, and total deaths 295.

Deaths in this city last week numbered 344, an increase of 15 over the preceding week, and a decrease of 28 as compared with the corresponding period last year. Of the foregoing, 60 died of consumption; 21 of marasmus; 15 of old age; 13 of paralysis; 13 of typhoid fever; 13 of convulsions, and 14 of diseases of the heart.

Markets, &c.—U. S. 4½'s, 108½; 4's, 128½ a 129½; currency 6's, 121 a 130.

Cotton was dull and barely steady on a basis of 10½ cts. for middling uplands.

Flour continued very strong, and holders again put their prices at 50c per barrel on export shipping orders. Stocks were light, and jobbers held off. Sales of 1050 barrels low grade springs, for manufacturing purposes, \$5.50; 125 barrels Minnesota patent at \$7.75; 125 barrels Pennsylvania, straight, at \$5.75, and 250 barrels of the same at \$6.00. Rye flour was scarce and firm at \$4 per barrel for choice, with some brands held higher.

Grain.—Wheat opened 1c higher, but quickly re-acted under more advices from other grain centres, and fell to 1½c below at 2½c below the rates of the 6th of the Month. Cash wheat declined 1½c, for all grades, except No. 1 prime red, which ruled firm under scarcity. Rye was scarce, 72c, being bid for No. 2 Pennsylvania. Corn options were neglected, and cash options were dull and declined 1c to 2c. Oats were quiet and prices closed weak. Extra, 51 a 52 cts.; good, 41 a 5 cts.; medium, 4 a 4½ cts.; common, 3 a 3½ cts.; fat cows, 2 a 3 cts.

Sheep were active for the good grades, while common stock was neglected. Extra, 5 cts.; good, 4½ a 4½ cts.; medium, 4 a 4½ cts.; common, 2 a 3 cts.; lambs, 3 a 6 cts.

Hogs were active and firm. Extra Chicago, 91 a 92 cts.; Michigan, 9 a 9½ cts.; State, 8 a 8½ cts. Milch calves were active at 3 a 63 cts.

Milch cows were fairly active at \$25 a \$60.

FOREIGN.—Up to the 8th instant no trace of the murderer in the Whitechapel cases had been discovered by the London police authorities.

The Currency Commission's reports are ready for presentation to Parliament. The members are equally divided. Six, including Lord Herschell, Thomas Farrer, John Lubbock and Courtney, sign a dissent supporting the gold standard. The other six, including Henry Chaplin and Milner, advocate the adoption of the bi-metallic standard in a modified form.

A biography of the late Emperor Frederick of Germany will be published in London shortly. It will relate solely to his domestic life. It is believed that his wife is the author of the work. Her name, anyhow, is appended to the preface. The profits derived from the sale of the book will be devoted to a hospital for the treatment of diseases of the throat.

Paris, Tenth Month 2nd.—Owing to the increase of immigration, it is feared, President Carnot has signed a decree regulating the residence of foreigners who have settled or are about to settle in France. The decree imposes upon immigrants the obligation to furnish a declaration with documents to prove their identity. The declaration must be such a nature as not to evoke protests founded on the engagements to which France is bound by convention, as a fresh tax is to be levied. The new regulations will not affect those persons entering France for business or pleasure.

Professor Pasteur has received advices from Sydney, N. S. W., to the effect that his method for the extermination of rabbits has been tried experimentally on Rhode Island in Port Jackson Harbor, and has proved a perfect success.

London, Tenth Month 3d.—A drought prevails throughout all France. Several individuals, and a famine is threatened on the peninsula of Kattywar.

Calcutta, Tenth Month 3d.—The Rajah of Sikkim has surrendered and the British have occupied Tumlong, the capital of Sikkim. The Chinese Envoy at Chassa has sent a letter to General Graham announcing that he is en route to Gnatong to arrange peace.

From advices received by the steamer Belgic, which has arrived at San Francisco, it is learned that the whole of the new embankment of the Yellow River at Chiang Chou, begun in January of the present year, is not equal to over \$9,000,000, has been completely swept away by the recent flood. Of the 8000 lineal feet of river wall recently completed not one inch remains, and the waters are pouring through the immense gap into the sea. From 800 to 1000 laborers, who were on the bank, were swept away and drowned.

New cases of small pox have been reported in Toronto, Ontario, and the local health officer advises the quarantining of Buffalo, so far as Canada is concerned, in a epidemic of small pox prevails in the lately invaded regions of Mexico.

CORRECTION.—The decease of William Wright (noted in No. 8 of THE FRIEND) occurred on the 20th of Ninth Month, not Fifth Month, as erroneously stated.

NOTICES.

THE SOCIETY FOR HOME CULTURE has begun its work for the term of 1888-89. Application for membership or circulars may be made to

MARY P. ELKINGTON, Secretary,
325 Pine St., Philadelphia.

DEED, at his residence, near West Branch, Iowa, on the 21st of Seventh Month, 1888, REBECCA ANN, wife of Lindley Holloway, in the 40th year of her age, a member of Hickory Grove Monthly and Particular Meeting of Friends. She was strongly attached to the religious principles of Friends, and desired that her children might be brought up under the influence of the Society of which she was a member. She bore a lingering illness with much fortitude, and near the close of life remarked to one of her friends in allusion to her hope of the future, "Surely there is good pasture prepared for me?" and the peaceful calm that over-spread the countenance after death, seemed to the beholders as an earnest of rest attained by the spirit that had flown.

FOR "THE FRIEND."

Incidents and Reflections.—No. 170.

SENSE OF IMPENDING DANGER—TRUST IN
DIVINE PROTECTION.

When Hannah Field, from America, was on a religious visit in England, two Friends accompanied her from Sheffield to Barnsly. After an evening meeting there, urgent business required their return home that night. Hannah Field, hearing of their intention, endeavored to dissuade them from going, and on their pleading the necessity of it, said, "Well, friends, if you do it I have a strong apprehension that you may be robbed on the way. You had better wait till to-morrow morning." But, being two together, and having good horses, they nevertheless concluded on going. On parting from them she said again, "I shall be very glad if you escape being robbed." They had gone about half-way to Sheffield, riding near one another, in earnest conversation on some interesting subject, when, suddenly, a man sprung from the roadside, to take hold of one of the bridles, while others behind, also tried to seize the horses, and another man, armed, was drawing near. The Friends so quickly put their horses at full speed, that the man who had seized the bridle was thrown on one side, and those behind led go their hold. A shrill whistle, answered by another right before them, increased their sense of danger, but they had no other course than to go forward, which they did at full gallop. The night was dark, and they got home safely.

The same power that at times gives to his servants a sense of impending danger, at others gives them a confidence in his protecting care. When Stephen Grellet was in Italy, in 1819, at a time when the country was much overrun with banditti, an order was sent to him by the military commanders to furnish him with soldiers to protect him on his way to Naples from the numerous highway robbers. To this he replied, acknowledging the civility of the friend who furnished it, and saying that he placed his confidence in the saving power of Him in whose service he was engaged, who is the Captain of salvation to all who put their trust in Him—adding, "should He permit me to fall a prey to the hands of unrighteous men, I submit to his sovereign will."

When about to return to America, in 1820, he went on board a vessel at Liverpool bound

for New York; and on sitting down quietly in the cabin, he says, "I felt sweet peace there. It seemed to me like a little sanctuary, and now on the eve of my return home, the gracious promise made at the time of my departure from America was sweetly revived, 'Verily my presence shall go with thee, and I will give thee rest.'" He reached New York in safety.

In 1814, the same Friend felt that his service in Europe at that time was fulfilled, and hearing that there was a ship ready to sail for New York to exchange prisoners (for it was then a time of war between England and the United States), he obtained liberty to sail in her. The vessel was reported to be unseaworthy, so that he was "introduced into deep exercise and close searching of heart, to know if it was indeed right to embark" in her. But feeling a trust that she would convey him safely to America, he was favored with "a sweet calmness and peace of mind in the prospect of going by her." The voyage was a boisterous and uncomfortable one, and they were at times exposed to much danger, and shortness of provisions, but they reached New York without any serious damage. Of his own feelings during this time of trial, Stephen Grellet says: "At seasons when violent winds and flaming billows assailed our very frail and shattered vessel, and my fellow-passengers saw no possibility for us to escape a watery grave, this gracious promise, 'Thou wilt keep him in perfect peace, whose mind is stayed on Thee, because he trusteth in Thee,' was revived. Thus did my gracious Lord uphold me, and deliver me; forever adored and praised be his holy name."

The danger from robbers, both by land and sea, to which S. Grellet was exposed in Europe, during the unsettled times in which he journeyed there, was by no means imaginary or slight. His Journal contains frequent allusions to it. When crossing the Apennines in Italy, he mentions that on that day, several persons were plundered by them, "but we saw nothing to disturb us." The next day, he records, "We were favored this day also not to meet with robbers. Some of the people where we stopped to refresh our horses seemed to marvel how we had escaped them; but I knew to whom I am indebted; the Lord is the Almighty protector of those who put their trust in Him, blessed for ever and ever be his holy name!" After passing from Naples to Rome he makes the record, "Through the Lord's merciful preservation, I have again escaped falling into the hands of banditti, which abound on this road, notwithstanding the severity of the laws against them. Every few miles I beheld the horrible sight of human flesh hanging on posts by the sides of the road, near the places where murders have been committed, giving evidence that they have been many. How often in these my journeyings, do I feel as if my life was offered up; day after day, and night after night, I know not but that I may fall a prey to the hands of unrighteous and wicked men; but very good and gracious is my blessed Lord; how precious is the sense of his Divine presence!"

Does not this experience remind the reader of the language of the Psalmist, "The Lord is my light and my salvation; whom shall I fear? The Lord is the strength of my life, of whom shall I be afraid?"

On one occasion, when travelling in Germany, Stephen Grellet met with a very narrow escape. He was travelling in the night in a sleigh with four horses, when a robber sprang from behind a tree to take hold of the horses' heads, whilst the others were coming by the side of the sleigh. But the horses being spirited, and the driver giving them a touch of his whip, they sprang forward, threw off the man on one side, and they were soon out of reach. Although during those perils he daily felt his life to be in jeopardy, yet at seasons, he says, "I am comforted in the belief that the Lord will not suffer anything to befall me, but what He will give strength to endure, and condescend to sanctify to me."

When among the islands of Greece, in 1819, on his way to the Island of Tinos, he records the following adventure: "We had proceeded only a few hours toward that island, when we met a vessel, the crew of which told us that last night they were chased by pirates, in two large row-boats, full of men. They had fired several times at them, but their vessel sailing well, had enabled them to escape. This was unpleasant information; but as it was now noon, we hoped to escape them. As we were going between the two islands, Andros and Tinos, we discovered at a distance a row-boat, which we thought might be a fisherman, and we kept on our course; but the wind dying away we saw two other boats join it and come towards us. Our captain soon knew them to be pirates of the worst kind, who destroy lives, sink the vessel, and carry away only the plunder. We were very near an inlet on Tinos, but there was no wind, and the boat too clumsy to be acted upon by our oars. Meanwhile the pirates had come very near us. It did not appear that we could escape their merciless hands, when He who commands the wind and the sea, and they obey Him, caused the wind to blow from the very direction which took our boat, first as the flight of a bird, right into the inlet of the island, where the pirates dared not venture. Had not the Lord thus in mercy interposed, a few minutes more would probably have ended our mortal lives. Surely we have cause to bless and to magnify his adorable name! Our Greeks appeared to be sensible of the wonderful escape." J. W.

MANY persons seem to think that the acknowledgment of their faults in a large measure excuses those faults. But the habit of making such acknowledgments of a fault without the concurrent effort or desire to correct that fault, is more likely to increase the evil tendency than to decrease it. When a man has taken pains to ascertain just where he is in error, he has turned his face toward the correction of his error. But his is a fatal position if just then he takes no steps in the direction of his new facing.—Selected.

FOR "THE FRIEND."

A Vacation Across the Atlantic.

(Continued from page 88.)

The House of Lords is a large rectangular hall, with a high ceiling. Both walls and ceiling are magnificently adorned with splendidly carved dark-colored wood. Elaborate and expensive stained glass windows admit a soft light on the scene below. A small space at one end is reserved for strangers. At the far end is the throne; and I should think the Queen would feel herself lost if she ever sat down on the ponderous chair. Right in front of the throne is a long, sofa-looking sort of a seat, called the woolsack, on which the Lord Chancellor sits, he being the presiding officer of the House. In front of him, in the middle of the room, are some large tables, piled up with books and papers, intended for the use of the members. On either side of the tables, facing each other, are the raised benches on which the Peers sit. The party in power always occupy one side of the house, and the opposition face them on the other side.

The members were engaged in a debate about a Scottish university, and but little of it was comprehended by me. The Lord Chancellor wore a gown, and had a tremendous wig falling down over his shoulders. Imagine the U. S. Vice President presiding over the Senate rigged out in that style! Every once in a while he would get up and read in a mumbled tone out of a large book he held in hand. Lord Salisbury, the Prime Minister, is a thoughtful looking man, with a bushy, sandy beard. The members generally looked like any ordinary well-fed, well dressed company of gentlemen. Hereditary legislation ought to be a thing of the past; and the Peers are beginning to find it out; and to save its waning and threatened power, the House of Lords is now considering a bill which is intended to debar from its deliberations incompetent members.

The hall of the House of Commons is also very beautiful, but is finished in lighter woods than the upper house. Its general arrangement is similar. The Speaker also looks very wise, and, like the Lord Chancellor, he doubtless is so. They each get enormous salaries for their services. In both houses the members sit with their hats on; and as they have no desks, have to write and take notes on their laps. When they are approving of any speaker's remarks, it sounds amusing to hear them call out, "ear," "ear." They mean "hear," "hear." Altogether they are a tolerably solid looking body of men; but I was disappointed in not seeing either sturdy old Gladstone or Parnell.

Ancient Westminster Hall adjoins the House of Parliament. It was built seven centuries ago, and many of the greatest seces enacted in English history have occurred within its massive and venerable stone walls. The arches that uphold the roof are 600 years old, but are in perfect preservation, being made of a wood that will not decay. How often, I thought, have these old arches looked down upon sights of revelry or suffering, and how often have they reverberated with sounds of royal mirth and human eloquence. If they could but speak, I think they would tell us that man's life seems but a little span as the generations come and go, and that his pride should count as nothing, inasmuch as the works of his creation survive centuries after he himself has mouldered in the dust.

Sixth Mo. 22nd.—Yesterday I came over to Liverpool, and by three o'clock was on the ship,

ready to start; we did not, however, start until after seven o'clock, although advertised to leave at the former hour. Soon after dinner we worked out into the Channel; and after the excitement and delay of getting off, I was glad enough to seek sleep in my hard and narrow bunk.

There are several young Englishmen in the cabin, who are going out to the United States to seek for business openings. They are nice, bright young fellows, with health, strength, ability, and some have a little capital, and they will doubtless make good citizens. Forward, in the steerage, are a lot of Polish Jews—and a more dirty and starved lot it would be difficult to imagine. There are also in the steerage the usual quota of Irish and German people. The former will look after our politics, and the latter will doubtless help to destroy the quietness of our American First-days. It is a pleasure to again meet the officers with whom I became acquainted on the out-bound voyage. The ship looks very natural and smells exactly the same. Why is it that ships have to smell so dreadfully bad? An abnormally sensitive nose is a sure indication that the first symptoms of seasickness are at hand.

28th.—We have had three days of the most disagreeable weather I have ever had out on the ocean; and are now two days delayed on our trip thereby. This is most unseasonable weather, and instead of the summer sea I had hoped to enjoy I have been knocked around with winter-like storms. For that matter, one incessant train of fog, clouds, rain, blow and gale has been my portion since leaving New York; and I shall be thankful to get into a more genial climate. I have enjoyed just two sunny days since leaving home. In London they say that the sun shines on an average two and a half hours out of every twenty-four hours, and from my experience I judge that to be a liberal estimate.

The last three days have been very severe. One cannot walk anywhere without danger of getting pounded with something flying in an opposite direction; and the arms and legs actually are sore with unusual exercise. When you get up in the morning you have to dodge your own possessions, which are viciously flung at you by Neptune in your own state-room; and the other morning, a perfect baptism of water on my unprotected head, hurried me out of my bunk quicker than I ever yet accomplished that feat. At the table you eat from one plate at a time, carefully holding it so as to keep its precious contents from sliding into the lap; and when you want a drink of water, you get the steward to hand it to you from the rack overhead, and just as quickly have him to replace it. I believe the sensible ones are those who have staid in bed the past three days, yet even they must be tired of being wedged into position during all that dreary time. Those who attempt to run around the ship can get into few places, for tons of water perpetually sweep over decks and make it dangerous to be anywhere except below. Down in the cabins the noises one hears are terrific. The whistling of the wind through the rigging, the huge slaps of the angry waters against the ship's sides, the labored thumps of the engine, the whizz-z of the screw, the voices of men loudly trying to be heard above the universal din, and the occasional smashing of plates and glass in the saloon—all combine to make a storm at sea a tiresome and disagreeable experience. Meanwhile the big vessel still dig its nose down as if intending to seek the bottom of the ocean; then she suddenly will

commence to mount higher and higher, staggers an instant under the vicious blow of a huge wave, then will poise a moment on its crest, and once more will sink down into the trough of the sea. So we keep up the endless tossing; and I feel like giving up the ocean now and forever, for it has become so tiresome that I can acknowledge that an ocean voyage may indeed be a dismal failure as a vacation.

(To be concluded.)

FOR "THE FRIEND."

The Kingdom of Heaven.

If I understand it, the Kingdom of Heaven is as old as Adam. But he, by transgression, fell from its controlling power, and became subject to the power of Anti-christ—the deceiver: who has ever since ruled and reigned in the hearts of the children of disobedience. So, now we have two opposing kingdoms before us, the kingdom of this world, and the kingdom of our Lord. And we have the privilege to become subjects to whichever kingdom we yield ourselves servants to; to whosoever king we will; whether of sin unto death or of obedience unto righteousness and life.

When man began to multiply and fill the earth, each nation wanted a temporal ruler of their own choosing to rule over them. And as sin and evil had been suffered, through disobedience, to enter the world, and the hearts of the children of men, the different nations in selecting their rulers, had to make choice of such men as were largely in the mixture of good and evil—some more, and some less. And as they had left the peaceable reign of the Kingdom of Heaven under which they were first placed, wars and rumors of wars soon prevailed; sword often lifting up sword against nation, causing lamentation and woe.

But when the prophecies concerning the long-expected Messiah were fulfilled, He came to his own, but his own as a nation received Him not. Yet the government was designed to be upon his shoulders; and of the increase of his spiritual government and peace there was to be no end. But He did not come in the outward pomp and splendor that they were expecting. He did not come as a temporal king of the Jews, to deliver them from their outward oppressors. But the kingdom that He was to set up was to be a spiritual one; the deliverance was a redemption from sin; the triumphant reign and kingdom was victory over spiritual death. And the blessings of his government were holiness and eternal life; and the Church, which He was to be head of, was to be composed of such as are gathered out of every nation: composed of all, whether Jew or Gentile, who embrace the promises of God, through that faith which works by love to the purifying of the heart.

But the Jews, and many of the disciples, as well as others, were looking for his coming from a worldly stand-point. They were trusting, as two of his disciples desponding said after his resurrection, that it had been He which should have redeemed Israel. But He told them that his kingdom was not of this world; if it were, "then would my servants fight, that I should not be delivered to the Jews." And He taught them to pray that his kingdom should come, and his will be done on earth as it is done in heaven.

And has not his Kingdom come, and is not his will done by such as are under the influence of his ruling power, and are governed by it? So we need not go after nor follow such as are saying, "Lo, here is Christ, or lo, He is there;" for the Kingdom of Heaven is within us. And if we have not the Spirit of Christ in us, we are

none of his. So Christ within is our hope of glory.

But when we assemble to worship God in spirit and in truth, are we not, too many of us, looking for something outward? And by forsaking Him, the fountain of living waters, are we not striving, in our own wills and strength, to hew out a resemblance, which proves to be nothing better than a broken cistern that can hold none of the water of life? But which proves that we have forsaken the living fountain, and become like the Jews, and like many of the denominations around us, too outward in our views and practices. We profess to be a spiritually-minded people, and to worship God in spirit and in truth. But how does our practice correspond with our profession? We profess to be ruled in our religious matters by the King of Heaven; and to worship the King eternal, immortal, invisible. But are we ruled by that Spirit which never dies, or grows fabled or cold, and which is invisible? If we are subjects of the Kingdom of God, why not look more inwardly for Him?

We sometimes see, soon after being seated in meeting, some turning the leaves of their Bible, as if looking for the Spirit in the letter, but at the same time making high profession of spirituality. But actions speak louder than words. God is not to be mocked. And that which, at times, is highly esteemed among men, is at times abomination in the sight of God. So let us seek first the Kingdom of God, and his righteousness, and all needful outward things will be added, if we seek Him with the whole heart. But "we may fight and war and yet have not, because we ask not, and we may ask and receive not because we ask amiss," having some selfish motive in view.

The Kingdom of Heaven when reigning within. Frees the sorrowing soul from the thralldom of sin; And gives strength to endure the trials that come, To fit the tried soul for his heavenly home.

D. H.

DUBLIN, IRELAND, Ninth Mo. 11th, 1858.

Preservation of Books in Guiana.

An article on this subject in the Journal of the Royal Agricultural and Commercial Society of British Guiana, published at Demerara, gives some insight into the effects produced by the moisture of the climate, and the precautions which are found necessary to obviate its destructive influences and those of the insects which abound. From this article the following has been condensed:

"In the country districts dampness is very destructive, in fact, away from the winds of the coast, it is almost impossible to keep a few books in good condition during the rainy season. The covers become mouldy, the cloth separates from the sides, engravings become discolored, and if the volumes are not well aired before the moisture has had time to develop mould, the leaves stick together and become a mass of rotteness. Black mould, blue mould and yellow mould, penetrate the substance of the paper, and if the back and covers have been pasted, they become the seat of a variety of fungi more interesting to the microscopist than to the unfortunate owner."

"In Georgetown there is not much difficulty in keeping the Library free from damp when suitable accommodation is provided. That books are being destroyed continually in the city however, the examples to be seen at Auction Sales very unpleasantly prove. Many of the Medical Practitioners keep their consulting rooms on the ground-floor, and as the reference library is a

necessary appendage, it is accommodated in the same place, in a book-case or on shelves, against the brick wall. In such situations the volumes soon become mouldy, and even if not allowed to become seriously damaged, they are very disagreeable to handle. To read a mouldy book is one of the most unpleasant tasks of a student. Sometimes it will be several months before the nasty smell is dissipated by a thorough airing. A set of new books in my possession, which had been taken up the Demerara River for a few months, were unbearable for reading till nearly a year after being brought back to Georgetown. I have several examples of the effects of damp and mould in my collection. One of the works being rather rare, I have taken some trouble to preserve it. For one-third of its width the leaves are thoroughly dis-integrated, so that they chip off at the lightest touch, another has a crop of black mould between each leaf which soils the hands when touched, although it has been well aired for several years; to brush this off would break the leaves in pieces, and even the separation of one leaf from another is very risky.

"Before leaving this part of the subject I cannot too emphatically condemn the carelessness of posted and wire-bound books to a damp tropical climate. The wire very soon rusts and the book falls to pieces, sometimes, before it leaves the booksellers. Authors generally desire that their works shall live after them; a little more attention to bindings would help in one way to that end. Many of the most elegant and showy bindings become unsightly in a few months, for want of attention to the fact that book-binders' paste decomposes immediately in a damp atmosphere.

"Coming now to insects pests, the nastiest and most disgusting is the Cockroach. It is omnivorous, but has its partialities, among which nothing is so pleasant to its palate as the fancy bindings which decorate some fine illustrated books. The publisher sends it out in a gay cover with bevelled edges and a wealth of gilding, placing the volume in a card-board box to preserve it. But the binding is pasted, and the cloth dressed with something which the cockroach fancies, so he lies from his lurking place after you have gone to bed, and the next morning you find your beautiful present covered with unsightly blotches. When a child sucks the corners of his picture-book, the effect produced is exactly the same as the work of this insect, but it by no means confines itself to the corners, on the contrary it goes over the whole of the exposed part of the cover, sucking out the dressing and exposing the rough fibres of the cloth. In preparing books for the tropics, the publishers should order the cloth to be finished by rolling, and only glue used in the binding. The cockroach not only attacks the cloth covers, but it eats the leather as well, and would probably find little difficulty in devouring the whole book if it could find nothing better. It makes very unsightly blotches on the edges, where it also excavates a hollow to fasten its egg-cases, which it glues with a kind of cement, covering the case with the tiny bits of paper which it has gnawed from the hollow. When the book is consulted, about fifty pages are found fastened together, and after removing the case an unsightly pit remains. As rough edges are always more liable to the attacks of insects, a Bibliophile in British Guiana had to abandon his preference for uncut books and get them gilt-edged if he can afford it.

"Wood ants (*Termites*) are as destructive to books as to everything else that is not metal or stone. They live in darkness, and cannot exist

on a well-lighted airy book-shelf. Old houses almost always have them lurking in the corners, ready to take advantage of a pile of periodicals, or a book-case placed against the wall, where they can work unseen. These insects do not mutilate the book by nibbling, or spoiling the binding, or boring holes in it; they simply eat it entirely, as a hungry boy eats his thick slice of bread. Where, however, the books are a little too much exposed for them to work properly, they will get into the back between the stitching and the cover, through a book-worm's hole, or if there are folding plates which keep the volume from closing tightly, they insinuate themselves between the leaves. Once inside, they begin to mine; there may be apparently nothing wrong outside, but when you open the book you find a hollow filled with insects, which have eaten almost all the letterpress, up to the margins. By keeping the shelves away from the walls and giving a little attention to wormy volumes, the Library may be easily freed from this kind of Bibliophage. Some species of carnivorous ants are mortal enemies to termites; it has been even suggested that nests of ants should be introduced into or near old houses to destroy them, but as the remedy may be worse than the disease, such experiments should be tried very cautiously.

"Book-worms are the larvae of species of moth. The eggs are laid by the parent insect in any convenient crevice of the book, such as between the leaves when they are loose, or in the space between the stitching and the back. As soon as the larva is hatched, it begins to eat its way through one leaf after another until it gets to the cover, where it is sometimes turned back, but more often it will penetrate through one volume after another, to the end of the shelf. A case has been reported of seventeen volumes perforated by one insect, so that a string could have been passed through the whole set. Where there are several larvae they will perforate the volume in so many places that the leaves can hardly be opened and appear like paper lace of a very irregular pattern. If not disturbed the perfect insect is soon developed, and lays her eggs in the old tunnels, from whence comes a new generation of the grub."

'The Grub that grubs in Grub Street for its grub.'

SELECTED FOR "THE FRIEND."

How Overseers are to be Made, and their Duty.

I apprehend that every overseer ought to be made so, by the Holy Ghost, although they are nominated by men; yet I trust, if the churches keep to their proper business, and duly attend to the direction of Divine wisdom, the members will be able to say, it seems good to the Holy Ghost, and to us, that such and such should be appointed to such and such services.

And I believe it not safe to nominate any person for services in the church without such Divine direction; although it is to be feared it is not enough attended to by many who undertake to nominate.

When they are properly appointed to that service, the Apostle gives them their charge in this manner: "Take heed, therefore, to yourselves, and to all the flock over which the Holy Ghost hath made you overseers." These persons who are so appointed, being first anointed for that service, are under peculiar obligation to watch over all the flock, and to take care that all things are kept clean in the Church; and in order that they may be able for so great a charge, and be qualified for a faithful discharge of their duty to the spiritual benefit of those under their

care, they must first take heed to themselves; that is, they must examine narrowly into their own situation, how they stand approved themselves in the sight of their Master. First, and more especially, whether their own spirits are seasoned with the salt of the kingdom, so as to preserve them savory, and keep them fresh and green, and sweeten their spirits to that degree, as to fit and qualify them for that important duty and charge of overseeing, and taking care of the flock, and ministering to their spiritual good and advantage.

And in the next place, they ought to examine whether their outward conduct quadrates in every respect with their profession and high station. That is, whether their dress and address, their houses and furniture, their pursuit after and use of the things of this world, their lives and conversations in every respect be exemplary and instructive to mankind or not; so as to enforce any advice or caution they may have to give those who deviate from the simplicity of the Truth; so that they may be able to say to others, Follow us as we have followed Christ. Counsel and advice from such faithful and well-qualified overseers, will be likely to take effect, and be well received by those to whom it is administered. If the overseers, and all the leaders of the people, were filled with the Holy Ghost, and careful in attending to their several gifts, in watching over one another for good, and over all the flock, I doubt not but the fruits of their love and labor would soon appear in our Society, by a reformation in life and manners. For as love abounded, a concern would naturally arise for the good of mankind, a labor would be freely bestowed upon the thoughtless ones, and a blessing would attend such labor, arising from the spring of love and life. Then the reformers and the reformed would rejoice together, and God be glorified. This I desire to see accomplished more than anything else, but never expect to see it, unless the leaders of the people are first stirred up to diligence, and go before the flock, and lead them on in love.—David Ferris, 1761.

The Little Boy from Barrhead.

The other day, a poor little waif of a boy, ten or eleven years of age, greatly emaciated and exhausted by long-standing disease, was brought up in the hoist to the operating theatre of the Royal Infirmary in Glasgow to undergo an operation, which it was thought might possibly have the effect of prolonging the boy's life. His condition, however, was so low and unsatisfactory, that there was some fear, not only that the operation might not be successful in its results, but that during or immediately following the operation the boy's strength might give in and his spirit pass away. After reaching the theatre, which is seated like the gallery of a church; and while the operating table was being got ready, the little fellow was seated on an ornished seat, and looking up towards some students who were there to witness the operation, with a pitiful tremulous voice, he said:—"Will one of you gentlemen put up just a wee prayer for a wee boy—I am in great trouble and distress—just a wee prayer to Jesus for me in my sore trouble." The surgeon, patting him on the shoulder, spoke kindly to him; but as he heard no prayer and saw only a pitying smile on the faces of some of the students, he turned his head away, and in childish tones and words, which were sufficiently audible to those around him, he asked Jesus, his Friend, "the Friend of wee boys who love Him," to be with

him—to have mercy on him in his distress. And, while the young doctor was putting the boy under chloroform so that he might feel no pain during the operation, so long as he was conscious, the voice of the boy was still heard in words of prayer. The surgeon, as he stood by the table on which the boy lay, knowing that he had to perform an operation requiring some coolness and calmness and delicacy of touch, felt just a little overcome. There was a lump in his throat which rather disturbed him. Soon, however, he heard the words from the assistant who was administering the chloroform, "Doctor, the boy is ready;" and taking the knife in his hand, lump or no lump, had to begin the operation. Soon the surgeon was conscious that the prayer which the little boy had offered up for himself had included in its answer someone else—for the coolness of head, steadiness of hand, and delicacy of touch, all came as they were needed, and the operation was completed with more than usual ease, dexterity and success. On the following morning, the surgeon going round his ward from bed to bed, and coming to that on which the little boy lay, saw from the placid, comfortable look on his face that his sufferings had been relieved, and that all was well with him. Going up to the head of the bed, and taking the little, wasted hand, which seemed no larger than that of a bazaar doll, the surgeon whispered into his ear, "The good Jesus heard your prayer yesterday." A bright, happy confident look lit up the boy's face, and with a feeble yet distinct pressure of the hand, he looked up in the doctor's face and said, "I ken't He wud." And then he added, "You, doctor, were gude to me, too." But apparently thinking that the doctor was on a different platform, and required something tangible for his care and trouble, in a plaintive voice, he said, "But I hae naething to gie you." And then a bright thought came into his mind, and with a little cheer in his tone, he added, "I'll just pray to Jesus for you, doctor."—*Christian Leader.*

[A Friend in Indiana, now far advanced in years, who says "that the doctrines, principles and even the practices of 'Friends are dearer to me than ever before," but who "never has felt like taking any very active part in the separations that have heretofore taken place," yet has found it his duty in some cases "to bear an unflinching testimony to our doctrines and testimonies," sends us the following article, which, he says, "is not intended as a caricature, but simply as a looking-glass, in which the Society of Friends [that portion of it which has joined in the modern departures from its principles] may see itself without any covering or distortion to deceive."]—

FOR "THE FRIEND."

A Short Sermon.

"And when the sons of the prophets, which were to view at Jericho, saw him, they said; The spirit of Elijah doth rest on Elisha. And they came to meet him, and bowed themselves to the ground before him. And they said unto him, behold now, let us go, we pray thee and seek thy master: lest peradventure the Spirit of the Lord hath taken him up and cast him upon some mountain, or into some valley. And he said, ye shall not send. And when they urged him till he was ashamed, he said, Send. They sent, therefore, fifty men, and they sought three days but found him not."—2 Kings 2: 15-17.

Elisha was a plain, old-fashioned farmer, until his call to the prophetic office by Elijah, whom he followed and by whom he was taught, until the time referred to in our text. It was but the natural result, therefore, of his early habits and later education that he was a man quite conservative—not up to the times. While those sons of the prophets were full of life and zeal—quite radical.

Now history and fashions are said to move in cycles, or repeat themselves after long intervals. So it may be, that the days of Elisha have again come upon the stage of church history—at least in the Society of Friends, as may appear by a few items:

First. The sons of the prophets of the present age said to the aged Elishas of the Church: Our meetings are too formal and lifeless; we pray you, let us send and bring in congregational singing. But the Elishas said, ye shall not send. But they urged till they were ashamed, and they said, Send.

Secondly. Again, some of them said: Our worship is not yet perfect; let us send and bring in an organ, and have instrumental music. But they said, ye shall not send. Yet being urged till they were ashamed, they said, Send.

Thirdly. Again they said: Our mode of accomplishing marriages is too long, too public, and even cumbersome. Let us celebrate the marriage covenant like others, we will make no charges for it—merely accept \$5.00 or \$10.00 or more as a present; this, too, will give some relief to our needs. But they said, ye shall not do so. But they urged it till they became ashamed, and said, Ye may.

Fourthly. Again they said: Our prophesying is so constant and laborious, that we have neither time nor strength to earn our bread. Make us pastors of churches, which shall pay us our wages. But the Elishas said, this must not be in our Society. But being urged till they were ashamed, they said, Ye may have it so.

Fifthly. Again they said: We are without a head or leader; let us have a Bishop in each Yearly Meeting, to whom we shall all be in obedience. But they said, not so, for Christ is Head over all in his Church. But they urged it till they were ashamed, and said, Be it so.

Sixthly. Again they said: Our language is too solemn; worldly people cannot understand us any better than they do the Bible; let us send and have it changed to the speech of modern times, with the addition of titles—such as Rev., &c.—becoming the dignity of our high and noble profession. But they said, ye shall not send. But it was urged till they were ashamed, and they said, Ye may send.

Seventhly. Again they said: Our dressing is too coarse and plain; it is not respected in the higher grades of society; let us send to Paris for the "Latest Fashions,"—camelback bustles and hats trimmed with gay ribbons, feathers and stuffed birds—for our sisters; and fine broad-cloth and high silk hats for ourselves. But again they said, ye shall not send. But when they urged it till they were ashamed, they finally said, Send. And they sent.

As you speak the Truth, let your life speak the Truth; and as you preach the Gospel, let your conversation preach it as well as your words; that all Friends wherever you come may be a good savor, not only in words, but in life and conversation; that the Lord God may have his praise and honor.—*G. Fox.*

FOR "THE FRIEND."

MUSINGS.

Behold the lightning billows roll
High o'er my head!
Yet peace and quiet clothe the soul
Divinely led.

Thine arm, O Lord, is underneath
Thy helpless ones;
Thy hand provides a lasting wreath
To deck thy sons.

More precious far than earthly fame
The "pilot's" light;
'Tis in thy power and thy name
We move aright.

Thy goodness crowneth every age,
And every clime;
Sure resting-place for saint and sage
Throughout all time.

MARSHALLTON, PENNA.

SELECTED.

THE AUTUMN OF LIFE.

Fling down the faded blossoms of the spring,
Nor clasp the roses with regretful hand;
The joy of summer is a vanished thing;
Let it depart, and learn to understand
The gladdenings of great calm and quiet rest,
The peace of human joys—the latest and the best.

Ah, I remember how in early days
The primrose and the wind-dancer grew beside
My tangled forest-path, whose devious ways
Filled me with joy of mysteries untried,
And terror that was more than half delight,
And sense of budding life, and longings infinite.

And I remember how, in life's hot noon,
Around my path the lavish roses shed
Color and fragrance, and the air of June
Breathed rapture round the summer days are fled,
Days of sweet peril, when the serpent lay
Lurking at every turn of life's enchanted way.
The light of spring, the summer glow, are o'er,
And I rejoice in knowing that for me
The woodbine and the roses bloom no more;
The tender green is gone from field and tree,
Brown harvest tapers stand clear against the blue,
And leaves fall fast and let the truthful sunlight
through.

For me the hooded herbs of autumn grow,
Square-stemmed and solerinted: mint and sage,
Horehound and balm,—such plants as healers know,
And the decline of life's long pilgrimage
Is soft and sweet with marjoram, and thyme
Bright with pure evening dew, not serpents' glittering
slime.

And round my path the aromatic air
Breathes health and perfume, and the turfy ground
Is soft for weary feet, and smooth and fair,
With little thornless blossoms that abound
In safe, dry places, where the mountain-side
Lies to the setting sun and no ill beast can hide.

What is there to regret? Why should I mourn
To leave the forest and the marsh behind,
Or towards the rank, low meadows slowly turn?

Since here another loveliness I find,
Safest and not less beautiful, and best
With glimpses faint and far of the long-wished-for
rest.

Is it an evil to be drawing near

The time when I shall know as I am known?

Is it an evil that the stars are clear,

That sunset-light upon my path is thrown?

That truth grows fairer, that temptations cease,

And that I see afar a path that leads to peace?

Is it no joy to feel the lapsing years

Calm down one's spirit, as at evening,

After long storm, the far horizon clears,

The sky shines golden, and the stars beside,

Startlingly sudden in the sunlight stir,

And still, as day declines, the restful earth grows fair?

And so I drop the roses from my hand,

And let the thorn-pricks heal, and take my way

Down-hill, across a fair and peaceful land,

Lapt in the golden calm of dying day,

Glad that the night is near, and glad to know

That, rough or smooth the way, I have not far to go.

—Sylvia, in the Living Age.

SELECTED.

WHO MADE THE STARS?

Mother, who made the stars which light
The beautiful blue sky?
Who made the moon so clear and bright,
That rises up so high?

'Twas God, my child, the Glorious One,
He formed them by His power;
He made alike the light that sun;
And every leaf and flower.

He made thy little feet to walk,
Thy sparkling eyes to see;
Thy lisp, prattling tongue to talk,
And limbs so light and free.

Our various wants his hands supply;
He guards us every hour;
Beholds us with his watchful eye,
And keeps us by His power.

Then let thy little heart, my love,
His grateful homage pay
To that kind Friend, who, from above,
So gently points thy way.

FOR "THE FRIEND."

A Visit to Ohio Yearly Meeting.

We attended this meeting five years ago, and found about as many in attendance now as then. On First-day, the 20th of Ninth Month, in the morning, the house could not accommodate all who came. In the afternoon, after the house was filled, it was thought there was as many more outside of the building. Nearly all of the latter were not members. The meetings were, in good degree, quiet and solemn. Supplication was made at the Throne of Grace on behalf of the various classes present; and the young were tenderly entreated to close in with the visitations of Divine love manifested in their hearts. Some of the young men were warned against attending at places where there was horse-racing, against card-playing, and against entering saloons. The young women were earnestly advised to avoid novel-reading and attending operas.

The Meeting for Business opened at 10 o'clock on Second-day morning. Epistles were read from the five Yearly Meetings with which Ohio corresponds. These documents were thought to be unusually weighty, and their expression seemed very much in unison with each other. This was thought to be an evidence that the resumption of correspondence by Ohio Yearly Meeting was a right step.

At this and subsequent sittings, minutes were read for ministers from Canada, Iowa and Indiana, and for two companions of a Friend from the latter State—members of Western Yearly Meeting. These Friends, as well as a number of other strangers, received a cordial welcome.

On Third-day, Barclay Stratton and Wm. L. Ashton were re-appointed Clerk and Assistant; also, Edward Stratton and Jesse Dewees as messengers to the women's meeting. The queries and answers were read. Some deficiencies were manifested, which occasioned exercise to many minds; and a few Friends were named to assist the Clerk in preparing an advisory minute to be included in those which are printed for the use of subordinate meetings.

A Friend from Iowa informed the meeting that there are about 400 Indians in Tama Co., of that State, in a sadly neglected condition and greatly in need of help. These Indians are the representatives of a portion of the Sacs and Foxes, who, during the Black Hawk war, belonged to the tribe of that chief, but who refused to fight against the United States. Our Govern-

ment afterward transferred them to a reservation in the Indian Territory, on the Arkansas River. This proving to be an unhealthy location, much sickness prevailed, and the greater part of their children died. Their number was reduced to 300, when they decided to remove to Tama Co., where they purchased land to the extent of 1000 acres. Here their number has increased.

The Agent now in charge of these people, it is stated, carries on other business in Montour, a town seven miles distant. Once a year he visits the Indians to pay them their annuity. This man draws a salary of \$700. The teacher, employed at \$50 a month, drives over to the school-house, which he opens—once in two weeks—stays there an hour or two, and then returns to his business as clerk in a store. The Indians, not knowing when to expect him, do not send their children to school. The farmer, with the same salary, pursues a similar course, so that they receive no instruction in farming. In the summer the Indian women bore little patches of land, in which they plant beans, corn, and a few other vegetables. These yield their principal sustenance during the warm weather—game being almost entirely extinct. In the winter these poor people live mostly by begging among the whites. They have the reputation of being honest.

The Yearly Meeting decided to appoint a committee to make further enquiries into the subject, and if any opens, take such measures as may conduce to their relief and help. This committee was authorized to receive voluntary contributions from Friends of an amount sufficient for the present need. This money was afterward raised.

By reports on Education it appears there are 578 children of school age—members of the Yearly Meeting—268 of whom attend Friends' schools exclusively; a few attend family schools; 234 attend District schools, and 46, while not attending school, are mostly receiving some instruction. While this exhibit is not as satisfactory as we could desire, it is to be borne in mind that the scattered situation and pecuniary state of a number of the parents are in the way of the children being educated in the Society.

The report of the Yearly Meeting Boarding School was interesting. The financial statement showed a small, but as regarded by some Friends, an "encouraging balance" in favor of the school. We were impressed with the belief that this Institution has been a blessing to the children who have been pupils in it. The re-gatherings of many of these at the times of the annual religious assembly are opportunities of encouragement and profit, both to the young and the old. And there is reason to believe that many who look forward, when young, with anticipations of pleasure to the social enjoyment which these occasions afford, with an increase of religious feeling as they grow older, come to look toward them as seasons of spiritual refreshment. The Meeting for Worship on Fourth-day was well attended, and we thought, satisfactory.

During the sessions of the business meetings, visits were paid to the men's meetings by our Friends, Ann Branson and Phebe George. On Sixth-day some reports were read, mostly of local interest, and were followed by the reading of answers to the Epistles received on Second-day. The minute on the state of Society was also read; and the meeting concluded under a feeling of solemnity. E. M.

The kingdom is not for them that are born of flesh, but for those that are born of the Spirit.

A Caged Deer.

There may be a lesson in the following narrative, given by a lady a few days ago, of value to some of our readers:

"I was at one of New York's summer resorts last week on its closing day for the season. The workmen were engaged in caging quite a number of animals that had furnished interest and amusement to the children and grown people who had frequented the grounds during the summer. Among these animals was a most graceful and beautiful little creature—a deer—that had been captured in its native woods of Virginia. The wooden box into which it was to be put was placed near the door of its cage, and the door partly opened. One of the workmen slipped a rope round the neck of the deer and gently pulled on the rope to draw the animal into its box. The deer, feeling the rope about its neck, ran frantically about its cage, dashed itself against the bars, threw itself down in mad attempts to rid itself of the rope, and endangered life and limb in trying to free itself from its captors. After a time it got into such a position that with little effort it was drawn and forced into the box unharmed. The poor little thing did not know that its captors were its very best friends. Left in its cage it would have perished miserably of cold during the coming fall and winter. In its padded box it was lifted gently into a cart and borne to the dock, where a steamer waited to transport it with its companions in captivity to a warm structure, where it would be carefully taken care of during the winter, and in the summer it would again be brought back to its cage at the summer resort.

"As I watched the agonized captive struggling to free itself from its rope, and resisting all attempts to remove it from the cage, I thought when the rope of circumstance—of Providence—is thrown around my neck, and I am irresistibly drawn and forced into narrower and unwelcome places, I will not beat my head against the bars that close me round; I will not strangle myself with the rope about my neck; I will not resist the compelling forces that would make me go where I do not choose to. I will cheerfully, docilely, obediently, bow to the Divine will, trusting that He who loved me, and gave himself for me, does even what seems hard and cruel and intolerable for my good. Were I to stay where I chose to stay, I might perish miserably. Following his guidance, I shall be borne gently to the place he has prepared for me. I will not fear the narrow box in which I must sometime lie still and cold, for over the waters of death He will bear my soul to Paradise."—*Christian Advocate.*

The Lord's Covenant with the People of Israel.

—A "covenant" among Orientals is, and always has been, a sacred compact binding two parties in loving agreement. Oriental covenants are made in various forms and by various ceremonies. The most sacred of all forms of covenanting in the East is by two persons commingling their own blood, by its drinking or by its inter-fusing, in order that they may come into a communion of very life. Two persons who wish to become as one in a loving blood-friendship, will open each a vein in his own arm, and allow the blood to flow into a common vessel, from which both parties will drink of the commingled blood. Or, again, each person will open a vein in one of his hands, and the blessing hands will be clasped together so that the blood from the one

shall find its way into the veins of the other. Or, yet again, the two will share together the substitute blood of a sacred animal. Usually, in such a case, a written compact is signed by each party and given to the other, with a stamp of the writer's blood upon it as a part of the ceremony of covenanting; and the writing is carefully enclosed in a small packet or casket, and guarded by its holder as his very life. It is in the light of such customs as this that we are to read of the sacred covenant entered into between God and his Oriental people.

It was at the foot of Mount Sinai that Moses came before the people of Israel with God's proffer to them of a covenant, whereby they should bear his name and be known as his people. "And he took the book of the covenant, and read in the audience of the people: and they said, All that the Lord hath spoken will we do, and be obedient." Then it was that Moses took of the substitute blood and divided it into two portions, one-half to be sprinkled on the altar God-ward, and the other half to be sprinkled on the people; and Moses said: "Behold the blood of the covenant, which the Lord hath made with you concerning all these words"—or, as the margin of the Revised Version has it, "upon all these conditions."—*H. Clay Trumbull in Sunday School Times.*

THE work of the Spirit of Truth within doth give (in some degree) a true and real testimony in the souls of all men and women, that there is a God, unto whom worship doth belong; by this Spirit God doth give just cause unto all men and women to believe in Him, (every one in the time of their visitation), and if they believe not, their unbelief is their sin, which doth shut them out of the kingdom of God, and such do destroy themselves.—*J. Gibson, 1678.*

Natural History, Science, &c.

Asparagus.—Some years ago Thomas Meehan called attention to the fact that the Asparagus is a diocious plant—that is, that the staminate and pistillate flowers grow on different plants. It is stated that the experiment has been tried in France of making separate beds for each sex—one composed wholly of staminate plants, and the other wholly of pistillate plants—and it has been found that there is a remarkable difference in the number of sprouts sent up from the roots. In a given number of plants, the pistillate sent up 76 stalks, and the staminate 244.

Discovery of Spectral Analysis.—Shortly before his death, the late Dr. Kirchhoff, of Berlin, related the true story of the discovery of spectral analysis. He and Bunsen were then professors at Heidelberg, and kept bachelors' quarters in the well known "Riesenstein." Upon one of their daily promenades, Bunsen remarked: "Kirchhoff, we must discover something which will be too simple to be true." They returned and went to work. But years passed by before the discovery was effected. Experimenting one day in his laboratory, Kirchhoff happened to place a burning lamp in the rays of the sun. A dark place appeared at once. Thinking it an "optical illusion," he repeated the action, only to find the dark ray reappear and give place to the ordinary ray when the lamp was removed. He called Bunsen. The experiment was repeated many times, and always with the same result. They could not explain it. Finally Bunsen proposed that they go home and "think of other things" for a while; possibly some explanation

might be reached. They lolled in their easy-chairs, smoking their long student pipes, and talking of the days of their youth and the gossip of the hour. The afternoon had almost passed, when Bunsen sprang to his feet with the remark: "Eureka! The flame of the lamp is fed by the same stuff which is burning in the sun?" They hurried back to the laboratory, tried a number of experiments, and the great discovery was made.—*N. Y. Tribune.*

A Cheap Medicine.—The Queen of Sweden is undergoing peculiar treatment to restore her nerves to a normal condition. Her doctors have ordered her to rise early, make her own bed, and dust and sweep the room. She has to take a walk in the garden before breakfast, and a walk in the flowers afterward, and lead an active outdoor existence all day long. Already the queen has been benefited by this curious "cure"—the "chambermaid treatment," as it is called. The same mode of life might benefit many a woman in this country.—*N. Y. World.*

Quinine Habit.—The *Christian Advocate* says it has killed men "as dependent upon quinine as stimulants for intellectual effort as others upon alcohol or tobacco."

"While it is less injurious than some articles taken to overcome debility or nausea, its effects in some instances that have come under our knowledge have been disastrous. The constitution broken down would neither respond to quinine or to anything else; the appetite was destroyed, and the person declared a dividend on the principal of his vital forces, and not upon the interest of the daily accumulation from food. The safest course is never to use medicine except in an extreme case, under the best advice; then a little will accomplish a great deal, and if the medicine be stopped the moment the malady for which it is given subsides, and the patient be content to recover slowly and build up by natural processes, he will have but little sickness, no medicine-made diseases, and preserve his recuperative power to old age."

Yellow Fever.—Among the statements respecting yellow fever, read in the United States Senate by the Senator from Florida (Wilkinson Call) was one from Dr. Reed of Tuscaloosa, Ala., who favors the opinion that the disease is generated by poisonous germs, which multiply with great rapidity in the body of the patient; and who adduces some facts which seem to show that the vitality of these germs is destroyed by the gas ammonia. One of these is that the old city prison in New Orleans has not had a case of yellow fever in the past 75 years, though not very favorably situated in a sanitary point of view. This immunity from the disease is attributed to the ammoniacal smell given out from the dead bodies and droppings of countless bats, which have long made their abodes in the attics of the prison.

The city gas-works has enjoyed a similar freedom from infection. Both the employees and the families residing within reach of the ammoniacal odor given off from the works, have escaped this disease for the past 50 years.

Dr. Reed suggests that the inhalation of ammonia in a diluted form may prove to be both preventive and curative in its effects.

Life in the Highlands of Scotland.—A writer in *Chambers's Journal* gives a description of life among the farmers in the Scottish Highlands, as he observed it when a young man, teaching school among the Grampian hills. The living-room of the family had no chimney proper, but

a raised flat stove at one end, in which on winter evenings a fire of wood and peat was built; the smoke from it escaping through a great open wooden funnel. In this room the family spent the evening employed in work of various kinds, the light for which came from splinters of pine roots full of resin, collected and dried for this purpose. A sort of griddle was placed at a convenient height, on which several of these splinters were placed crosswise, and lighted.

The conversation often turned on the wild legends of ghosts and fairies, which the Scottish peasantry had handed down from father to son, and which sometimes were of a kind to frighten people of weak nerves. One incident connected with these stories he relates as follows:—

"I remember how, one very dark night, after hearing a ghost recital at a house three miles from my lodging, a feeling of fear and great uneasiness seized me on the way homewards. Two miles of the road ran through the Black Wood, and it was black that night. Suddenly I recollected that I had to pass a spot where, a few years before, a peddler had been found dead, sitting against a tree. He was buried on the spot. What if I should see the peddler beside that tree, enveloped in phosphorescent light! I knew I was nearing the place. My eyes were straining through the darkness; the sound of my own footsteps alarmed me, and great beads of perspiration were trickling over me. Suddenly I heard the patter of feet approaching; but I could see nothing. For a moment I stood listening—hesitating. Instantly there was a gentle touch of something cold and moist on the back of my hand. I ran on like a mad creature. The Thing kept pace with me; I could hear it in close pursuit. I rushed along at a great pace. In the midst of my terror, I remembered that we kept a tame fallow-deer at the house, which knew me and followed me like a dog. The animal might have got loose. I stopped suddenly, and in excited tones, jerked out, 'Flora.' She answered by rubbing her cold moist nose against my hand. It took me some time to still the tumultuous beating of my heart; and then I laughed at the idea of being frightened by the touch of a fallow-deer's nose."

Items.

Western Yearly Meeting (Larger Body).—This meeting convened at Plainfield, Indiana, and commenced its sessions on the 13th of Ninth Month. The statistical report showed the number of members to be 13,153—an increase of 247 during the year.

The report on Earlham College showed an expenditure of near \$200,000 on the buildings, of which about \$25,000 are yet to be paid. The number of pupils had been 201. The College is under the joint care of Indiana and Western Yearly Meetings.

The following minute was adopted in reference to the Richmond Declaration of Faith:—"The Declaration of Faith was then read, and after a full expression, the meeting united in accepting and approving it, as a statement of the faith of the Society of Friends, and not as a compulsory creed." A committee was appointed to consider the subject of holding future conferences of delegates from the different Yearly Meetings.

As an illustration of the character of the devotional meetings, it may be mentioned that at the last one held during the Yearly Meeting 110 testimonies were given in 45 minutes.

Western Yearly Meeting (Smaller Body).—This meeting convened at Sugar Grove, near Plainfield, Indiana, on the 7th of Ninth Month.

On the afternoon of the 11th, a Youths' Meeting was held, by appointment of the Yearly Meeting of Ministers and Elders, at which many were present.

"The tenderness of spirit and solemnity that covered many of these gave ground for hope that many of our dear young people will so submit to the purifying influences as to be enabled to stand firm in righteousness of those who are being called away in this Yearly Meeting."

At the Yearly Meeting, "there were present several dear Friends from various places, who belonged to the larger bodies, who are greatly tried in spirit by the downward drift of these bodies, who came to Western Yearly Meeting, apparently to see for themselves if there was still a place where the true Friend could 'worship the God of his fathers' in accordance with our ancient principles."

The consideration of the state of Society was a time of solid counsel and spiritual refreshing. Many Friends were enabled to find the needs of the body with words of encouragement to faithfulness in all the duties of our Christian profession.

"The public meetings on First-day were largely attended; many were unable to get into the house. The good order, quietness, and solemnity of the meetings, and the sense of the Divine blessing that many felt, all joined to make it a day of comfort and rejoicing to those on whom the weight and burden of the responsibilities of the Society rest."

"The business of the Yearly Meeting on Third-day was the reading and consideration of the reports of its committees on Education, Temperance, Religious Labor, and Bond and Tariff, and the reading of the minutes of the Meeting for Sufferings. The Meeting for Sufferings is preparing an address, deploring the growth of the military spirit in our beloved country; and the Yearly Meeting directed its attention to the subject of preparing an address on the present condition of the temperance question."

"A public meeting for worship was held on Fourth-day, after which the Epistles to other Yearly Meetings were read and approved. The meeting then adjourned to meet at Sugar Grove, next year."

"The expression of Friends, after the adjournment, was a hope that it had been a favored Yearly Meeting. Many went to their homes refreshed, and encouraged to hopefulness, feeling that the Lord in his goodness had again remembered them in mercy."—*Continued from Western Friend.*

Public Meeting at Parkerville.—A meeting for the people of the neighborhood generally was held in Friends' meeting-house at Parkerville, Chester Co., Pa., on the afternoon of First-day, the 7th of Tenth Month. It was appointed by the joint action of Committees of Philadelphia Yearly Meeting, and the Western Quarterly Meeting. As has been the case with many similar meetings recently held in various parts of Philadelphia Yearly Meeting, the solemnity and good feeling which prevailed gave cause to believe that the Divine blessing attended this effort to promote the cause of truth and righteousness in the earth.

Much of the vocal service of the meeting was in the nature of a hymn and arrangement to various classes present, to yield to the visitations of Divine Grace which it was believed were extended to the people of that neighborhood. As one of the evidences of such extension of the Lord's mercy and favor, reference was made to a recent visit to many of the families in that vicinity (not members of the Society of Friends) which had been paid under religious concern.

The long-continued mercy of our Father in Heaven is shown by the parable of the shepherd leaving his ninety and nine sheep, and going into the wilderness to seek one that was lost. Any poor soul present, that had passed through youth and middle age, without entering the fold of Christ, and now, in advanced years, was still wandering as in the wilderness of this world, was tenderly entreated to listen to the voice of the Good Shepherd, who was calling unto them to repent, and turn to Him, and find safety and rest under his protecting care. One of those present who, by the confession of the Truth, was called to the responsibility which rested upon them, in all things to adorn the doctrine of God our Saviour, so that they might be as lights in the world, and not prove stumbling-blocks to others, whose minds had been awakened to the consideration of heavenly things; but that,

by their godly lives they might hold out the invitation to such visited ones. "Come with us, and we will do thee good," for the Lord hath spoken good concerning Israel.

The meeting was well attended, and was a comforting and satisfactory opportunity. At its close, there were handed to such as desired, brief treatises showing some of the spiritual doctrines held by the Society of Friends.

PARENTS and teachers cannot be too watchful, lest the children whom they are instructing fail to understand words in their lessons which seem unmistakably intelligible. It will never do to take it for granted that a child knows the meaning of the simplest words and phrases. The only safe way is to make sure of the truth by frequent and familiar questioning, in order to have the child give his own understanding of the words which are in the lesson itself, or which are in the instructor's interpretation of the lesson. In a recent lesson it is said that Jesus walked by the sea, that He saw men fishing, that He promised to make those who followed Him fishers of men, that He taught and preached and healed; and that people who were taken with divers diseases were brought to Him to be healed. A father was studying this lesson with his children, asking questions of his bright boys, he received prompt answers in the language of the Bible. They seemed to understand the lesson facts fully. "What is meant by divers diseases?" he asked of his eldest boy. Promptly the answer came, "The sickness of men who dive down to the bottom of the sea."

THE FRIEND.

TENTH MONTH 20, 1888.

The Australian Friend, for Seventh Month, contains the following Editorial paragraph:—

"Some months ago a letter reached the Editor from a Friend in Philadelphia, asking to be supplied with copies of this paper, which were duly forwarded. Since then we have received a quantity of pamphlets published by the Tract Association of Friends of that city, and it appears that similar packets have been forwarded to Friends throughout the colonies, whose names and addresses our distant brethren have obtained from these columns. We cannot but reciprocate the kind feeling that has prompted this manifestation of brotherly interest, and perhaps we may also accept it as a lesson in the prompt recognition of opportunities. Have there not been many occasions when Australasian Meetings, if equally on the alert, might have been able usefully to bring our Society's principles under the notice of others?"

The tracts which were sent, as above mentioned, were accompanied with a catalogue of the Friends' books published by the Meeting for Sufferings of Philadelphia Meeting, so that their recipients might know where such books of the kind as they were in want of could be procured. This explains the reference to said catalogue contained in the following extracts from a letter in reply, received from a Friend in Hobart, Tasmania; which has been kindly placed at our disposal by the Friend to whom it was sent. As most of our readers have probably little knowledge of Australasian Friends, it has been thought that these brief notices of them would be acceptable.

"Seventh Mo. 7th, 1888.

"Dear Friend,—My father has duly received thy letter of Fourth Mo. 4th, 1888, accompanied by a parcel of tracts, for which we are much obliged.

"We are pleased to have your interest in us thus practically manifested, and trust that Friends everywhere will more and more grow to a united brotherhood. At present the time seems far distant. Even here, though nominally of the same household of faith, the various meetings include members holding views apparently as opposite as can exist in one religious body.

"Nevertheless there is a certain harmony of feeling which I trust may continue; but it is manifest that this will not be strengthened by any lowering of the standard, on the part of those who deem it their duty to uphold the standard of truth once delivered unto the saints.

"There is truly a great need of patience everywhere, so that the faith may be held in a pure conscience—in meekness instructing those who oppose themselves; without this, as we all know, there is a great danger of religion degenerating into party warfare."

"The remark of the Australian editor, that the action of the Friend who sent the tracts, may be accepted "as a lesson in the prompt recognition of opportunities"—may be usefully heeded by many of us on this side of the ocean. He who is earnestly desirous of performing his measure of service for his Divine Master, will watch for the openings for labor which come from the Lord of the vineyard.

"We suppose our readers generally will feel an emotion of righteous indignation in reading the following statements published by *The Voice of New York* :—

"A few days ago the daily papers of this city contained an account of a Jewish picnic which was largely attended by young and old. When they embarked on the steamer to return home, it was found that all the tanks of drinking water had been salted, and it was impossible for even the little children to get anything but liquor and beer to drink. There was, of course, a great deal of suffering, and a number were taken seriously sick. Investigation disclosed that the bartender had been seen salting the water-tanks in order to increase the sales of his beverages. A short time ago, in Brooklyn, a bartender was found pouring the refuse from beer-kegs on the side-walk, and confidentially explained to some one asking him for his reason, that the odors of the beer were in this way more likely to reach men who had sworn off, and arouse their appetites. Some time since we reported the case in Baltimore of a liquor-dealer who made a specialty of candies filled with sweetened bandy, wine, &c., which he sold near a school-house. Another dealer was in the habit of fixing up little lunches for the school-children and selling them very cheaply for the purpose of getting the children in the habit of coming to his place. We have exposed a certain 'tonic,' manufactured by a large brewing establishment in the Northwest, which is nothing more than a beer, but which is advertised all over the country as a medicine highly recommended for invalid women and for children, and thousands have probably taken it in ignorance of its quality."

"He who, for the sake of his own pecuniary gain, deliberately tempts others into indulgences which may lead to their ruin, has need to seri-

ously reflect on the warning given by our Saviour to those who cause others to offend.

"But this warning, we believe, may profitably arrest the attention of some, who could not be tempted to any such gross acts as are above related. All exercise some influence over others. And this influence in the long run will be for good or evil, according as the Spirit of Christ or the spirit of the world bears sway within us. A good tree cannot bring forth evil fruit, neither can an evil tree bear good fruit. By their fruits they are to be known. When we reflect that our lives will necessarily tend to promote the well-being of our fellow men; or will have an influence to draw them down to the chambers of death; what an added motive for submission to the operations of Divine grace is given to those who desire the welfare of mankind.

SUMMARY OF EVENTS.

UNITED STATES.—It is believed that Congress will adjourn in a short time. There has already been a quorum present in either House for several weeks past.

The General Land Office, on the 13th instant, received information of the conviction of Charles E. Hildreth, for a short time. There has already been the entry of a large body of redwood timber land in California, consisting of 57,000 acres, bearing timber of the estimated value of \$11,000,000. A syndicate, composed chiefly of foreign capitalists, was organized, it is said, for the purpose of securing title to this valuable tract from the Government, and the attempt was made to do so by means of fraudulent entries. About three hundred and sixty such entries were made, embracing about one hundred and sixty acres each. Of these entries many have been held for cancellation, and steps are being taken to secure forfeiture to the Government in the other cases.

Mung Koon, a Chinese merchant in Montreal, was prevented from visiting New York on business last week by the Chinese Exclusion Act. He applied to the United States customs officers in Montreal, and was told that the act covered his case. He is a naturalized British citizen, and expresses his intention of testing the matter in the courts.

Judge Sawyer, in the U. S. Circuit Court at San Francisco, on the 15th instant, in two cases under the Chinese Exclusion Act, directed the decree to be constitutional, and that it applies to Chinese now in port, on shipboard on the way from China, and to those still in China. Counsel for the Chinese gave notice that they would appeal to the Supreme Court of the United States.

The National Line steamer *Queen*, which arrived at New York on the 10th instant, from England, collided with the French fishing schooner *Madeline*, early on the morning of the 6th, during a fog, off the Banks of Newfoundland. The *Madeline* was cut in two and sank immediately. The captain, first mate, and steward of the fishing schooner were rescued after they had been in the water nearly an hour, but the rest of the crew, numbering twenty-one, were lost.

For the week ending Tenth Mo. 15th, there were 328 cases of cholera in the city of Huleston, and 21 deaths. The total number of cases to the 15th, was 3269, and 316 deaths.

On the 10th instant, a special train on the Lehigh Valley Railroad, carrying a Wilkesbarre delegation back from a temperance celebration in Huleston, was wrecked at Mud Run. One section of the train ran into another, and more than sixty persons were either killed or mortally injured.

The State Board of Labor Statistics in Illinois has called attention to the subject of mortgages in that State. They will show the status of the mortgage records for three periods—1877, 1880 and 1887. The total on lands, lots and tracts is now about \$402,000,000. Of this amount \$142,000,000 is in farm mortgages. It has been found impossible to ascertain accurately what proportion of these instruments is owned by non-residents, but, so far as the records show, the non-resident holdings are less than 357,000,000.

Deaths in this city last week numbered 233, which is 11 less than in the preceding week, and 3 less than in the corresponding period last year. Of the foregoing 163 were males and 170 females; 42 died of consumption; 37 of pneumonia; 20 of marasmus; 19 of diseases of the heart; 17 of typhoid fever; 15 of epilepsy; 15 of inanition; 12 of old age, and 11 of apoplexy.

Markets, &c.—U. S. 4½, 10½; 4s, 12s; currency 6s 12 1/2 a 13 1/2.

Cotton was quiet, but steady, at 10 5/16c. per pound for middling uplands.

Wool was steady under moderate supplies, but demand was light. Quotations: Winter bur, choice and fancy, 5 1/2 a 5 7/10; do., fair to good, 5 1/10 a 5 1/16; spring bur, as to quality, 5 1/16 a 5 1/10; white middlings, 5 1/10 a 5 1/16; red middlings, 5 1/10 a 5 1/16.

Flour and Meal.—Sales of 500 barrels of No. 1 straight, at 86; 125 barrels winter patent, at 85.50; and 250 barrels Minnesota patent, at 87.

Grain.—Wheat No. 2, red, 81.10 a 81.10 1/2.

Corn, No. 2 mixed, 52 1/2 a 53 cts.

Do., No. 2 white, 53 1/2 a 54 cts.

Beef cattle.—Extra, 5 1/2 a 5 3/4 cts.; good, 4 1/2 a 4 3/4 cts.; medium, 3 3/4 a 4 1/4 cts.; fat cows, 2 a 3 cts.

Sheep.—Extra, 4 1/2 a 5 cts.; good, 4 1/4 a 4 3/4 cts.; medium, 3 1/4 a 4 cts.; common, 2 a 3 cts.; lambs, 3 1/4 a 6 1/2 cts.

Hogs.—Extra Chicago, 9 cts.; Westerns, 8 a 8 1/2 cts.; State, 8 a 8 1/2 cts.

FOREIGN.—Lord Rosebery, in a speech at Leeds on the 10th instant, favored the appointment of a non-political Foreign Secretary, who should speak with the united voice of the English people, without distinction of party. He said that England's colonial policy was becoming more and more involved with her foreign policy, and that if she wishes to retain her colonies she must not allow them to be larger obstacles to the influence of England in foreign affairs.

Sir William Veron-Harcort, speaking at a recent temperance alliance meeting in London, promised Liberal support of a local option measure.

The past summer was the wettest that England has experienced since 1879, and the coldest since 1860. In most parts of the country the sun did not shine more than an average of four to four and a half hours per day. In Scotland the daily average was about five hours.

The work of forming stations on the Skibbereen coast, Ireland, for the cure of mackerel and their exportation to America, is flourishing. The fishing boats are at present earning an average of \$350 a night.

London, Tenth Mo. 9th.—At a meeting of the Corn Merchants' Association, at Leeds, to-day, the price of flour was advanced 1/2 cent, per 48 stone, making a rise of 88. 6d. within eight weeks. The enhanced values of American and the poor quality of English wheats caused the advance.

The report is confirmed that cholera prevails in the Punjab and Meekool.

According to Johann Faber, the famous manufacturer of Nuremberg, the people of the United States, in round numbers, about a hundred million lead pencils every year.

Morfe Macaulay has published a history of the malady which caused the death of Emperor Frederick of Germany. He reflects severely on the professional reputation of the German physicians who were connected with the case. Forty thousand copies of the book have been seized by the police of Leipzig, and the writer, Herr Macaulay, has been arrested therefor. His work has been printed in the *New York Sun*, and extracts from it in the *New York Herald*.

A despatch from Ottawa, Ontario, says that T. C. Keefe, President of the American Society of Civil Engineers, has received a cable from London announcing that a contract for the construction of a ship-railway from the Bay of Fundy to Baie Verte, Gt. St. Lawrence, has been finally settled, and that Ketchum, the indefatigable promoter of the scheme, sailed last week for Canada on the *Eururia*. The works will probably cost \$,000,000.

Colonel J. T. Child, our Minister to Siam, was in St. Louis on the 14th instant, on his way from Bangkok to Washington. He says the commerce with America has increased wonderfully in the past few years. "All the petroleum used in Siam comes from America, the country is supplied with flour from San Francisco, much American machinery is used, and a great quantity of cotton and woollen fabrics bought. American goods are liked better than any others, as is proved by the fact that more than an English manufacturer can counterfeit our trade marks."

NOTICES.

THE SOCIETY FOR HUMAN CULTURE has begun its work for the term of 1888-89. Application for membership or circulars may be made to

Incidents and Reflections.—No. 171.

REPROOF.

When the wife of Sir Stamford Raffles, who was for a time Governor of Singapore in India, had lost a favorite child, she was so overwhelmed with grief, that she shut herself up in her room and gave way to her sorrow, neglecting her other children, and a proper attention to her duties. From this condition she was aroused by a reproof of one of the native women, a person of low caste employed about the nursery, to whom doubtless it must have been a great effort thus to address one to whom she looked up with feelings of much deference. She addressed her as follows:

"I am come because you have been here many days shut up in a dark room, and no one dares to come near you. Are you not ashamed to grieve in this manner, when you ought to be thanking God for having given you the most beautiful child that ever was seen? Were you not the envy of everybody? Did any one see him or speak of him without admiring him? And instead of letting this child continue in this world till he should be worn out with trouble and sorrow, has not God taken him to heaven in his beauty? For shame—leave off weeping, and let me open a window."

On one occasion John Wesley gave a skillfully worded, and as it proved, a very effective reproof to General Ogleshope, the Governor of Georgia, with whom he crossed the ocean to America. Hearing an unusual noise in his cabin, he stepped in to inquire the cause. He found the general highly incensed, because his servant had drunk up some Cyprus-wine, which the general had provided for his own use. "But," he added, "I will be revenged on him, I have ordered him to be tied hand and foot, and carried to the man-of-war which sails with us. The rascal should have taken care how he used me so, for I never forgive." "Then I hope," replied Wesley, "you never sin." This reference to our Saviour's declaration, "If ye forgive not men their trespasses, neither will your Father forgive your trespasses," produced such an effect on the general, that he restored the custody of his keys to the offending servant, with an admonition to behave better for the future.

Equally effective was the rebuke administered by John Locke, the distinguished author of a

treatise on the human understanding, who had been introduced by Lord Shaftesbury to the Duke of Buckingham and Lord Halifax. The three noblemen, according to the foolish customs of the times, sat down to a game of cards, instead of entering into rational and improving conversation. Locke, after looking on for a time, pulled out his pocket-book and began to write. One of the company observed the manner in which he was employed, and took the liberty of asking what he was writing. "My lord," said Locke in reply, "I am endeavoring, as far as possible, to profit by my present situation; for, having waited with impatience for the honor of being in company with the greatest men of the age, I thought I could do nothing better than write down your conversation; and, indeed, I have set down the substance of what you have said this last hour or two." The three noblemen, sensible of the force of this well-timed ridicule, laid aside their cards, and entered into conversation on subjects more worthy of rational beings.

Isaac Walton relates the following instance of a rebuke given to one who was seeking in outward things that which could only be found in himself. He says:

"I knew a man that had health and riches, and several houses, all beautiful and well-furnished, and would often be troubling himself and family to remove from one of them to another. On being asked by a friend, why he removed so often from one house to another, he replied, 'It was in order to find content in some of them.' But his friend, knowing his temper, told him, if he would find content in any of his houses, he must leave himself behind, for content can never dwell but with a meek and quiet soul."

An anecdote is told of a surgeon named Meikle, who was called to attend a man who had been stung on the face by a wasp or bee, and who was very impatient, swearing on account of the pain. The doctor told him it would soon be better, but he continued to swear, until his attendant determined to give him a reproof; so he said, "I see nothing the matter, only it might have been in a better place." "Where might it have been?" asked the sufferer, "Why, on the tip of your tongue!"

Less personal and direct, yet plain enough to be understood, was the implied rebuke expressed by—Howe, [probably John Howe, a Non-Conformist minister, and chaplain of Oliver Cromwell] who dined on one occasion with King Charles I., introducing many oaths into the discourse. Howe remarked, that he had omitted one singular excellence in the character of that prince. The man eagerly inquired what that was, and received the reply, that "he was never heard to swear an oath in common conversation." The hint was received, and a promise given to break off the practice.

At another time, when Howe was passing two persons who were talking with great earnestness, and imprecating curses on each other, he said to them, "I pray God save you both." They

accepted the admonition and returned him thanks.

The habit of profane swearing, to which some of these anecdotes refer; and the horrid character of the oaths that are often uttered when the swearer becomes enraged, or sometimes even in a careless and thoughtless mood; are so bad and unreasonable, that they are enough to shock the guilty, when calmly brought to his notice. An anecdote illustrating this has been preserved of William Wilson, a minister of Perth. He was walking along the streets of that town, and three soldiers happened to come near him, one of whom, on some frivolous account, expressed the wish that he might be damned! W. Wilson immediately turned round, and said, "Poor man, and what if God should say Amen, and answer that prayer?" He passed on: the man seemed stupefied, and went home to his quarters in such a state of distraction, that he knew not where to turn for relief. He was soon after seized with a fever, under which he continued to suffer awful forebodings of future misery, saying that he was beyond the reach of mercy, and that God had sent his angel to tell him so. Hearing of his situation, William Wilson visited him, and endeavored to set before him the mercy of God in Christ Jesus, to those who repent of their sins and lay hold of the hope set before them in the Gospel. The sick man found peace to his troubled mind, recovered his health, obtained a discharge from the army, which he felt to be unfavorable to a religious life, and settled down as an exemplary Christian.

A similar reproof was once uttered by the pious William Romaine, of London. In crossing Blackfriars Bridge, he came up with a man, who, in impious language, called upon God "to damn his soul for Christ's sake!" Laying his hand upon the blasphemer's shoulder, Romaine said: "My friend, God has done many things for Christ's sake, and perhaps He will do that too." This probably brought home to the poor wretch's heart, a feeling of the awful character of his imprecation; and was so blessed by the Spirit of God, that it was made the occasion of a change in his course of life, so that he became a follower of the Redeemer.

J. W.

FOR "THE FRIEND."

A Vacation Across the Atlantic.

(Continued from page 10.)

Sixth Mo. 30th.—Yesterday was another hard day. The captain declares there is a Jonah on board. I sit near him at table, and get a good share of his conversation. He is well read and intelligent, and like all of his kind is fond of talking, and don't like to be asked questions. Yesterday afternoon he and three of us passengers were standing on a little dry spot on the quarter deck, doing our best to keep right side up, when suddenly an extra roll of the boat made it impossible to keep our feet, and we all four unexpectedly took seats and slid down hill into the scupperns. It quite gratified me to see the captain so ignominiously go off his legs much despised landsmen.

But to-day is beautiful. People are commencing to turn up whom we never suspected were on board. I find two Friends are in the ship beside myself. The skies are blue, the sea is calm, things are nice and dry; the engines seem to throb out the words "going home, going home;" the tables are attractive with good living and pleasant conversation, we all forget that we were ever sick, and are almost ready to believe that our voyage will wind up as pleasantly, as it began disagreeably.

Evening on the sea during fair weather, is the most delightful part of the day. After the good things have been discussed at dinner, I love to go out on deck, and watch the great round sun sink into the tossing waters. Meanwhile the exquisite gray of twilight will steal over the misty scene until it deepens into the impetuous black of night. Then the lights are placed around the deck and dance from stem to stern with the motion of the ship. Overhead the beautiful stars gaze down upon us, except where they are hid by the curling trail of smoke that incessantly pours forth from our two huge smokestacks. The phosphoreous flows away from the ship's sides like molten gold, and I love to go out to the stern and watch in our wake the brilliant flashes of light that rival sparks of electricity in beauty. All around, the cheerful hum of conversation is heard from almost unseen fellow-passengers, and after participating therein, or else after walking the deck until it becomes slippery with the dew of night, I go below to sleep till the morning's light shall penetrate into my little cabin.

Seventh Mo. 1st.—This afternoon we took the pilot on board, although several hundred miles from land. This operation always creates a great excitement on a big steamship. The ponderous machinery stops, men get ready with ropes and a rope-ladder to throw over the vessel's side, and the decks swarm with an eager throng, anxious to catch sight of the first thing American. A short distance away, the schooner-rigged and beautifully built pilot boat, with her number painted on her masthead, gracefully rides the water like a thing of life. From her is sent out a little boat which dances over the waves towards us, and soon it is pulled alongside, and the pilot climbs up into our midst; then the engines wheeze and struggle, and we once more are moving on our course, actually feeling that now we are nearing home.

These pilot boats will swim like ducks, will ride out almost any dreadful storm, and are beautiful specimens of marine architecture. They often venture out to sea 600 or 700 miles, so as to be first to catch an incoming steamer—the competition among them is so great. The pilots are paid according to the size of the vessel they take into port. It seems a dangerous and uncertain way of earning a livelihood; yet I presume it must pay very well, and it certainly ought to.

Seventh Mo. 2nd, 1858.—On steamships approaching their destination, there is most always considerable conversation regarding going through the custom-house. The inexperienced will often be observed to anxiously inquire of the wise old travellers as to any danger of having their goods seized, what goods are dutiable, and how to avoid any extra annoyance in having their baggage examined. The said wise old travellers are often ready to narrate hairbreadth escapes from the vigilance of the customs' officers, and some are even ready to tell how 85.00 has sometimes blinded the eyes of those representatives of the law. These tales are often open to

suspicion. I regret to observe that a great many people of mostly correct ideas or the subject of honesty, will be ready to express the belief that it is no sin to cheat the custom-house. Probably this wrong idea may be founded on the fact that we all dislike to be compelled to make an affidavit as to the amount of dutiable goods in our possession, and then have all our possessions tumbled around to find if we have told the truth or not. Outside of the latter annoyance there is nothing to worry about for one who expects to tell the truth, and don't try to cheat. My experience has been that it is possible to deal so with the inspectors that they are kept in a good humor and let me off very soon. But woe betide that individual who tries to conceal, or who is impudent to them! They can give him no end of trouble and vexation. Anyhow, none of us like to have our effects all pulled out and exposed to the amused gaze of unfeeling spectators. I have seen some funny scenes on custom-house docks.

Seventh Mo. 3d.—By the evening of the 2nd we once more realized that we were in American waters. For two days the quiet sea had made sweet amends for the tossing, and pounding, and aching it had given us the early part of the voyage. The mid-summer sun went down in a blaze of glory. As we watched for the low Long Island shore, the heavens burst forth as if with transparent gold, mingled with those marvellous tints of crimson, green, and blue, with which nature paints some of our summer sunsets. The gray green sea caught up the charming reflection; and as the darkness of night obscured the scene, I detected to the north a little light sparkling between the quiet waters, and knew it went over a friendly welcome from the shores of my native land.

W. C. ALLEN.

SELECTED FOR "THE FRIEND."

Parental Care in the Training of Children.

I have a sweet hope thy little ones will grow up to be a help and comfort to thee, and in order that it may be so, and that the Lord may delight to bless them, I doubt not it is thy *sublime care* to watch over the tender plants, lest any budding of pride, or any wrong shoot, spring up or frustrate the gracious intentions of Heaven in any degree towards them; and carefully and assiduously to nurture them up in *that* simplicity of manners and appearance which Truth leads into. Many parents, it is to be feared in our day, have been miserably deficient in the education of their offspring; checking, hindering, and preventing that which ought to be cultivated in them, and cherishing, forwarding and encouraging what ought to be rooted out and destroyed; and hence it comes to pass that so little tenderness of spirit and amiable simplicity is to be seen in our youth, and very little of a succession of testimony-bearers is in prospect. One of the first temptations thrown in the way of children, after the age of infancy, is a little finery in dress, and the convictions of Grace remonstrating against it being resisted, the reproofs of that Divine Monitor (through repeated resistance) become less forcible, less clear and less felt, and so disregarded too much; and hence for want of faithfulness in the little, and in the early discoveries, there is not a right growth experienced, but the contrary prevails; and here is *one great reason* that the city of our fathers' sepulchre lies waste. May it be our care, more and more, by example and precept, to train up our children in the way they should go, as the most probable means, with the Divine blessing, of preventing their departure from it in their

riper years. And if there should in our families fall out some exceptions to this general rule, yet we shall have the comfort arising from a conscientious sense that we have done *all in our power*, and are clear in the sight of our Great Judge, the Chief Shepherd, who committed the little flock to our charge.—From a letter of Richard Shackleton.

John Pounds—the Founder of Ragged Schools.

[The following interesting narrative of the life and labors of one who, like his Divine Master, spent much of his life in doing good to others, is condensed from a biographical sketch in "Notable Workers in Humble Life," by E. V. Hoare:]

"It was by a picture that I was at first led to take an interest in ragged schools," said Dr. Guthrie in a speech delivered at a public meeting in Edinburgh—"by a picture in an old, obscure, decaying burgh that stands on the shores of the Firth of Forth. . . . I went to see this place many years ago; and going into an inn for refreshment, I found the room covered with pictures of shepherdesses with their crooks, and sailors in holiday attire—not particularly interesting. But above the chimney-piece there stood a large print, more respectable than its neighbors, which some skipper, the captain of one of the few ships which now trade between that once busy port and England, had probably brought to the town. It represented a cobbler's room. The cobbler was there himself, spectacles on nose, an old shoe between his knees; that massive forehead and firm mouth indicating great determination of character; while from beneath his bushy eyebrows benevolence gleamed on a number of poor ragged boys and girls who stood at their lessons around the busy cobbler. My curiosity was awakened; and in the inscription I read how this man, John Pounds, a cobbler in Portsmouth, taking pity on the multitude of poor ragged children left by ministers and magistrates, and ladies and gentlemen, to go to ruin on the streets, had, like a good shepherd, gathered in these outcasts; how he had trained them to God and the world; and how, while earning his daily bread by the sweat of his brow, he had rescued from misery and saved to society not less than five hundred of these children. I felt ashamed of myself. I felt reproved for the little I had done. My feelings were touched. I was astonished at this man's achievements; and I well remember, in the enthusiasm of the moment, saying to my companion, and I have seen in my calmer and cooler moments no reason for unsaying the saying, 'That man is an honor to humanity, and deserves the tallest monument ever raised within the shores of Britain!'" . . .

John Pounds was born in St. Mary's Street, Portsmouth, on the 17th of Sixth Month, 1766; in that same street he found his life-work and made his humble home for seventy-two years; thither, though not to the very house in which he had been born, the old man was brought home dead on New-Year's Day, 1839. . . .

Little Johnny enjoyed but few advantages in the way of education. His father was a carpenter in the dockyard; and the boy, when twelve years old, was taken from school to be apprenticed to his father's trade. Of his mother, we are told by one who recollects her well, and who was the life-long friend of her son, that "she was a good sort of woman; a pleasant kind of respectable woman. But she'd always be reading." We may believe that

young John inherited his literary tastes from his mother, since we are told, on the same authority, that he too "was a terrible one for a book."

After a year or two in the dockyard, a terrible misfortune, as it appeared at the time, befell the young apprentice. He fell into an empty dry-dock and was taken home on a stretcher to use his own words, "a heap o' broken bones, and out o' joint." The lad was now a cripple for life—lame and painfully deformed. For him all the brightness of youth and "the wild joy of living" were over forever. "I was a lively young chap then," said the old man of sixty-seven; "full o' fun; up to every dodge. And who knows but I'd been like many another young chap, gay and thoughtless, with their larking and fooleries? But the broken bones quiets me a bit. And I's rubbed on very well, I has—thank the Lord."

It being impossible for young Pounds ever to return to the dockyard, an occupation suited to his deformity was sought for him, and as soon as he was able to move about again, he was apprenticed to a shoemaker. He maintained himself by his trade for the rest of his life. During the war time he was able to earn a good deal of money, sometimes clearing as much as a pound a week; but after the peace, trade became slack in Portsmouth, and he was content to make his living by mere cobbling work as a mender of old boots and shoes.

There had indeed been one little break in his life. He had tried going to sea for one summer. What! a sailor lame and crippled? Yes; and it was this very deformity that in part recommended him as a safe hand. Those were the days of the press-gangs, when likely men were picked up and compelled, without scruple, to serve in the royal navy. Merchant-ships were in this way often deprived of their best men, and skippers had to make shift as best they could. Nobody was likely to press John Pounds, and accordingly he found employment during one summer on board a vessel trading between Portsmouth and Swanage, carrying stone for the ordnance works. It afforded a pleasant change; the cobbler brought his kit of tools with him, and was quite happy. This took place while he was yet living with his parents and working at home at his trade.

In the year 1801, the paternal home having been broken up (the actual house was pulled down to make room for a larger), John Pounds set himself up in a little weather-boarded shanty further down the same street. Here he lived and worked for thirty-six years; here he established the first ragged school, in the fashion the reader shall hear of; and across the threshold of that tumble-down cobbler's shed, years after, passed hundreds of little feet, hurrying eagerly into the presence of an uncouth and, truth to say, somewhat dirty and unkempt old man!

The school grew up gradually; indeed it was a sort of after-thought. John Pounds was a philanthropist first and a schoolmaster afterwards. He never saved a penny. In the days when trade was good and he earned comparatively large wages, he spent all, after providing for his own small wants, on relieving the destitute and buying food for the hungry. "He would do anything for anybody," is the testimony of his life-long friend Lemmon. "All the neighbors round would come to him when they wanted anything done, it did not matter what. 'Mr. Pounds,' one would say, 'will you come and tap my beer for me?' 'Yes,' he would say, and he goes down into their cellar

and taps their beer for them. 'Mr. Pounds,' another would say, 'will you come and put up our bedstead for us?' 'Yes,' he says, and he goes upstairs and puts up their bedstead for them. And all for nothing. Nothing came amiss to him if he could help a poor neighbor."

It was out of these labors of love that the celebrated school grew up. Pounds had a nephew, a poor deformed thing, born with both feet turned in and overlapping one another. It was proposed by the surgeon to whom the child was taken that as soon as the ankle bones were tough enough they should be broken and the feet set straight. The story goes that the mother, having kept her little one a year, was taking it to the doctor, when she met John. In reply to a somewhat peremptory question, the woman admitted that she was going to the surgeon to have the child's feet operated on. "Why, you savage old brute," exclaimed the warm-hearted but rough-tongued cobbler, "you's not ag-ooing to do that 'ere? Give me the child; you's not fit to have the care of a child." And so a bargain was struck; and John Pounds, filled no doubt with that fellow-feeling that makes us wondrous kind, carried home the little sufferer, resolving to try upon him a gentler method of surgery.

But that was not just yet. The first thing was to provide companionship for the poor cripple. So, his friend Lemmon was invited to send in his youngsters to play with Johnny, the nurse-child promising to bring them forward in their studies as best he could. He played with the children, he cut out toys for them, and between whiles he managed to teach them a good deal too. He had the native genius of a Frobel, and his school was indeed a Kindergarten—a very paradise of children. He had no experience, no staff, no "school requisites." For "premises" he had the shop in which he lived and toiled, and barely six feet wide by fifteen long, and scarcely high enough for a tall man to stand erect. There was scarcely anything for the children to sit on—some old broken boxes, a form or two, and the lower steps of the stairs that led to the room above. During the first years, at all events, he had no books—nothing to teach from save stray leaves, scraps of news paper, hand-bills, and his Bible. For writing, there was nothing available but broken fragments of slates, and of these seldom enough for the class. Those early days at the new academy are thus described:

"He talked about it all so nicely, he made it pleasant and interesting for them. And he never kept them at it too long, so as to weary them. He would always let them play again as soon as he thought they had had enough. If any one seemed sleepy, he let it lie down and go to sleep. 'Nature's the best judge,' he used to say. He often told them pretty stories, all to do them good. Johnny was always good at telling interesting stories; and they were eager to listen to them. By-and-by he got them some little slates to write on, and began to teach them how to do little sums. And neighbors would stop and look in, and listen to them reading and saying their verses; and all seemed so pleasant and happy. First one neighbor would say, 'Mr. Pounds, will you kindly let my little ones come and say lessons with yours?'—and then another; and he always said 'Yes; bring 'em'—fill his shop was full. And when once his shop was full, it never slackened. So it went on to the end. . . . Poor widows would bring their little children to him in the morning; and he took care of them all day, and they

never came again for them till nine o'clock at night. They couldn't—they were out at work all day; and they'd often had them asleep before the fire. They'd have had no food but what he gave them!"

(To be continued.)

How Whitworth Made the True Plane.

At Maudslay's shop Whitworth soon won a position as one of the best workmen, and while here he made his first great discovery, which consisted in the construction of a set of perfect plane surfaces. Up to that time the most accurate planes had been obtained by first planing and then grinding the surfaces. They were never true, and young Whitworth became possessed with the idea of making a true plane. At the next bench sat a Yorks-hireman, a good workman and a good fellow, who took an interest in his young companion's work. One day, as they worked, Whitworth ventured on an idea. "If these planes were true, one of them ought to lift the other." "Tha knows nowt about it," was the concise reply of steady-going experience. Whitworth kept on at his problem, working quietly at his lodgings. His first step was to abandon grinding for scraping. "Taking two surfaces," he said, when telling the story afterwards, "as accurate as the planing tool could make them, I coated one of them with coloring matter and then rubbed the other over it. Had the two surfaces been true the coloring matter would have spread itself uniformly over the upper one. It never did so, but appeared in spots and patches. These marked the eminences, which I removed with a scraping tool until the two surfaces became more coincident." But while his skill as a workman was thus being made the most of, Whitworth's mind was not idle. He saw that his first thought was not enough. Two surfaces might lift each other by fitting perfect and yet not be planes. One might be convex and the other concave. A new light came. Make three surfaces. If each will lift either of the others they must be planes and must be true. After another stage of skillful labor the three planes were made and the test fulfilled. After the problem was solved Whitworth called on his old mate. "John," said the young man, "come to my house; I've something to show you." The true planes were exhibited. "Ay! tha's done it," said John. That was probably the greatest moment in a great life. Joseph Whitworth had perceived that a true plane was the first thing needed for the improvement of mechanical construction. He set to work to produce it, and by sheer clear thinking and honest work he did produce it. The appreciation that he first sought and perhaps most highly valued, was that of the best workman among his fellows. The invention was characteristic of the man. It was not a happy thought to be applied by Whitworth and then carried further by others. It was an ideal of perfection first conceived as desirable and then once for all finally and absolutely realized.—*Manchester Guardian.*

THE manner of the working of Truth is to humble the creature, and bring into denial, contrition, tenderness and fear, and true self-denial.—*John Richardson.*

A little child was once asked, where it lived? Turning towards its mother, who stood near by, the little one said, "Where mamma is, there's where I live."

FOR "THE FRIEND."

The article in last week's FRIEND on the position of Philadelphia Yearly Meeting, by a member of Iowa Yearly Meeting of the Larger Body, interested me, where he said, "The eyes of other Yearly Meetings are upon her," and "the Friends' Society has not finished her mission in the world in upholding those living testimonies given her to promulgate,—that of peace, and the spirituality of the Gospel dispensation,—the right call and qualification for a true Gospel ministry, as well as many others."

No doubt our responsibilities are great, and so fact that we seem (so far) to have been kept from some of the innovations which have troubled some other Yearly Meetings, does not diminish them in the least.

It becomes each and every one of us to examine closely into our conduct and walk among men, as to how far we are discharging our individual duties. This self-examination is, I think, obligatory upon us all, from the most favored minister or elder, to the most obscure member of any of our meetings.

"Where much is given, much is required;" and where but little is given, I hope we may be concerned to be faithful in that little, however small and unimportant the service may seem. If it is our duty, it cannot be discharged by others; and we may remember the promise that "He that is faithful in the little, shall be made ruler over more."

I hope we will not be too easily led into the creaturely activities which have laid waste some portions of our once highly favored religious Society.

Don't let us rely too much on wealth, high culture, mere Biblical knowledge, or our own talents. Our Saviour, when on earth, did not call upon either the learned or the rich Jews for his immediate and chosen followers; and if we expect to draw down the Divine blessing we must seek to know the Divine will, and follow it,—even if the service is very humbling to our naturally proud spirit. Mere appointments from our meetings, or high natural abilities improved by the highest culture, will not make us fitted for places we were never designed to fill, and into which our Heavenly Father has not called us, nor qualified us for.

"Wait on the Lord, be of good courage, and He shall strengthen thine heart. Wait, I say, on the Lord." B.

Chester Co., Pa., Tenth Mo., 16th, 1888.

A Suicide Prevented.

A Piedmontese nobleman related the following incident in his experience: "I was weary of life, and after a day such as few have known, and none would wish to remember, was lounging along the street to the river, when I felt a sudden check; I turned and beheld a little boy, who caught the skirt of my coat in his anxiety to solicit my notice, whose look and manner were irresistible. Not less was the lesson he had learned, 'There are six of us, and we are dying for food!'

Why should not I, said I to myself, relieve this wretched family? I have the means, and it will not delay me many minutes. But what if it does? The sense of misery he conducted me to, I cannot describe; I threw down my purse, and their burst of gratitude overcame me. It filled my eyes, it went as cordial to my heart. I will call again to-morrow, I said. Poul that I was, to think of leaving a world where so much pleasure was to be had, and so cheaply!"—*Arcine's Cyclopaedia.*

FOR "THE FRIEND."

MUSINGS.

"The Lord God omnipotent reigneth! Let all the earth keep silence!"—Rev. xix. 6.

Return, return Oh peace of God!
Return through mystic power of Faith,
Or through the needed dust-enslaving rod—
Return, mine inmost nature saith,
To spread thy glorious light abroad!

Return, Oh Hope that's "not ashamed!"—
That stands triumphant in its right;
Until thy sorrowing child has claimed
Thy attributes, with sweet delight!

Return, Oh Charity and love!—
The crowning link to bind thy chain:
And let thy passive captive prove
Thy harmonizing power again
To drown all needless earthly care
In faith in Thee—all else is vain.
MARSHALLTON, Penna.

MARJORIE.

BY WILLIS HOVD ALLEN.

"O, dear," said Farmer Brown, one day,
"I never saw such weather!"
The rain will spoil my meadow-lay,
And all my crops together."

His little daughter climbed his knee;
"I guess the sun will shine," said she.

"But if the sun," said Farmer Brown,
"Should bring a dry September,
With vines and stalks all wilted down,
And fields scorched to an ember?"

"Why then 'twill rain," said Marjorie.

The little girl upon his knee,
"Ah, me!" sighed Farmer Brown, that fall,
"Now what's the use of living?"
No plan of mine succeeds at all!"

"Why, next month comes Thanksgiving,
And then, of course," said Marjorie,
"We're all as happy as can be."

"Well, what should I be thankful for?"
Asked Farmer Brown. "My trouble
This summer has grown more and more,
My losses have been double,
I've nothing left!"—"Why, you've got me!"
Said Marjorie, upon his knee.

SELECTED.

SLEEPING-TIME.

"So He giveth his beloved sleep."—Ps. cxviii. 2.

When the summer's day has ended, and its duties all are done,

And the eastern hills are gilded by the slowly setting sun,

Then the songbird seeks the quiet and the shelter of its nest.

While the flowers close their eyes in sleep upon their mother's breast.

When his day of toil is over, then the laborer seeks his home;

And his frame is worn and weary, but his rest has yet to come;

There are those at home to greet him well, with many a loving cheer,

And the thought doth urge him onward to the home he holds so dear.

When the gentle twilight falleth, then the children gather home,

For their little feet are weary and their sleeping time has come;

And in peace they lay unconscious, though in safety all the while,

Till they rise to greet the sunlight and their father's loving smile.

When the Christian's day has ended, and his work on earth is o'er,

And he longs to meet his loved ones, who have gathered home before;

Then the Father calls his children to the quiet of his home,

For the twilight shades have gathered and their sleeping-time has come.

—William H. Ross, in the *Christian*.

FOR "THE FRIEND."

A Ramble in the Swamp.

On the 9th of Tenth Month the air was so cold that a heavy frost during the coming night seemed probable; and so, before its blighting effects had destroyed the beauty of the remaining flowers, I determined once more to visit a swamp, rich in plants, which I had often explored.

I especially desired to secure for my herbarium a good specimen of the beautiful Closed Gentian (*Gentiana Saponaria*), which I knew was to be found there; and in this I was quite successful; for the plants grew there abundantly, and some of them were the finest specimens I had ever seen. The flowers are a bright blue, and about 2 inches long, and may be compared to a little bag or purse plaited lengthways, narrow at the base, enlarged in the middle, and again contracted at the top, where its points or lobes fold inward so as to apparently close the opening to the interior organs—the precious treasures of stamen and pistils it is designed to contain and protect. The stem is crowned with a cluster of these flowers; and often similar clusters are found in the axils of the leaves below. The leaves themselves are smooth and graceful in shape—so that the whole plant is very attractive in appearance, the more so because it blooms so late in the season, when most other plants have lost their beauty. Though nearly one-third of the Tenth Month had passed, I found many of the flower buds not yet fully developed. It may give some idea of the luxuriance of the growth of these plants, to mention that one of them had more than 30 flowers, and another, a truly magnificent specimen, upwards of 50, many of them fully developed, and others but partially so.

About ten days before, I had collected on the rocky banks of the Brandywine in Chester Co., Pa., another Gentian (*Gentiana Andreinii*), so nearly resembling the common Closed Gentian, that I brought it home, supposing it to be the same. In it the flowers are also closed, but the projecting points or limbs of the corolla have been cut off, and the light-colored connecting membrane projects beyond the blue; and there are other differences, observable to the eye of a botanist, which show that it is a different, but closely allied species.

Another, and still more admired species of Gentian, is not uncommon in Chester County, although I have never found it in our part of New Jersey. It is the Fringed Gentian (*Gentiana crinita*). The flowers are about the same size as those above described, but instead of the lobes of the corolla being drawn together, they open out at the top in a narrow bell shape, and are beautifully fringed. The color is a deep blue. It is not very abundant, so that I felt well pleased, when a kind friend procured for me some specimens, on the 4th of Tenth Month. I mention the dates, to show that all of these are late-flowering species, coming to cheer the eye, when other flowers are leaving us. Another Gentian, I met with on the 29th of Ninth Month, on the sea coast of New Jersey, above Absecon. It has a simple, slender stem, about a foot in height, with very narrow leaves, and crowned with a flower of a most brilliant purplish-blue color, which opens into a funnel or bell of about 2 inches in length. The discovery of this species (*Gentiana angustifolia*), gave me a thrill of pleasure, partly from its intrinsic beauty, and partly because I had never seen it until the present season.

The natural order of Gentian works includes about 70 genera and upwards of 500 species.

Among the Gentians proper, blue is the prevailing color; yet white, yellow, and even red flowers are met with. The red-flowered species are almost confined to the Andes, while blue-flowered species ascend the Himalayas to the height of 16,000 feet. The great majority are found in hilly or mountainous districts in the northern hemisphere. "The abundance and beauty of the Gentians on the European Alps never fails to arrest the attention of the traveller." The color of some of the lower growing species is an intensely brilliant blue, and they may be found growing in profusion, surrounded by ice-lad rocks and glaciers.

Most of the Gentians contain a bitter principle which is used as a tonic. The Gentian root of the apothecary is obtained from a yellow-flowered species (*Gentiana lutea*) growing in Switzerland and the Tyrol.

When wading through the dense vegetation that covered the swampy ground, much of it as high as my head, I came to the dead stem of one of the beautiful wild lilies (*Lilium superbum*), with seed pods where once the flowers had been; and determined to take the roots and plant them in our garden at home, in hopes that they would flourish there. The Lily has an underground stem or bulb, composed of a mass of thick white scales, closely appressed, from the bottom of which descend the true roots, which are long, thread-like organs. From the top of this mass of scales the flowering bud ascends and produces the stem, leaves and flowers. In the specimen I examined, a new mass of such scales had been formed on one side of that which had produced the flowers of the present year; and from this the flowers of the succeeding year were designed to come. So the Lily propagates itself in two ways—both by its seeds, and by offsets under the surface. When washed from the surrounding black, peaty soil, the bulbs and roots of the Lily were very interesting and instructive objects of study, and withal quite pretty. On cutting open the bulb, which had already flowered, it was evident that the flower had sprung from a central bud, and that the thick scales which surrounded it might be regarded as undeveloped leaf buds, designed to protect the living centre from injury.

On the under side of the peaty soil which I upturned in digging up the Lily, I found a pretty large white grub, with brown head and jaws, in a semi-torpid condition. It had, I suppose, taken refuge for the winter in that well-sheltered position; and, if undisturbed, would emerge the next year as one of the numerous family of beetles, with thin, gauzy wings for flying, and thick, horny wing-cases to protect the wings when at rest, or creeping upon the earth.

(To be concluded.)

Charles Kingsley on Gambling.—The following letter, says the *Irish Ecclesiastical Gazette*, was addressed by the late Charles Kingsley to a public-school boy who had put money into a sweepstake without thinking in was wrong:

"My Dearest Boy—There is a matter which gave me much uneasiness when you mentioned it. You said you had put into some lottery for the Derby, and had hedged to make safe. Now, all that is bad—bad, but not bad. Of all habits, gambling is the one I hate most, and have avoided most. Of all habits, it grows most on eager minds. Success and loss alike make it grow. Of all habits, however much civilized men may give way to it, it is one of the most intrinsically savage. Historically, it has

been the peace excitement of the lower brutes in human form for ages past. Morally, it is unchristianous and unchristian. (1) It gains money by the lowest and most unjust means, for it takes money out of your neighbor's pocket without giving him anything in return. (2) It tempts you to use what you fancy your superior knowledge of a horse's merits, or anything else, to your neighbor's harm. If you know better than your neighbor, you are bound to give him your advice. Instead, you conceal your knowledge to win from his ignorance; hence come all sorts of concealments, dodges, deceits; I say the devil is the only father of it. I'm sure, moreover, that the head master would object seriously to anything like a lottery, betting or gambling. I hope you have not won; I should not be sorry for you to lose. If you have won, I shall not congratulate you. If you wish to please me, you will give back to its lawful owners the money you have won. If you are a loser in gross thereby, I will gladly reimburse your losses this time. As you had put in, you could not in honor draw back until after the event. Now you can give back your money, saying that you understood that the head master and I disapprove of such things, and so gain a very great moral influence. Recollect always that the stock argument is worthless. It is this: 'My friend would win from me if he could, therefore I have an equal right to win from him.' Nonsense. The same argument would prove that I have a right to maim or kill a man if only I give him leave to maim or kill me if he can and will. I have spoken my mind once and for all on a matter on which I have held the same views for more than twenty years."

Current Misquotations.

There are three different ways in which a passage may be mis-quoted: 1. The words may be wrongly given; 2. The meaning given to the passage may be different from that intended by the author; and 3. The passage may be attributed to a wrong person.

In each of these cases alike the passage is misquoted, although in common parlance that term is usually limited to cases where there is a verbal mistake in the quotation. Every one who has given any attention to our English colloquial speech is well aware how much it is indebted to our English Bible. Consciously, or unconsciously every day and hour of our lives we are making use of the phrases and expressions of the Old and New Testaments. They form the very warp and woof of our ordinary speech. That under these circumstances a passage from the Bible should be occasionally misquoted would be but natural; but that, with our Bibles daily, or at least weekly, in our hands, any passage could be continually and universally misquoted may well seem incredible. It is, however, true. Who has not heard, nay, who has not again and again employed the hackneyed quotation, "He who runs may read"? It is not only constantly used in common conversation, but it is also a favorite commonplace of poets, prose writers and public speakers. And who has ever seen or heard the words used in any sense but this—"that the writing is so legible that a man can read it as he runs." But assuredly the Hebrew prophet from whom the quotation is taken neither said nor thought of saying anything of the kind. Habakkuk is foretelling the vengeance which the Chaldeans would inflict upon the land because of its ungodliness, and writes (chap. ii. 2): "And the

Lord answered me and said, Write the vision and make it plain upon tables that he may run that readeth it." Obviously the prophet is to write so plainly that anyone who reads it may understand it and run away and escape from the coming vengeance. It is not that he may run and read, but that he may read and run.

The Bible is sometimes, as we have seen, robbed of what belongs to it; but on the other hand, it is sometimes improperly credited with what does not belong to it. There are several proverbial sayings which are very generally, but erroneously supposed to be taken from the Bible. "God tempers the wind to the shorn lamb," and "Cleanliness is next to godliness," both come under this category. Both are, without doubt, very excellent sayings, but certainly not biblical. The former, we are told by the compiler of "Familiar Quotations," was first used by Sterne, who puts it into the mouth of Maria in the "Sentimental Journey." The other passage—"Cleanliness is next to godliness"—is given with quotation marks in one of John Wesley's sermons; but the origin of it is not known. The compiler of "Familiar Quotations" says that a Jewish lecturer, reported in *The Jewish World*, asserts that this proverb has been for centuries taught by the Rabbis in the Talmud, both as a religious principle and as a sanitary law. The common sayings, "Pouring oil on the troubled waters," and, "The war horse scents the battle from afar," are also, as a recent writer in *Notes and Queries* says, very generally believed to come from the Bible. But the Bible will be searched in vain for either of them. On the other hand, as the last-mentioned writer says, the expression by "skin of my teeth," which many regard as vulgar slang, is in reality biblical. It is the unhappy Job (ix. 29) who exclaims in the bitterness of his anguish, "I am escaped with the skin of my teeth."

Make Haste!—Some years ago, when travelling through Palestine, we were nearly benighted. We had left Hebron in the morning, and had come leisurely along, passing through Bethlehem, and visiting the gardens of Solomon on the way. The sun began to get low ere we caught our first glimpse of Jerusalem, and on reaching the plain of Rephaim we had to increase our speed. In a little the sun set, and we saw a man come out from the Jaffa gate and stand upon a small hillock, shouting with all his might, as if forewarning of danger, and gesticulating wildly, as if to call our attention to what he was announcing.

"What is the man saying?" we asked our guide.

"He is shouting, 'Yellah! Yellah!'"

"What does that mean?"

"Come along! Come along!"

We now found we were about to be shut out, and this messenger had come out to warn us that the gate was about to be closed. We made haste, as we did not at all relish the thought of being kept all night outside the walls. We were just in time; no more. We entered, and the gate closed behind us. "The door was shut." (Matt. xxv. 10.)

The lesson we learned was, "Make haste!"—a lesson which some of us never forget. So run being shut out of the earthly Jerusalem! What if we were to be not almost, but altogether, shut out of the Heavenly City!—*Dr. H. Bonar,*

BUT as reprobate silver, is too much the religious worshippers of the world.

FOR "THE FRIEND."

A Plea for Tract Distribution.

More than twenty years ago, a young man in a neighboring city was favored with a remarkable visitation of Divine love. His parents noticed a great change in him, which they thought was evidence of a preparation for usefulness in the church. He spent much time in reading the Bible, Friends' tracts, and other religious publications. Respecting the Scriptures, he said they were opened to his understanding with a personal application that he had never previously known. He sent to Philadelphia for some of our tracts for distribution. The principles we profess, he said, are the Truth, and he wondered everybody did not see them to be such. In a few weeks he died, after a short sickness.

There are many Friends who are alive to the importance of embracing opportunities, which frequently arise, of handing out short essays on moral and religious subjects. A large amount of good seed is thus sown, some of which we may trust, will be received into prepared ground, and in the future yield a harvest of good.

Those who are separated by distance from their fellow professors, may, in this way, disseminate precious truths among their neighbors and others with whom they come in contact; and they should be encouraged in the good work. Those who go from their homes on account of health, or on business or other errands, can often find persons in whose minds is a desire to know the truth. It is well to be provided with tracts on different subjects; but if that upon which particular information is desired by those we meet, should not be among the number on hand, it may afterward be mailed to a given address.

When several families of Friends live near each other, they can often co-operate with each other to advantage through an auxiliary tract association. In several of the Yearly Meetings such organizations are working to good satisfaction, and it is hoped that the number of these may be increased.

In our own borders there are at present no such auxiliaries in operation. It is so convenient to call at the Depository, or to order all that an individual wishes to distribute, that it would seem to be unnecessary to do more. Yet in many neighborhoods there are factories, shops, and other industrial establishments, employing a large number of work-people, whose families might be visited by young people and others, where the individual could not spare the time. In such cases co-operation would be attended with advantages. I would suggest, why should not our Friends at Germantown, Chester, Wilmington, Media, Woodbury, Haddonfield, Moorestown, and other places, act upon this suggestion? Any detail of organization can be obtained from our agent, Jacob Smedley, 304 Arch Street.

E. M.

THE baptism of Jesus Christ, of which He was Lord and administrator, according to the nature of his office and Kingdom, is even by John the Baptist declared to be that of fire (not water) and of the Holy Ghost; of which water-baptism was but the forerunner; and is, by them that now practice it, called but the outward and visible sign of the inward and spiritual grace; and therefore not the grace itself; which grace, as the Apostle saith, is sufficient for us, and which we believe, profess and experience to be come by Jesus Christ,

who is the substance of all signs and shadows to true believers; he being no more a Jew or Christian that is one outwardly, by the cutting or washing of the flesh; but he is a Jew or Christian who is one inwardly, and circumcision and baptism is of the heart, in the spirit, and not in the letter, whose praise is therefore not of men, but of God. And this baptism Christ preferred and recommended at his farewell to his disciples: in reverence and duty to whom, to say nothing of the abuse of water-baptism, we decline the use thereof.—*William Penn.*

Natural History, Science, &c.

The Cactus as Food.—When divested of the thorns which so thickly beset them, the cactuses are said to make nutritious and acceptable food for stock. The thorns may be destroyed by drawing the plants over a fire.

Tobacco a Sand Bur.—A special despatch to the Lincoln (Nebraska) *Call* from Wahoo, Neb., says: "Mrs. Adolph Solon met with a peculiar and painful accident yesterday. Some sand burrs had caught on her gloves, and she was picking them off with her teeth and inhaled a breath of air when just in the act of taking one of the burrs off the gloves and sucked it down her throat into her left lung. It is likely that tracheotomy will have to be performed to extract the burr."

A Deep Well.—A remarkable instance of the increase of temperature in the earth toward the centre has been presented at Pesh, where the deepest artesian well in the world is that now being bored for the purpose of supplying the public baths and other establishments with hot water. A depth of 8140 feet has already been reached, and it furnishes 176,000 gallons daily at a temperature of 158° Fahrenheit. The municipality have recently voted a large subvention, in order that one boring may be continued to a greater depth, not only to obtain a larger volume of water, but at a temperature of 176° Fahrenheit.

How a Salmon Escaped a Seal.—Passengers on the ferry from Vancouver were treated to a novel and rather exciting spectacle yesterday morning. Just as the boat was approaching the Oregon shore a salmon was seen pursued by a seal. The fish swam near the surface, and although evidently putting forth its best endeavors, the seal kept close behind it. The fish in its terror frequently leaped from the water; but all its doublings and turnings were in vain. The seal followed in its track like a bloodhound. The passengers became quite excited watching the race, and everyone wished to see the salmon escape its pursuer. At length the boat drew near, but the seal was too intent on its prey, which was almost within its grasp, to pay any attention to the boat or the passengers; but just as it was about to seize the salmon the latter made a leap and landed on the apron of the boat. A cruel, hard-hearted member of the boat's crew captured the exhausted fish, and instead of restoring it to the water when a safe distance from the seal, sold it to a farmer. It is well known that seals and sea lions prey on salmon, but it is seldom that such a scene as that above described is witnessed.—*Portland Oregonian.*

The Prairie Owls.—These birds may generally be seen sitting on a heap of sand thrown up by the prairie dog in digging his hole. This hole is appropriated by the owl for his house, and as you ride past he never fails to salute you with a very polite bow. Because of the positive

good he does in the destruction of many harmful insects and reptiles, and especially the scorpion, he should have protection. In Southern California and the warmer parts of Utah and Arizona, every summer evening brings forth numbers of scorpions. They get into the gardens and infest the paths and walks about dooryard and gardens; and but for the appetite and industry of the owl they would become an intolerable nuisance in these hot climates for three or four months of the year. At such seasons our little owl comes quietly about the house at dusk, every night, and picks up the scorpions by scores. Usually he has some place near by, as the cornice of the house or some broad beam in the barn, where he deposits his load and eats what he desires. He devours only the soft part of the body of the scorpion, leaving the head, claws and tail of the reptile, until there may be found a quart or more of such remains, at the place he has chosen for his nightly banquet.—*Forest and Stream.*

A Ruined City in Texas.—The surveys being made for the Kansas City, El Paso and Mexican Railroad pass along a flow of lava, which consists of a sea of black glass, agitated at the moment of cooling in ragged waves of fantastic shapes. These lava waves or ridges are from 10 to 12 feet high, with combing crests. The lava flow is about 40 miles long, and from 1 to 10 miles wide. For miles on all sides the country is the most desolate that can be imagined. It has been literally burnt up. It consists of fine white ashes. To the north of the lava flow the surveyors have come upon the ruins of Gran Guivera, known to the early Spanish explorers, but which have been seldom visited. They found the ruins to be of gigantic stone buildings, made in the most substantial manner, and of grand proportions. One of them was four acres in extent.—*Scientific American.*

Aeration of Sewage.—Dr. Dupre states that the destruction of the organic matter in sewage soot to render it harmless is accomplished wholly by marine organisms which require the presence of oxygen to enable them to live and perform their work. Hence the importance of a full supply of air. Without this these healthy organisms cannot operate, and the putrefactive process sets in.

Nervous System of the Chinese.—The North China *Herald* says that the Chinese as a race are much less nervous than the Europeans.—The Chinaman can write all day, work all day, stand in one position all day, weave, beat gold, carve ivory, do infinitely tedious jobs forever and ever, and discover no more signs of weariness and irritation than if he were a machine." This statement is too strongly expressed to be taken as literally true.

Qualities of Wood.—According to Professor Sargent, the strongest wood in the United States is that of the nutmeg hickory of the Arkansas region, and the weakest is the West Indian birch. The most elastic is the tamarack—the white or shellbark hickory standing far below it. The least elastic, and the lowest in specific gravity, is the wood of the *Ficus aurea*. The highest specific gravity, upon which in general depends value as fuel, is attained by the blue wood of Texas.—*Scientific American.*

Items.

The Mohawk Conference.—A meeting of Indian Commissioners and of others specially interested in the welfare of the American Indian, has recently been held at Lake Mohawk, as has been annually

done for several years past. Among the conclusions reached in the discussions which took place, the first was the necessity for an adequate system of courts under the authority of the Federal Government, for the protection and government of the Indians. "During the present transition period the Indian cannot, either with safety or justice, be given the same State and local courts, which are in which are often inaccessible and not always impartial; nor left to petty police tribunals organized by and dependent on the will of the Indian agent, tribunals essentially inconsistent with the fundamental provisions of the Constitution."

The next conclusion was the need of a more thorough system of education. "It is the duty of the Federal Government to undertake at once the entire task of furnishing primary and secular education for all Indian children of school age on the reservations under Federal control."

"We call upon the Department of the Interior to inaugurate at once a thorough and comprehensive system providing, at national expense, on principles analogous to those which experience has incorporated in our public school system, for the education of all Indian children in its ward and care, in all the elements of education essential to civilized life and good citizenship."

The next subject taken up in the educational system thus called for, the Conference thought the Government ought not to interfere with private or church schools which are laboring in the same good cause; and in which religious instruction may be given which the Government could not supply.

Gambling and Suicide.—At the celebrated gambling resort, Monte Carlo, there have been 49 suicides of ruined gamblers in two and a half months.

Nervous Excitement in Religious Meetings.—On this subject, *The Christian Advocate* remarks, that sometimes "the wave of religious feeling rises so high, that the nervous system is temporarily suspended in it. Sometimes it takes the form of catalepsy, and men lie rigid for hours; at others, of a convulsive twitching and jerking; or it is merely helplessness. Such collapses may become epidemic, and persons with little or no religion may yield to the contagion. These furnish no conclusive proof that the nervous system is suspended in any act of religion, but they may accompany the highest degrees of piety. Such manifestations are not confined to one religion, but abound in false systems. The spinning Dervishes often sink into unconsciousness, and remain so for a considerable period. It is largely a question of temperament and of the state of the community." "Deep emotion is some persons occasions tears; in some, a solemn awe; in others, it may reach such a point as to cause unconsciousness. It is better to maintain self-control."

"Nothing is so valuable to an intelligent Christian as the full possession of the faculties which God has given him."

Hindoo Wives and Children.—In an article under this heading, *The Christian Advocate*, reference is made to the case of a Hindoo woman (Rukmabai) a child-wife in Bombay, who has been sentenced to imprisonment because she refuses to live with the husband chosen for her. She was married at the age of eleven, without her consent, in accordance with their customs.

"Her education was completed (which was unusually liberal) her husband stepped forward and claimed her. He was ignorant, uneducated, and a consumptive. She refused to live with him. He appealed to a Justice, who dismissed the case on grounds of equity. He then appealed to a higher Court, which remanded the case to be tried on the facts. This Justice declared a decision in accordance with the strict letter of Hindu law, and ordered Rukmabai to live with her husband, or failing compliance, to be sent to prison for six months."

Rukmabai replied that she could not obey. In a touching letter she declares that she is being dragged to the gallows, and that thereby she can give no public thought to the revolting custom of child-marriage. She realizes the battle she is fighting is not for her own happiness, so much as it is a plea for the rights of her Hindu sisters all through the land. She appeals to the queen "to signalize the jubilee year of her reign by procuring the passing

of an enactment that henceforth the Courts in India shall not enforce marriages between boys under twenty and girls under fifteen."

The opinions of the native press are a startling index of India's progress. Almost without exception, it champions Rukmabai's cause, and some even look upon her as a martyr. *The Indian Spectator* says, from its Hindu standpoint: "If Rukmabai did not consent to be given in marriage to the man who now claims her as his wife, then the judgment of the Court, under which she may be sent to jail, is more preposterous and unjust than the judgment of the Jews who convicted Jesus and got Him crucified."

Another paper, *The Bengalee*, says: "It is impossible for us to view with unconcern the circumstances of a case which reveals, more than any other also has yet done, the urgent necessity of an important social reform. It teaches a moral which we would do well to lay to heart. If Rukmabai had been more fortunately wedded, and in the maturity of years, she would probably have been the center of a prosperous and happy family. She would not have been the inmate of a prison. Apart from other objections, child-marriage perpetuates an outrage upon womankind. So unnatural is the institution that, in the most solemn event of life, the party most deeply concerned has no voice. An ordinary contract becomes void if one of the contracting parties is of immature years. But the most solemn contract of life, one of the most holy sacraments of religion, is performed by babes and striplings. Nothing is more illogical, nothing more disastrous, from whatever point of view we may choose to look at the matter."

To one who was accustomed to worry, a friend who avoided worry as much as possible, said:—"What would you do if you stopped every time to consider the possibilities of every act. I know of a woman who walked across a smooth carpeted floor; she fell, broke her hip joint, and died in a few days. I knew of a neighbor who ate his dinner, and fell dead as he rose from the table. Another went to sleep well and never woke; another rode out and was killed." Thus, instance after instance might be mentioned, for every daily act, if we had travelled, or read much, or met many persons.

Temptation.—Never count a temptation so trifling over, so beaten off, that it will never assault you any more. Satan has been called Belzebub, or the god of flies, some tell us, because he will not take a repulse; because he comes back again and again; because it is impossible so to drive him away that he will not return. Consider the Lord of Glory himself. When the tempter, thrice encountered and thrice defeated in the wilderness, left Him, it was only, as we are expressly told, "for a season." There were other hours and powers of darkness still to come, when the Prince of this world should make further proof in the garden whether there was not something which he could claim for his own even in that Lord, who had so filled and baffled him in the desert. And shall we think that when he departs from us it is more than for a season? Never, so long as you bear about these sinful bodies, count any corruption to be so dead in you that you are perfectly safe from it henceforth, that it can never stir or trouble you again. How much that seems dead, by a sad experience, will be shown to have been only sleeping—like snakes, which, frozen in winter, lose, for awhile, their power to harm, appear as though there were no life in them, but, brought to the warmth, can hiss and sting again. How many an old corruption is, perhaps, at this moment in a torpid and inactive state in us, which yet only waits the returning warmth of a suitable temptation to

revive it in all its malignant strength anew.—*Trench.*

WELL said the Apostle Peter, Our beloved brother Paul in all his epistles, writes things which are hard to be understood, which they who are unlearned and unstable wrest, as they do the other Scriptures, unto their own destruction.

Peter was an illiterate man, and so an unlearned man in natural or artificial learning of tongues and languages; but he was a man of great learning in the heavenly spiritual school of Christ. All who come to learn of Christ, Paul and Peter's heavenly Master, they are taught by Him to understand their words, and to have unity with them; and such are of one mind concerning them. But they who are not yet come to learn of Christ, as He is the Light of the world, they are not come to the right understanding of the holy men's words which are recorded in the Holy Scriptures; and this is the cause that they are not of one mind concerning them, but in very many contrary minds, and in tumultuous controversies about the meanings of them.—*Wm. Gibson, 1678.*

THE FRIEND.

TENTH MONTH 27, 1888.

Those who are accustomed to weigh the meaning of words, and to select such as will accurately convey the ideas they wish to express, are aware of the danger there is of false impressions being made by the use of terms which, although in one sense true, yet may foster erroneous views in themselves and in others. An illustration of this danger we think may be found in expressions frequently used by writers or speakers on religious subjects, which speak of salvation being secured by our *accepting* Christ, or *accepting* the salvation which He offers.

One of the meanings of the word *accept*, is to take an offered gift; and with this meaning in his mind, a person listening to such teaching may gradually come to believe that the religion of Christ requires nothing more than simply to receive salvation; unless the teacher is careful to point out the accompanying conditions which Christ and his Apostles have clearly laid down as necessary to be observed. If we turn to the "Sermon on the Mount," which is the most important compendium of Christian doctrine of which we have any record, we find it full of practical directions to be observed by the disciples of Christ; showing that there is a work and service for man to perform; and that the kingdom of heaven is not promised to every one that acknowledges Christ as Lord, but to him "that doeth the will of my Father which is in heaven."

Many passages of similar import might be quoted from the New Testament—such as "strive to enter in at the strait gate;" "Work out your own salvation;" "Be ye doers of the word, and not hearers only," &c. All of which show that it is a part of the plan of salvation, that man should co-operate with the Divine Power and "Spirit of God" which worketh in us, both to will and to do of his good pleasure. "Without submission to the operations of this Power, there can be no well-founded hope of salvation; for it is through it we are redeemed from the defilements of sin, and prepared for admission into that

celestial city where nothing that is impure or unholily can ever enter.

Nor is there anything in this view inconsistent with the declaration of the Apostle, that it is "the Grace of God which bringeth salvation"—for man cannot of himself work the works of God, but is dependent on this "free gift," this Light, Grace and Spirit, of which our blessed Redeemer said, "I am come that they might have life, and that they might have it more abundantly."

SUMMARY OF EVENTS.

UNITED STATES.—The Supreme Court of the United States, on the 22nd instant, sustained the constitutionality of the prohibition law of Iowa. The point at issue was the right to manufacture intoxicating liquors for exportation to other States, outside the State law, and it was pleaded that the prohibitory feature, in so far as the manufacture for exportation is concerned, was in conflict with the constitutional provisions giving Congress the sole right to regulate interstate commerce. The case was argued by J. Fort Kidd, a distiller, plaintiff in error, vs. I. E. Pearson and S. J. Loughead. The Court holds, in an opinion by Justice Lamar, that the State law prohibiting both the manufacture and the sale, except for medicinal, medicinal and agricultural purposes, is not in conflict with the inter-State commerce provisions, and the decision of the Iowa Court is sustained.

The first session of the Fiftieth Congress ended on the 20th instant, by adjournment *sine die*. The whole number of bills and joint resolutions passed during the session, was 115, of which 117 were approved by the President, 95 became laws without his signature, 128 were vetoed, and 25 failed for want of signature at the time of adjournment.

A telegram has been received at the Treasury Department from the Hon. James C. McMillan, of Portland, Me., Washington Territory, saying that the steamer Aucou, from Sitka, had landed a Chinaman at Victoria, British Columbia, on his way to Port Townsend, and asking whether he should be allowed to land. In reply, Assistant Secretary Maynard was referred to the Hon. Charles D. Smith, British Columbia, regarding the landing of Chinese laborers who have departed from United States Territory. Chinese, per Aucou, from Alaska, cannot land.

The acting Secretary of the Treasury has received a telegram from the Customs Collector at San Francisco, asking if Chinese laborers arriving from China in transit for either Panama or across the territory of the United States to Cuba can be landed at San Francisco, and, if so, how they are to be guarded. Acting Secretary Thompson telegraphed in reply that "Chinese laborers cannot land on United States Territory whether for transit to foreign countries or otherwise."

The Sioux chiefs on Seventh-day last, formally notified Secretary Vilas that they had rejected, by a large majority, the propositions made by the President on the 17th inst. They submitted a counter proposition agreeing to accept \$125 per acre, the money to be paid at once. This proposition, the Secretary declared, could not for a moment be entertained by the Government. A small minority signified their willingness to accept the proposition. This concludes all negotiations under the new law, which were opened by the appointment of the Sioux Commission. Secretary Vilas expressed the opinion that one of the principal reasons for the rejection of his propositions was due to the fact that the proposition of the President was not made under the new law, thus depriving the chiefs of their present authority.

A telegram from Muskogee, Indian Territory, says the Creek Council has, in session at the capital of Okmulgee, passed a resolution in favor of the proposition and settlement of so much of the land known as Koolahma as the Muskogees have an interest in. Chief L. C. Perryman promptly approved the measure. "This is the strongest step ever taken toward the opening of that coveted country."

A telegram from Los Angeles, California, says negotiations are going on between the President of the University of Southern California and Alva Clarke, of Cambridge, for the construction of a 42-inch lens, for the biggest telescope in the world, to be erected in one of the mountains of California. Alva Clarke says he can make such a lens in five years for \$100,000. It will be eight inches larger than the Lick telescope, and will bring the moon within sixty miles of the earth.

A despatch from Belvidere, New Jersey, says the

effect of the local option election in Warren County has been to bankrupt a number of the liquor men. The following were the results: 23 deaths, 10 of whom were reported 86 now cases of yellow fever and one death, at Fernandina, Florida; 16 cases and 6 deaths, at Gainesville; 15 cases and 5 deaths at Decatur, Ala.; and 250 cases and 16 deaths, at Jacksonville, Fla. In all of the other places, the total of cases reported is 2829, and deaths 332.

A large bed of pine potter's clay has been discovered at Parsons, Kansas. It is said to be the only deposit known west of the Allegheny Mountains.

Deaths in this city last week, according to the improvement over the preceding week, and 9 over the corresponding week of 1895. Of the foregoing 163 were males and 174 females; 55 died of consumption; 25 of pneumonia; 21 of old age; 19 of diseases of the heart; 11 of convulsions; 12 of apoplexy; 11 of typhoid fever; 11 of malaria; 10 of cholera.

Markets.—U. S. 4½'s, 108½; 4's, 127; currency 6's, 124 to 131.

Cotton was in limited demand, on a basis of 102 cts. per pound for middling uplands.

Fuels were not much changed. Quotations: Winter bran, choice, \$16.75; do, fair to good, \$16 a \$16.50; spring bran, as to quality, \$15.50 a \$16; white middlings, \$19 a \$21; red middlings, \$16.50 a \$18.

Flour and Meal.—Flour was firmly held, because of small supplies. Demand was moderate and prices were steady. Quotations: Superfine, extra, 4½, do, extra, \$4.12½; No. 2 winter family, \$4.37½ a \$4.75; Pennsylvania family, \$5 a \$5.10; do, roller process, \$5.25 a \$6; winter patent, 8's a \$5.50; do, straight, \$5.60 a \$6; western clear, fair to choice, \$6.25 a \$7; Minnesota, extra, 10's, 11's, 12's, 13's, 14's, 15's, 16's, 17's; do, patent, old, \$7 a \$7.50.

Beef cattle.—Extra, 5 a 5½ cts.; good, 4 a 4½ cts.; medium, 3½ a 4 cts.; common, 3 a 3½ cts.; fat cows, 2 a 3 cts.

Wool.—Extra, 4 a 5 cts.; good, 4 a 4½ cts.; medium, 3½ a 4 cts.; common, 2 a 3 cts. Lambs, 3½ a 6 cts.

Hogs.—Extra Chicago, 82 a 8½ cts.; fair Westerns, 81 a 8½ cts.; State, 8 cts.

Milk calves were active and higher at 2 a 7 cts.

On the 22nd inst. the report at \$75 a \$85.

FOREIGN.—The *Times* of the 16th instant gives an entire page to an impartial review of both Dr. Mackenzie's book and the report of the German physicians on the illness of the late Emperor Frederick, and also of the treatment which he received. It is shown to have applied the knife in the treatment of the Kaiser's throat often than did his German colleagues. The prolongation of the unfortunate controversy does not help Mackenzie except in the increase of the sale of his book, but on the contrary swells the already large number of persons who believe that he has permitted himself to make statements which the circumstances do not justify and whose absolute accuracy he cannot prove.

London, Tenth Month, 17th. —The *Times*' defence in England of the action has been vindicated to the South Court. C. S. Parnell, on Eighth Month 10th, a day prior to the opening of the Edinburgh action, obtained a writ in the Court of Queen's Bench for the same libel; the case, therefore, must first be tried in the English court. Instant the great libel suit of the London *Times* against C. S. Parnell and other distinguished Irishmen commenced. The case was opened by a speech of the Attorney General.

It is reported that the differences of opinion among the public decided to instruct the bishop throughout the world to continue to agitate for the restoration of the temporal power of the Pope.

A despatch from Potenza, Italy, says that there were 400 passengers on a train, which was crushed by a landslip on the 17th inst. The wreck, however, was not identified. Fifty dead and wounded have been identified. Many of the victims are unknown. Scores continue to be unearthed. Soldiers are working hard at the wreck. The work is impeded by cold and snow. An entire theatrical company was killed. A young girl was buried for two hours, and when extracted it was

found that his hair had turned white. An entire family, consisting of six persons, was killed. It is estimated that 200,000 cubic meters of earth fell along the line. Many of the passengers who escaped with their lives left the scene immediately after the accident. It is, therefore, impossible, as yet, to tell the exact number of the killed. The Russian troops in the vicinity of the Austrian frontier is proceeding actively in response to the movements of the Austrian forces. No special change in the relations between the two countries has taken place. The movement of the Russian troops is a measure of precaution.

The Haytian Minister at Washington has received a cable despatch from Port au Prince, dated the 17th instant, announcing the election on that day by the National Assembly of General Francois Denis Legitime as President of the Republic. Cape Hayti, Gonaves and St. Marc having revolted against the Legitime Government, have been closed to foreign commerce, and a naval force is before said ports to enforce the decree of the Government against all vessels endeavoring to evade the same.

NOTICES.

WESTWON BOARDING SCHOOL.—The Winter Session will open on Third-day, the 30th of Tenth Month.

Conveyances will be at Westown Station, on the West Chester and Philadelphia Railroad on that day, to meet the trains that leave the Broad Street Station of the Pennsylvania Railroad Company at Broad and Filbert Sts., Philadelphia, at 7.01, 8.53 and 11.13 A. M., and 2.47, 4.35 and 5.31 P. M.

The Pennsylvania Transfer Company will send for baggage to any place in the built-up part of Philadelphia, if notice is left either at No. 338 Chestnut St., at the S. E. corner of Broad and Chestnut St., at the Baggage-room, Fifteenth St., above Market, or at Market St. Ferry (north side); and will deliver at any of the above places. Baggage for the Pennsylvania Transfer Company, at a charge of 25 cents per trunk, to be paid either when the order is given or when the trunk is called for. For the same charge they will collect baggage from any of the other railroad depots. If the railroad checks held for such baggage are left at one of the offices of the Transfer Company above designated. In all cases it must be stated that the baggage is to go to Westown Boarding School, Westown Station, on the West Chester and Philadelphia Railroad.

Pupils are requested to assemble at the School promptly on *Thurs-day* in order that the classes may be organized, and the regular school-work begin on *Fourth-day*.

MARRIED. at Friends' meeting-house, Fourth and Arch Sts., Philadelphia, on First-day, Ninth Month 16th, 1888, WILLIAM ARCHUT and SARAH M. CALLEY, both of this city.

—, at Friends' Meeting Sixth and Noble Sts., Philadelphia, on Third-day, Tenth Month, 16th, 1888, WALTER SOUTH, son of Dr. E. W. South, late of Philadelphia, and PENNY TRANT, of PENNSCOCK, daughter of the late J. Lidton Pennock.

—, at Friends' meeting-house, Muncy, Lycoming Co., Penna., on Fourth-day, Tenth Month 6th, 1888, HENRY F. WAXNER, Jr., son of Thomas A. and Elizabeth F. Waxner, of Muncy, Pa., and daughter of Richard H. and Eleanor S. Eroyod, both of Muncy Township.

—, at the same time and place, WILLIAM S., son of Sarah and the late Joseph Whitaker, of Pine Iron Works, Berks Co., Penna., and MARGORIE R., daughter of Richard H. and Eleanor S. Eroyod, of Muncy Township.

DEED. suddenly, at Tuscawba, Alabama, on the 11th of Sixth Month, 1888, LISBOW W. TAYLOR, in the 31st year of his age, a member of Salem Monthly Meeting Friends, N. J.

—, on the 5th of Eighth Month, 1888, at her home in the Mills Building, SARAH MILLER, a member and elder of Beech Grove Monthly and Particular Meeting, in the 75th year of her age. This dear Friend for many years manifested to those around her that she was adorned with a meek and quiet spirit. When prostrated with illness, she often expressed a desire to be kept patient, which seemed to be mercifully granted; and her friends have the comforting assurance that her end was peace.

Incidents and Reflections.—No. 172.

CONSISTENCY.

That is a curious trait of the human mind, which leads people who are apparently conscientious on some subjects, to practice gross wickedness in other directions, apparently with little or no compunction. It is evident in such cases that they cannot be living fully under the light of the Spirit of Christ, for this testifies against *all* unrighteousness. There are many persons of the Roman Catholic persuasion who would consider it a more venial offence to tell a lie—a thing forbidden of God—than to eat meat on a day set apart by their church for fasting—a thing harmless in itself.

A striking example of this error in judgment was furnished by two Greek pirates who were tried and condemned at Malta in 1829. In the course of the trial it appeared that the beef and anchovies on board one of the English vessels which they pirated, were left untouched; and the circumstances under which they were left appeared to the Court so peculiar, that the culprits were asked the cause of it. They promptly answered that it was at the time of the great fast, when their church ate neither meat nor fish. They appeared to be most hardened and abandoned wretches, yet rigidly maintaining their religious character; and while they were robbing and murdering, stealing the women and children of their countrymen and selling them to the Turks, they wished it understood that they were not so wicked as to taste meat or fish when prohibited by the canons of their church!

Similar in its character is the anecdote of the Neapolitan shepherd who came to his priest for absolution, because during the season of Lent, he had swallowed some wool which had spurted into his mouth as he was working a cheese-press. "Have you no other sins to confess?" asked his spiritual guide. "No; I do not know that I have committed any other." "There are," said the priest, "many robberies and murders from time to time committed on your mountains, and I have reason to believe that you are one of the persons concerned in them." "Yes; I am," he replied, "but these are never accounted as a crime; it is a thing practised by us all, and there needs no confession on that account!"

A similar blindness (if it be blindness), or perversity is shown by those persons who when

reproved for any thing wrong in their conduct, attempt to justify themselves by asserting that they are not guilty of certain other wrong actions. If told they should not swear or give way to their passionate feelings, such persons sometimes reply that at least they do not lie or steal. They forget the exhortation of our Redeemer, "Be ye perfect, even as your Father in heaven is perfect;" and the declaration of the Apostle James, "Whosoever shall keep the whole law, and yet offend in one point, he is guilty of all." The scope of this declaration may be better understood, if we remember that a Christian is one who is under the government of the Spirit of Christ, and is walking in his holy light; and that without faith in Him and filial submission to his will, man cannot partake of that joy and peace which He bestows upon his servants. Whoever therefore acts in opposition to his requirements, in so far deserts his service and enters the ranks of his enemies.

The want of more thorough consistency with their profession in some who claim to be Christians, is a great hindrance to the spread of Christian principles in the earth. An atheist in conversation with one who professed Christianity, expressed his astonishment that those who believed the Christian religion to be true, could quiet their conscience in living so much like the world. "Did I believe," he said, "what you profess, I should think no care, no diligence, no zeal, enough."

The same stumbling effect is strikingly shown in the account of Lord Nugent, given by Frederick Smith, of London. He was a man highly connected with the families of the nobility, and had received in Germany a university education. But the bigotry, superstition and wickedness which he observed among the priests and professors of religion, gave him a disgust of the whole system, and led him to believe that it was founded in dissimulation and priestcraft. After coming over to England, he paid a visit to his relations in Ireland, who showed him great hospitality and kindness; and large convivial parties were invited where neither the manners nor the conversation were such as would bear much reflection. At one of these the incident occurred which he related to Frederick Smith as follows:

"It happened one evening that the conversation took a religious turn, in the course of which I inadvertently leaned towards scepticism at least; on which one of the company hastily said, 'Surely, sir, you do not doubt the existence of a Supreme Being?' To which I replied, 'What are your sentiments on that subject?' 'Why, sir, my sentiments are these: I look upon the Almighty as of infinite purity; as the object of both love and fear; that I am in his immediate presence; that it is through Him I live and move and have my being; I consider that I am amenable to Him for every action of my life; that if I do evil voluntarily, I run the hazard of his eternal displeasure, and wretchedness will be my portion; but if I act according to his will, I shall be eternally happy.' 'Is this, sir, really and truly your belief?' 'Yes, sir, it undoubtedly is,

and is also the belief of every well-regulated Christian."

"Then, sir, how comes it to pass, that your actions correspond so little with your profession? Is it possible that such a hearsay evidence as this would convince me, were I an atheist, of the truth of God's existence? Has any part of your conduct, since we have been so often together, manifested either love, or fear, or reverence, for this object of your pretended regard? I wish not to give you offence, but see whether there is anything like consistency in your declarations, and in the conduct I am led to fear you are in the habitual practice of? My friend seemed confused and thoughtful, and I immediately turned the discourse to another subject."⁸

The cruelty of the Spaniards to the natives of the New World, naturally had the effect of exciting prejudice against the religion they professed. It is said that one of the Cuban chiefs who was condemned to be burnt, when brought to the stake was exhorted to embrace Christianity, and assured that if he did, he would be admitted to heaven. He then asked if there were any Spaniards in heaven. "Yes," said the priest who attended him, "but they are all good ones." The chief replied that he did not wish to go to a place where he would meet with any of that nation, and wanted to hear nothing more of their religion!

The stumbling effect which even slight inconsistencies of conduct may have upon the young and tender, is an added reason for that watchfulness which our Saviour enjoined upon his disciples. A somewhat amusing illustration of this was furnished by a clergyman of nervous temperament, who sometimes became quite vexed by finding his little grandchildren in his study. One day one of these little children was standing by his mother's side, and she was speaking to him of heaven.

"Ma," said he, "I don't want to go to heaven."

"Do not want to go to heaven, my son?"

"No, Ma, I'm sure I don't."

"Why not, my son?"

"Why grandpa will be there, won't he?"

"Why, yes, I hope he will."

"Well, as soon as he sees us, he will come scolding along, and say, 'Whew, whew, what are these boys here for?' I don't want to go to heaven, if grandpa is going there."

Rowland Hill once showed his appreciation of the necessity of a consistent life in a professor of religion, in a remark he made respecting one who had applied to be received into membership in the congregation with which he was connected. The candidate stated that his first impressions as to the evil of sin were produced by a dream, which so affected him as to lead to serious inquiry. When he had ended, R. Hill said, "We do not wish to despise a good man's dreams by any means; but we will tell you what

⁸ The reader may find a further account of this interesting character, and of his conviction of the truths of Christianity in Tract No. 22 of the *Friends' Tract Association of Philadelphia*.

we think of the dream, *after we have seen how you go on when you are awake.*"

Our blessed Saviour said, "By their fruits ye shall know them?" and if the fruit of a holy life is not manifested, fallible man, who judgeth by the outward appearance, but cannot see into the heart of his fellow man, has but imperfect means of knowing the real situation of others. A minister who had much experience in visiting the sick, said that it was very rarely the case with one who had not previously been serious, and had recovered from what he supposed the brink of death, that he afterwards performed his vows, and became religious.

Very similar was the testimony of a pious physician, that of the sick who, soon expecting to die, had been led as they supposed to repentance of sins, and saving faith in Christ, and afterwards were restored to health, not more than one in thirty gave evidence of being really regenerated.

J. W.

FOR "THE FRIEND."

Isaac Coates' Visit to the Seneca Indians.

There have been placed in the hands of the writer the manuscript journals kept by Isaac Coates, of two visits paid to the Indians in Western Pennsylvania and New York. He was a member of the committee appointed by Philadelphia Yearly Meeting in 1795. "For promoting the Improvement and Gradual Civilization of the Indian Natives" and it was partly in connection with the duties of this appointment that the visits he describes were paid.

Before proceeding with Isaac Coates' narrative, it seems proper to state that he was a man in good esteem in the Society of Friends, if we may judge from the services he was called upon to perform. He was born in 1748, and resided in the neighborhood of Cain meeting-house, in Chester County, Pa. In 1779, he was one of a committee appointed by Bradford Monthly Meeting to assist his fellow members who were then suffering from the military demands made upon them during the stormy period of the Revolutionary War; and his name is attached to a memorial on this subject, addressed to the Legislature of Pennsylvania in 1781. As already mentioned, he was a member of the committee appointed to promote the civilization of the Seneca Indians; and, as will be noticed further on, he was one deputed by the Yearly Meeting to visit Friends settled in Canada and establish a Meeting for Discipline among them. His death occurred in 1809.

In the undeveloped and thinly-settled state of the country at the time that I. Coates paid his visit, such journeys involved an amount of hardship, fatigue and exposure, of which it is difficult at this day to form an adequate conception. A member of the Indian committee can now leave Philadelphia in a luxuriously furnished railroad car, and in less than a day find himself on the Allegheny Indian Reservation. Then, his predecessor in the same good work was compelled to ride his horse day after day over the mountains for two or three weeks, often with very indifferent lodging and food, to reach the same spot.

The first visit paid by the committee was in 1798, when several of their number visited the Seneca Chief, Saplantat, at his residence on the Allegheny River, and secured permission for the young Friends they had brought with them to settle on the Reservation and instruct the Indians in agriculture, mechanical arts, &c. An interesting account of this visit, taken from the notes of Joshua Sharpless, one of the com-

mittee, was published in the 21st volume of THE FRIEND. The following year (1799), several members of the committee again performed this long and tedious journey. Of these Isaac Coates was one. He left his home in Chester Co., Pa., on Sixth-day the 23d of the Eighth Month, and travelled in a westerly course, nearly parallel with the southern boundary of Pennsylvania; passing through York, Bedford, Berlin, &c., till he reached the Youghiogheny River, a branch of the Monongahela, which he followed till he reached Pittsburg. Thence his course lay northward along the Allegheny River, on whose banks dwelt the people he was desirous of seeing.

He mentions attending a meeting at York, on the 25th, and a Quarterly Meeting at Warrington, in that vicinity, on the 26th. Both of these meetings have long since been laid down; and so far as we know, there are no representatives of our Society at either place. The meeting-house at York is still standing; and a Friend who was travelling under religious concern, held an appointed meeting in it a few years ago, which was well attended by the people of the city.

The following extracts from his journal describe a part of the country lying west of Bedford, and will show the general character of his memorandum.

"On our way to Berlin we met an old man who had just killed a large buck, which had horns with a number of prongs covered with the velvet, which he had skinned, and had some of the meat tied up in it, carrying about his neck in the manner of a Napsack. In riding six miles, we came to the foot of the great Alleghena mountain, where is some good land; buckwheat and oats about of an equal ripeness, both good, but the buckwheat extraordinary, as much so as I think I have ever seen. The ascent of this Mountain is better land than any of the others, being covered with lofty timber of divers sorts. After we got over the mountain, the timber very thick, but much destroyed with fire. This day's ride 36 miles.

"Eighth Month 30th. Took an early start off from Berlin, being a village of about 50 houses. Passed through some very rough land and roads, on which I saw a rattlesnake about 3 feet long, with 10 rattles, lying in the road, appearing to have been just killed by a wagon wheel running over it. Part of the way to this stage the land was covered with most beautiful lofty Chestnut, and part of the way very thick set with White Pine. Crossed Laurel Hill, being one mountain after another for 7 or 8 miles. The ascent of one of them exceeded all for Chestnut timber I ever saw. They stand so thick together and are so tall that I fully believe there are thousands of acres that would yield more than 10,000 rails to the acre. Almost all those mountains that go by the aforesaid name are the most fertile of any I have yet seen. The trees and vegetables of every kind are so luxuriant I could not help feeling some attachment to the place; but when I considered the exceeding rough mountainous face of the surface, and the intolerable road to and from the place, I am content, if I should live to return, to spend the remainder of my days in Chester County. Proceeded to Connellstown, being a new settled place of about 50 houses, on the Youghiogheny River. The people were employed in building flat-bottomed boats, the stern of which they cover with thin boards for a shelter. Some of them are 30, some 40, and some 50 feet long, in which they will carry 360

barrels of flour, or other produce in proportion, to Kentucky or New Orleans.

"31st. Rode up a small stream large enough to turn a mill. We came to a curious limestone rock, lying horizontal, about 3 feet thick, forming a concave semi-circle of perhaps 300 feet, near the centre of which the water fell about 28 feet. On another rock, about 12 feet below, and near the centre of the semi-circle, a spacious grist mill is built, butting up against the rock. We then passed many hills and valleys. After getting over a bridge at the mouth of Redstone Creek, we found ourselves in a narrow path, perhaps not more than 5 feet wide, and a precipice on our left hand down to Redstone Creek, and our right hand down to the Monongahela River, each of them near perpendicular, which was near 200 feet; which to some of our company was truly alarming; and I believe would have been more so, had it not been that a bulky woman rode on just before us, seemingly without care or fear.

"The land through the Redstone settlement is very rough and mountainous, and appears to be very fertile, producing wheat, rye, oats and grass in abundance, even on the tops of the hills; and abundance of lofty timber of many sorts, particularly Sugar Maple and White Oak; but notwithstanding, it hath been a very wet growing season, and all kinds of grain in the ground and vegetables look luxuriant, yet the waters are very low, which induces me to believe that when the land comes to be more generally cleared, and a dry season takes place the inhabitants will suffer with lack of water. The reason in part, as I take it, of the waters falling so much, is an horizontal rock which lays a little under ground, I believe over much of the country.

"Ninth Mo. 2nd. Attended Quarterly Meeting at West Land, which, notwithstanding some weakness and disorder appeared in the conduct of the young people, was a comfortable, solid time, there being a number of well-concerned, valuable Friends engaged in conducting the business of this remote and newly established Quarterly Meeting. Here I met with a number of my former acquaintance, who had removed to this country years past, divers of them [then] in low or straitened circumstances, that now appeared to live in fulness and plenty; many of whom, I hope, are in good measure thankful to their kind Benefactor, who hath spread them a table in the wilderness, and provided a comfortable asylum in this western country."

The meetings which Isaac Coates speaks of attending during the course of this journey were all originally branches of Philadelphia Yearly Meeting, whose minutes contain several references to them and give information as to the time when they were established, and other circumstances connected with them. For example, in 1776, Warrington and Fairfax Quarterly Meetings, probably being at some loss to determine whether their geographical limits included the country about Redstone west of the Allegheny Mountains, which was then being occupied by settlers, asked the advice of the Yearly Meeting as to the reception of certificates of removal for Friends going to those parts. The Yearly Meeting advised that certificates for such should be received by Hopewell Monthly Meeting, one of its branches. The number of members there appears to have rapidly increased for a time; and in 1786, it was thought expedient to divide the Quarterly Meeting into two branches—one called War-

ington Quarter, to be composed of the Monthly Meetings of Warrington, Pipe Creek, Monallan and York—the other called Fairfax Quarter, to be composed of Hopewell, Fairfax, Crooked Run, Westland and Goose Creek Monthly Meetings.

In 1789 all these meetings were transferred to Baltimore Yearly Meeting, and it was probably under its authority that the Quarterly Meeting at Westland was set up, which Isaac Coates speaks of in 1799, as having been then newly established. A few years later the tide of emigration flowed to Ohio, and afterwards to more Western regions; and the number of members in the valley of the Monongahela and the adjacent regions became greatly reduced. But the size of the old stone meeting-house at Westland (now in ruins) and the area of the lands attached, indicate that it was for a time a populous settled neighborhood of Friends.

(To be continued.)

John Pounds—the Founder of Ragged Schools.

(Continued from page 90.)

The description given by Pounds of the way in which he cured his nephew's deformity will give a good idea of the old man's peculiar style of speech as well as of his ingenuity and tenderness:—

"Poor little thing! to see him trying to walk a bit and toddle like, with both his little feet turned in and overlapping, it's very sad to look at; and Lemmon's children bein' all so bright an' sportive about him. And when neighbors begins bringing their children, and they's all a-playing to-gether, it makes me very sad, it does, to see my little Johnny a cripple among 'em. Thinks I, 'I'll try and set the feet right.' But how's I to begin? This puzzle, no very much at first, it does; and I can't sleep o' nights for thinking about it. At last thinks I, 'What's wanted is to turn his little feet part round on the ankle—now it's ankle-joints bein' soft and tender—and so bring 'em round to the right place, and keep 'em so till they grow strong on the ankle, and then—all right.' But how's I to do this? Thinks I, 'I'll make him a little pair o' boots of old shoe leather, easy at first, and put in another thickness of leather where I wants to turn his little foot out a bit; and so go on, a bit at a time, and I'll bring it all right in the end. And so I makes him a little pair o' boots out of old shoe leather—such little things to look at. They fits him easy at first. But I puts in another thickness of old shoe leather, where I wants to turn the foot out a bit, and I brings it round a bit towards the right place. Poor little Johnny! he cries when I put on the other thickness o' leather and pushes its little foot out a bit on the ankle. But I lets it bide on—it's all for his good. And by-and-by Johnny gives over crying. And when it's bein' on long enough, and gets easy like, I puts in another thickness of old shoe leather over that, and pushes the little foot out a bit more. Poor little Johnny cries again. But it's all for his good, and so I lets it bide on; and after a while Johnny gives over crying. And then, when that's bein' on long enough to get easy, I puts in another thickness o' leather over that, and pushes out its little foot a bit more. Johnny cries again; but I lets it bide on. And so I goes on, till I bring 'em both round into their right places. And I keeps 'em so while Johnny's a-growing, and his bones 'em a-hardenin', and his ankle-joints bein' a-getting strong like. And they's all a-stiffenin', and in time they grow firm, and all's right in the end. And that's how my Johnny's

the fine young fellow he is now. Bless the Lord for it!"

[A person who visited him in 1833, found him at work mending a shoe, while a big boy was standing beside him reading. Having been introduced to the old shoemaker, he immediately prepared to give his visitor some samples of his work. The account of the visit is as follows:—
"Here, you rascal wi' the curly wig, come and show the gentleman what you's a-doing; and a fine, intelligent little boy brought a bit of broken slate with a long-division sum on it. The slate was clean and the figures were well formed, and the sum, as far as he had gone in it, correct. 'Here's a sum that there rascal in the corner's ben an' done,' handing his slate to me. 'The vagabond! he can do 'em when he likes.' It was a double-rule-of-three sum, done correctly, the figures neat and clean.

"Here, Lizzie, come and read for the gentleman. And a nice little girl, with a clean bright face, and neatly dressed, evidently well taken care of at home, came and climbed up on the old man's knee, and put her little white arm around his dark rough neck; and he gave her a kiss, and she looked very happy. A gate came with her, brushing against his leathern apron, as if pleased with all that was going on. "Now, Lizzie, here's the sixth chapter of the Gospel according to Matthew; it's what our Saviour's saying to the multitude as he sits on the mountain side." And she read the chapter through with a clear, pleasant voice, and with scarcely any hesitations, and as if she felt it. All the other children were still and listening, as if they were interested in what she was reading. 'That'll do, Lizzie,' and he gave her another kiss. 'Now go to puss and the young birds in the corner.' And she jumped off his knee merrily; and puss went with her to the basket and the young birds in the farther corner.

"What's that you's got in your hand, Polly?" And a very little girl on the floor beside Lizzie and puss said, 'A buttercup, Mr. Pounds.' 'Buttercup? bring it to me, Polly, and let's look at it.' And the little girl brought it to him, and he lifted her on his knee and gave her a kiss. 'Spell butter, Polly.' And the child spelt butter. 'What color's butter, Polly?' 'Yellow, Mr. Pounds.' 'Spell yellow.' And the child, with a little help from the master, spelt yellow. 'And this flower's yellow, like butter. Now spelt cup.' 'Kup.' 'No, Polly—cup.' ('They doesn't know, sir, how e spells like k.'). 'Now mind that, Polly; c-u-p, cup, and now look down into the flower; it looks like a cup, doesn't it, Polly?' 'Yes, Mr. Pounds.' 'And so they call it a buttercup. Where's you get it, Polly?' 'On the walls; and there's daisies, too.' 'Buttercups and daisies! Who made the buttercups and daisies, Polly?' 'God, Mr. Pounds.' 'And God takes care of 'em in the dark night, and when the storm blows hard, and And when the storm's over and gone, and the sun shines out bright again, there's the pretty buttercups and daisies again, all so bright and pleasant, for us to look upon. Isn't it very kind of God to make so many nice things for us?' 'Yes, Mr. Pounds.' 'Red roses and white roses that grows in the hedges and smells so sweet, and cowslips and primroses; and the pretty birds, singing all day long so merrily, to make us glad. There's no end to all the good things that God's always doing for us. And we's to love Him, Polly.' 'Yes, mother says so.' 'And we's to try and do what'll please Him, Polly.' And the old man gave her a kiss. 'There, go to Lizzie and puss and the little birds in the basket.'

"Billy, come and say your pretty verses, "How doth the little busy bee." And a rosy-cheeked little boy, not more than three or four years old, came eagerly, pushing head foremost through the crowd, and took his stand beside the old man—scarcely higher than his knee—and looked up at him with a loving smile; and repeated, without hesitation and as if he liked them, these favorite verses of Dr. Watts. All the children seemed fond of them, and listened with bright countenances, as if they could never hear them too often. 'You're a busy bee, Billy.' 'Yes, Mr. Pounds.' 'Not a lazy chap; good for nothing.' And the old man took the child fondly up in his arms and kissed him. 'There, Billy; that'll do till next time,' and the little fellow was soon out of sight among the crowd of taller boys."

Next there followed an examination in mental arithmetic for some of the bigger boys; and then, not without difficulty, the visitors got away. . . . Probably the happiest days in John Pounds' busy life were those on which he took his youngsters for their annual excursion into the country. . . .

A description of one of these "outing," as given by an old friend, who took part in it, will serve as a picture of the rest:—

"That evening before his intended ramble with his scholars, Johnny called on me and said, 'Lemmon, we're going to have a bit of a walk over the Hill to-morrow, my little vagabonds and me' (he always talks of them so, but it's all in kindness). 'Will you go with us?' I said Yes; I thought I should like it. . . .

"We were to start at seven o'clock. Johnny was up at five, getting things ready; for all those of his scholars who were going might come and have breakfast with him at six o'clock—for Johnny had always the notion that to enjoy a long day's ramble they should have a good breakfast to start upon. By seven o'clock we were all ready and in high spirits for starting. He had, the night before, packed up abundance of solid provisions in several bags, to serve for all of us all day. . . .

"While we were within range of the town, Johnny did not like them to be boisterous; but when they got clear, all were free to run off where they liked, and do what they liked, so long as they did no mischief. . . . After the first outburst of joy—running wild, making as much noise as they could—they gradually became more quiet in their pleasures. Some rambled about the fields, picking up primroses and daisies; some stood still, listening to the birds singing; some went along the hedges, gathering roses and honeysuckle and May, which was plentifully in bloom. Johnny had no wish to hurry them; still, when there was nothing to cause delay, he kept his way onward towards the Hill."

(To be concluded.)

FOR "THE FRIEND."

A Ramble in the Swamp.

(Concluded from page 101.)

Late as it was in the season, there were a few flowers, besides the Geniuses, left to reward the search of the botanist. These were principally Asters and Golden Rods; and some of the Rattlesnake-root, also called Lion's-foot (*Nabula*). In the supposition from the shape of the leaves. In the adjoining woods I was somewhat surprised to find, so late in the season, a cluster of our waxy-pipes (*Monotropa uniflora*), and of a few inches in height, ending in one large nodding flower. Instead of leaves they have scales of the same sub-

stance as the stem, and all without a trace of green. From its peculiar white appearance, this plant is sometimes called "Copee-Plant." The genus *Monotropa* is parasitic, either on the roots of other plants, or springing from decomposing vegetable matter like a Fungus.

A few days before (on the 4th of the month), I had met with the only other species of this genus mentioned in Gray's Manual of Botany, the *Monotropa Hypopitys*, or Pine-sap. I was walking through a woods in Chester Co., Pa., when I saw a low plant somewhat resembling the Indian Pipe, about the same size, and destitute of anything green; but instead of being pure white, it was tinged with red. It had several smaller flowers, instead of one large one; and they were slightly woolly, instead of being entirely destitute of hairs." Like its brother, the Indian Pipe, it was peculiar in its appearance, and altogether unlike the surrounding vegetation.

In the same woods, under the shade of a Beech tree, I found growing many specimens of another curious plant, which is destitute of any green organs. It was the Beech-trops (*Epiphyllum Virginiana*), a yellowish-brown plant of from 6 to 12 inches in height, with scales in the place of leaves, and small flowers scattered along the upper part of the stems. Like so many of the other plants which are destitute of green foliage, it is parasitic, and grows on the roots of the Beech.

Although at the time of my visit to the swamp, the season for flowers had nearly past, yet there was still a field of interest and instruction in noting the seed vessels and seeds which had succeeded them. On the margin of the swamp grew a quantity of a tall grass—the cluster-flowered Indian Grass (*Andropogon muricatus*), which may readily be distinguished from the Indian Grass so common in old fields and on thin soil, by having the numerous spikes of flowers crowded together at the top of the stem. It had ripened its seeds, and the spikes were ornamented by the feathery plumes of the seed vessels which projected on every side, ready to be detached by the passing winds, and scattered over the land.

On the rising ground, and by the margin of an adjoining woods, I had seen earlier in the summer many specimens of the Tick-Trefoil (*Desmodium*), with its small purple flowers; a plant that belongs to the numerous family of pod-producing plants, such as the pea, bean, clover, &c. The flowers had all passed away, but my clothing soon gave evidence of the presence of the plants, by the numerous little flattened triangular pods, which adhered to it firmly by means of the hooked hairs with which they are covered. This provision of nature for the spreading of the seeds, most often prove as effective for this purpose, as are the feathery plumes of the Indian Grass.

After passing through the woods, I entered a field overgrown with the grass and weeds which spring up and cover the earth in the fall of the year, after the removal of the summer crops. A breeze was blowing, and I noticed on many of the taller plants little masses of down, to which were attached their brown seeds, which I recognized as those of a Milk-Weed, or Silk-Weed (*Asclepias*). Along a neighboring fence row, were several of the commonest species of this *Asclepias* (*A. Coriaria*), whose pods had ripened and split open; and now the wind had taken hold of the large clusters of exceedingly slender white hairs or down, with which each seed is crowned, and were carrying them far and wide over the land. There are hundreds of these

hairs on each seed, and when opened out they cover a globe of about two inches in diameter, so that there is ample surface for the wind to act upon. Besides, these hairs are not simply straight lines, but are away in their course, so that the air in passing through is pretty effectually entangled. In the pods, the feathery crowns of the seeds are closely packed in parallel lines; but when a seed and its crowns are withdrawn, the hairs at once begin to separate from each other and in two or three minutes are fully expanded.

On the leaves of a Pin-oak (*Quercus palustris*) which grew on the borders of the woods, I observed a multitude of small brown excrescences about the size of peas. On opening these, they were found to contain small grubs, which no doubt in due time would come forth with wings. Some of the larger of these galls were inhabited by 2 or 3 of the grubs. The parent gall-fly had stung the leaf and deposited its eggs, and the effect had been to cause the growth of the gall, which furnished to the young insects both food and shelter.

J. W.

FOR "THE FRIEND."

Always Abounding in the Work of the Lord.

This was the language of the apostle to the believing disciples. But I have, for a long time of experience, believed that the natural man is far more inclined to be striving to abound, and make himself conspicuous in what he calls the works of the Lord, than he is to seek inwardly for the mind of the Spirit and be led and influenced by it. While it is right for the disciples of Christ to be always abounding in the works of the Lord, it is wrong for the disciples of Antichrist to be striving to abound in the works of the Lord in the spirit of man; as thus, while they are deceived themselves, they are deceiving others also. But while we may know the things of men by the spirit of man that is in us, we cannot know the things of God except by the Spirit of God that is in us. And if we have not the Spirit of Christ we are none of his, and cannot availingly work for Him; for without Him we can do nothing that will advance his cause. We may speak great swelling words of vanity, but they amount to nothing, except it is to the exaltation of man. For the servant is not above his master, nor the disciple above his Lord. And we must learn of Him; for all the Lord's children are taught of the Lord, and great shall be their peace. Then, as we have learned of Him, He puts us forth in his work according to our several abilities, and it is our duty to follow Him, but not to go before Him. And as we abound in the work that He calls us to, our labor will not be in vain in the Lord. We should not be slothful in business, but fervent in spirit, patient in tribulation, and continuing in prayer, that we might do the works which He assigns us, whether visible or invisible, in the ability which He alone can give.

But Paul had not learned of Christ till his conversion; for he was a zealous persecutor of the Christian religion until he had his eyes opened and saw the great light above the brightness of the sun. But then he was made a minister and a witness of the things which he had seen and heard for himself; and was sent to the Gentiles to open their spiritual eyes, and to turn them from darkness to light, and from the power that Satan has over us, to the power of God; that they might receive forgiveness of sins, and abound in the works of the Lord by faith in Him, and become steadfast and unmovable; and we must have our spiritual eyes opened by

the same power, through faith in Him. But we must be obedient to the heavenly vision, like he was, before we can always abound in the work of the Lord, and become instrumental as he was, in opening the eyes of others, and turning them from darkness and death, to the glorious light and life of the children of God. For we cannot teach the way to the kingdom of heaven further than we have learned it ourselves; and we must learn of Him who is the way, the truth and the life. But while our faith stands more in the wisdom and teachings of fallible men, than it does in the infallible power of God, we shall be no better than blind leaders of the blind. But while we have the light, if we believe in it, and walk in it, we shall become the children of it, and so abound in the works of the Lord, that others will see our good works and give God the glory and not man. Then will our labors not be in vain in the Lord, because they proceed from Him and will lead to Him. But if our labors emanate from a human fountain, they will lead the hearers no higher than earth. They produce an emotional or human life, but not a Divine one. For as the body without the spirit is dead, so faith and works without the Holy Spirit, are dead also and cannot produce good fruit; yet they may produce a semblance, or counterfeit. But when iniquity abounds the true love of many will wax cold. The true and the false cannot dwell together, as they proceed from different fountains that do not harmonize. So in the church or family, where these attempt to dwell together in the mixture, the ways of Zion mourn, and cannot always abound in the works of the Lord.

We may abound in good works to the glory of God; and we may abound in evil works to the glory of man. As our faith is, so will our works be. If our faith is in scholastic wisdom and eloquence, we shall be left to our choice, but leanness will cover the soul. If we do his will, we shall know of the doctrine whether it is of God, or whether of man. "He that speaketh of himself seeketh his own glory; but he that seeketh the glory of Him that sent him, the same is true, and no unrighteousness is in him;" and he is always abounding in the works of the Lord; and his labor is not in vain in the Lord. So why do we longer halt between two opinions? If Israel's Lord be God, let us follow Him, though He should lead us away from the pomp and pleasure and sin-pleasing delights of the world; and through much tribulation and self-denial, and through many things which cross the natural will. But if Baal be our choice, let us follow him, though he should still lead us deeper and deeper into the streams of confusion, until they drown the heavenly life, and blind the spiritual eyes so that we cannot discern between good and evil; nor sing the Lord's song in a strange land, while in captivity under the king of Babylon.

D. II.

DUBLIN, IRELAND, Ninth Mo. 24th, 1888.

THE Philadelphia *Ledger* makes some just comments on the cases of two men who have recently violated the trust placed in them, and heavily defrauded others by means of forgeries. One of them is in jail, and the other a fugitive hunted by the law, and "destined to be either an exile or a convict." Of these two men, it says: they "have sold much more than their birthright for less than a mess of pottage. They have given all that is valuable to men for a brief indulgence in gross pleasures, which in themselves convey the stings of punishment."

LOSS AND GAIN.

SELECTED.

I sorrowed that the golden day was dead,
Its light no more the country-side adorning;
But whilst I grieved, behold!—the east grew red
With morning.

I sighed that merry spring was forced to go,
And doff the wreaths that did so well become her;
But whilst I murmured at her absence, lo!—
Twas summer.

I mourned because the daffodils were killed
By burning skies that scorched my early posies;
But whilst for these I pined, my hands were filled
With roses.

Half broken-hearted I bewailed the end
Of friendships than which none had once seemed
nearer;
But whilst I wept I found a newer friend,
And dearer.

And thus I learned old pleasures are estranged
Only that something better may be given;
Until at last we find this earth exchanged
For Heaven.

—Good Words.

WE ARE SEVEN.

SELECTED.

A simple child,
That lightly draws its breath,
And feels its life in every limb,
What should it know of death?

I met a little cottage girl;
She was eight years old, she said;
Her hair was thick with many a curl
That clustered round her head.

She had a rustic, woodland air,
And she was wildly clad;
Her eyes were fair, and very fair;
Her beauty made me glad.

"Sisters and brothers, little Maid,
How many may you be?"
"How many? Seven in all," she said,
And wondering looked at me,

"And where are they? I pray you tell."
She answered, "Seven are we;
And two of us at Conway dwell,
And two are gone to sea.

"Two of us in the church-yard lie,
My sister and my brother;
And in the church-yard cottage, I
Dwell near them with my mother."

"You say that two at Conway dwell,
And two are gone to sea,
Yet ye are seven!—I pray you tell,
Sweet Maid, how this may be."

Then did the little Maid reply,
"Seven boys and girls are we;
Two of us in the church-yard lie,
Beneath the church-yard tree."

"You run about, my little Maid,
Your limbs they are alive;
If two are in the church-yard laid,
Then ye are only five."

"Their graves are green, they may be seen,"
The little Maid replied,
"Twelve steps or more from my mother's door,
And they are side by side.

"My stockings there I often knit,
My kerchief there I hem;
And there upon the ground I sit—
I sit and sing to them.

"And often after sunset, sir,
When it is light and fair,
I take my little porringer,
And eat my supper there.

"The first that died was little Jane;
In bed she moaning lay;
Till God released her of her pain;
And then she went away.

"So in the church-yard she was laid;
And when the grass was dry,
Together round her grave we played,
My brother John and I.

"And when the ground was white with snow,
And I could run and slide,
My brother John was forced to go,
And he lies by her side."

"How many are you then," said I,
"If they two are in Heaven?"
The little Maiden did reply,
"O Master! we are seven."

"But they are dead;—those two are dead!
Their spirits are in Heaven!"
"I was throwing words away; for still
The little Maid would have her will,
And said, "Nay, we are seven!"

—Wordsworth.

THEY ARE SEVEN.

SELECTED.

BY ALICE WELLINGTON BOLLINS.

"How many roses are there, dear?"
I asked a little maid,
"Seven," she answered, counting them
With eyes demurely laid.

"Why, no, dear;—one has fallen down
Here on the shelf, you see;
And standing in the pretty vase
Together there are three.

"The other three are in the glass,
Only reflected there,"
She looked and nodded in assent,
That little maiden fair.

"Three in the vase, one fallen down,
And in the mirror three;
Add them together, Auntie dear;
There will be seven, you see."

I took the vase down from the shelf.
"Now, Annie, come, look here!
Only four roses with them all
Together—that is clear."

With eyes serene, and far more calm
Than Wordsworth's little maid,
Sweet Annie heard my protest through,
And listened unblinded.

"If I were you," she gently said,
"And blue eyes raised to heaven,
"I'd put them back there on the shelf,
With the other would be seven."

And after all, is she not right?
It's just the point of view;
A grateful heart knows how to make
One blessing seem like two.

—The Independent.

FOR "THE FRIEND."

"The Lord is My Shepherd."

"Though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me; thy rod and thy staff they comfort me."—Psalm xliii: 4.

The observations in the Reflections in THE FRIEND, No. 9, of vol. 62, on the above language, have fixed themselves upon my mind, and while having no desire to be critical, I feel a concern resting with me, with pure desires for the good of my fellow-professors in the truth, that we may be on our guard not in anywise to let slip the precious inheritance into which in Christ Jesus we are called.

We are not called to be judges one of another, but we are invited to the possession of the knowledge of that which entereth within the vail, whither the Forerunner for us has entered. George Fox, when brought face to face with the pale messenger, could say, "The Seed of God was over all." It is this knowledge that gives a confidence and a holy boldness, even the possession of a life, not our own, but begotten by Him, the Father of Spirits, with whom is no variableness, neither shadow of turning.

But, brethren and sisters, the secret of the whole truth in George Fox's experience, as well as in the host of witnesses that stand forth in the page of history, is that they lived and walked by Him in life who gave confidence and clearness in death. For the promise still holds good to those who, while walking in this earth, have their life hid with Christ in God; "they shall fear no evil" when passing through the valley of the shadow of death, for the Lord their Master is with them, to be as a rod and a staff unto them.

It is no vain confidence that is thus begotten. Cause and effect are alike true in godliness as in material and earthly things. Mary, said our Saviour, hath chosen the better part that shall not be taken from her. And this will become in those who are subject unto it, a treasure, enriching the soul with heavenly knowledge; and in the obedience of faith, a heaven, leaving the whole lump.

But, ah! the sense takes hold of my mind that in the many cumbrous, many cares; and is it not to be feared in the desire to be rich, or great, or anything, or everything but the *one thing* needful,—the knowledge of the power, and wisdom and goodness of God in Christ Jesus, to rule, control, govern and direct all, is wanting.

There is again and again the knowledge of seeking, of desiring, of hoping—yes, and fearing; but, alas! there is not a following on to know the Lord so as to experience a being transformed as from glory to glory by the Spirit of the Lord.

Hence there is weakness and sickliness of soul, and faint-heartedness, when there should be joy and strength. For in proportion as we are diseased of our own corrupt and earthly and unclean nature, and clothed upon by Christ, does our confidence and knowledge of God grow, as that of the child in the likeness of its parents.

Our weakness, our decline, our divisions as a religious body, are all traceable to the one cause; and that cause had begun to work in the Society before death closed the life in the flesh of George Fox; for he complained that many were now minding their own, instead of the Lord's business. When we have a life in anything that is out of Christ, we are in that degree fallen from grace.

Great is the mystery of godliness, said an Apostle, and truly great is the mystery of the working of iniquity; and if Satan can beguile us to take up a rest in anything short of the knowledge of having our whole lives possessed by Him whose right it is, he has gained his purpose.

The path of the just is as a shining light, which shineth more and more unto the perfect day; and I am persuaded as we live, so shall we die. If our life is not centered in God, by the begetting in us of the life of his dear Son, through the effectual working of his Spirit; but we live in a kind of spasmodic condition, constantly turning aside unto and living by that life (even in a religious way) that is the outcome of our own strong wills, we must not be surprised if struggles and fears and doubts are permitted to overtake us in the hour of nature's extremity. God is just in all his ways and in all his works, and he or she who gives without any reserve their all into his hands, and are willing to follow in all simplicity as they are led, will find Him a God nigh at hand in life, and their rod and their staff in the hour of death.

God's ways are equal; such as we sow, such

we shall reap. It is so in our daily life; if we will not do nought that is displeasing in his holy sight, either to gratify ourselves or for gain, but are engaged in spirit to live near to God, we shall constantly have heavenly meetings as we journey along in life, so that at times we will be so filled as to be made sensible there is nothing we could desire to complete our happiness, because of the possession of that joy his presence and his favor give.

Such, when they come together to publicly acknowledge their dependence upon God, will realize the arising in their midst of heavenly life, and so will know a renewal of strength; because their dependence is on God alone, and they are passive in his hands, willing to be still, or to engage in active service, as He wills. These know it to be a blessed thing to meet together, because there is witnessed a united ingathering to that in each heart and mind that is the stay, the staff, and their comfort in their daily walk, amidst the not unfrequent trials, perplexities, and cross-occurrences of life, which enables them to look beyond the scenes and anxieties of this lower world, and by the faith springing herefrom, to mount up as on eagle's wings, run and not be weary, walk and faint not.

It is the felt presence of Him, whom they own as Lord and Master, and at whose feet they indeed and in truth bow as such, by obedience and subjection, as well as in humiliation and contrition on account of short-coming and mis-stepping, that enables them in life to triumph. And He, who by the power of his Spirit, through Christ Jesus our Saviour, doth enable his poor unworthy servants in life to triumph, will also cause their soul to rejoice even in death, which is but the fuller breaking forth of life in beings freed from the shackles of mortality.

O! ye poor, lingering souls who cannot be satisfied with anything that this world can give, let not go your hold by faith in the all-sufficiency of the Almighty power of God in Christ to keep you through all the tribulations of time, and to land you safe on yonder shore of eternal rest and peace. Only, as you would have Him keep you, be faithful and keep the word of his patience in your souls, and let nothing either of pleasure or of gain turn you aside from attentiveness and obedience. For it is in the disobedience that darkness gets into the mind and darkens and beclouds the vision. It is when the reason gets in, and our own wisdom gets sway, whether in the things of this life or in those that concern our immortal nature, that we are led astray. We first doubt, then a slavish fear takes possession of the mind, and by little and little we lose our hold by faith upon God; because the mind is withdrawn from entire reliance in the all-sufficiency of his power.

Are we weak in faith? Let us seek unto Him who alone can give, and doth give, and doth not upbraid the weak ones, who, feeling their weakness, cry in secret unto Him for strength.

But are we thus concerned, to seek first, above and beyond all else beside, to be clothed of Him, in the righteousness of Christ? or is there a lurking in the heart or a hiding in the tent a veil of gold, or a covering in secret of the Babylonish nature, wishing to stand well with our religious friends, preserve a fair name, and still hold on to the world in all the enjoyments and pleasures that it can give, unmindful of the Saviour who would fain come in; but, as

in the inn of old, there is no room for the Heavenly Babe?

There is abundance of labor to be done in the world in the ingathering of the harvest fields, but the laborers must be clothed, fed and kept by the great and good Husbandman. He will have no half-provisioned servants, whom he shall take a little of Him, but have ever an abundant stock of their own provisions whereby to labor.

Such laborers He will not bless in time, and when they come to die, O, how lean and famished they are! In life the Lord was not their whole staff; in death He is not their perfect stay.

Think you, will God forsake his own? He did once, when the bitter cry was raised, "My God, my God, why hast thou forsaken me." For thee and for me, dear reader, was this agony borne, that we might know a being clothed upon by his most precious nature. And this nature is too precious to be trifled with; therefore is the counsel in my heart to thee as to myself. Let us be wise in diligent attention and faithfulness to our blessed Master, who doth not seek to reap where He does not sow.

Hath He not strewn of his goodness in thy heart and mine? And shall we return ingratitude unto Him, by slighting in anywise so good and so gracious a God and Saviour?

"The Lord is my Shepherd" in watchful care and guardianship over his defenseless sheep in life; He will be my stay and staff in death—is the language begotten in the soul, in childlike confidence and trust, in those who are concerned above and before all things to know the favor and friendship of God. They are permitted in the obedience of faith to realize, as they are attentive and obedient to the motions of the Father's will, a foretaste of the joy and blessedness of Heaven.

But what reductions must be gone through; what emptying and purging must be known; if the fullness is to be received and power known to give unto God his honor due! Ah! there is but One can enable us to do this, by bringing forth in us of his own new nature and life. The Sun of Righteousness in his arising doth shed light and glory in the soul, and God the Father is glorified thereby.

O! how few are willing to be little and nothing in their own estimation, and to submit to be brought into a condition to be thought little of by their fellows, in order to know a perfecting in them of his image and likeness, of whom the children of men did say, "there was no beauty in Him that they should see Him." "He was despised and rejected of men, a man of sorrows and acquainted with grief." There rests with me a sense that much of the darkness that obscures comes of the unmerciful nature, that which still loves to retain something of its own, on which it can feed and in which it can glorify itself. Only that which is born of God can live with God—hence the deep struggling between nature and grace, even in those who among their fellows have been accounted pillars in the temple of God.

Alas! poor man, he doth so slowly perceive that the greatest pillars in God's temple are those who have ceased to live but in Him, so that in them is verified, "I live, yet not I, but Christ liveth in me."

Now those to whom the language applies, "The Lord is my Shepherd," cannot but delight to wait upon God. Their life is more or less made up of this secret waiting upon Him. He is precious to their souls. Are they engaged in the workshop or in the counting-house, in the

field or in the home, God is sanctified unto them. Every place is a holy place, and every spot is hallowed ground; and often it is their experience: my cup runneth over. Then well may they exclaim, Surely goodness and mercy shall follow me all the days of my life, and I shall dwell in thy house for ever—the building not made by hand, reserved in heaven for them.

O! when shall Zion's children shake themselves from the dust of the earth? when shall her children put on their beautiful garments? When the love of gold and the greed of gain have ceased, and the humility and the docility of the new-born child of God doth fill their place.

Barren meetings and lifeless gatherings will then disappear among those who, possessing that of which they make profession, will worship with one accord in one place—the inner sanctuary of the soul. Living praises will often arise from gladdened hearts, and tears of contrition from penitent souls, melted by Divine power; and pure and living testimony will go forth to his presence and to his truth.

O, blessed day! May it be hastened, when Zion's children shall be gathered into the knowledge of God, by which all shadows shall flee, as darkness before the morning sun.

Let none seek to climb into the heights to know this, or to go down into the depth to find it, the blessed, the eternal Word is near thee, in thine heart and in thy mouth; be faithful therefore, and He thy God and thy Saviour, shall keep thee in life and in death—thy Shepherd and thy shield, thy staff and thy support. Even so, may we pray, Come Lord Jesus—claim us wholly as thy own! But let this prayer be that of the life, our business life, our social and home life, our professed and religious life. Such, God will never, never forsake. "Ye, though I walk through the valley and the shadow of death, thy rod and thy staff shall comfort me."

CHARLES W. THOMSON.

3809 Mt. Vernon St., West Philadelphia, Pa.
Tenth Month, 1888.

Natural History, Science, &c.

The Marsh Wren.—Wilson says of the Marsh Wren, that it constructs a nest which in durability, warmth and convenience, is scarcely inferior to one, and far superior to many, of its more musical brethren. This is formed outwardly of wet rushes, mixed with mud, well intertwined, and fashioned into the form of a cocoon. A small hole is left, two-thirds up, for entrance. The inside is lined with fine, soft grass, and sometimes with feathers; and the outside, when hardened by the sun, resists every kind of weather. This nest is generally suspended among the reeds, above the reach of the highest tides, and is tied so fast in every part to the surrounding reeds as to bid defiance to the winds and the waves.

It would be impossible for these birds to build such nests unless they possessed the power of communicating their thoughts. In this case, it is by spoken and not gesture language. As I have had occasion, in another connection, to remark, I have seen one of these birds adjusting one end of a long blade of rush-grass, while its mate held the other, until the former had completed the task to his satisfaction. It was evident that the weight of the ribbon-like growth, quite a metre in length, was too heavy to be moved to and fro, and at the same time prevented from slipping from the unfinished nest. Only by assistance could such materials be utilized, and only by intelligent joint labor

could these little birds build such large and complete globular nests. Now these birds were not silent, nor yet did they sing, while at work, but uttered frequently short, sharp, sibilant chirps and twitterings, such as I have never heard at any other time. It was plainly their conversation.

During the past summer I examined a very large series of nests, but found none of them with a cover over the entrance as described by Wilson; not even a single strand of rush projecting more at the top than the bottom. As so much stress is laid upon this feature by Wilson, I visited the marshes during a "driving" rain, to see if, in lieu of such protection, temporary provision for protection against rain was now adopted, but could discover nothing. A very few of the nests were so placed as to face the rain, and were apparently fated to be thoroughly wetted, but I could not find that they were penetrated by the rain to any important extent. One of the old birds was, in every case, in each nest examined, and in eleven of twenty-three nests visited, the mate was sitting in the entrance. In every instance, therefore, the eggs were wholly out of harm's way; for what little rain might enter the open entrance the sitting bird would receive on its back, and either retain or cause to trickle beyond the eggs; and in those nests where the mate sat in the entrance, of course no rain could enter. I do not know that this has become a common habit, taking the place of a nest built as Wilson describes, but such is probably the case. A general survey of the nests then found and all such seen since, then, bear me out in saying, that, as a rule, the nests are not built so as to be exposed to wind or rain. They are placed sufficiently low in the reeds to be sheltered quite effectually by the overtopping growths which, of course, bend over them and become sheltering roofs during high winds and driving rain-storms.—C. C. Abbott, in *Upland and Meadow*.

Paper Pencils.—Ordinary cedar-wood pencils are made by gluing two pieces of wood together, after placing some graphite or other marking material in a slot in one of them. The pencil is afterwards rounded and finished.

The use of paper instead of wood was found objectionable, because the paper was so tough, that, in sharpening, the lead would adhere to the paper and snap off. In a recent patent for making paper pencils, a gross or more of the hollow cylinders of paper are placed in a frame forming the lower end of a cylinder, in which the marking material is placed in a plastic state, and then forced by pressure into the centres of the paper tubes. After this has hardened by gradual drying for several days, the pencils are put into melted paraffine, which renders the paper as easy to cut as cedar wood.

Thickness of Spider's Web.—Lewenhock's spon has often compared the size of the thread spun by full-grown spiders with a hair of his beard. From the most accurate judgment he could form, 100 of such threads placed side by side would not equal the diameter of one hair. If the hairs are round, it follows that 10,000 of the threads spun by a spider will not be equal in substance to a single hair.

Electric Lighting of the Suez Canal.—By the introduction of electric lights, which enable vessels to travel through the canal by night as well as by day, it is said the amount of tonnage which can pass is greatly increased. The traffic now reaches annually from 7,000,000

to 8,000,000 tons; but it is expected that the canal will accommodate from 11,000,000 to 12,000,000.

Items.

Political Influence of the Roman Catholic Church.—In an article in *The Independent*, written by "A Catholic Layman," the position is taken that the claim of the Pope to infallibility involves his interference in political questions, however earnestly he may claim to avoid such interference.

"The claims of Divine right to govern the world morally; but since there is scarcely a question of politics which cannot also be made a question of morals, he governs it also politically." "According to the teaching and authority of the Roman Catholic Church as at present organized, any infallible Pope can decide infallibly when a question of ethics is a question of morals, and no Roman Catholic dare gainsay him."

"What is true of the general public and the influence of the Pope on national politics, is true of the power and influence of every bishop and priest in local politics." "Hence if the Pope can change the policy or purpose of a king or emperor, the bishop can change the policies and purposes of the mayor or alderman." "A priest consciously or unconsciously, uses his spiritual powers to attain his temporal ends; if he did not he would be more than human."

This state of things is unsatisfactory to the Catholic laity, some of whom feel that "the priests want to control the private as well as the religious affairs of their parishioners and render them virtually slaves to do their bidding."

Despotic Power of Indian Agents.—The absolute power of an Indian agent over the Indian on the reservation is a reason for appointing only the best men. Here are some facts to illustrate: A few months since eight Indians were arrested by a white man in Minnesota, and put in jail. Their offense was the violation of the reservation rules, which is written consent or permit of their agent. They were driving logs for a lumberman and earning \$1.50 per day. It is not long since two intelligent, industrious Indians were banished from a reservation, leaving behind them satisfied debts, stock, &c., simply because they did not please their master agent in charging, who also seized and prevented the use of a printing press bought, and brought on to the reservation, by another Indian for the purpose of issuing a paper. In such cases there is absolutely no appeal. The agent is dictator. He may be a tyrant.—*The Independent*.

Indiana Yearly Meeting.—This body assembled Ninth Mo. 26th. The Book and Tract Committee made their 38th annual report. For several years after their work began in 1850, it rapidly increased, but the interest in it had latterly abated. A supply of tracts is kept on hand at the depository, but no new tract had been issued during the past year, and the committee had met but once.

The 36th annual report of White's Indiana Institute revealed that 4 white and 75 Indian children had been under its care during the past year. Of the Indian children, 60 had been paid for by appropriations of Congress.

The statistical reports gave the whole number of members as 23,419. The Committee appointed the previous year on Conference Yearly Meetings made a report, proposing that if six or more Yearly Meetings unite, a Conference be held in the year 1852, which should have advisory powers only. The meeting appeared to be in favor of the proposition, and referred the appointment of delegates to a future Yearly Meeting.

The Christian Worker. in its account of the Yearly Meeting, says the "Devotional Meeting" on Seventh-day morning "was led by Henry S. Newman, who is not a whit behind any Western Friend in modern methods of definite work in soul-saving; several elderly Friends came forward for blessing." The writer of this country may hope that the visit of H. S. N. to this country will strengthen the cause of truth, or prove a comfort to those attached to the ancient doctrines and usages of the Society;

for the "modern methods" spoken of are not in harmony therewith.

THE FRIEND.

ELEVENTH MONTH 3, 1858.

In conversing recently with a friend respecting a Chester County acquaintance in whom we were mutually interested,—a man whose varied intelligence led him to closely observe the plants that grew in his neighborhood, and their peculiarities; the minerals that are to be found in the different geological formations which exist in that section of the country; and the relics of a former race often upturned by the plough, in the shape of stone arrowheads, hatchets, and other implements—my companion related that his little five year old son would listen with much interest to conversation on these subjects, which his father found so attractive to himself.

It was an illustration of a general truth, that children are naturally drawn towards those things which engage the thoughts of their parents, or of those with whom they are much in company. Whatever habitually occupies the thoughts and affections of a person, will in measure manifest itself in his actions and words; and these cannot fail to influence in some degree those with whom he is associated.

Does not this consideration clearly show the responsibility which rests upon all for the influence which they exert over others. "No man liveth unto himself," his character and conduct will tend to spread themselves in the community, whether he designs it should be so or not. If he is a man fearing God and endeavoring to do his will, he will be a preacher of righteousness, and others seeing his good works may be led to glorify our Father who is in Heaven. If he is one who will not yield himself to the Divine government, his influence will tend to spread the kingdom of Satan.

The Grace of God which visits all mankind, and teaches them how to live in this world, can and often does rescue from the way that leads to destruction, those whose surroundings are very unfavorable. But yet, this does not relieve of their responsibility those whose example and influence are out of harmony with its holy teachings. How can parents "train up a child in the way it should go," if their own thoughts and desires are directed chiefly to worldly things? If the conversation in a family largely turns on what they shall eat, the delicacy of particular articles of food, and similar topics, will not the child naturally come to bestow too much thought on such subjects? If the style of clothing to be worn, the ornaments which will adorn the person, the beauty of certain dresses, &c., are matters which claim much attention, will not the seeds of vanity be fostered in the youthful mind? If the events which are transpiring are all spoken of with reference to their financial bearings, and praise or censure is bestowed in proportion as the acts discussed in the family circle tend to increase or diminish the property of those concerned, will not the younger members grow up with the feeling that the accumulation of an estate is the great business of life?

How different will the influence be in those families where the love and fear of our Heavenly Father are felt and acknowledged! While outward cares, duties and labors will receive their proper share of attention, yet "themes of a graver tone" will not be deemed out of place; and out of the abundance of the heart the mouth

will at times speak of the goodness of the Almighty, and of his providential care over his children.

Christian professors generally, and especially the members of our own Society, live so near in spirit to the Source of all good, that they may become as channels through which the waters of life may flow to their own families, and to the communities with which they are associated!

A correspondent calls our attention to Job xxxix. 25—"He smelleth the battle afar off"—as showing that the author of the article "Current Misquotations," which was inserted in THE FRIEND of last week, was mistaken in supposing that this saying was not to be found (substantially) in the Bible.

SUMMARY OF EVENTS.

UNITED STATES.—Much excitement has been caused by a letter written by the British Minister at Washington, Lord Sackville-West, in reply to one alleged to have been sent by a certain British subject, named Morrison, in California, in which the Minister is asked advice as to how Englishmen should vote in the Presidential election. The reply, which is favorable to the Democratic nominees, is almost universally regarded, both in this country and in England, as a highly improper meddling in American politics.

The *Chicago Farmer's Review* estimates the total potato crop of the United States for 1888 at 216,640,049 bushels, against 134,000,000 bushels last year.

The Acting Secretary of the Collector of the Customs at San Francisco, that "Chinese sailors arriving in United States vessels, who were shipped in United States ports for round voyage, and who have been continuously under the United States flag, are not covered by the Chinese Exclusion Act."

A telegram from Tacoma, Washington Territory, says 20 more Chinamen came down from Alaska on the steamer *Auson* on her last trip. They had gone there from Astoria to work in the canneries. The steamer, on coming down, went straight to Port Townsend and anchored at Victoria, as usual, to avoid any trouble in regard to their landing at Tacoma. The Collector of Customs, however, refused to allow them to land, because they had passed through British waters. A writ of *habeas corpus* was sued out, and 1882 and was granted by the court. They arrived at San Francisco with six Chinamen, the steamer having stopped en route at Victoria, British Columbia. She, too, was stopped. The argument took place on the 22d instant. Judge Allen decided the case was still to be contemplated by the Chinese Restriction act; that under the laws which derive jurisdiction over American ships to be under the jurisdiction of the United States, those Chinamen, bound from one American port to another American port, not having left the ship at any time, had not been out of the United States, and were, therefore, subject to the act for foreign port. The Chinamen were allowed to land.

The first school census taken in Georgia since 1882 has just been completed. It gives the total number of children of school age as 568,281, against 508,722 in 1882, and showing that the country districts are losing outnumber the girls, while in the cities and towns the girls predominate.

Governor Semple, of Washington Territory, in his annual report, places the population of the Territory at 167,882, an increase of about 21,000 during the year. The tax receipts of the Territory were \$84,621,182, a large increase over last year. The coal mines during the year produced 1,138,801 tons, as against 525,765 during 1887. Gold and silver mining is also in a prosperous condition. The salmon pack for the year was 209,290 cases. The Governor urges the admission of the Territory into the Union.

Governor Leslie, of Montana, in his annual report, estimates the population of the Territory at 130,000, an increase of 10,000 over his estimate of last year. The Territory is now a rich country. It is said, has plenty of money in the treasury. All the industries of the Territory, the report states, have been highly prosperous during the year. The total assessed value of the taxable property of the Territory is stated to be \$10,000,000. Mining is the leading pursuit of the people.

It is said that wolves and coyotes are doing great

damage in northern Montana, having killed in a few days many hundreds of sheep and colts, besides attacking travelers. The Territorial Veterinarian, Parsons, who has just returned to Helena from Cheatum Co., reports that Charles Adams was compelled to fly from his home on the night of the 20th, when they destroyed 80 of his thoroughbred hogs. The next night 150 sheep were killed in one flock, and also 30 colts belonging to another ranch man. The bounty law was repealed at the last session of the Legislature.

Deaths in the ending Tenth Month 29th, there were reported 231 cases of yellow fever and 20 deaths in Jacksonville, Florida; upwards of 80 cases in Fernandina and a few cases in Gainesville, Ga., Enterprise, Fla., and Decatur, Ala. Altogether 220 cases are known to have occurred at Enterprise, and 4995 cases of cholera, 27 cases of pneumonia; 22 of diseases of the heart; 15 of convulsions; 14 of infantile; 12 of apoplexy; 11 of old age; 11 of typhoid fever; 11 of crop, and 10 of inflammation of the brain.

Deaths in this city last week numbered 336, a decrease of 1 from the previous week, and an increase of 2 compared with the corresponding period last year. Of the whole number 199 were males and 137 females;

41 of consumption; 27 of pneumonia; 22 of diseases of the heart; 15 of convulsions; 14 of infantile; 12 of apoplexy; 11 of old age; 11 of typhoid fever; 11 of crop, and 10 of inflammation of the brain.

Markets, &c.—U. S. 8 1/8, 108 1/2, 4's, 127 1/2; currency 68, 112 1/2.

Attention is called on a basis of 101 cts. per pound for middling uplands.

Flour and Meal.—Western and Pennsylvania super, \$8.85 a \$4; do, extras, \$4 a \$4.25; No. 2 winter family, \$4.27 a \$4.75; Pennsylvania family, \$5 a \$5.10; do, under process, \$3.25 a \$3.75; Ohio, clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.75; Indian, clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.75; St. Louis and Southern Illinois, clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.75; winter patent, fair to choice, \$6 a \$7; Minnesota, clear, \$5.25 a \$5.75; do, straight, \$6 a \$6.50; do, under process, \$3.75 a \$4.25.

Grain.—No. 2 red wheat, \$1.09 1/2 a \$1.09 1/2. No. 2 mixed corn, 50 1/2 a 51 cts. No. 2 white oats, 33 a 33 1/2 cts.

Beef cattle.—Extra, \$4 1/2 a 5 cts.; good, \$4 a 5 cts.; medium, 4 a 4 1/2 cts.; common, 3 1/2 a 4 cts.; fat cows, 2 a 3 1/2 cts.

Sheep.—Extra, 4 a 4 1/2 cts.; good, 4 a 4 1/2 cts.; medium, 3 a 3 1/2 cts.; common, 2 a 2 1/2 cts. Lambs, 3 a 3 1/2 cts.

Hogs.—Extra Chicago, \$3 a 3 1/2 cts.; Westerns, \$4 a 5 cts.; U. S. extra, 7 1/2 a 7 1/2 cts.

FOREIGN.—Sir Richard Webster, Attorney General in the Parnell Commission case, concluded a lengthy speech on the 26th of Tenth Month. He recited a catalogue of outrages supposed to be traceable to members of the Parnell Commission, and in the course of John Dillon and other Parnellites to prove their support of the plan of campaign. He dealt in succession with a series of utterances made by William O'Brien, Cully, Cox, Kenney and Matthew Harris to show their sympathy with the Parnell Commission. Attorney General concluded his remarks by stating that men who had actually participated in outrages would be called as witnesses, and they would tell what money had been paid to them, and how the crimes they were hired to commit were arranged.

The *Eclectic* of New York states that the President of the Geographical Society of Lille has received news from Africa that Henry M. Stanley has been massacred, with all his expedition, excepting two men.

The Paris *Nationale* is authority for the starting of a new Franco-Belgian War, which the Government has been making a tour of the southeast of France, has informed the Budget Committee that it will be necessary to spend £400,000,000 for the purpose of defending the eastern frontier against a possible German invasion. It is reported that Dr. Freytag found the present despatches false.

The decree forbidding the sale of Dr. Mackenzie's book in Germany has been rescinded.

The official report of the railway disaster near Potenza, limits the number of persons killed to 19, and the number of injured to 65.

The bodies of a woman and two Belgian monks, from the Pretrastano monastery at Naples, have been found at the scene of the landslide near Potenza. Two of the injured have died at the hospital, making 21 fatalities.

Queen Natalie has appealed to Patriarch Dionysius, of Constantinople, who is the superior of Metropolitan Theodosius, against the latter's action in dissolving the marriage of the Queen and King Milan.

It is reported that the Government is constructing a railway from Jaffa to Jerusalem.

Count Teleki has arrived at Mobasa from the in-

terior of Africa. He discovered a lake, which he named Bassanarak, the north of Lake Boring, extending from latitude 2.20 north to 5 north, lying to the westward of Lakes Samburu and Bassanarak. Two large rivers from the north and west enter the northern part of the lake.

NOTICES.

SITUATION WASTED.—A young Friend, with some experience as a despatch agent, and a Grocery Store.

Address J. J. WALKER, care of G. A. Milne, 450 North Fifth St., Philadelphia.

BIBLE ASSOCIATION OF FRIENDS.—The Annual Meeting of the Bible Association of Friends in America, will be held in the Committee-room of Arch Street Meeting-house, on Fourth-day evening, Eleventh Mo. 7th, at 8 o'clock.

Friends generally are invited to attend.
EPHRAIM SMITH,
Tenth Month, 1888. Secretary.

DIED, near New Market, Randolph County, N. C., on the 26th of Fifth Mo. 1888, JOHN A. L., aged 16 months; also on the 25th of same month, RUTH ISABEL, in her 5th year, son and daughter of Joseph and Mary Smith.

Wetzer Friend, please copy.

—, in Media, on the 7th of Tenth Mo. 1888, ANNE P. RHODES, widow of the late William Rhodes, in the 90th year of her age. She was an esteemed member of Springfield Periodical and Chester Monthly Meeting, Penna. Through the vicissitudes attending a long life, she was favored with much cheerfulness and serenity of spirit; realizing, as she end approached, the blessed assurance that her "Saviour was near."

—, in Media, on the 10th, 1888, at Quakerboro, Kansas, in the 48th year of her age, MARY H. HURST, in the 48th year of his age, a member of New Garden Monthly Meeting of Friends, Ohio. Though not conscious much of the time during his severe illness, we have a hope that, through redeeming mercy, he has been gathered to an abiding rest.

—, at the residence of a relative in Zanesville, on the 8th of Tenth Mo. 1888, DR. ISAAC HURST, in the 79th year of his age, a beloved nephew and elder of Chesterfield Monthly Meeting, Morgan County, Ohio. He had been in declining health for a number of years, and was favored to attend the sitting of the Yearly Meeting, and after its close expressed a satisfaction which his infirmities were such that it hardly seemed suitable for him to make the attempt. As the time approached for the holding of the Ohio Yearly Meeting, he was favored to attend it, and although his family feared his strength was not adequate thereto, yet, as this feeling continued to rest with him, arrangements were made for the accomplishing of it as comfortably as might be, with his bodily weakness. He was favored to attend the sitting of the Yearly Meeting, and after its close expressed a satisfaction with having been there. On the sixth, in company with his wife, he left Barnesville and proceeded onward as far as Zanesville. On the night of the 7th, after they had retired, she became more uneasy about him, and expressed that he had been there. Having something done, he only expressed a wish for them both to rest. About one o'clock she called the family with whom they were stopping, and it was soon found he was in a sinking condition. He gradually grew weaker until a little after five, when he expired. Having ceased to breathe without a struggle or any apparent suffering. His relatives and friends are comforted in the belief that he had fought the good fight and kept the faith; and, having been released from the trials and sorrows of this life, he received a crown of righteousness that fadeth not away.

—, in Camden, New Jersey, on the 18th of Tenth Mo. 1888, W. M. COOPER, in the 75th year of his age. This dear Friend was taken sick about two weeks before his death, and from the early part of his illness was impressed that he was near his home. He was preserved in a very tranquil state of mind, and was without alarm in the near prospect of death, manifesting humble confidence in Divine mercy. He was a good example of purity and integrity in life and conversation. He was a true and fervent worshiper of the Holy Spirit; and he was held in much esteem on this account by a large circle of friends and acquaintances. We reverently trust the Scripture language may be applied to him: Blessed are the pure in heart, for they shall see God. His remains, when he died, were buried in the Friends' burying-ground at Newton, on the 22nd—the funeral being largely attended.

Incidents and Reflections.—No. 173.

BOOKS AND TRACTS.

A very valuable means of spreading a knowledge of the truths of religion, is by the distribution of suitable books and tracts. Words spoken often pass from the memory; although, when uttered under the movings of the Spirit of Christ, they may be greatly blessed. But the words which are preserved on the printed page, may be recurred to at any time, and may be made useful in future years. It is no wonder, therefore, that the circulation of writings which have been prepared under a measure of the holy anointing, has been felt by many to be a duty and a service to which they were called.

The Journal kept by Stephen Grellet during his numerous and extensive journeys as a minister of the Gospel, shows that he did not neglect this method of sowing good seed. He often refers to his efforts in this direction; and it may reverently be believed that the Divine blessing rested on this part of his labors as well as on the preaching of the Word. When tarrying for a short time at a village in Greece, near Athens, about twenty of the villagers came to gaze at them. The priest and others soon followed. Stephen says, "I felt the love of Christ towards them. I wished to communicate something to them, but our interpreter was not there. He had gone into the village to buy some provisions. Another way, however, seemed to open for conveying my religious impressions. I opened the Greek Testament on those parts which contained what I wished to bring before them. These passages I got the priest to read to them. So forcible is the plain truth, in the simple language of Scripture, that, on hearing it read, several of these people were much affected, and broken into tears, so that when our interpreter returned, their hearts were prepared to receive what further we had to impart. We found that they had never heard the Scriptures read. The priest himself had not a copy of them. He entreated us to give him one, saying, he would keep it very carefully locked up in the church. We told him, before all the people, that we would give them a few copies, on condition that they would not keep them locked up, but that frequently during the week, and especially on First-days, they would meet together, and that the priest or such of them as are able, would

read them audibly to all the others. They promised they would do so, and parted from us in great tenderness."

When in the Southern part of Germany, in 1832, Stephen Grellet mentions that some of the inhabitants of villages through which he had passed, came to his inn at Neuburg. He says, "They were from home when we visited their villages; they wished to be with us a little, and requested that we would give them some books like those we had distributed among the people. They told us that on their return to their homes, late in the evening, they found every family collected, listening attentively to what one read to the others out of the tracts we had left them, and that parents and children were in tears. One of them, on returning home in the afternoon, met some boys on the road reading a tract with much attention; he listened for awhile, and felt such a strong desire to have one of the tracts, that he offered a large price for one, but the children replied that no money could induce them to part with such good books."

In connection with the distribution of books, Stephen Grellet mentions the case of a converted Jew who was travelling in Arabia. "He had a number of New Testaments in that language, which he distributed on his journey; he was also in the practice of frequently reading it to the people in the market-places. On one of these occasions he was sent for by the Pasha, who in a rough manner inquired of him, 'What is this that I hear of you?' it is said that you read in a book that declaims against Mahomet and our holy religion, and which is calculated to cause the people to revolt against the Sultan, &c. The Jew replied, 'You have been greatly misinformed; for the book I read in has not the name of Mahomet in it; it was even written before Mahomet was born; and, so far is the doctrine it contains from exciting the people to revolt, that if they were obedient to it, the Grand Sultan could not have a more peaceful and upright people in all his dominions. To convince you, which he presented him one copy of it,' on which he presented him with a New Testament, in Arabic, very nicely bound. The Pasha took it, examined it, and said, 'It is a very pretty book.' Books in those parts are rare. A few days after, the Jew had occasion to go to the palace of the Pasha; when at the door, he heard the Pasha reading in the Testament to many of his people who stood about him; he was then reading some of the miracles recorded by the Evangelists, and now and then made his own remarks to his attendants. Observing the Jew at the door, he called out to him, 'Come in, come in; I am reading out of your book to my people; Christ was indeed a great one; I also observe that all his miracles were made publicly among the people, whereas all those of Mahomet were in private.'"

Anna Shipton tells, in her book, "The Lord was There," of having sent some little books to a boy who was employed to clean knives, &c., in a ladies' school, with a request that he would give them to the three servants, who had been

very kind to him. One of them was given by the boy to the housemaid; who at the same time received a message to summon her to the sick bed of a brother, who had been sent home as an invalid from India. He had been a source of trial and sorrow to the family for many years; and had now returned to die. The housemaid put the tract in her pocket to read on the railway journey, for the purpose of beguiling the time rather than for any desire after its contents. When she reached home, her brother was worse; and the despair of his soul was such she knew not what to say to him. She had no comfort to offer him; for his grief was the grief of a heart broken for sin, and his cry for mercy was a mystery to her.

She remembered the little book; it was about God's love to sinners like him; so she read it to him. She was amazed at his rapt attention and thankfulness. She sat up with him that night; and again and again she read the tract to him. The words were like bread to his famishing soul: "God so loved the world, that He gave his only-begotten Son, that whosoever believeth on Him should not perish, but have everlasting life." And "He gave himself for our sins, that He might deliver us from this present evil world, according to the will of God." "Greater love hath no man than this, that a man lay down his life for his friends."

The following day, the housemaid returned to her place of service, deeply impressed by the work of the Spirit on the young man's soul. The next week she received a letter from her mother, telling her of the happy death of the prodigal, and the blessing that he had received through the tract she carried him.

On another occasion, when riding in a railway car with only one fellow passenger, a young man of exclusive demeanor, she felt so clearly the extension of Divine love towards him, that she felt constrained to extend an invitation to him. "What followed she thus describes:—

"The young man listened, drew himself up haughtily, and replied: 'My family do not approve of such questions.'

"Smiling consciously at his idea of escape, I said, 'I am not speaking to your family, but to you.'

"He rejoined coldly, 'Then I do not approve of such questions.'

"There was a pause.

"I said—though gently I thought (perhaps it sounded somewhat sternly, for he turned quickly at last and looked at me), 'When you meet me before the Lord, in that day when the secrets of men are judged, how will you answer when the Lord tells you that He sent me with an invitation to you to come to Him, and that your reply was, that you did not approve of his message?'

"He looked astonished and uncomfortable; but maintained a cold, thoughtless haughty silence, while he gazed intently through the carriage window."

During the time of silence she felt an impression to give him a tract. The only one she had with her bore the title, "That Man Saved my

Life." It was accepted with reluctance. As the young man's eye glanced over the open page, his face became softened with evident emotion, and in a subdued voice, and with a startled look he said, "Did you know then, that I had just been saved from drowning?" The barrier between the travellers was broken, and they joyfully opened for conversation on Heavenly things. His heart had been impressed at the time of his escape from shipwreck; but the impression had passed away. The Holy Spirit now showed him that the Heavenly Father still yearned after his wandering child.

J. W.

FOR "THE FRIEND"

Isaac Coates' Visit to the Seneca Indians.

(Continued from page 107.)

"Ninth Month 3d. Passed the time very agreeably among our friends about Bridgeport, on the Monongahela, in preparing necessaries for our wilderness journey. Friends were exceedingly kind—seemed as if they thought they could hardly do enough for us; got well equipped by them for our journey.

"5th. When we arrived on the top of the mountain, where we got the first sight of Pittsburgh, we soon began to descend the steepest hill I ever saw a wagon-road upon, which to me appeared almost impracticable for a good team to draw an empty wagon up. Nevertheless, the inhabitants say they frequently go up loaded. When we descended to the bottom, we again crossed the beautiful Monongahela, and immediately entered the town, where we stayed the afternoon in providing some necessaries. I took the opportunity to walk down to the point or junction of the aforesaid river and the Allegheny, which makes the great and grand river Ohio; it being a delightful prospect. Also had a view of the old French fort, Duquesne, and the English fort, which are both very much demolished, and beautiful grass lots in the place. This town appears to be a lively place for trade, containing perhaps 200 houses."

"They left Pittsburgh on the 6th, crossed the Allegheny River and travelled up its west bank. In places "the road was intolerable for short, steep hills; so much so, that going down some of them, leading our horses, we seemed in danger of their falling down upon us." It was then very much of a wilderness country. The town of Franklin on French Creek contained 10 or 15 houses. "A few cabins and small lots cleared and we saw on our way between French Creek and Oyl Creek, Rattlesnakes abound here. I saw a large one of about 3 feet 9 in. long, and about as thick as my wrist. I alighted and killed it, and cut off the rattles—being 9. Great numbers of wild turkeys are here. We saw several flocks containing 40 or more; and might easily have shot some of them if we had had guns and ammunition.

"We arrived at Titus' a little before sunset, got our horses to good pasturage, and lodged comfortably in his barn. Said Titus being a young man settled here on Oyl Creek, in the woods, about two and a half years ago; has made a great improvement for the time; owns 400 acres of land, the most of it a rich bottom; has got about 25 acres of excellent corn in the ground, a considerable quantity of wheat in stack, a large spring of excellent water near the door, large enough to turn a breast-nill; that upon the whole I think his farm likely in time to be of most inestimable value. Oyl Creek took its name from the oyl which is skimmed off the water in great quantities, and resembling the Seneca or British oyl in smell—its length

being about 36 miles from its mouth to the place where it issues out of a small lake."

When Isaac Coates traversed this section of country, he had no idea of the wonderful changes which would be effected in it by the sinking of oil wells and the consequent enormous development of the production and trade in petroleum. The oil which was brought up in small quantities by some of the springs and collected from the surface of the waters, was then principally valued for medicinal purposes, and had long been used in that way by the Indians.

"10th. Being a fine morning we set off early and rode 29 miles near the mouth of a large stream called Brokenstraw, where we pitched our tent, kindled a fire and lodged in the woods. After leaving Titus' we rode 2 miles to a newly-erected mill and saw-nill on a branch of Oyl Creek, which the Holland Company have erected in order to supply the new settlers with flour, &c. Divers of them came there, 20, 25, or more miles with bags of grain, on a horse, to be ground—their being no road that any carriage can pass—and indeed to such who have not seen these mountainous new countries, it would appear impracticable to pass with a single horse. After leaving the mill, we soon entered a forest of White Pine, Hemlock and divers other sorts of timber; and great part of our ride this day was through timber of that sort: some of the way tolerably level, but a great part of it mountains thickly set with stones and rocks; which, together with the interlocking of the roots of the timber, and the deep swampy guts, it was with difficulty we got along; the cavities being so deep and close together, that had our horses got their legs in they must have been broken. But I suppose the way to be much better than it was 2 years ago, being now a cut path all the way, which was not the case then. In many places the timber being, I believe, from 100 to 200 feet high, and thickly set, insomuch that a great part of the face of the ground and rocks is scarcely ever saluted with the luminous rays of the sun; which I think is the reason of the rocks and old logs being very thickly set with coats of moss, and as the seeds of different kinds of trees fall on this moss, there being moisture enough contained in it to occasion vegetation, the body or trunk ascends and the roots crawl on the surface of the rock or log, to the edge, and then descend into the ground, and great numbers of that description are grown into large trees, the roots of which clasp a rock a little similar to the clasp of an eagle's claw. I saw one rock about 20 feet in diameter, which had 7 trees on it, some of which were 2 or 3 feet over and perhaps 150 feet high, and the rock 10 or 12 feet high. I think we saw neither house nor improvement for 20 miles; neither can I suppose much of it will be settled for many years to come.

"We came on the Brokenstraw about 7 miles above the mouth, and rode 6 miles down the stream to the place of our encampment through a very rich bottom.

"11th. Set off early without taking breakfast or feeding our horses. Rode down the aforesaid creek almost to the mouth; and with some difficulty got along, the Indian path up the river being in many places hard to be discovered, to a place called Warren, being a newly laid out town, but without much buildings except one cabin and a store-house, built by the Holland Company, near the mouth of

another large stream called Connowingo. Here we breakfasted and fed our horses. The people in the cabin were very kind, made our chocolate for us, and gave us some good pigeon soup. Here we hired a guide, rode over the Connowingo, and followed our guide with indescribable difficulty about 16 miles to Complanter's settlement. The logs, the brush and thick set young timber rendered this stage extremely difficult and tiresome—almost a continual succession of logs, in many places 3 or 4 in a perch as high as our horses could step over, and many of them they had to jump, and the young growth being so thick that if we were two rods apart we would have to call out to each other in fear of being lost.

"About an hour before sunset we reached the new house which Complanter is getting built, and the school-house where Henry Simmons teaches the young Indians; at which place we met with Henry, greatly to our mutual comfort. We tarried all night in the school-house. Complanter and many others of the nation came this evening to visit us, and appeared to be much pleased with our coming.

"12th. This morning the old chief and some of his connections brought us some cucumbers to help out our breakfast, and immediately returned to his village. We soon set off up the river, Henry Simmons bearing us company, and in about one mile came to the town, stopped a few minutes with the Indians who gathered round us, apparently much pleased with our arrival. We proposed a council or conference with them to be held in two days after that time, to which they readily assented, and agreed to send out some runners to inform their people. We then took leave of them for the present, and proceeded up the river to Genesinghuta, to join our friends Halliday Jackson and Joel Swayne, whom we met with mutual joy.

"13th. Stayed with our friends and visited several families of Indians in their houses and cabins, and walked about and viewed the improvement made by our young Friends in this wilderness county, which appears considerable. Their corn and buckwheat are good, had pretty good oats, have a considerable quantity of hay, procured a large garden of good vegetables, and have about 5 acres of ground cleared and plowed, ready to sow wheat. They have got a comfortable two-story house to live in, and several other necessary buildings.

(To be continued.)

FRIENDS: There is a summer religion that is up and flourisheth while the sun shineth, and while they have the club, the staff and the bag; but when the winter, the storm and the tempest come, they fly under the hills and mountains and trees to cover and shelter themselves; whom the powers [of the world] do separate from their religion, worship, church (as they call it) and their doctrine. But the nature of sheep is not so. The sheep will get a-top of the highest hill and mountain; and set their backs against the storm, weather and tempest; and bleat for one another: and when the dogs are abroad among the sheep they will run altogether; but they that are not the sheep, they will scatter and be scattered when anything *fourth* then [maketh them afraid]. But part the sheep asunder, and they will run all on heaps again, and will keep together; and neither storm, tempest, nor winter, nor powers nor principalities can separate them from the love of God, which they have in Christ Jesus their Shepherd. And so Christ's sheep bear fruit in the winter and tempests; and have

neither bag, staff nor club; but are in the Vine bearing fruit; setting a-top on the highest hill and mountain with their backs against the weather.—George Fox.

John Pounds—the Founder of Ragged Schools.

(Concluded from page 107.)

Several little incidents are given which illustrate the old man's happy way of interesting and instructing his scholars:—

"A little lad came running to us with something bright and green in his hands. 'Mr. Pounds,' he said, almost out of breath, 'what's this, so bright and green? it grows all along the hedgerow, a long way.' Johnny received it from the boy very respectfully; if it had been the king he could not have been more respectful. 'They call it traveller's joy,' he said; 'it is not in bloom yet—you found no flowers upon it.' 'No,' said the boy, 'only leaves.' 'No, it's too early for the flowers. It's a clematis; but they call it traveller's joy. It leaves are bright and green, spreading plentifully over the hedges a long way together; and its flowers, when they come out, are a greenish-white, and look bright and gay; and when the flowers go to seed, every seed has a longish feathery tail, curling out from one end, almost as white as the flowers, and they glisten in the sunshine. So they brighten the hedgerows all through spring, summer and autumn—in spring, with their bright green leaves; in summer, with their white flowers; in autumn, with their white feathery seeds, all looking so pleasant and cheerful along the road-sides. I've often thought this is why they call it traveller's joy—it cheers the traveller on his way.'"

Then another boy comes up with a piece of scarlet pimpernel, and the old man explains why it is called the shepherd's weather-glass. Then there is a lecture on the scarlet poppy, and so forth. . . .

[A comfortable dinner on the Hill, and a tea at the shop after their return, completed the treat which John Pounds, out of his poverty, managed to provide annually for his young flock.]

It is hardly credible that Pounds could have done all he is described as doing—not only for his pupils, but for all the sick and suffering round him—out of his own scanty earnings. Yet we are assured that not only was his school absolutely free, but he also steadily refused all offers of money for himself. Not, indeed, that rich and influential folk seemed to trouble much about the poor old cobbler while he lived.

He did not, however, refuse help when he needed it for his little ones; but such help came mostly from the poor. From time to time the old man's heart was cheered by an unexpected visit from an "old boy," who would come and lean over the low half-door and delight his former teacher by reminding him of some little ragamuffin that he had perhaps coaxed into that very room, years before, by the tempting offer of a hot potato! Such grateful and welcome visitors generally insisted that the schoolmaster, to whom they owed so much, should accept some small offering to help him forward in his work among a younger generation. . . .

[One of his old scholars thus relates his school-boy days:]

"Father took me by the hand—I was a very little chap then—and we went to Mr. Pounds', in that little shop in St. Mary's Street. It was full of children—as full as it could hold; there did not seem room for another; and good Mr. Pounds was sitting amongst them, on his bench at the window, working."

The first lesson is then described: "He says (oh, so kindly and lovingly, drawing me gently to him), 'Now, come my little fellow; in *The beginning, God created the heaven and the earth.*' He always began so. He began so with every one; whether they could read or not, he always began with the first chapter of Genesis. I astonished them at home; for I could go through the first chapter of Genesis before I well knew all my letters.

"Sometimes he would explain it to all the school at once how God created the heavens and the earth. He delighted in explaining this. There were some tall boys and girls that could not read—much taller than I was—and they stood behind and listened to these explanations, and so learned in this manner. There was another chapter that was one of his great favorites—the fifth chapter of Matthew, the beginning of our Lord's sermon on the mount. He was very fond of giving us these two chapters to read. . . .

"Mr. Pounds often went out suddenly during school hours. He'd leave us all alone, boys and girls together, and say to us, 'Now you bid here till I come back, and mind you be good. Then he'd tell one of the older boys, perhaps, to take care of us when he went out to some poor neighbor, perhaps to take them a dinner he had been cooking for them, or some broth or gruel.'"

But the old cobbler was not satisfied with merely receiving such as came to him; he went forth also "to seek and to save that which was lost." He went about all the lowest and most degraded places in that wretched neighborhood, seeking for poor children "that nobody cared for." When he saw a poor, starving little thing "poking in the gutter,"—"That's one for me," he would say. Let him describe in his own words, his method of procedure:—"An' I goes gently towards it, and I says to it, 'Will 'y have a taty?' I has a boiled taty ready in my pocket; I pulls it part out, and when it sees it, it says 'Yes,' And whiles it's eating its taty, I moves off, yet not so fast but it can keep up w' me. But before it's done eating its taty, I takes care to be in my shop. It follows me into the shop for another taty, and as sure as it comes once it comes again."

Good old John Pounds was called by his rest very suddenly, in the midst of his labors of love. The Christmas of 1838 found him in his usual health, full of active benevolence, carrying forth portions to the sick and needy, for the weather was very severe; teaching in his school, striding hither and thither on errands of kindness and mercy, with bare head and arms. "What's frost or cold to him? his heart is warm enough!" those who watched him would exclaim. The cobbler always had a festive Christmas day. He had a piece of roast-beef and a huge plum-pudding; and during the afternoon he held a sort of *levee*, all the neighbors being welcome to drop in and taste the famous pudding, which, tradition asserts, invariably held out till the very last visitor had had a bit. On that Christmas day he was in his glory. Such of the children as were likely to get a pudding at home—perhaps no dinner at all—were invited to dine with him. After the meal was over the old man stirred his fire and produced the little presents that he had provided. Then the neighbors began to drop in, and the afternoon passed quickly by.

"I'm as happy as I can be," he exclaimed to his nephew: "I haven't a wish on earth unfulfilled. And now, if it please God to take me before I can no longer do for myself—No, I would not live so long as to be a burden to any

one;—when I can no longer do for myself, I should like to die—like a bird dropping from its perch."

His last wish was fulfilled. New-Year's day came, and John Pounds was still all life and activity. He had bought a pint of sprats for his dinner, and was very gleeful over the unwonted treat that he was about to give himself. The school was in full swing when, at ten o'clock, the old man suddenly rose, and charging the youngsters to be good in his absence, which he said would be very brief, he carried off one of his boys to visit a Mr. Carter, whose house was not far distant. The lad had a sore heel, for which Pounds desired to get some ointment; at the same time he bade him bring his slate, that Mr. Carter might see what progress he had made with his arithmetic.

Mr. Carter's house was reached, and the slate was sent in, by way of introduction, while master and pupil stood in the hall. A noise was heard; some members of the family hurried out, and found the old man lying helpless on the floor. They raised him into a chair, applied restoratives, and for a little he rallied. A doctor who happened to be passing was called in. He saw at a glance how matters stood; in ten minutes John Pounds was dead!

FOR "THE FRIEND."

Saving Faith.

"There is a faith that overcomes the world, and there is a faith that is overcome of the world." That faith that overcomes the world, that is operative, bringing mankind into harmony with the will of God, is the faith that saves. "By grace are ye saved through faith, and that not of yourselves, it is the gift of God; not of works, lest any man should boast."

If any one has a saving faith he acts upon that faith, which makes it operative, producing a change in his life. "To as many as received Him, [Christ] in them gave He power to become the sons of God, even to them that believe on his name." The Apostle tells us that faith comes by hearing, and hearing by the word of God. Yet there were those in that day having ears that did not hear so as to make any change in their lives. As the wonder-working power of Divine Grace is heeded, it makes the human family willing to comply with the terms upon which salvation is offered, which are repentance and faith. "Let the wicked man forsake his ways, and the unrighteous man his thoughts, and let him come unto the Lord, and He will abundantly pardon; not saving us in our sins, but from our sins."

Botanical Notes.

He who passes along the streets of Philadelphia, on Chestnut Street above Eleventh, may observe a conservatory placed on the line of the street, through whose windows during the whole of the winter season, may be seen most interesting collections of growing plants, which the owner thus displays for the pleasure and instruction of the thousands who daily pass by.

On the afternoon of the 18th of Tenth Month, my attention was arrested by some fine specimens of the Pitcher-plant (*Nepenthes Hookeriana*), the leaves of which are among the most curious of Nature's productions. The main body of the leaf is long and comparatively narrow, not much unlike those of some of the lilies and

orchids in shape; but the central stem of the leaf, instead of ending where the expansion of the leaf ceases, is greatly lengthened, so that it hangs down like a green cord of a foot or so in length. At the end of this cord grows in an upright position, a green cup (thickly blotched with reddish-brown, about the size and shape of a gorse's egg, open at the top, where it is bordered with a colored lip or flange. Over the open top is fastened in a sloping position a cover about the size of the opening, which looks as if it might be designed to shelter the cup from any shower of rain which might fall upon it.

The researches of Darwin and other naturalists, seem to show that the real use of this lid is to entice insects into the cup open below to receive them. Its under side is furnished with honey glands, whose secretions are doubtless very attractive to many insects; and from its sloping surface the descent is easy into the cavern below, where the watery fluid secreted by the inner surface of the cup speedily closes the breathing pores and drowns the unfortunate victim.

The *Nepenthes* belongs to the somewhat numerous family of insect-eating plants, which by various devices entrap their visitants, drown them in their slimy embraces, and then absorb the nourishment which their bodies are capable of furnishing. Among these carnivorous plants we suppose many of our readers are more or less familiar with several species of Sun-Down (*Drosera*), and with the American Pitcher-plants (*Sarracenia*), which grow abundantly in the swamps of the Pine Barrens of New Jersey.

The genus *Nepenthes*, of which there are now known more than 30 species, inhabits the tropical swamps of the East Indies, Madagascar, Australia, &c. The lid of the pitcher or cup formed at the extremity of the leaf, does not open until the leaf is completely developed, and before this takes place, the watery liquid is secreted and partly fills the cup; so that it cannot be derived from the rain-fall. The different species vary much in shape and appearance. The *N. distillatoria* has narrow cylindrical pitchers, 6 or 8 inches long, which are of the same light green color as the leaves. It is so abundant in Ceylon that the natives use the strong mid-ribs of the leaves for cords or withes. A variety of this has been found, in which the pitchers are of a deep blood-red color. In one species, found in Borneo, (*N. raja*), the pitchers are a foot in depth and 6 inches in diameter.

In investigating the kinds of insects which are found in the pitchers of our American plant (*Sarracenia*), Prof. Riley of St. Louis, discovered a species of flesh fly, not before known, which drops its maggots into the tube of the pitcher, where they feed upon the soft parts of the insects it contains. At maturity, the maggot makes its way through the base of the tube, burrows in the ground, and is transformed into a fly.

J. W.

The Beguiling Influence of Human Wisdom.—The minds of too many of our young people have become so much dazzled with the glare of creaturely activity and excitement, as to have little relish for the plain, but incontrovertible truths of the Gospel in their primitive purity. O! the beguiling influence of human wisdom! how doth it corrupt from the simplicity that is in Jesus; it strikes at the very life of spiritual Christianity."—*Daniel Wheeler*.

I am afraid of taking up a rest in consolations, as suffering seems the allotment of the present day.—*Mary Copper*.

WATER LILIES.

The south winds wake
The lilies on the lake
To greet the early morning;
So do the Spirit's lovely breath
Dath gently wake our souls from death;
Our early life adorning.

The lilies bloom
Beneath the blaze of sunny noon,
Their fragrance sweet extending;
So, as we love, our prayers arise
Like incense floating to the skies,
To the throne of God ascending.

The lilies grow
Where living waters flow
From hidden fountains bubbling;
So, when our souls to Christ are led,
Their thirst is gone, their hunger fed,
Made calm from all their struggling.

The lilies fold
With robes of snow, which their hearts of gold
When evening shades are falling;
So, when we sink to heavenly rest,
We hold Christ's love within our breast
And wait his blessed calling.

SELECTED.

WHEN, WHERE AND HOW?

BY ELEANOR C. DONNELLY.

Dear Lord! in some dim, future year,
In some dim future month and day,
Abides the hour, the solemn hour,
When thou shalt call my soul away;
That year, that month, that day of days
Come soon? come late?—I know not when;
O Thou who rulest all my ways!
Master of life, whom Death obeys,
Be with me then, be with me then!

Somewhere upon this globe of ours
Is hid the spot where I must die;
When wilt thou find me, or 'mid the flowers,
My shroud-forn fold shall coffin die;
If north or south? If east or west?
At home? abroad?—I know not where;
O tender Father, Lord of grace,
Whose presence fills the realms of space,
Be with me then, be with me then!
By fire? by flood? by famine sore?
When Death's dark angel opens the door,
How shall it call my soul away?
God only knows; He bends the bow,
And He alone can fix the dart;
Yet can I not, when, where, or how
The end may come, sweet Lord! if Thou
Wilt then but shield me in Thy heart!

THE WIDOW'S MITE.

"More than they all," the lip of Truth declared,
When it poor widow's mite to the temple came
With her two mites,—her all of worldly goods,
And cast them in the treasury. The rich
Of their abundance gave and willingly,
But she her living freely did bestow;
And the world's wealth, had she at her dispose,
Would have been given to the cause espoused,
Which was so dear to her, as cheerfully.
The structure was adorned with costly stones,
And exquisite the finish. Beneath its dome
Stood one unconquered, greater than Solomon;
A lowly life was his, and yet his brow
Bespoke a being of no common mould.
"More than they all," how strange unto the ear
Of those then gathered, seemed the Saviour's words,
Ere they discerned his meaning. He who sees
Not as man, but as God, to each man's heart
And by the motive is the action weighed.
Her name we may not know; from whence she came
Or whether she returned, no record tells,
Of her tribe, or of her family;
And yet her memory will ever live.

R.

"The heart grows rich in giving; all its wealth is
living grain;
Seeds, which milder in the garner, scattered, fill
with gold the plain."

The writer of the following "Thoughts in a Friends' Meeting House," &c., had been attending the meetings of the Hicksite branch, but was not satisfied with their religious views, nor the doctrines held by a great number of their members. He could not unite with them as a Society in their views of spiritual things, nor could he find rest with those churches having a man-made ministry. There were no Orthodox Friends' Meetings near where he lived. His wife was a member of the Hicksite branch, and they continued to attend their meetings together. Having business in Philadelphia during the Yearly Meeting of Orthodox Friends, he was led to attend their meetings while he remained in the city, and perceived that their testimonies and doctrines were different from the Hicksite Society. When he returned home he continued to attend meeting with his wife, as heretofore, and in process of time believed that it was his duty to testify in public for the Master. And during a public meeting of this Society he was under a deep spiritual visitation from that word which is quick and powerful, and is a discernor of the thoughts and intents of the heart.

Afterwards, by prayer and supplication, he was led to attend those meetings of Friends, as the way opened, who believe that Jesus is the Christ, and that He suffered death on the cross, without the walls of Jerusalem, for all mankind, that whosoever believeth on Him and is baptized with his baptism shall be saved,

J. S. W.

Thoughts in a Friends' Meeting House, and Reflections Therefrom.

The Friends and many others, who we believe, were not of this persuasion, have assembled themselves together for the purpose of worshipping God; and it is to be hoped that the greater number of those thus assembled on this occasion have come together for this purpose. A solemn silence soon overspreads the meeting. The words—"There is a division and a dividing line," came vividly before my spiritual vision. What can this mean? I queried, as no one has yet broken the silence by rising to speak. The words were repeated in the same manner, but with much more force than before, "There is a division and a dividing line: arise and speak the words." The emotion and the force of the words of this spiritual visitation were such as not to admit of any doubts. My heart seemed to sink within me. I cried in my soul, O! my Lord, how can I do this work? Is there no other way? Wilt thou not remove this burden from me? Then came the answer, "Thou mayest write them. There is a division and a dividing line." I replied, I will write them. Then a peaceful calm settled over my troubled spirit, but the words above written still sounded in my ears. I queried, what can the meaning of those words be? The answer came, "There is Christ and there is anti-Christ." Then I began to understand the meaning of this visitation:—There is a division and a dividing line, and it is between Christ and anti-Christ.

There were several speakers, but no one spoke of the divinity of Christ, until near the close of the meeting, when a woman spoke on this subject, and explained, that Jesus was not a man, but that He was the Christ, and that the best thing that the Friends could do would be to acknowledge the divinity of Christ.

The Meeting of Friends referred to, and which the writer of this article attended, was the Hicksite's.

The Hicksite Friends, as a Society, do not acknowledge the divinity of Christ, and are ignorant in doctrine and belief. There are individuals, no doubt, among this branch of Friends who believe that Jesus was the Christ. It was the spread and adoption of Unitarian doctrines that led to the great division in the Society of Friends throughout the United States in 1827—the seceding portion of the Society taking the name of Hicksite from a distinguished peaker, Elias Hicks. Those that remained were called Orthodox, from their holding to, or professing orthodox doctrines in common with other Evangelical churches.

It is a sad spectacle to any one in sympathy with Friends or their primitive principles, to behold them divided and subdivided as they are at the present day.

Who is anti-Christ? "Who is a liar but he that denieth that Jesus is the Christ. He is anti-Christ that denieth the Father and the Son. Whosoever denieth the Son, the same hath not the Father." 1 John ii: 22, 23. "And every spirit that confesseth not that Jesus Christ is come in the flesh is not of God. And this is that spirit of anti-Christ, wherof ye have heard that it should come; and even now already is it in the world." 1 John iv: 3. "For many deceivers are entered into the world, who confess not that Jesus Christ is come in the flesh. This is a deceiver and an anti-Christ." 2 John i: 7. This is a scriptural interpretation of the word anti-Christ; and in 1 John ii: 18, we are told that even now there are many anti-Christ, whereby we know that it is the last time. I would earnestly exhort my readers to study carefully those passages quoted, and they will give a clear idea of anti-Christ; and also to read carefully in connection therewith the first and second Epistles of John.

In worldly matters union is considered necessary for success. In 1 Corinthians i: 13, "Is Christ divided? Was Paul crucified for you? Or were ye baptized in the name of Paul?" Christ is not divided, but there is a division and a dividing line between Christ and anti-Christ. If it were necessary to prove that Christ is the Son of God, and was in the flesh in the person of Jesus, I would quote from passages where the query was put direct by Him to his disciples, and answered by Peter: Matthew xvi: 15, 16, 17 and 18—"He saith unto them, But who say that I am?" And Simon Peter answered and said, Thou art the Christ, the Son of the living God. And Jesus answered and said unto him, Blessed art thou, Simon Bar-jonah, for flesh and blood hath not revealed it unto thee, but my Father which is in heaven. And I say also unto thee, That thou art Peter, and upon this rock I will build my church; and the gates of hell shall not prevail against it."

The Scriptures contain many other proofs that Jesus was the Christ, but we must leave this matter with our readers, with the exhortation to search the Scriptures; read them for yourselves deliberately and prayerfully. After you have done this, can you say that Jesus was only a man? Or will you not exclaim as Peter did—"Thou art the Christ, the Son of the living God." We must either confess Christ or deny Him; there is no neutral ground in this doctrine. He prayed that all his people might be one. Let us come to Him in humble prayer that we may be one in Him. If we are one in Christ, then there is no division nor dividing line amongst us. This rock upon which the Church of Christ is built is the Truth, as it is

in Christ, our Lord, for He is the Way, the Light and the Life, and besides Him there is no other way; for he that cometh by any other way, the same is a thief and a robber. This is the only sure foundation, and if we build upon it, then we are Christ's, and Christ is God's.

A Whitty Hero.

Last month, there was buried, in Whitty Cemetery, John Storr, one of Whitty's brave lifeboat men. On the day of the funeral, all the shipping and fishing craft of the port lowered their colors half-mast, and many thousands of persons witnessed the passing, to the cemetery, of the funeral procession, which was a remarkably long one. The coffin, bearing the deceased, was carried shoulder-high through the streets, by lifeboat men and fishermen. The funeral rites at the grave-side were performed, and the scene was deeply affecting, for deceased was not only respected for his bravery, but also beloved for his many personal qualities. John Storr was a member of a numerous family of that name, all of whom spent the best years of their lives in the precarious occupation of fishing in the deep sea; all of whom had a deserved reputation for unselfish heroism; and many of whom sacrificed their own lives in their attempts to save those of others, who had been cast upon the rocky coast of Whitty, by the angry waves. Storr's own father perished in one of the most brilliant enterprises ever recorded in the national lifeboat annals; while a brother and two uncles lost their lives, in similar deeds of heroism. The deceased, John Storr, was ever to the fore, in times of peril, to those at sea; and, for many years, none of the Whitty lifeboats have gone out to shipwrecks, without having him as one of the crew. He was one of the coxswains of a crew of brave fellows, that have saved many scores of lives, from vessels which have been beaten on Whitty's shores by the fury of the sea, and then dashed to pieces. He has had many miraculous escapes, one about eight or nine years ago, when the lifeboat, while on one of her adventurous expeditions, was upset by a huge sea. She, however, soon righted herself again, but four of the crew were missing, among them Storr. He, however, was cast up on the beach, though unconscious. By long and patient nursing, he recovered. The other three poor fellows were drowned. The most memorable feat, accomplished by a lifeboat crew, was that in January, 1881, when the national lifeboat, "Robert Whittyworth," was dragged all the way from Whitty to Robin Hood's Bay, a journey of six miles, through banks of snow, standing in some places, several yards high. A boat, containing the crew of a sunk ship, was off Robin Hood's Bay, in momentary peril of being swamped. The Whitty lifeboat reached the Bay, after encountering difficulties and obstacles hitherto unheard of, and was launched into the terrible waves. Once she was driven back, twice she was driven back, more or less disabled, but still the plucky fellows, urged by Storr, stuck to their work, and again launched into the sea. At last, the frail craft was reached, and a crew of five or six men, half frozen to death, were brought to the shore, and a tumbler of joy that was almost delirious. In other brave deeds, of a similar character, Storr was a prominent actor, and his name will ever be revered, at least in the local annals of the doings of brave men.—*Advocate of Peace.*

In the noise and false glare of a worldly life, how many false motives, how many erroneous opinions may steal in and out of the heart unnoticed.

SELECTED FOR "THE FRIEND."

The Right Choice in Early Life.

The continuance of our Christian Society as a light in the world, depends much on the visited youth giving up, and surrendering their all, without any capitulation, in order to preserve this or that favorite object alive, which ought to be slain. We have many half-baked cakes, flitting morning clouds, and momentary early dews, among us. All states have their trials, and temptations; and in faithfulness or disobedience lies our increasing strength or weakness. Little trivial circumstances of dress or other light matters are presented by the enemy to young and tender minds. The sure Friend and Monitor in their bosoms deborts from entering into the temptation; here the conflict begins, army against army; the free agents have to make a choice which standard they will join, and in this choice is involved their safety, their preservation, and capacity for further growth in holy stability and religious experience. In their making a right choice, and in their diligent waiting for renewed help to persevere in that choice (through Divine mercy) consists their happiness in time and eternity.—*Richard Shackleton.*

BY ORIENTAL custom the terms "father" and "mother" are by no means limited to one's natural parents, but are applicable to superiors in years, or in wisdom, or in civil or religious station. This truth was impressed on my mind by an incident in my journey across the desert of Sinai. My companions in travel were two young men, neither of them a relative of mine—as my dragoman very well knew. When, however, in mid-desert, we met an old Arab shaykh, through whose territory we were to pass, my dragoman introduced me as the father of these young men. "No, they are not my sons," I said to the dragoman; but his answer was: "That's all right. Somebody must be father here." And when I found that, according to the Arab idea, every party of travellers must have a leader, and that the leader of a party was called its "father," I saw that it would look better for me to be called the father of the young men, than for one of them to be called my father.

Traces of this idea are found in the Bible use of the term "father." In Genesis, Jabal is said to be "the father of such as dwell in tents, and have cattle;" the man who started the long line of nomad shepherds. Jubal is called "the father of all such as handle the harp and pipe;" the pioneer instrumental musician of our race. Joseph in Egypt speaks of himself as "a father to Pharaoh;" in view of the confidence bestowed in him by the ruler of the empire. "Be unto me a father and a priest," says Micah to the young Levite, in the days of the Judges; because a religious guide is, in the East, counted as in a peculiar sense a representative of God. It is not merely that the terms "father" and "mother" may include that others besides human parents, but it is that no Oriental would think of limiting those terms to that relationship. Hence this fifth requirement of the covenant of God's people with their God, just as it stands, is in substance: Honor those who are over you in the Lord, as the representatives of the Lord; for the powers that are are ordained of God, and he who fails to honor them lacks in due honor to Him who has deputed them to speak and to act for himself. And herein is affirmed a principle which is as important to us to-day as it was to the Israelites in the days of Moses. Indeed, it may be questioned whether any

precept of the ten covenant requirements has a more specific bearing on the peculiar needs of the American people than this injunction to reverence those who are in authority because they are God's representatives in their sphere. Anarchy can have no tolerance in the mind of a child of God; but reverence for rightful authority has its home there.—*H. Clay Trumbull, in Sunday School Times.*

C. SPURGEON had occasion, some time ago, to speak to a company of students on the importance of using illustrations, and remarked, in his bluff way, that illustrations enough might be found in a tallow candle. This was regarded as an extravagance of speech, whereupon he prepared a lecture to show what might be illustrated by candles.

A nicely japanned but shut-up box, filled with fine unused candles, illustrated an idle and spiritless church. Several colossal and highly colored but unlit candles were shown, and with them a tiny rushlight, shining as best it could. The big, handsome, unlit candles might be archbishops or doctors of divinity, or other persons of culture without piety, and the bright rushlight might be some poor boy in a workshop, whose life is beautiful. He showed an unlighted candle in a splendid silver candlestick, and then a brightly burning one stuck in a ginger-bear bottle. He showed what a few people might do by combining their good efforts, by exhibiting the combined light of twelve candles. The folly of trying to light a candle with the extinguisher still on was shown, and the dark lantern illustrated the case of people who make no effort to let their light shine before men. The lecturer then placed a candle under a bushel, and afterwards placed the bushel-measure under the candle—the point of which was obvious. In snuffing a candle he extinguished it, and remarked that Christians often did a like mischief by unwise rebukes or criticisms. The chief of burning the candle at both ends was illustrated.

The last illustration was a number of lighted candles of various hues placed together on one stand, representing the church's true diversity in unity, all the different branches burning from one stem and for one purpose.—*From the Hartford Courant.*

Natural History, Science, &c.

The Habit of Taking Drugs.—In speaking of the danger which attends the habitual use of any drug, *The Christian Advocate* says:—

"Medicines are advertised as producing no tendency to a habit; that their use can be discontinued without the slightest inconvenience. All these statements, one after another, prove lies. To take no medicine, no stimulant, no opiate, except when unmistakably and absolutely necessary—then the least possible quantity to accomplish the result, and cessation at the earliest possible point—constitute the only safe rules. The best physicians of all schools know this, practice it themselves, and so far as possible, lead their families to do so. The people at large are too ignorant, too much afraid of pain, too unwilling to deny transient enjoyments or to be governed by hygienic laws; to pay physicians for wisdom if they tell them they need nothing but cleanliness, exercise and moderation. They turn to the quack, the patent medicine bottle, the pargoric, Jamaica ginger (*another name for spirit raw*), patent zinc, or any one of the thousand ways of trying to escape the penalty

of continuing to act as though nature's laws were a fraud."

Drainage in Holland.—"The twelve hours' ride from Rotterdam to Hanover proved a very pleasant one and full of interest. Leaving the city, the train passes through a long tract which has been reclaimed by various syndicates. Canals have been dug through the swampy land at right angles, and the rich black soil thrown out has proved sufficient to form rectangular patches of arable land called 'polders.' The canals form the highways in many places, and enables the landholder to do without fences. During the wet season they are kept at a proper level by means of numerous windmill pumps, the water being poured into larger canals having a slight fall toward the North Sea. Along the edges of the polders are rows of willows and poplars, and nearer the water are many unbeneficial plants, and every few yards most delightful patches of poppies, Sagittaria, cat-tails, and tall grasses very like our wild rice, extended into the water, which furnished an abundant crop of pretty, white water-lilies, smaller than those of our Middle States. In several places the farm hands were seen gathering boatloads of Duckweed (*Lemna*), which grows in great abundance."—*Friends' Intelligencer.*

The Habits of the Martins.—These birds have made their home with me for the past forty-five years continuously, during the nesting season. I have accommodations for forty pairs in the eaves of our kitchen, within fifteen feet of the ground, where the family are continually passing and repassing, without any apparent annoyance to the birds. They generally come one at a time, although several may appear to arrive the same night. If the season should prove cold and stormy, or we should have snow so as to prevent their getting a supply of food, they will stay and perish rather than return to the South, where it is plenty. That they always return in the night, is a mistake, and arises from the habits of the bird. "At the approaching dawn the merry martin begins his lively twitter, which continues for half a minute, then subsides until the twilight is fairly broken. To this prelude succeeds an animated and incessant musical chattering, sufficient near the dwelling to awaken the soundest sleeper." Some of them arrive in the day time. Standing at our south window one day in early spring, I saw the arrival of the first martin of that year. It was an old male that seemed tired by his long journey. He made directly for his box, and I think, remained silent, having no one of his own kind to exchange ideas with. He was some distance from the house when first observed, but was at once recognized by his flight. The rest gradually followed him. Every new arrival by day seems to excite them, and is announced by loud chattering.

They resent any intrusion on their premises with the greatest violence, and will permit no other bird to enter their box, if they can help it. The roof, which is within a few inches, is common to all. One year I found there was something exciting and disturbing them very much, and finally I discovered two old Norway rats had found their way up the drain into the conductor that came from the roof, and, availing themselves of this road, they had entered the cornice of the house and had been feasting on the young birds or eggs. I soon destroyed them. The next year only two pair returned. They have again increased and filled the empty boxes.

The red squirrels have to be watched. Formerly there were many of them in the town. Last year four of these were killed on the premises. They are as bad as the rats. Sometimes we had a full house, but since the advent of the English sparrow there has been trouble for the martin as well as for myself. The sparrows, remaining all winter, are ready to take possession of the boxes when they are opened for the martins on the arrival of the first one in the spring. Did the whole body of martins come at once, I could we tell which box to open for the new comer, much of the difficulty is no match for the martin in the air, but when the former once gets possession of the box, and sits at the entrance of the hole, with his strong bill presented, he cannot be dislodged; and after both have got to house-keeping there is but little contention between them. To attempt to dislodge the sparrows, I fear, would drive the martins away.—*Selected.*

The Great Auk.—A party of men from the United States Fish Commission schooner recently visited Funk Island, an exposed rock 32 miles northeast of Nova Scotia, where this bird, now extinct owing to the greed of man, once made its home. The island was found strewn with the bones of the Auk, and more than 100 complete sets were gathered. It will be remembered that these birds could not fly by reason of their small wings. It was the custom to slaughter them with clubs before despoiling them of their coveted feathers.—*Chambers's Journal.*

Eucalyptus Honey.—This honey is of a deep orange color, of a transparent sirupy consistence in warm climates, but as seen in England, it is usually partly solidified. It contains about 62 per cent. of pure sugar, and about 17 per cent. of the essential constituents of the Eucalyptus, which have useful medical properties; so that it is likely to be used as a substitute for cod-liver oil, and in other ways, in medicine.

It was first discovered by a French traveller in Tasmania in 1884. He noticed at the summit of one of the Eucalyptus gum trees, which was about 250 feet high, a peculiar formation, which further examination showed to be a hive of bees. The tree was cut down and the honey thus obtained. The bee was a black species, smaller than the common bee of Europe and America but with a larger proboscis.

A kind of honey is obtained from the neighborhood of Trebizonde, which acts as a narcotic on all who partake of it, followed by strong excitement and poisonous effects. An analysis of this honey, and experiments on animals made with its ingredients, have led to inquiries as to the plants which are common in the places where it is collected; and it has thus been ascertained that the bees gathered it from a poisonous plant, of whose character the honey partakes.

Chambers's Journal, from which the preceding statements have been condensed, says there are now known many honeys "containing either tonic properties or peculiar odors, which have been traced to the bees frequenting a certain plant; for instance, the Narbonne honey owes its peculiar flavor to the Rosemary, which grows so profusely in the neighborhood."

Instinct of a Deer.—An old Algonquian guide related that on one occasion he saw a number of deer feeding and heard in the distance the baying of a hound. As the voice of the hound drew nearer, one of the deer raised his head and seemed to be listening very intently; when he

quickly drew off from the others, and slowly increased his distance from his companions, from time to time throwing back his head in order to catch every sound of the nearer approach of the hound. Presently he trotted away and drew out of sight, when soon came an unerring animal on his trail, passing almost in sight of the other deer, but causing very little excitement and no hurry.—*Forest and Stream.*

Items.

Exposure of Spiritualism.—Many years ago the performances of the Fox sisters, especially certain *appings* which they produced, and which were aimed to proceed from spiritual influences, made a great sensation, and many persons were induced to admit the truth of their pretended discoveries. Margaret Fox, now the widow of Kane, the Arctic explorer, and her sister, have recently made a public confession that these *raps* were made by a motion of the toe, and had no connection with the spirit-world. She read her confession before a great assembly. The only value of such exposures is that they warn those whose brains are not already ailed.

The Editor of the *Christian Advocate* says that several years ago, in company with some others, he tested her performances, and ascertained how her *raps* were made, "yet the spiritualists will not be convinced." The only value of such exposures is that they warn those whose brains are not already ailed.

It is too often the case that great credulity on one subject, is associated with scepticism or unbelief of the most essential truths.

Giving up the use of Tobacco.—A writer in the *American Register*, of Paris, says that "the King of Italy is known for his temperance in all things except smoking. He is an exceedingly small eater, and to drink his guests may have it in vain, they will never forsake his pipe or water. His once great weakness was a good cigar. In this respect he had subdued himself until his nerves had begun to suffer; he had asthmatic turns, could sleep but little, and men had to be propped up by plenty of pillows. Some weeks ago his physician told him what was the matter, and King Humbert said, "From this time forth I will not smoke another cigar, or anything in the shape of tobacco." The result has been most noticeable improvement in his health. King Humbert is a man of iron will, and no one doubts that he will keep his pledge to the end of life.

Victor Hugo on War.—In a speech delivered at an International Exhibition in Paris, Victor Hugo said—

"If to kill is a crime, to kill much cannot be an extenuating circumstance. If to steal is a disgrace, a great robbery cannot be a glory. *Tu Deum* are of small significance here; homicide is homicide; bloodshed is bloodshed; it alters nothing to call the self Caesar or Napoleon; in the eyes of the eternal God, a murderer is not changed in character because, instead of a hangman's cap, there is placed on his head a crown; it is not more honorable to be proclaimed absolute verities! Let us dishonour war! No; bloody glory does not exist. No; it is not good, and it is not honorable, to make corpses. No, it cannot be that life should travail for death. No, O mothers who surround me, it cannot be that a war, the thief, is to continue to seize and murder; that men should be made to weep, that women are to bear children in anguish; that men are to be born; that communities are to plow and sow; that the peasant is to fertilize the fields, and workmen enrich the cities; that thinkers are to meditate, and instructors to teach; that industry is to perform its marvels; that science is to accomplish its prodigies; that human activity is to multiply, in the presence of the starry heavens, its efforts and creations, in order to produce that frightful international exhibition which is called a field of battle!

Public Schools must not be Denominational.—The Report for 1888 of the Superintendent of Public Instruction for the State of New York, contains one extremely interesting case that deserves attention which it has not received; and it may indicate what

may be done in similar cases. St. Raphael's Catholic Church in Suspension Bridge, had a parish school for twenty years. In 1885, the church asked the Board of Education of the school district to take this school under its care and maintenance, and allow the Sisters in charge to be continued as teachers. The Board, however, declined, and was continued as before, under Sisters in their garb, but at the public expense, the Board leasing the building from the church at a rental of a dollar a year. The Acting State Superintendent decided, in 1886, that such an arrangement was an illegal discrimination in favor of a certain class, and void. The objection, however, was made in the wrong manner, and the lease continued for five years. Another appeal was made to the Superintendent, Andrew S. Draper, and his decision is reported. He decides that there has been in this case a decided discrimination in favor of the Catholic Church in appointing first three Sisters of one order, and then two others of the same order, they dressing in the garb of their order, with beads and crucifix, and being addressed as "Sister Mary," "Sister Martha," &c. He says:

"The conclusion is irresistible that these things may constitute a much stronger sectarian or denominational influence over the minds of children than the repetition of the Lord's Prayer, or the recitation of the scriptures at the opening of the schools; and yet these things have been prohibited, whenever objection has been offered, by the rulings of this Department from the earliest days, because of the purpose enshrined in the hearts of the people and embodied in the fundamental law of the State, that the free press shall be the property of the people, and free from matters not essential to its primary purpose and dangerous to its harmony and efficiency."

Accordingly he ordered that within fifteen days the teachers should put off their religious costume, and that they should be addressed by their names.

This the teachers would not do, and within the time the anomaly of a sectarian school as a public school ceased to exist.—*The Independent.*

Public Meetings.—Two public meetings were held on the afternoon of First-day, the 21st of Tenth month, at the same general character as those recently noticed in THE FRIEND, by authority of the Committees of the Yearly and Quarterly Meetings. They were both well attended—that at Vincent-Town, N. J., was very crowded, the aisles and all available space being occupied as well as the benches. It was a source of encouragement to notice the readiness with which the people in that neighborhood responded to the invitations extended.

The other meeting referred to was held in Kennet Square, Chester Co., Pa.; and it also was well attended. The house built by Hicksite Friends in that place had been kindly offered by them as the most suitable building for the occasion, and for those reasons the meeting was well. The covering of solemn quiet, which is so grateful to those who are endeavoring to draw near in spirit to the Lord, was spread over the assembly; and was maintained in good measure to the close of the meeting during the intervals between the vocal exercises. The subjects that were most prominently brought up, were the doctrine of the atonement by Christ, and the nature and preciousness of true worship, "in spirit and in truth."

So far as could be judged, the meeting was generally satisfactory to those who assembled; as well as to the Friends who were instrumental in having it appointed.

As has often been done in such cases, the opportunity was embraced at the close, of distributing to those who desired to receive them, copies of extracts from the doctrinal writings of William Penn, George Fox, and others; these were received with much openness.

A Returned Cannon-Ball.—In 1775, a British man-of-war, by the name of the *Mystic River*, threw a cannon-ball at the little American army intrenched on Bunker Hill. The ship threw more than one ball, but this particular one was picked up after the fight and saved. In 1888, at the 250th anniversary of the Boston ancient Artillery Company, this cannon-ball was returned to a party of English artillerymen, who had come over to help celebrate the occasion.

The presentation was made at the dinner by Colonel Walker. "I hold in my hand," said Colonel Walker, "a cannon-ball thrown by a British ship-of-war at the patriot army on Bunker Hill, June 17th, 1775. Through the kindness of Mr. Hassan, who gives it to this company to present to you, I give it to you to carry home as a memento (handing the cannon-ball to Major Durand amid hearty cheers and applause). It was thrown at us in war. We give it to you in peace as a token of the amity which lives to-day between our great nations, and which we all may pray will live for ever." "There is time for wonderful changes in a hundred years," says the *New Haven Bulletin*, in commenting on the above. "It would have given the grizzled old-fighters of the British war-ship a queer feeling if they could have known, when they 'touched her off,' and sent that ball screeching at the Yankee breastworks, that a hundred years later the ball would be handed back over a friendly dinner table as a token of amity and concord between the two greatest and most enlightened powers of the earth."—*Army and Navy Register*, New York.

THE FRIEND.

ELEVENTH MONTH 10, 1888.

We have received a communication designed to be inserted in THE FRIEND, entitled "Thoughts in a Friends' Meeting-House"—the writer of which is altogether unknown to us. He appears not to be a member of our Society. It has caused some thoughtfulness, from a desire to avoid giving offence to any; especially as we have reason to believe that among those called "Hicksite Friends" there are some who accept the Scripture testimony that "God was in Christ, reconciling the world unto himself," and that our Saviour was far more than merely an eminently-gifted man. Indeed, the testimony of Scripture in this respect is so plain and often repeated, that we do not see how any one can reject this doctrine, unless they also reject the authority of the Scriptures.

But it is very evident, and we suppose few or none of their more intelligent members would deny the statement of J. S. W., that "as a society they do not acknowledge the Divinity of Christ." On this point of doctrine they allow their ministers to hold and to preach whatever opinion they choose; and this freedom is defended as a laudable exercise of Christian liberty. The pages of *The Friends' Intelligencer*, published in the interests of their Society, furnish evidence that some of their preachers hold some doctrines very inconsistent with those that were maintained by our early Friends, and that the publication of their sentiments does not prevent their being in good standing among their fellow-members.

As the article referred to appears to have been written under a degree of religious concern, we have felt it best to insert it in THE FRIEND. In publishing it, we have no unkind feeling towards those of whose meetings it speaks; for we have a sincere respect for them as intelligent men and useful citizens; who hold many testimonies in common with ourselves, and who retain their attachment to the precious truth, that it is the Grace of God, the Divine Power and Spirit operating on the heart of man, which lies at the foundation of all practical religion. We would that all, both among ourselves, and our brethren who have been divided from us, could heartily adopt the language which John Banks uses as expressing the views of Friends in those early days; "We as truly believe in that same Christ, who laid down his body and

took it up again, as in his Light within; and we have benefit to salvation by the one as well as the other; and of both, they being one; and are willing to lay hold of every help and means. God, in and through Jesus Christ, has ordained for our salvation."

SUMMARY OF EVENTS.

UNITED STATES.—On the 30th ultimo, by direction of the President, Secretary Bayard informed Lord Sackville, the British Minister, that "for causes heretofore made known to Her Majesty's Government, his continuance in his present office as British Minister to the United States is no longer desirable to this Government, and would consequently be detrimental to the relations between the two countries."

The public debt statement shows a reduction during Tenth Month of \$4,565,619. Total cash in the Treasury, \$82,294,137.

The Supreme Court of Massachusetts has decided that the Legislature has the power to grant the taking of water from ponds without compensation to those who have hitherto used the water for furnishing power. The judges asserted that the grant of an injunction restraining election officers from receiving votes at different times of the day from any one of the voters. The Judge holds that a citizen can approach the poll but once for the purpose of voting.

It has been discovered that the water of Mono Lake makes an excellent wool cleaner, and during the past week one of the largest wool buyers of San Francisco has been up looking after the same.

A telegram from the Lick observatory, in California, announced the discovery, by Barnard, of another comet the second discovered by him in less than two months. It was in right ascension 9 hours 43 minutes 22 seconds, declination south 15 degrees 19 minutes. It has a faint tail, with a slow motion northeast.

A party of hunters in Colorado have discovered on Rifle Creek, 25 miles from Silverton, Springs, Colorado, a wonderful waterfall. It is supposed to have never been visited by white men before. The stream spreads out to a width of 300 feet at the trunk, and the water glides over the rocky edge, spreading out into a thin sheet as it falls a distance of 150 feet to the bottom of the mountain.

Between two and three tons of nitro-glycerine stored in a magazine near Shamokin, Pa., an old town 12 miles from Pittsburg, exploded at an early hour on the morning of the 5th inst. The magazine belonged to the Pennsylvania State Arsenal. The cause of the explosion is unknown. The concussion shook the very foundations of houses between Rochester and Pittsburg. The earth was torn up for a distance of 500 yards; trees an eighth of a mile away were rent asunder and many houses were wrecked. The residences of General and William Wilson and Thomas McWay, situated a half-mile away, were completely shattered, and the occupants thrown through the windows. Fortunately they were not seriously injured, and, as far as can be ascertained, no one was killed.

For the week ending Tenth 5th, there were reported 221 new cases and 14 deaths of yellow fever, at Jacksonville, Florida. The disease continues to find victims at Decatur, Enterprise, Gainesville and a few other places.

Captain Kennedy, of the ship "Creedmore," which arrived at New York on the 1st inst. from Manila, reported that he had landed at Balabales the captain and part of the crew of the ship *Earl Wemyss*, which had been in collision with the British ship *Ardenlepe*, and which sank immediately after, carrying down six officers and crew, including the captain's wife and three children.

Governor West, of Utah, in his annual report to the Secretary of the Interior, estimates the population of the Territory at 216,000, an increase of 65,000 since 1880. The assessed value of the Territory is stated to be \$46,729,072, an increase of about \$11,000 during the year.

Deaths in this city last week numbered 223, a decrease of 13 as compared with the previous week, and an increase of 9 over the corresponding week of 1887. Of the 211 male and 112 female, 50 died of consumption; 26 of pneumonia; 19 of diseases of the heart; 18 of old age; 15 of convulsions; 15 of typhoid fever; 11 of scarlet fever; 11 of inflammation of the brain; 10 of diphtheria and 10 of the influenza.

Markets.—U. S. 8 1/2, rec. 107 1/2; coupon, 108 1/2; 4 1/2, 107 1/2; currency—6, 124 1/2 to 131.

Cotton sold in a small way to spinners 10 1/2 cts. per pound for middling uplands.

Feeb was dull and unchanged. Offerings were moderate. Winter bran ranged from \$46 to \$47 per ton. Flour and meal—Western and extra, \$5.25; No. 2 winter family, \$4.37 1/2; Pennsylvania family, \$5.45; \$5.25; Pennsylvania roller process, \$5.25 a \$5.55; Ohio, clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.85; Indiana, clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.85; St. Louis and Southern Illinois, clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.85; winter patent, fair to choice, \$6 a 7 1/2; Minnesota, clear, \$5 a \$5.85; do, straight, \$6 a \$6.50; do, patent, \$6.75 a \$7.25. Rye flour was quiet at \$4.10 a \$4.12 1/2 per barrel. Buckwheat flour was dull at \$3 a \$3.25 per 100 pounds for market.

Grain.—No. 2 red wheat, \$1.05 a \$1.05 1/2.
No. 2 mixed corn, 48 1/2 a 49 cts.

No. 2 white oats, 32 1/2 a 32 1/2 cts.

Beef cattle.—Extra, 5 a 5 1/2 cts.; good, 4 1/2 a 4 1/2 cts.; medium, 3 1/2 a 4 1/2 cts.; common, 3 a 3 1/2 cts.; fat cows, 2 a 3 1/2 cts.

Sheep.—Extra, 4 1/2 a 5 cts.; good, 4 1/2 a 4 1/2 cts.; medium, 3 1/2 a 4 cts.; common, 2 a 3 cts. Lambs, 3 a 6 1/2 cts. A few very common sheep sold for 50c. a head.

Hogs.—All Southern Illinois, clear, \$5 a \$5.75; 7 1/2 cts.; a few common western, 7 1/2 cts.; State, 7 a 7 1/2 cts.

FOREIGN.—The dismissal of Lord Sackville by the American Government, is severely commented upon by the British. The *Standard* of London papers advise us a retaliatory measure, that Minister Phelps be dismissed by the British Government. May the friends of peace be wisely directed to use their influence in a way that will conduce to that brotherly forbearance and comity between Great Britain and this country, which has become the professed followers of the Prince of Peace.

London, Eleventh Mo. 4th.—The Norwegian Bark *Nor*, Captain Bjornsen, from New York, Tenth Mo. 2nd, for Stettin, collided with and sank the steamer *Saxmundham* from the same port. The steamer was, as it is supposed to have been drowned. Eight survivors have landed at Weymouth. The *Nor* was abandoned. Her crew have landed at Portland.

A cablegram has been received in Boston, announcing the discovery, on the 31st ultimo, of asteroid No. 410, at Palisa, of Vienna. It is of the twelfth magnitude.

Couriers arriving at Zanzibar on the 2nd inst. from Tabora, bring direct news from the Stanley expedition, a portion of which was met at the end of the month last. The detachment of the *Arabs* were at Lakes Victoria Nyanza and Njize and Tabora. These *Arabs* met Stanley's rear guard at a point west of Albert Nyanza, southeast of Sanga, just as the expedition was preparing to cross swamps, caused by the radiation of streams that were found in that country. The *Arabs* did not see Stanley. The detachment consisted of 20 men. They stated that Stanley was two days ahead. The expedition had suffered greatly on the march through a thick forest, where it was impossible to advance more than a mile and a quarter daily. The health of Stanley was then so bad, that many had disappeared or died. Forty were drowned in crossing a great river flowing from east to west. One white man had died. The *Arabs* estimate the total strength of the expedition, after all losses, at 250 men. The health of Stanley was then so bad, that many were of the opinion that the expedition was still strong enough to reach Waddeai.

The Catholics of Australia and India have presented the Pope with \$1,000,000.

The police authorities of St. Petersburg have given notice that they will not be allowed to change their names or to reside in the capital without a permit.

The harbor of St. Petersburg is covered with thick ice, closing navigation.

A cablegram from Port au Prince, received in New York on the 31st ult., announced the capture by the Haytian man-of-war *L'Ouverture*, off Cape Haytien, of the British schooner *Alta*, which left New York about the 10th ult. with a heavy cargo of arms and ammunition. The *Alta* cleared for Antwerp.

At Yokohama, the *Arabs* were engaged in Japan, are in Chicago. They have been to England to purchase machinery for cotton and woolen mills, to be erected in their respective cities. Kikuchi says he will employ about 500 persons in his cotton mill, paying girls 10 cents a day, and the most skillful men 15 cents. He will get the principal part of his raw material from China, but some of an inferior quality is grown in Japan.

NOTICES.

CONCORD QUARTERLY MEETING.—For the accommodation of Friends attending Concord Quarterly Meeting, a special train will run from West Chester & Medina on Third-day, the 13th inst., leaving West Chester at 9 o'clock a. m., and stopping at intermediate stations to take on passengers, about twenty minute ahead of the regular train.

SITUATION WANTED.—A young Friend, with some experience, desires a position in a Grocery Store. Address, 1015 W. 5th, care of G. A. Milne, 48 North Fifth St., Philad.

MARRIED, on Fifth-day, Tenth Mo. 18th, 1888, at Friends' Meeting-house, West Chester, Pa., David C. C. son of William H. Hare, of Nansensond Co., Va. to LYDIA T., daughter of Philena N. and the late Nathan S. Yarnall.

DIED, in Salem, New Jersey, on the 27th of Ninth Mo. 1888, GEORGE ABBOTT, in the 72d year of his age a member and elder of Salem Monthly Meeting of Friends, N. J. In his last Friend Meeting sought to know the God of his fathers, and desired to serve Him with a perfect heart and a willing mind. He became warmly attached to the doctrines and testimonies ever held by Friends, and often commended their excellency to others. In seasons of trial and sorrow, which marked his mature years, he evinced Christian fortitude and a meek submission to the Divine will; thus manifesting his foundation to be the Rock of Ages, against which the storms of Time do beat in vain. In the decline of his life and near its close, his only comfort of salvation was in the mercy of God in Christ Jesus, his precious Saviour, whose peace was the crown of blessing of his life.

—Tenth Mo. 3rd, 1888, at his residence, Buck Horn, Columbia Co., Pa., JACOB BETZ, in the 71st year of his age, a member of the West Chester Preparative and Minzey Monthly Meeting of Friends.

—on the 11th of Tenth Month, 1888, at his residence in Moorestown, N. J., DR. JOSEPH WARRINGTON, an esteemed member of Chester Monthly Meeting of Friends, N. J., in the 63d year of his age, a close and ardent adherent to the doctrines of Friends, and after retiring from active practice, he continued to feel a warm interest in the community in which he resided, which extended to all classes of his fellow citizens. As old age approached he evinced an increasing interest in the cause of the slave, and longed for that which awaited him; and before the end came he was favored to feel that his sins were forgiven; so that in the last conflicts of nature he could say, that his distress was only that of the body.

—at Wellington, Tenth Month 16th, 1888, DEBORAH BROWN, widow of Thomas M. Brown, aged 81 years, 9 months and 2 days, a consistent and valuable member of West Lake Monthly Meeting of Friends. Although many years an invalid unable to get out to meeting; yet her spirit was clothed with meekness and charity, and she was a pattern of patience and resignation, so that all who visited her could feel that she was teaching them a lesson of faith and love. Her funeral was held in the Friends' new meeting-house at Wellington, and was largely attended, and her remains were committed to the earth by W. White, Blessed are the dead which die in the Lord from hence forth; yea, saith the Spirit, that they may rest from their labors; and their works do follow them. Of such as these it was said, Rev. xiv. 12: "Here is the patience of the saints: for they keep the commandments of God, and the faith of Jesus."

—at the residence of her son, Dr. Gustavus North, Springville, Iowa, Tenth Month 20th, 1888, ELIZABETH, wife of Jesse North, aged 75 years, 6 months and 4 days, a member of Springville Monthly and Particular Monthly Meetings of Friends. Her Quarterly Meeting of Friends, at which the beloved Friend had been an invalid for several years, but able to be around most of the time until within two weeks of her close. She was patient to the last, hid her family farewell, and her eternal journey was for ever all to meet her in heaven. The light of her example shone brighter and brighter, leaving those that mourn her loss an incentive to press on and follow her as she endeavored to follow Christ, that they too may enter in to the rest which is the portion of those who have died in Christ, purified spirit and true. She leaves an aged husband and four children to mourn her loss.

FOR "THE FRIEND."

Incidents and Reflections.—No. 174.

PRAYER.

In a work entitled "The Lord was There," written by Anna Shipton, she describes some of the events that occurred while boarding at a hotel in the Tyrolean Alps, where she met with an Englishman and wife, and a bright, attractive daughter of 12 or 13 years of age. The child was a good German scholar, and accompanied Anna when she needed to make purchases in a town near by. A longing desire for the spiritual awakening of the child was raised in the heart of Anna Shipton; and when, after missing her from the public walks for some weeks, she heard that the object of her interest was very ill, a prayer for her recovery sprang up in her heart, to which the answer was given, "She shall not die." So clear was the impression, that she sought the distressed father and said to him, "Trust your child to Him who raised the ruler's daughter; she will not die." He shook his head incredulously and made no reply.

The mother (who also had been ill) was raised up in a few weeks, but the child over whom her heart had yearned was still unable to leave her room. One evening, being in much heaviness of spirit, and oppressed by the noise in the hotel, A. Shipton had gone to a quiet spot in the public gardens, when the mother approached with information that her daughter was better, and said, "Yesterday, when I went into her room, I found Hope sitting up in bed; with her face flushed, and her eyes sparkling, she exclaimed, "'Oh, mother, I am so happy!' I was afraid she was delirious, her countenance was so altered and flushed, and her voice so strange.

"What makes you so happy? I inquired.

"Because I know my sins are forgiven; because I know I am a child of God."

"She then told me she had remembered some words you had spoken to her when you were shopping together; and now she believed in the love of God, and had the peace of God in her heart."

When at length the patient was able to leave the sick room and spend an hour or two with her friend, A. S. was amazed at the spiritual intelligence that had developed during those long weeks of sickness, and could not restrain her joyful tears, feeling no doubt amply repaid for the exercise of mind she had passed through on her account.

The same writer mentions a case in which a widow was led to pray for her prodigal son, that the Lord would open his eyes; and received an assurance from God that her prayer was heard, and that not only should he be brought back (though she would not see it), but that he should preach the Gospel in the very place where, as a headstrong youth, he had caused her to weep over his wandering from the right way.

"Take pen and paper," said the dying mother, "and write this: 'I am fully persuaded that God's grace will reach my wilful son, and save his precious soul; and that in this very town he will preach the Gospel.'"

So she died, resting on the Divine promise to her; and this child of many prayers after a lapse of many years, was brought from the far country to fulfil his mother's petition.

In speaking of his labors at Zurich in Switzerland, in 1813, Stephen Grellet says: "In some of the meetings I had, I was engaged to press upon the people to attend faithfully to the teachings of the Holy Spirit in their hearts; for it is the Spirit of Truth who not only brings the repenting sinner to Christ, the Saviour, but also 'leads him to all Truth.'" I also earnestly pressed upon them to repair often to the house of prayer, with faith and confidence in our Lord Jesus Christ, who has promised that 'whosoever ye shall ask in my name, it shall be done unto you.' After one of these opportunities, Lavater, a physician, brother to the late Lavater, told me, "I have great reason for being fully convinced of these great and important truths, that you have delivered. Once I did not believe in them, and even ridiculed them; but the Lord was pleased to convince me of their reality in the following manner: My son, my only son, was very ill; I had exerted all my medical skill upon him in vain, when in my distress I wandered out into the street, and seeing the people going to the church where my brother, Lavater, was to preach, I went also; he began with that very text that you have mentioned, 'whosoever ye shall ask in my name, believing, it shall be done unto you.' He dwelt very particularly on the nature of prayer, in whose name and to whom it is to be offered; he described also the efficacy of that faith which is to be the clothing of the poor supplicants. I attended very closely to what my brother said, and I thought I would now try if it was indeed so; for my solicitude for the recovery of my son was great,—my prayer for it was earnest; I thought also that I believed the Lord Jesus had all power to heal him if He would. Now," said he, "in my folly, I dared to limit the Almighty to three days, concluding that by this I should know that He was indeed a God hearing prayer, if my son was restored all within that time. After such a daring act, all within that time, as a physician, seemed to be taken away from me. I went about, looking at my watch to see how the time passed, then at my son, whom I saw growing worse; but not a thought to misinter anything to him arose. The three days had nearly passed away, when with an increase of anguish, and also a sense of the

Lord's power, I cried out, 'I believe, O Lord! that thou canst do all this for me, help thou my unbelief;' on which some of the most simple things presented to me, to administer to my son; so simple that at any other time I should have scorned them; yet believing it was of the Lord, I administered them, and my son immediately recovered. Now," said the doctor, "I felt fully convinced that the Lord heareth prayer, and that there is an influence of the Spirit of God on the mind of man, for I have felt it." He added, "To this day I feel ashamed of myself, that I, a poor worm, should have dared to prescribe limits to the Lord, and wonder how in his boundless mercy, He should have condescended, notwithstanding my darkness, to hear me." These are very nearly the words of the doctor; they were accompanied with brokenness of spirit.

When Stephen Grellet was at Abo, in Finland, in 1818, he dined in company with the Archbishop. He says: "When we came to the dinner-table, instead of sitting down at once, the company stood in silence behind their chairs, and then, without uttering a word, we all took our seats. I was seated between the Archbishop and his wife, and took the opportunity to ask him respecting their having thus stood in silence before sitting down. He said that it is his regular practice in his family. He considers it much preferable to the formal habit of uttering set prayers, which often the heart does not feel; but that in silence there is an opportunity for the heart to feel after and receive a qualification for secret prayer to God."

When James Backhouse was drawing towards the conclusion of his Gospel labors in Australia, Mauritius and South Africa, he noted in his Journal the manner in which his mind was first turned to look for a companion in George Washington Walker, the Friend who accompanied him during nearly all this lengthened engagement, which occupied more than nine years. The narrative is an interesting illustration of that exercise of prayer which the Lord begets, and which He answers in his own time and way. The Journal says:

"The union of George Washington Walker and myself, in the work which we had now accomplished, afforded an example of the consecution of the Most High to the peculiar circumstances of his dependent children. After having had an impression paying a religious visit to some parts of the Southern Hemisphere, which impression I believed to be of the Lord, the time arrived when I thought I clearly perceived that it was his will, that I should proceed to the performance of this duty. I therefore laid the matter before the meetings for discipline, upon which it devolved to judge of such a subject, according to the good order observed in the Society of Friends. These meetings all concurred in the belief, that I was called of the Lord to this service, and they gave me certificates of their unity, commending me also to the kind regard of the persons amongst whom I might

come; the Yearly Meeting of Ministers and Elders, nevertheless, signified its judgment to be, that I should not proceed without a suitable companion.

"I had settled my affairs and taken leave of my children before setting out from York; and I remained several weeks in the vicinity of London, waiting for a companion without one presenting. One evening, after retiring to my bedroom, I had been engaged in earnest prayer, that if it were the will of God that I should, at this time, proceed in the work which I had in prospect, He would be pleased to raise up a companion for me. I retired to rest with this petition upon my mind, and awoke in the night under the same feeling. Toward morning, before I was thoroughly awake, I was considering who there were, in various places, who might be suitable for such a service, when the words 'Now look northward,' were distinctly and powerfully impressed upon my mind, but without audible sounds; and in a moment, Newcastle and my friend George Washington Walker were set before me. Being afraid lest I should be deceived by my imagination, I tried to bring other places and other persons into view; but it was not in my power to give a similar character to any effort of my own.

"On awaking fully, such a feeling of heavenly sweetness attended the view of my friend accompanying me, as left no doubt on my mind that he was the person chosen of the Lord. I therefore wrote to him, simply informing him how I was situated, and encouraging him, if he felt drawn to the service, to give up to the will of the Lord therein. Subsequently it appeared, that his mind had been prepared for this work by a series of circumstances, scarcely less remarkable than the one here related. But up to the moment of my receiving the impression described, I had never thought of him as a person likely to accompany me, nor had this field of labor opened to his view. We had taken leave of each other, and he had sent letters to my care, for some of his relations who were settled in Van Diemen's Land." J. W.

FOR "THE FRIEND"

Isaac Coates' Visit to the Seneca Indians.

(Continued from page 114.)

"Ninth Month, 14th. After breakfast prepared to set off 9 miles down the river to Cornplanter's village, in order to attend the council before appointed; and nine of us embarked in a canoe, to wit: Indian John, Halftown, Halliday Jackson, Joel Swayne, Joshua Sharpless, Thomas Stewardson, James Cooper, myself, and Hugh Harshorn. Had a pleasant sail down the river, and arrived at our destined port a little before eleven o'clock, divers of the distant chiefs being collected before we came. Before we sat in council, walked about viewing some of the Indian cottages and their dress, which would take more time to describe than I am at this time disposed to take. About an hour after we arrived, a large horn, something like a French horn, was blown, in order to collect the chiefs and others to council; and in a short time they collected in a part of Cornplanter's house or cabin—perhaps to the number of 30 or more. We all sat down in stillness a short space, when the old chief stood up (his son, Henry O'Beel interpreting) and addressed us in substance as follows:—

"Brothers, I am glad the Good Spirit has favored you all with health in your long journey to come and see us, and take us by the hand, so

that we may brighten the chain of friendship; and now some of us are collected, we should be glad to hear what you have to say to us."

"We then informed them, that we had taken a long journey to see our young men who were settled among our Indian brothers, and that we had not much that we knew of to say to the Indians, only to know from themselves how they liked our young men being amongst them; and whether they thought they were likely to be useful to them or not. We then had our certificate read and interpreted to them, with which they expressed satisfaction; and we having agreed upon a short piece of advice or queries to lay before them which we had in writing, it was read by paragraphs, and interpreted to them as follows:—

"Brothers, you have now heard that our coming here was to see how you and our young men who live amongst you are getting along. We are glad the Good Spirit has favored us to meet you in health, and given us this opportunity of taking you by the hand, and brightening the chain of friendship. Now, brothers, we should like to hear from your own mouths, if you are quite satisfied with our young men living amongst you. They came here with an hope of being useful by instructing you in a better way of managing your land, and providing for yourselves and your cattle; we desire you to speak freely.

"Brothers, it has been some satisfaction to us in riding through your town to see marks of industry taking place; that you are building better and warmer houses to live in, and that so much of your cleared land is planted with corn, potatoes, squashes, cucumbers, &c., and to see those articles kept in good order.

"Brothers, we observe where your new houses are building, that the timber is very much cut off a rich flat, which we wish you encouraged to clear and make it fit for plowing. We believe it to be very good land for wheat as well as corn; and as the white people are settling around you, the deer and other game will grow scarcer and more difficult to be taken; we therefore hope that more of your men will assist in clearing land, fencing it, planting it with corn, and sowing it with wheat; you will then have a supply of provision more certain to depend upon than hunting.

"Brothers, we were pleased to see your stock of cattle increased. The Rich Bottoms on the river will be plenty for them to live on in the summer season; but as your winters are long and cold, it will require something for them to live on in the winter; now the white people keep their cattle on hay, on straw, and on corn fodder; straw you cannot get until you raise wheat or other grain. The Rich Bottoms, if they were put in order would produce a great deal of hay; but, for an immediate supply, we think if as soon as you gather your corn you would cut the stalks close at the ground, bind them up in small bundles, and put them in stacks, as our young men do, they would keep the cattle part of the cold weather.

"Brothers, we are pleased to see a quantity of new fence made this summer, near where our young men live; and we would not have you get discouraged at the labor it takes, for if you will clear a little more land every year, and fence it, you will soon get enough to raise what bread you want, as well as some for grass to make hay for winter.

"Brothers, we understand you are desirous to discourage whiskey from being brought amongst you; with which we are much pleased,

and should be glad if you could entirely keep it away; for to get it you give your money which you should have to buy clothes with, and to buy oxen and plows with to work your land, and it does not do you any good."

"After which, a solemn silence took place, in which I thought I felt love to flow to the poor natives, accompanied with a strong desire that they might be prevailed upon to wholly decline the drinking of distilled spirits; for truly, I think, until some reformation in that respect takes place amongst them, the solid ground on which we can expect their profitable civilization is small; and though I felt as I did, it seemed discouraging to offer anything to them on the occasion, considering my own inability, and the imperfect interpreter we had, being one who hath a strong inclination to the evil habit himself; so had like to have omitted saying anything, until my friend, Joshua Sharpless, whispered to me, and told me, if I had anything to say to them, not to omit it. I then addressed them in substance as follows:—

"Brothers, your brothers, the Quakers, who have come a long way to see you, believe that the Great Spirit made both white men and red men, and placed them on this great island; gave them many good things to live upon, such as grain, flesh, fruit, &c., also, gave them understanding hearts; and we also believe that his design or intention was that we should love and serve Him, and not only love Him and our own people, but love and be at peace with all people of all nations and colors; but some white men became very cunning, and sought out new inventions—one of which was making rum, whiskey, brandy, &c. out of the good thing that He had given them; which at first was used in very small quantities as medicine; but, as it became more plenty, many white men got to love it, and drink more of it, insomuch that they became drunk and neglected their business, many of their wives and children suffered in want of food and clothing, and it seemed to be the beginner or forerunner of almost every bad practice.

"Now, brothers, some of your friends, the Quakers, many years since were favored to see the mischief that rum and whiskey had done, believed it right for them not to drink any more, and have found by more than 20 years of experience that they can do better without it than with it; and seeing the mischief it did to others, and how much better themselves did without, believed it right to persuade others to do so too; and, as we love our Indian brothers, and seeing their land is much sold and white people settling all round them, whereby the deer and other game is likely to become so scarce that they cannot live by hunting much longer, we are drawn in compassion to invite some of our young men to come and live amongst you, in order to instruct you in the useful ways of the white people, who have now been sometime with you; but we understand that some bad white men let Indians have whiskey, and that many of them love it so much that they often get drunk and are wicked.

"Brothers, we wish you would not hearken to those bad men who want you to buy their whiskey, nor give way to your own love for it, but stand against it, and not use any of it; for, if you do, your friends, the Quakers, will be discouraged, and hang down their heads, and go and leave you; but if you will stand against it, and not use it, become sober men, they will be willing to assist and instruct you, what they can."

"I believe the interpreter endeavored to render it into the Indian language as well as he could, though he appeared somewhat convicted; and I also think they understood it pretty well; as there appeared a general concurrence by their usual nod and sound on such occasions, and by what the old chief said to us after.

"On our asking them if they had anything to say to us, he replied that Henry Simons had told him sometime ago that he intended to go home this fall (Henry having taught school at Cornplanter's village); and that he could not give us an answer until he knew whether Henry would go or not. We then agreed to be a little time by ourselves. They left us a few minutes, and we laid the matter close to Henry. He then told us that he believed it was his duty to come here; and he now believed it was his place to go home; which we could not gainsay, though we felt sorry the Indian children should be left without an instructor. The chiefs were called in again, and tenderly informed of Henry's intension of returning. Cornplanter then replied, if it was right, he could not say against it, but was afraid he should not have help enough to keep away the whiskey, as Henry had been a great help to him in that; and that he thought the Indians would mind him more than they would one of them; and then said, that when our young men came first amongst them, some of their warriors did not like it; but now, he believed they all liked it, and all spoke very well of them; and wished the young men to tell us if any of the young Indians or others behaved bad to them. They then all rose up, and in a friendly manner shook hands with us, and did what they call cover the council fire. Then one of their women brought in a large loaf of unleavened wheat bread, and a tin cup full of pretty good butter, on which we dined, and took our departure up the river. Halliday Jackson, James Cooper and myself walked; the others all went in the canoe we came down in. Arrived at the young men's home just before sunset, and lodged this night with them."

(To be continued.)

The Word of God.

FOR "THE FRIEND."

In speaking of the Word of God, I shall aim to do it with the understanding that the term "Word" as used in the Scriptures, generally implies the great Emanuel—the Spirit which permeates all space; and in whom we live and move and have our being. He is the same that John speaks of, which was in the beginning with God, and is God, Head over all; and blessed forever. His all-penetrating eye, "scans every secret movement of the heart and sees us as we are." So there is nothing hid from the eyes of Him with whom we have to do. For His Word is quick and powerful, and is a discerner of the thoughts and intents of the heart.

While the word of man, when reduced to writing is visible and binding between man and man, the Word of the Lord is spiritual and invisible, but binding between God and man, and is forever nigh at hand, even in our hearts and minds as a swift witness against all evil, as it permeates the whole man, as well as the whole creation; but is incomprehensible by the natural man.

"All flesh is as grass, and all the glory of man as the flower of grass;" fading and transitory. For "the grass withereth and the flower thereof falleth away; but the Word of the Lord endureth forever." And this is the word of faith

which by the gospel is preached, whether outwardly or inwardly, to every nation, kindred, tongue and people. But the cares of the world, the deceitfulness of riches, or the lust of other things, often choke the good seed so that it becomes unfruitful.

This living and eternal word of faith which is sown in every heart, and which the Apostles preached, and which all true ministers of the Gospel preach, is nothing short of the indwelling Spirit of Word of God, who upholds all things by the word of his power, and is a discerner of the thoughts and intents of the heart. This Word was made flesh, and dwelt amongst us for a season, but now He comes to us in spirit; and as many as receive Him, in the way of his coming, to them He gives power to become his sons; and if sons, then heirs, and joint heirs with Him in glory. And if, while in this probationary world, we abide the day of his coming, when He comes inwardly as a refiner and purifier, He will keep us from falling in the hour of temptation which shall come upon all the world to try them that dwell on the earth. For we must be "purified and made white and tried." But "blessed is the man that endureth temptation; for when he is tried, so as to be approved, he shall receive the crown of life which the Lord has promised to them that love Him"

And now, the great creative Word by which the world was made, and by which it is upheld, has come into our sinful hearts, to take away the sins of the world, out of them, and to purify us unto himself as a peculiar people from the world, so that we might, even here in this life, be made partakers of his holiness, and of the inheritance of the saints in light. And as He is able to uphold all things by the word of his power, He is able and willing to uphold us, as individuals, and as a church, so as to keep us from falling in the hour of temptation, if we are worthy. But it is the willing and the obedient that shall eat the good of the heavenly land; and if we are so unwilling and disobedient as if we are to become evil, it is no wonder that we love darkness rather than light, and follow after such as teach for doctrine the commandments of men, and that we receive the wisdom and strength and words of men, as Divine, rather than the eternal word or power of God; for they are more congenial to our depraved nature.

And as we see that the wisdom and sagacity of finite man is great, enabling him to exercise the mechanical skill needed in this world, so we seem too ready to conclude that the same wisdom is sufficient to run the machinery of the Church of God, and do the deep things that belong to the kingdom of heaven. But the world by its wisdom knows not God. It sees and knows the things of this world, but it takes a heavenly light and wisdom from above, to enable us to see, and understand, and do the things of God. But we may, and ought to be willing instruments in his hands, as ministers, teachers or servants, to do his work, in the ability that He alone can give, until his Word should prevail and cover the earth as waters cover the sea.

The longer I live the more firmly I am convinced that we, as individuals and as a Church, greatly need more confidence and faith in this invisible but powerful Word of God, in carrying on his work, and less faith and confidence in the activity and power of man. And while I say this for our separate organization, I say it intending to embrace all Christendom: as far as my observation extends, our zeal is too much without the true knowledge of Him whom to rightly and inwardly know, is life eternal. A

head knowledge is for this world; but we want a heart knowledge to fit us for the world to come. D. H.

DUBLIN, IND., Tenth Mo. 5th, 1888.

P. S. To-morrow I shall be 87 years old. And I thankfully find, the Sun of righteousness is at times still shining. Glory to God.

Dredging on the Atlantic Coast.

FOR "THE FRIEND."

One of my young friends, who is interested in the study of natural history, recently constructed a dredge. The instrument consists substantially of two iron plates about 18 inches long and 4 or 5 wide, which are fastened at the ends so as to be a few inches apart. To these is attached a net of fine meshes, ending in a canvas bag; the whole so arranged that when fastened to a rope, sunk to the bottom of the water, and dragged along it, one of the plates scrapes the surface of the sand, and the plants and animals that it meets with are gathered into the net. Having received a kind invitation to witness its operations, I went to Atlantic City on the evening of the 26th of Tenth Month, and was much interested in examining some of the specimens which had been collected by the dredge during a sailing excursion in the afternoon, and had been preserved alive in vessels of sea-water.

Many of these were similar to those I had often picked up on the beach, but it was a source of much greater pleasure to watch the motions of the living animals than to examine the forms from which life had departed.

Among the treasures were some of the long, feather-like plumes of the *Sertularia argentea*, which are abundantly cast on the beach by the waves, and are often gathered, dyed with various colors, and used as ornamental festoons. It is popularly called Sea-moss, Fox-tail, and probably other names; and is spoken of as one of the Sea-weeds. But it is really an animal production, somewhat allied to the corals. Its thread-like stems and delicate branches are thickly studded with very minute cells, each of which contains a living animal, like the coral polyp, which seizes and digests the animalcules which come within its reach, and contributes its share of nourishment to the support of the whole compound animal. Among the branches of the *Sertularia*, when in its proper home beneath the waters, other forms of animal life find shelter, and wander about among them, as the birds and smaller animals do among the trees of a forest. As we watched it floating in the bucket of salt water, we observed, in various parts of the tangled mass, what seemed like small branches of it swaying themselves back and forth. Closer observation showed that these were small, slender crustacean animals, but so translucent and devoid of color as to be almost invisible while in the water. They have a habit of fastening themselves by the hind feet to the *Sertularia*, and swinging about, perhaps in search of food. Naturalists have given them the name of *Caprella geometrica*.

A curious sea-worm that attracted notice, was a small, flat worm with numerous legs, somewhat like the common centipedes which are found in decaying logs. Each leg was protected by a flat scale or shield of a brownish color. On dropping it into alcohol for preservation the most of these scales fell off—making a very striking change in its appearance. It was the *Lepidonotus squamatus*.

Among the shells brought up by the dredge, many were univalves—that is, composed of one

piece like that of the snail. Of those that were dead almost every one was inhabited by a Hermit crab, two species of which are abundant on the New Jersey coast. One is the Warty Hermit Crab (*Epagaurus pollicarius*) which has broad, flat claws dotted with little projecting points. When the Hermit retires to the recesses of the shell which he has selected for a habitation, these broad claws fill up the entrance and close it securely against intruders. The other species (*Epagaurus longicarpus*) has long and slender legs, from which is derived its specific name, *longicarpus*. One little shell, not larger than a grain of rice, was tenanted by a baby crab; and various species of shells of different sizes, up to the *Natica* or Boat-shell, the largest that was found on this occasion, and which was about the size and shape of an ordinary apple, had within them Hermit crabs of proportionate sizes. It was an interesting sight to see a dozen or so of these little Hermits, each with head and antennae projecting from the shell, with the two black eyes raised on slender foot-stalks, and rapidly vibrating the organs about the mouth—probably to produce currents in the water, which would aid in the process of respiration.

I had often found dead shells on the beach, inhabited by Hermit crabs, which were overgrown with a dark moss-like covering, which the books inform us is a mass of Hydraz, to which the name *Hydroactinia* has been given. Of course in those beach specimens the Hydraz were dead; but as I watched with a magnifying glass a smaller shell which had been dredged from the ocean and transferred to a vessel of sea-water, I could see the motions of the living Hydraz, waving their translucent bodies through the water.

Among the objects in the bucket before me were several of the large round boat shells (*Natica*) which were still living. Some of these had protruded a large part of the body and were slowly gliding over the surface of the vessel. It seemed surprising that so much of material as the broad expanse of flesh presented could have found lodgment in the cavity of the shell. But it is supposed that the animal has the power at will of distending the vessels of its body with the water which surrounds it. A drop of alcohol fell upon one of the specimens. This seemed very offensive, for it at once withdrew into the hollow of the shell, and closed the entrance with the plate of horn, which forms a closely-fitting door.

In examining the anatomical structure of the *Natica*, my friend succeeded in dissecting from the body the very curious tongue—a slender ribbon, thickly set with several rows of fine teeth so small as to be barely visible to the naked eye. Yet small as they are, they enable the *Natica*, which is a carnivorous animal, to bore through the shells of the species on which it feeds, and to extract the meat from within. This boring is evidently done by a circular motion, in which the file-like tongue gradually wears away the substance of the shell on which it is working, and leaves a symmetrical circular opening, through which access has been obtained to the soft parts within. J. W.

SATAN will seldom come to a Christian with a gross temptation; a green log and a candle may be safely left together; but bring a few shavings, then some small sticks, and then larger, and you may soon bring the green log to ashes.—*John Newton*.

SELECTED.

THE WARMTH OF A WORD.

'Twas a day in the dead of winter,
And the echo of hurried feet
Struck sharp from the icy pavement
Of the pitiless city street.

Each passer was loath to linger,
Though wrapped in a fur-clad fold;
For the air was a tingle with frost flakes,
And the sky was lencumb with cold.

The cineter wind, in its fury,
Torn up like a sweet-scented foe;
The tempest was waiting the onset,
And abroad were its scouts of snow.

Yet, 'midst it all, with his tatters
A-dap in the whirling blast,
A child who seemed born of the winter—
A creature of penury—passed.

So tremulous were his accents,
As he shivered and crouched and sung,
That the names of the numbed papers
Seemed frozen upon his tongue.

He paused for a bitter moment,
As a wondrously gentle face
Arrested his voice and held him
With a pity that warmed the place.

"Have a paper?" The kind eye glinted
As the stranger took the sheet,
And glanced at the stiffened fingers,
And thought of the icy feet.

Then dropped in his hand the value
Of his fifty papers sold;
"Ah, poor little friend!" he faltered,
"Don't you shiver and ache with cold?"

The boy, with a gulp of gladness,
Tore out, as he raised his eye
To the warmth of the face above him,
"I did, sir—I'll you passed by!"
—*Margaret J. Preston, in "Christian Union."*

SELECTED.

GLORIFY THE ROOM.

Wide open throw the shutters, and
The curtains throw aside;
Let in the sun's bright messengers
In all their golden pride.

Whate'er matter thou shovels or rug
They take the rainbow bloom;
They'll shower gems on it instead,
And glorify the room.

Glad are the tidings that they bring
From wood and field and hill,
From the singing-bird and humming-bee,
And the little dancing rill.

Before them many shovels will
They banish thoughts of gloom;
Then with a welcome let them in
To glorify the room.

With them comes health: upon the weak
They many blessings shed;
Their kisses strengthen tired eyes,
And their touch makes cheeks with red.

No place too dear for them to seek,
Its darkness to illumine;
Thank God that we can let them in
To glorify the room!

—*Vick's Magazine.*

SELECTED.

THE KING'S DAUGHTER.

She wears no jewels upon hand or brow;
No badge by which she may be known of men;
But, she 's she walk in plain attire now,
She is a daughter of the King, and when
Her Father calls her at his throne to wait
She will be clothed as hath befit her state.

Her Father sent her in his land to dwell,
Giving her a pale that must be done;
And since the King loves all his people well,
Therefore, she, too, cares for them, every one.
Thus when she stoops to lift from want and sin,
The brighter shines her royalty therein.

She walks erect through dangers manifold,
While many sink and fall on either hand;
She heeds not summer's heat nor winter's cold,
For both are subject to the King's command;
She need not be afraid of any thing
Because she is the daughter of the King!

Even where the angel comes that men call Death—
And name with terror—it appalls not her;
She turns to look at him with quickened breath,
Thinking, "It is the royal messenger!"
Her heart rejoices that her Father calls
Her back to live within the palace walls.

For tho' the land she dwells in is most fair,
Set round with streams, like pictures in a frame,
Yet often in her heart deep longings arise
For that "imperial palace" whence she came;
Not perfect quite seems any earthly thing,
Because—she is a daughter of the King!

—*New York Sun.*

FOR "THE FRIEND."

The Metlakahla Indians.

Many of the readers of THE FRIEND have doubtless been interested in the history of the settlement at Metlakahla, in British Columbia, where a large number of the Indians of the coast had been in good measure civilized through the labors of a man named Duncan, who had devoted himself to this work. They will remember, also, that much dissatisfaction was felt with the interference of the Episcopal Bishop, who claimed ecclesiastical jurisdiction over the settlement; and that the prospects and growth of the village were greatly hindered, so that many of the Indians, with their teacher, left the buildings and improvements they had made, removed into Alaska, into the territory belonging to the United States, and founded a new Metlakahla on its soil. A visit has been recently made to this settlement by Bishop Cridge and Senator MacDonald, who seem to have been much interested and pleased with what they saw. The *Daily Colonist* publishes the account given by MacDonald to one of its reporters—from which the following is taken:—

Reporter.—How does the village sit at Port Chester compare with old Metlakahla?

McDonald.—It is a better site in every way than the old one, situated on a beautiful plateau, nearly level land extending to one thousand acres, with clean sandy beaches on three sides, which are highly appreciated by the Indians as affording facilities for launching and hauling up canoes, as well as for landing and shipping fish, wood and other commodities. The soil is capable of cultivation when drained and cleared. The food supply is abundant—venison, salmon and halibut to be had almost at every door. During our visit the beach was covered with millions of small fish, very good eating, and could be picked up by the cartload.

Rep.—Do the Indians appear satisfied with the change?

McD.—Very much. No repining—no desire to go back to the old home.

Rep.—Are the reports about disaffected Indians returning to old Metlakahla correct?

McD.—We questioned Mr. Duncan closely on that point, and he told us so far as he knew none of his people had left, excepting those (probably six in all) he would not have at the new settlement, and he could not say where they had gone to.

Rep.—How many were at the new settlement during your visit?

McD.—About six hundred, and about two hundred were working at the gold mines and canneries, who had not yet returned for the winter. The demand for men trained by Mr. Duncan is so great that they command from \$2 to \$3 wages per day.

Rep.—Are there any schools at the settlement?

McD.—Yes, one day school at present conducted by Mr. Duncan with the help of Indian

assistants. The day we visited the school 98 children were present. A building for an industrial school is being finished, with accommodations for sixteen girl pupils, boarders, and a male and female teacher, and a smaller building is to be erected for an equal number of boys. In the meantime thirty young men have been sent to the industrial school at Sitka, where they stand out in bold relief from the other pupils for their good conduct and cleverness.

Rep.—How will those schools be maintained?

Med.—The United States Government gives \$12000 annually in aid of the day school, and will so maintain the industrial school also.

Rep.—Are there any industries carried on?

Med.—Only a sawmill is operated at present, which has paid for itself in one year, and is found too small to supply the demand. The canneries, which have been getting their boxes from Portland, find that New Metlakahla can supply better boxes much cheaper, and intend in future to get their boxes there, which means trade to the value of \$20,000, and employment to a number of people. The logs are supplied, all the sawing done, the boxes cut and branded printed on by Indians, who are fully as expert as white men.

Rep.—What buildings are at the settlement?

Med.—Mr. Duncan lives in a log house with an abundance of air and daylight coming through the chimneys. Dr. Bluett has built a very neat frame cottage, which will be comfortable when finished. The Indians live in small houses at present, but will soon commence to erect their permanent houses on an improved plan on the new town site, in the laying out of which Mr. Duncan took counsel with Bishop Cridge and myself. It is intended to have a wide road on the sea front on the three sides of the village, a square of twelve acres in the centre, in which will be the church, day school, and two industrial schools. From this square streets for residential purposes will radiate. The most convenient part of the immediate water front will be for commercial purposes, and on a very pretty and well-wooded point, will be the town-hall and recreation grounds. Two large buildings, one built for a cannery, now used for a church and school-house, and one for the trade shop. A large building called the guest-house, is erected on a convenient spot where strange Indians can find shelter, with fuel, tables and benches. Such a building is a great boon and is much patronized.

Rep.—By whom are the different branches of work carried on?

Med.—Mr. Duncan gives the greater part of his time to the church and school. Dr. Bluett, a medical gentleman from England, who gives his services gratuitously, attends to the sick and takes some of the Sunday services (there being four). When Dr. Duncan is away, David Leask and others assist with the services. David Leask and John Tait manage the mercantile department, the former making periodic trips to Portland, to purchase goods.

Rep.—How does the trade compare with that of old Metlakahla?

Med.—Very favorably, being nearly double the volume, and goods of all kinds are 25 per cent. cheaper than at the old settlement.

Rep.—Are other industries likely to be commenced?

Med.—Yes, Mr. Duncan is trying to raise a capital of \$20,000 to establish a cannery next spring. Dogfish oil will become a large industry, and already Indians are forming joint stock companies for its development. Logging and cutting cord wood will be a remunerative industry. During our stay four steamers called

for firewood. The manufacture of furniture has been commenced. In Fred. Ridley's house we found a large turning lathe and mortising machine, and other tools of many descriptions with which he was turning out bedsteads, wash-stands, tables, window-sashes, &c., which would do credit to any of our factories. He had received an order from Portland for furniture, for which he was seasoning yellow cedar.

Rep.—What pecuniary means have they had in establishing their trade and industries?

Med.—There was an unexpended balance from the trade of the old place sufficient to purchase a stock of goods for the new. An agency was established at Portland and unlimited credit could be had. The contributions in the States, all unsolicited, were under \$4000, none of which have been put into the trade or industries of the place, but has gone to assist in the emigration, building the guest houses, road making and aiding the poor.

Rep.—Were the Indians pleased to see you?

Med.—Very much so. The day after our arrival they gave Bishop Cridge and myself a feast, as they call it. The food was well cooked and well served. A raised table was prepared for us, ornamented with a canopy of evergreens and flags. About 400 persons partook of the feast, nice white tablecloths and good crockery on the tables. An hour previous to our entering the supper room a salute was fired. After supper, eight of the most prominent men made eloquent speeches, thanking us for coming to visit them, and referring to their present happy and united condition, with no allusion, strange to say, to their old home, the land grievance, or to any official or other person who may have treated them unjustly. They display the greatest patience and forbearance, and used such temperate language. Very few of us whites would under similar circumstances act with such commendable prudence.

Rep.—Is the settlement likely to increase?

Med.—Mr. Duncan does not desire a rapid increase; if he did the population would be doubled in three years. He will not sanction or encourage more than can be conveniently absorbed and furnished with employment, and church and school training.

Rep.—What provision is there for maintaining law and order?

Med.—Mr. Duncan is a J. P., and has commenced dealing with some lawless characters already, and will soon turn his attention to rooting out the whiskey traffic in Alaska as he did in British Columbia, and there is every prospect that he will acquire the same influence for good over the surrounding tribes which he exercised so wisely and usefully at old Metlakahla.

There is all the difference in the world between the man who means to do "about right," and the man who means to do right. The man who means to do "about right" is the commonest and most commonplace sort of man among men. He is the man who does not very decidedly mean not to do just a little wrong if circumstances should seem to require it. He passes for "a very good sort of man;" but he is not good,—he comes very far short of being good. The reservation that he makes in his purposes of conduct taints his whole character; and so it makes "all the difference in the world" between him and the one who purposes to do right,—all the difference in two worlds indeed. If you would do "about right," you must mean to do wholly right, without any qualification or reserve.—*Selected.*

[The following interesting narrative was received from a Friend of Leeds, England, who says that she met with John Myers during the time he was attending meetings at Castledorf, and that she "knows the account to be strictly true."—Ed.]

From Darkness to Light, Ezemplified in the Case of John Myers, of Castledorf.

John Myers was looked upon as a professing Christian until he imbibed infidel opinions from his employer; afterwards associating with some of the noted sceptics of the day, and taking part in their meetings, he openly avowed himself one of them, and used his influence in favor of infidelity whenever he could gather listeners around him. His abilities in this direction were of no mean order. A publican once offered him a sum of money weekly, if he would entertain his company in an evening; and it was his love of society that made him a frequent visitor at the public-house, for he was not a great drinker, and as a married man was a kind husband and father. Years after, when the employer had seen the error of his way, he heard of John Myers' doubt and darkness, and sought him out, bitterly lamenting that he had been the means of this endangering an immortal soul. He endeavored to turn him from his evil course, but the reply he received was, "I am what you made me; you should have told me differently years ago."

Time passed on, but not without the reproofs of God's Holy Spirit, that blessed witness for the truth, following the wanderer, who became very miserable. Conscious that he was a great sinner, and that life was passing quickly to its close, he was afraid to meet the God whose existence he had for so many years denied. In this wretched condition he dreaded the sight of a funeral and would turn aside anywhere to avoid meeting one. Not knowing where to find rest for his troubled soul, he attended some Gospel temperance meetings that were being held in the town in which he then resided. He signed the pledge and put on the blue-ribbon, hoping that doing this would bring peace, but it did not reach his sore need. He visited the various Protestant places of worship in Castledorf, and conversed with some of the ministers, without finding the help he sought.

When he was just ready to despair, passing down a side street, his eye rested on a board recently erected, announcing that meetings for worship of the Society of Friends were held at that place. "Society of Friends," he said to himself, "I know nought about them; this is one more chance for me—I will go there." Before the hour arrived he was tempted again and again to give up going; even when walking to the meeting he felt inclined to turn back and not "make such a fool" of himself, entertaining the thought that if God were a God of mercy He could save him without such a fuss over it. Twice he retraced his steps towards home in despair, but thought he would have "one more try;" and, just as he reached the door it was opened, and he entered and took a seat. What was his surprise to find the little company gathered in silence. "It seemed so strange," he said, "that I who had thought so much of eloquence should be led into a place of worship, where, for a few minutes, not a word was uttered." In that ten minutes' silence, the power of God took hold upon him. He felt that he was in an atmosphere of prayer. He said, "I was convulsed. I was torn to shreds."

The depth of his conviction that evening so affected him physically that he was unable to work for the next two or three days.

One who was present says:—"The meeting that evening was a peculiarly solemn one. In the early part of it a few words of Scripture were quoted, followed by a prayer and an earnest address. A stranger, a somewhat elderly man, who had met with us, appeared to be greatly exercised in spirit—so much so, that the form on which he was seated shook under him. After awhile, he rose and said: "I am nearly sixty-seven years of age; I have no time to lose. If there is mercy for such a rebel as I, I plead most earnestly for your prayers on my behalf. I am an infidel of more than thirty years' standing, and have denied the existence of a God; but for the last two years I have been seeking salvation, and have come to this little meeting to-night as my last chance, determined at any cost to obtain salvation." As we listened, many were affected to tears, and under the influence of the Holy Spirit, were in travail of soul, that this earnest pleading for the mercy of God, might, even *then* and *there*, through our blessed Advocate, Christ Jesus, be heard and answered. After he took his seat, vocal prayer was offered and words of encouragement were spoken, testifying to the sufficiency of the Grace of God; one present quoting the text, "He that covereth his sins shall not prosper, but he that confesseth and forsaketh them *shall have mercy*." Prov. xxviii. 13.

It was indeed a time to be remembered, and so great was the exercise of mind of those assembled, that some of us felt the need for the prayer silently to arise for calmness of spirit, and that no outward excitement might mar the work of the Lord in the midst of this little company, the larger portion of which had but for a few months been accustomed to Friends' manner of worship.

After another season of silent waiting and prayer, John Myers knelt down, and thanked for God's *clemency*—as he termed it:—"If Thou canst have mercy on such a rebel as I, in Thy *clemency* have it." It seemed too solemn a season to resume our seats as his words ceased, and we remained standing whilst the poor penitent, still on his knees, was evidently in agonizing supplication. One or two persons uttered words of blessed hope and assurance of God's willingness to pardon. After some time, the stranger himself arose, and exclaimed, "Friends, the storm is over, the storm is over." It was a time never to be forgotten, and to himself the beginning of a new life. Some young men were present who had previously listened to his arguments in favor of infidelity.

He told us afterwards that four times God had preserved him from sudden death, and spoke of the trials and losses he had had, and of how God had dealt with him, but it was not, he said, until he was willing to know nothing save Jesus Christ and Him crucified, and determined, at any cost, to obtain salvation, that he found peace.

For two years John Myers was a diligent attendant of the meetings of Friends, and delighted to bear his testimony to the exceeding mercy of God in Christ Jesus our Lord; often recurring with great emotion to that first evening when God had directed his steps to that room and heard and answered his cry; and earnestly did he plead with any who were still refusing to yield to the convictions of God's Holy Spirit. Sometimes he would ask to be excused for the vehemence of his manner, saying, "I cannot

afford to be half-hearted, at my time of life. I've been earnest enough in the devil's service." Frequently he would engage in prayer, and, at other times, he asked our prayers on his behalf, that he might be kept faithful to the end. "The Better Land"—the Cathedral in the sky—were his favorite terms when speaking of Heaven. He was faithful in taking opportunities, as they arose in the railway carriage, or in the street, to confess his Saviour, and earnestly to plead with others to come over to the right side.

During the last year of his life he was a great sufferer from cancer and acute rheumatism, but was enabled to bear agonizing pain patiently and cheerfully, grace sufficient being given for each day's need, whereby he was strengthened to glorify God even in the fires. He still attended meetings while able to walk. He often used to say to his wife on retiring for the night, "If I am gone before morning, lass, thou'll know where to find me," and remarked to his friends on one occasion, that God had brought him within "earshot of the Better Land—the trumpets sounded so pure and clear." All fear of death was taken away: through faith in the Saviour he had learned to love; and this was the man, who, in his boasted unbelief, and saying, "There is no God," had been afraid of the sight of a funeral. "There is not a man anywhere," he would say, "that has more to praise God for than I have."

At the close of the year 1886, his only daughter, living at Derby, came to see her parents, and persuaded them to go and live with her and her husband. The thought of parting from the friends who had been so helpful to him was very affecting to John Myers, but it seemed right for him to make the change. Soon after his arrival he wrote in a trembling hand to inform his friends of it, concluding with the message, "Please tell all my dear friends I shall always hold them very dear. *Tell them to live near to God and He will bless them.*"

He only survived his removal a few weeks. Shortly before the end, and in much suffering, he said:—"When thou comest on thy throne, dear Lord, remember me," asking those around him "if they heard those sweet bells?"

And so he passed away, as we reverently believe, to that "Better Land" of which he loved to speak, to unite in singing the new song "unto Him that loved us, and washed us from our sins in his own blood, and hath made us kings and priests unto God and his Father; to Him be glory and dominion for ever and ever. Amen." Rev. i. 5, 6.

Natural History, Science, &c.

Paper Making.—A late number of *Science* contains a note regarding the light thrown on the early history of the art of making paper, by the researches which have been made in the collection of papyrus in the German Archduke Rainer. From these ancient manuscripts it appears "that the art of making paper of linen was first carried to Samarkand by Chinese captives in A. D. 751, when the governor of Samarkand made war upon the princes of Ferghana and Shash, who were tributaries of China. In Samarkand the manufacture of paper from linen rags was invented by Persians, and this invention gave a great stimulus to the manufacture. Samarkand papers were famous all over the Orient and Occident until the eleventh century. Later on, factories were established in Bagdad and Egypt, and it was then that paper took the

place of the ancient papyrus. The researches of Weisner show that these early papers were white, and that they were filled and sized by means of starch. It is of great interest that Weisner's conclusions as to the methods of manufacture of the early papers have been fully confirmed by the recent discovery of an ancient Arabian manuscript describing the manufacture of paper in detail. Cotton was never used for making paper in those early days."—*The American*.

Effect of Tree-planting.—Major J. W. Powell of the U. S. Geological Survey, has recently written an interesting letter to the *Kansas City Times* in regard to the reclamation of arid lands. He says that it is an error to suppose that tree-planting, be it ever so extensive, can materially increase the rain-fall in a given section. The great service of tree-planting is to equalize the atmospheric conditions and preserve for longer use the amount of rain that falls. Irrigation and tree-planting, according to his conviction, will, in a few years reclaim many areas now waste-land and convert them into productive farm and pasture lands.—*The American*.

Java Birds in the Rotterdam Zoological Gardens.—"A long halt was made before the cage containing some two dozen or more little *Estreltas* from Java, most beautiful little seed-eating birds, songless, but giving in the various tones of the color-scale what they lack in beauty of song. The quaintest, most delicate little dove-colored beauties, nesting alongside others that exhibited on breast and head many or all the glories of humming-birds without the gilding. They made, as they sat snuggled together on their perch, a veritable piece of rainbow coloring, and we wondered that for those to whom the shrill trilling and whistling of a canary is annoying, these little thumb-high specimens of the genus *Estrelta* were not oftener forthcoming—being rather little, moving, happy flowers than birds. Altogether the impression they make is that of pansies."—*Friends' Intelligencer*.

Effect of Climate on Seeds.—Experiments recently made by Professor Schubeler, a Norwegian plant-geographer, confirm the belief that most plants produce much larger and heavier seeds in high northern latitudes than in those further south, the difference resulting from the prolonged influence of light consequent upon the length of the summer day at the far north. One of the most remarkable instances he noted was that of dwarf beans, which gained 60 per cent. in weight when taken from Christiania to Drontheim, a distance of no more than four degrees; and another was that of thyme, which taken from Lyons to Drontheim, gained 71 per cent. All our cereals likewise show a marked increase in weight when grown at the far north.—*Garden and Forest*.

Slops.—Every housekeeper ought to know that the slops of the household may become a prolific source of dangerous diseases to the inmates. But that every housekeeper does not know this is conclusively shown by Dr. Lucy Hall in her report of the sanitary condition of country houses. In her inspection of the farm-houses of New England and the Middle and Western States during last summer, she finds it a very common practice to throw the kitchen and bath-room slops from the back-door. In New England in 77 per cent. of the farm-houses examined, this was the habit; and in the Middle States in 40 per cent. of the farm-houses, the same usage prevailed.

As one informed on sanitary matters might expect, 93 per cent. of the New England houses which she examined had furnished cases of lung disease and diphtheria, and 55 per cent. of typhoid fever.

Those familiar with New England farm-houses know that in a majority of cases the barn is connected with the house by a row of buildings—kitchen, wood-house, carriage-house—so that one can pass from dining-room to stable without going out-of-doors. This arrangement, of course, brings the well and stable within less than a hundred feet of each other. If there is a cess-pool, this also may be within the same distance. And so it comes to pass that excrementitious matters continually find their way back into the bodies which have thrown them out, and, as their nature compels, breed dire diseases.

The tidy housekeeper wages a continual warfare against dirt. But she must also be intelligent as well as tidy, or else she will not recognize the exact point against which this warfare must be directed. The end to be gained is to get rid of our dead selves. It is for this that we wash our clothes, that we air our rooms, and sweep them and clean them. But if, after all this trouble, we throw our wash-water out of the back-door and have our sink-drains and cess-pools open and near, we breathe in and drink in the very substances we have taken so much pains to get rid of. Thrown on the ground, exposed to the air, they become active breeders of most deadly diseases; taken into the very bosom of Mother Earth, they are transformed into elements of nutrition and beauty, and are sent forth anew to bless the world, not to curse it.

The labor and expense caused by one case of diphtheria, of typhoid fever, of malarial fever, might often suffice to put the premises into perfect sanitary condition, and, on the score of economy, prove a valuable investment. However that may be, every woman upon whom depends a household for some home comfort, should find it that no lurking places for unwholesome things be permitted within her domain. Widely distributed through some cultivated field, as is the latest recommendation of sanitarians, these enemies of life and health may be transformed into fruits and grains.—*Christian Advocate.*

The Bark of the Sequoia.—The editor of *The Christian Advocate* states that he had received to a present a specimen of the bark of one of the *Sequoia gigantea*, or big trees of California. The bark is about 3 feet thick, which around the entire tree would make a belt of 6 feet.

Modification of Natural Instincts.—The Weaver-bird of South Africa has been in the habit of suspending from the branches of a tree its nest, curiously woven from stalks of grass, with an entrance from the bottom so as to afford increased protection from snakes. It is a social bird, and 20 to 30 nests are often hung from a single branch. With the advance of civilization on them the Weaver-birds of Natal have commenced hanging their nests from the telegraph wires, and as no snakes can reach them there, they have adopted the plan of making a hole on the side of the nest—a more convenient place for entrance than the bottom.

Pallas's Sand Grouse.—This bird is a native of the central plains of Asia, where it exists in enormous flocks. A few of them have at different times made their appearance in England. In 1863 a considerable number visited that country, and the present year they have come in still

larger numbers. English naturalists appeal to their countrymen not to disturb these grouse, as if permanently resident there, they would form a valuable addition to the birds of the country.

Items.

Kansas Yearly Meeting, (Larger Body).—The seventeenth session of this meeting convened on Sixth-day, Tenth Month 12th. William Nicholson acted as Clerk, and Edmund Stanley and William V. Coffin as Assistant Clerks.

During the past year twelve new Monthly Meetings had been established, and two laid down.

At the opening of the state of South Carolina a question was asked, why the mid-week meetings were so small, when "great revivals" were reported to be going on; the attendance at them was thought to be poorer than in former years. The young people were warned against secret societies.

When the subject of education was before the meeting, reference was made to the large sums of money which had been donated for educational purposes in the East; and it was stated that a tithe of the amount would educate thousands in the West.

The devotional meetings were conducted in the same *unfriendly* way as heretofore; and the system of paying preachers was advocated.

There were reported to be 276 Indian members of Friends' Meetings in the Indian Territory.

The proposition that a Conference of Yearly Meetings be held regularly once in five years was not united with, but was left for consideration next year.

Religious Feeling in France.—Everything clerical or ecclesiastical is at a vast discount with the people. Priestly life of every cut, and every denomination of every degree, are so distasteful that they must be entirely disused if the interest of the masses is to be in any degree regained. To say nothing of the church which the large majority have long since deserted, even the name of chapel is repelling. Therefore the *hall* in which the McMill Mission is held, is found to be exactly the place, and the simple evangelistic service exactly the service that draws the people. In this mission religion has returned to the common room; Christ is set forth in the dialect of every-day life, and once more the common people hear Him gladly. The plain rooms, and the wooden benches seem so much more attractive to them than the magnificent cathedral into which they might step for special worship, but for which they evidently have no taste. In a word, here is a return to primitive Christianity. A. J. Gordon, in *The Christian*.

In connection with this, we find a statement in *The Episcopal Recorder*, that a recent article in a Parisian journal, asserts that atheism is declining in France; that it has failed to become popular, and has not won the masses of the French people. Its special organs, the *Anti-Clerical*, and the *Semaine Anti-Clerical* are both dead.

W. F. Davis' Imprisonment.—W. F. Davis, of Boston, has served out his ten months' imprisonment in jail for the crime of preaching the Gospel of Christ on Boston Common, and is now free. An exchange says: "The striking fact was mentioned in our hearing, by H. L. Hastings, who also suffered with Mr. Davis, that since this unrighteous treatment was meted out to these servants of God, the hand of death has laid low the chairman of the committee which assumed control of the Boston parks and forbade the preaching of the Gospel in them; the district attorney who prosecuted W. F. Davis; the Irish Roman Catholic man-seller and alderman who was most interested in passing the gag ordinance; and Judge Baker who pronounced the four sentences against the preacher in a single trial, giving the highest possible penalty under the law of the State."

To this it may be added that we are informed that W. F. Davis "accepts no stipend for his preaching;" and that "when released from the jail, and it being given out that he was expected to speak in a certain place in the evening, a collection was taken up; but he stipulated that the jail should be returned before consenting to deliver his discourse."

Ye know not what manner of Spirit ye are of.—The *Primitive Catholic*, a paper which rejects the authority of the Pope, says: "A large number of copies of the Bible were recently burned in Barcelona, Spain, by order of the Government. The following, translated from the *Catholic Banner*, the organ of Papacy there, shows that they approve and appreciated the action:—"Thank God, we at last have turned towards the times when those who propagated heretical doctrines were punished with exemplary punishment. The re-establishment of the Holy Tribunal of the Inquisition must soon take place."

"Its reign will be more glorious and fruitful in results than in the past. Our Catholic heart overflows with faith and enthusiasm; and the immense joy we experience as we begin to reap the fruit of our present campaign, exceeds all imagination. What a day of pleasure will that be for us when we see Anti-clericals writing in the flames of Inquisition!"

Military Discipline.—A tragic event has just taken place at Parthenay, in France. An officer of the 14th Regiment condemned several soldiers who had committed breaches of discipline, to run for no less than three hours, carrying their rifles and fully equipped. Among them was a corporal, named Vallad, guilty of no greater offence than of having returned late to barracks. At the end of two hours, Vallad fell down exhausted. The sergeant wished to permit him to rest a little, but the officer insisted upon his being made to get up and complete his punishment, observing, "He must keep on till he drops down dead." Vallad rose to his feet, and shot himself dead.—*The Herald of Peace.*

THE FRIEND.

ELEVENTH MONTH 17, 1888.

There appears to exist in many places so imperfect a conception of the nature of Divine worship, and the manner in which the meetings of the Society of Friends ought to be held, that we gladly avail ourselves of the permission to make use of the following extracts from a letter addressed to the Friends on this subject, which seem to us to unfold the views of Friends in a clear and satisfactory manner.

"While encouraging the frequent reading of the Scriptures in our families, and in private, and doing all we can to inculcate a love for them among our young people, we need to remember that from the beginning Friends have felt themselves led into a manner of worship, in which the arrangements adopted by most other professing Christians could not consistently be followed. Each worshipper is regarded by us as being led to perform acceptable service to his Heavenly Father, through the quickening influence of his own Holy Spirit—and, gathering, as we profess to do, in the name of the Lord Jesus, we rejoice to believe that He will fulfil his gracious promise to be himself in our midst. So that under his teaching, any exercises arranged by us, or fellow-meetings for the help of the worshippers, become unnecessary, and may even interfere with those 'spiritual sacrifices' which are acceptable to God through Jesus Christ."

"If, on the other hand, any are moved under the Holy Spirit's power, to offer words of exhortation or doctrine, we believe these will find entrance, and tend to the edification of the hearers; or, should there be a call to vocal prayer, under the same holy influence, this too will find a response in other hearts, and we reverently believe will reach the Mercy Seat.

"It is, as I understand it, because Friends have felt so strongly the necessity for each wor-

shipper to realize that no one can take his place nor do his part when he comes before the Most High, that they have attached so much importance to reverential, silent "waiting upon God." Whatsoever therefore tends to substitute something else, however profitable at other times, may well view with anxiety, as regards our meetings for Divine worship. Yet just this substitution has taken place, as we know, in many parts of the Society; and now, when the reading of the Scriptures and the singing of hymns have been introduced into our meetings as a part of their service, no time is left for silent worship, and none is desired. It is the natural craving for something that is said, or read, or done that we need to guard against."

To this may be added a few additional remarks on the singing of hymns in our meetings, taken from a treatise published in 1815, which received the sanction of the Meeting for Sufferings of Philadelphia—and which doubtless expressed the views of Friends generally in that day:

"The Society of Friends do not believe that songs of thanksgiving or praise are, of necessity, vocal. If by the Divine Spirit, any are favored to feel praise, to spring in their souls, let them sing their spiritual song in spirit, where it properly originates; and we doubt not God, who is a spirit, will understand their spiritual song. But we do not see that those inward joys of the soul, at all stand in need of any outward or musical tone, to render them acceptable to God. And though we were sometimes to admit the outward voice to be incorporated with this spiritual impression, yet we are not of the judgment that this would be proper in our religious assemblies, because we are aware that all could not in truth sing the same song; some would be likely to be unqualified. Indeed it could seldom occur, that the whole congregation would be raised into the same spiritual song, and if any should outwardly sing that which was not inwardly brought forth in them by the Spirit of God, such would be acting contrary to truth, and could not be edified thereby. From this view of the subject we apprehend all those who are not prepared in spirit to sing, had better be silent. And those who are opened in spirit into the songs of the Lord, let them sing to the Lord in spirit; and not to men; lest they become the instruments of spiritual death to those whom the Lord has not yet given a song; and who, according to his righteousness, are yet to pass under the just dispensation of condemnation. But if the whole assembly were born of the Spirit, and each of them were in consequence prepared for the true worship of God; we have elsewhere said, that this does not require the aid of the human voice; but being an inward and Divine qualification known unto God, because brought forth by Him, we are not sensible that it is made any more acceptable, by being proclaimed outwardly in songs to men. And if the outward singing does not add to the spiritual virtue of the thanksgiving or praises, then there is no advantage gained by it. That singing, then, which is pleasing to the Almighty, must proceed from that which is pure in the heart, even from the Divine life, and manifestation of the Spirit; and all those will, no doubt, as they are moved thereby, have spiritual songs and hymns, to return unto the Lord. But we do not find in the New Testament, any thing to warrant the use of instruments of music, or artificial singing in the worship of God; and being satisfied that He is and may be worshipped in spirit, and in truth, we leave all those outward

acts, which are often attended with danger to the cause of sincerity, out of our practice."

SUMMARY OF EVENTS.

UNITED STATES.—At the election held on the 6th instant, Benjamin Harrison and Levi P. Morton were chosen President and Vice President of the United States. All the northern States, excepting Connecticut and New Jersey, chose electors favorable to the above-named candidates. All the other States, including the District and New Jersey, excepting West Virginia, which is in doubt, chose electors favorable to Grover Cleveland and Allen G. Thurman. The Prohibition vote is not yet known, although it is believed to be quite double that cast for St. John and Daniel, in 1872.

The amendment to the Constitution of West Virginia, prohibiting the sale and manufacture of intoxicating liquors, has been defeated by a majority of 40,000.

The Collector of Customs at Sitka, Alaska, has informed the Treasury Department that natives engaged in taking sea otters in Cook's Inlet and Skeliffok Straits, complain that white hunters cruise along the shore there, using firearms and scaring the otters to sea beyond the reach of the natives, who now sell skins only, and thus deprive them of their only means of support. As the killing of sea otters by others than natives is expressly forbidden by law and regulations, the Collector has been instructed by the Secretary of the Treasury to bring the matter to the attention of the Governor of the Territory, with a view to preventing marauders from pursuing such unlawful adventure.

The Supreme Court of the United States, on the 12th instant, rendered a decision in the suit of the United States against the Bell Telephone Company, by the appeal from the decision of the Circuit court of Massachusetts, sustaining the demurrer entered by the Bell Company to the Government's suit. Justice Miller, who announced the decision, held that the plea of multifariousness by the Bell Company, and also its plea of the Statute in limitation of time, were not a plea in law to set aside a patent, are not good. Justice Miller overrules the decision of the Circuit Court of Massachusetts, and the Court remands the case with instruction to entertain the Government's bill.

The result of the whaling season in the Arctic whaling season just closing. All the whaling vessels, with two exceptions, have returned. The catch this year is reported at 164 whales, against 293 last year. The fish run smaller this year than a year ago, averaging from 1000 to 1700 pounds lone each, so that the entire catch of bone will be about half that of 1887.

The Cunard steamer Umbria, which sailed from New York for Liverpool on the morning of the 10th instant, ran into and carried away the stern of the Falero Line freight steamer Iberia, off Long Beach, in the afternoon. The Umbria's collision bulkhead was partially crushed in above the water line. The crew of the Iberia, 30 men, were taken off by the Umbria. The Umbria then returned to her dock at New York for repairs, which were soon completed. The pilot boat of H. C. Holt put a salvage crew of three men on board the steamer Iberia. The cargo in the hold is said to be in good condition.

While 160 coal miners were preparing to leave work on the evening of the 9th instant, in Slip No. 2, near Pittsburg, Kansas, a terrific explosion completely shattered the shaft. Thirty-nine bodies have since been taken out of the mine. Twenty others were injured, of whom several may die.

On the night of the 9th instant, the Rochester Steam Cable and Works in Rochester, New York, were destroyed by fire. Nine bodies have been recovered from the ruins of the burned building. Four of 20 who were injured have died, and it is said that 21 men are missing.

At Northampton are playing havoc with sheep and cattle. Choteau County is the greatest sufferer.

The Evening Telegram, of New York, estimates that the election wagers in that city amount to \$2,000,000. The book makers, most of whom bet on Cleveland, lost heavily.

The day after election, in this city, drunkenness occurred to a most deplorable extent, exceeding what we have witnessed for a long time past.

In Jacksonville, Florida, 201 cases of yellow fever, and 23 deaths, were reported for the week ending the 11th of August.

Deaths in this city last week numbered 334, an in-

crease of 11 over the previous week, and a decrease of 11 as compared with the corresponding period last year. Of the whole number 168 were males and 166 females; 52 died of consumption; 25 of pneumonia; 23 of diseases of the heart; 16 of old age; 16 of convulsions; 13 of typhoid fever; 12 of scarlet fever; 12 of influenza; 11 of Bright's disease; 10 of consumption; 8 of *Worm*; 8 of *St. Vitus'*; reg. 1071; coupon, 1083; 4's, 1271; currency 6's, 121 a 131.

Cotton was $\frac{1}{2}$ higher, with small sales to spinners at 110 cts. per pound for middling uplands. Flour and Meal.—Flour was dull and prices favored by the war of wheat and corn. Winter wheat, \$3.85 a \$4; do, do., extras, \$4 a \$4.25; No. 2 winter flour, \$4.37 a \$4.75; Pennsylvania family, \$4.75 a \$5; Pennsylvania roller process, \$5.25 a \$5.85; Ohio, clear, \$5 a \$5.50; do., straight, \$5.50 a \$5.85; Indiana, clear, \$5 a \$5.50; do., straight, \$5.50 a \$5.85; St. Louis and Southern Illinois, clear, \$5 a \$5.50; do., do., straight, \$5.50 a \$5.85; winter patent, fair to choice, \$6 a \$7; Minnesota, clear, \$5 a \$5.85; do., straight, \$6 a \$6.50; do., patent, \$6.75 a \$7.25. Rye flour was quiet and easier, at \$4 a \$4.10; barrels sold, the market rate.

Beef cattle.—Extra, \$1 a \$1.25; good, 4 a 5 cts.; medium, 4 a 4 cts.; common, 3 a 3 cts.; fat cows, 2 a 3 cts.

Sheep.—Extra, 4 a 5 cts.; good, 4 a 4 cts.; medium, 3 a 4 cts.; common, 2 a 3 cts. Lambs, 3 a 4 cts.

Hogs.—Extra, 8 cts.; fair Westerns, 7 cts.; common Westerns, 7 cts.; common country and roughs, offered 7 cts., with no buyers.

Milk calves were active and higher at 3 a 7 cts.

REVENUE.—The English Custom Commission has finally made its report. It advocates the co-operation of England with the United States, Germany and the Latin Union to secure the restoration of bi-metallicism.

Edinburgh, Eleventh Month 6th.—In the case of C. Farnell against the *Times* Publishing Company, announced his decision on the question of jurisdiction, raised by the *Times's* counsel. The Judge ruled that the Court had jurisdiction in the case.

Another fearful murder with dreadful mutilations of the corpse, occurred in the East End of London, on the 10th inst. The body was found in a ditch, and the victim of the unknown assassin, whom all efforts of the police have failed to discover. The attention of Parliament had been called to the subject, remarks were made reflecting upon Sir Charles Warren, Chief of Police.

A despatch from Brisbane says that the Queensland Parliament has come to a decision in regard to the Chinese bill in accordance with the Sydney conference.

The clause relating to the imprisonment for life of Chinese illegally entering the colony is reserved for royal assent.

The *North German Gazette* says that, owing to the increased traffic on the railways, the Prussian Government has ordered the construction of 7000 new goods wagons and has hired 1500 wagons from abroad. It also reports that the Prussian Government is now about the purpose of increasing the rolling stock of the railways.

The Berlin *Post* expresses the hope that, in the interests of peace, German troops will not touch the new Russian loan, she says: "Russia has first step in the event of war would be to stop the payment of interest. It is better that French capitalists be Russia's principal creditors, because they are likely to oppose warlike designs of the French Government."

St. Petersburg, Eleventh Month 12th.—A powerful American syndicate is about to be formed for the purpose of building railroads in Siberia. Besides a large subsidy the Government will give 4,000,000 roubles yearly for the transportation of mails and convicts.

A vessel has arrived at a Norwegian port which has been wrecked on the coast of San Francisco. The Panama, brings an account of a big fire which took place recently in the neighborhood of Ylletta, Columbia. It originated in stubble, and, owing to a strong breeze, the flames caught the houses of the town, many children perished in the conflagration. A heavy loss of property was produced. At the same time, Panama there has been great loss from drought and forest fires. All crops have been lost, and in some places the fire has destroyed other valuable property, including an immense sugar cane plantation, on which 2000 and 15,000 coffee plants were consumed by the flames.

FOR "THE FRIEND."

Incidents and Reflections.—No. 175.

SENSIBLE INFLUENCE OF THE SPIRIT.

When Stephen Grellet was in Constantinople, in 1819, he was introduced to the Spanish Ambassador. On entering the apartment of his wife, S. G. says, "We were greatly surprised. It seemed from her dress and manners as if we were with one of our women Friends. She told us that from a child she was brought up in simplicity of dress, which she likes; it was, said she, her valued mother's maxim and practice to endeavor to adorn the mind with Christian virtues, and not the body with vain apparel, which disfigures rather than embellishes it. 'I have frequently thought,' said she, 'that could I have been in one of those nations where you Friends reside, I should have been one of your Society, for what I have heard of your religious principles has greatly endeared your Friends to me; you are, however, the first I have ever seen. My mother often spoke of your Society and religious principles; she had read some of your books, but never saw any of your members; she dressed as plainly as I do.' We found on conversing with her on her religious views, that she has a claim to our Christian affection; and the tenderness of her heart rendered her very near to us; she is acquainted with the *sensible influences of the Divine Spirit*."

When at Smyrna on the same religious visit, S. Grellet became much interested in one of the Turkish officials, the Bey Effendi, Director of the Custom-house; who, in the course of a religious conversation, bore testimony to this same principle, saying, "that if all men were attentive and obedient to the Spirit of God in their hearts, peace, harmony and happiness would prevail over the whole world; for all the woe and misery that attend man in this life are the consequence of his departure from this blessed and Divine principle."

When at Rome, in the further prosecution of his journey, in 1819, S. Grellet was at the palace of the Cardinal Consalvi, the Prime Minister of the Pope, where he had an interview with several of the secretaries, &c., of the Cardinal. "Their inquiries," he says, "led me particularly to speak of the influences of the Divine Spirit, a gift freely dispensed of God, which man's wisdom, learning or power cannot obtain for himself; much less can he dispense it to others; by it only the deep

things of God can be known; by it acceptable worship is performed; qualification for the ministry of the Gospel is received; the Apostles were by this rendered able ministers of the New Testament, not of the letter, but of the Spirit. This led me to state that the Popes, Cardinals, Bishops, &c., in their ordination of ministers or priests, cannot confer upon them spiritual gifts, neither have they themselves any in virtue of their stations; but Christ Jesus, the Head of the Church, is the giver of spiritual gifts, and with his Divine anointing He gives power; He alone can forgive sin; He only is the Saviour of men." He adds, "they were all very serious whilst these and other subjects of vital importance were treated upon."

When at Berlin, in 1832, S. Grellet met with a young man from the Duchy of Mecklenburg-Schwering, who had suffered imprisonment and fines, for his religious views, which were more spiritual than those of the Established Church [Lutheran] of Prussia. He told S. Grellet that "several other persons in the parts that he came from are convicted of the same principles with himself,—convictions which have not been made by any outward instrumentality, but by the immediate operation of the Divine Spirit, which leads into all Truth, and by which the things of God are known, and the right understanding of the Holy Scriptures is given."

Similarly, when at Valencia, in Spain, in 1833, S. Grellet met with an aged man, eminent in his profession as a lawyer, who appeared to be well acquainted with several of the Christian testimonies, "especially as regards the influences of the Spirit;" hence his views respecting Divine worship and the ministry were pretty clear. He knew a number of persons convinced of the same important truths, who resided in various parts of Spain; many of these had perished in a recent severe persecution.

When at Athens, in 1819, S. Grellet met with a Capuchin Friar, whose rough garb and long beard were far from prepossessing; but in whom he found a humble Christian and a spiritually-minded man, who had learned that "it is in the temple of the heart that the Lord is to be found, worshipped and honored; that there is the altar on which acceptable sacrifice is to be brought to the Lord." S. Grellet says, "We encouraged him to keep his light that the Lord has lighted in his heart, bright and burning, to direct the attention of the people to it,—to be an instrument to gather them to Christ and his Spirit."

Stephen Grellet, in his Memoirs, speaks with much interest of Gossner, who had been a Roman Catholic priest in Bavaria, and whose eyes were opened to see more clearly, than at one time he had done, the spiritual nature of true religion. He says of him, "His great aim was to bring men to Christ, and to an acquaintance with the operation of the Holy Spirit on their own minds; and to encourage them watchfully and faithfully to attend to the dictates thereof, because it is the Spirit that leads into all Truth." In promotion of this concern it was his practice to have a company of pious persons to meet at his house

in the evening, and to spend some time together in silent waiting on the Lord.

This "operation of the Holy Spirit," to which Gossner directed the attention of his hearers, is the source of all true practical religion. It was the experience of this which made so great a change in the character of Israel D. Titus, a Friend in Canada, who deceased a few years ago. In his earlier life, he was a great fighter. After he had yielded to the convicting power of Divine Grace, and become established in the Truth, he had an appointed meeting in a small log house. After the meeting he walked with the friend to whom I am indebted for these particulars, through the pine woods to his house. During the walk he recounted the mercies of God to him, and spoke of his past life, when, as he said, "he loved to fight;" and related the lost amount of the kind that he had made. He thought he had received an insult from a young man, and he started "to have it out in a fight." As he was passing through a pine woods he was arrested by a Divine visitation. In his own quaint way of expressing it, he said, "I laid down upon the ground and had considerable of a time of it." The result was, that he turned back again. My friend, who knew him long and intimately, but not till after the change in his course of life, said of him, "I think I have known but few in whom the Spirit of the Lamb was so conspicuous as it was in him."

To what, but to this "sensible influence of the Spirit," are we to attribute the contriving impressions sometimes produced by ministrations uttered in a language unknown to the hearers? David Sams, in his Journal, mentions that when about to leave the Friends at Congenies, in France, "I felt drawn to supplicate the great Father of the family; which was a new trial, as there were none to interpret. Having submitted to the intimation of the Divine will, the people appeared much affected; so that the Lord works by his Spirit when and as He pleases, even when the words spoken are not understood by the outward ear." On another occasion, when in the same section of country, he says, "In this meeting, I felt drawn to prayer; it was a season that greatly refreshed my deeply-tried mind; and though the people did not understand my language, yet they felt their hearts lamed much."

Among the papers of David Sands was one on the "Inward Witness," from which the following extract is taken: "There is an internal testimony given to the Gospel of Christ in the heart of every one that receives it in truth. These are the beginnings of that eternal life wrought in the soul, which the Son of God bestows on all believers: 'He that hath the Son hath life.' Oh, the spiritual life of a Christian runs into eternity! It is the same Divine temper, the same peaceful and holy qualities of mind, communicated to the believer here, in the days of grace and visitation, which shall be fulfilled and perfected in the world of glory. And this is a blessed witness to the truth of Christianity; it proves with abundance of evidence that it is a religion sufficient to save

souls, for salvation is begun in all that truly receive the good tidings of it."

J. W.

FOR "THE FRIEND."

Isaac Coates' Visit to the Seneca Indians.

(Continued from page 125.)

"Ninth Month 15th, and first of the week. Have not went much out of the house to-day; sat down with the young men at their usual time of holding their meeting, which to me, and I believe to others, was a solid strengthening time. A little after night, Joshua Sharpless went out of the house, and just as he came in, the trap-door of the cellar being open, he stepped in it and fell with the back of his head against one of the joists or sleepers, and so down into the cellar. We all made what haste we could down; finding him stunned and senseless, we were exceedingly alarmed, got some camphor, lathed his temples and other places, so that in about two or three minutes he came to, so as to speak, but knew not that anything was the matter, or where he was, for a considerable time. At length his understanding returned, but could not all the evening recollect falling, being a good deal hurt. Getting away from here as soon as we proposed, looks doubtful; but it is a great comfort to us to find him as well as he appears to be. Went to bed, and I slept with him in some hopes he may be better in the morning.

"16th. Joshua quite as well as we could expect, but not fit to travel. This day we have had a visit from five or six Indian chiefs, who stayed with us the most of the day, and appeared very much pleased in being in our company and viewing a map which we had with us; soon got to understand it so that they could point out almost any of the rivers and lakes. About noon Complanter came and brought us a quarter of venison and two pigeons; offered to send some of his people to pilot us to Buffalo, but we could not tell him when we could go; not knowing when our friend would be able to travel. About the middle of the afternoon they all took an affectionate farewell of us for the present.

"17th. A fine day, Joshua appearing some better. Eighteen or twenty of the Indians came to see us and bid us farewell. About 1 o'clock we set off, Halfday Jackson bearing us company. We took an affectionate farewell of our other two friends after an unquiet opportunity just before parting. Rode about four miles up the river, through middling good land, to the house of one of the old chiefs who was with us yesterday, who had his horse standing hitched ready to pilot us up the river to a small settlement of Indians. On riding along we discovered they had the day before opened and cut the path wider and better, for several miles, just on our account. On our way we passed a new settlement made this summer by Halfday, on some most excellent land, where he lives; has cleared and fenced two or three acres and got it in with corn and vines. After crossing the river we rode to another chief's house, where there are several cabins, and pitched our tent and lodged on the river bank. They were very kind to us in their way, gave us two very good squirrels; this being ten miles up the river.

"18th. Being a rainy morning we set off, having Sunday and Halfday Jackson for our guides, which we found to be very useful to us before night, it being a very wet day, and much of the way so swampy and difficult that we should have been much beset without them; and abundance of the way through the wilderness is so stopped up with windfalls of timber, and abun-

dance of it so large in low grounds, and fell one on another for a mile together, which to a stranger would seem altogether impossible; many of which, with great difficulty, we have to jump our horses over, and perhaps in mud half leg deep, and many of them so large no horse could leap them. We went up the river three miles, and then took up a valley about twelve miles, down which a creek of about the size of one branch of Brandywine runs. Excellent good land all the way up it, being abundance of Sugar-maple, Beech, Ash, Birch, and Bass. I think

I have seen Sugar-maple in abundance that were three feet over, and near one hundred feet high; the other timber in proportion. We then ascended a very high mountain, good land up it and on the top still good—being covered with very heavy, lofty timber, some of which is White Pine, some Poplar, and the other as before mentioned. Before we ascended the mountain we came to the heads of springs within a few perches of each other, some of which run into the Allegheny and some into the Cattaraugus—the former of them empties into the Allegheny and Ohio, the latter into Lake Erie and so down the river St. Lawrence. In some places abundance of wild cherry, three or four feet diameter, perhaps sixty, and some eighty feet to the first limb; but as I do not intend to give a minute description of the land, water and timber; only to give a sketch of what appeared remarkable, suffice it to say that in this day's ride (which was a wet one through abundance of swampy land) I think the land was generally good and heavy loaded with timber. This day's ride twenty-four miles; and pitched our tent by a spring amongst lofty timber, and just after we got our fire made, and tent raised, it began to rain very fast and was an exceeding wet night, accompanied with a great wind or storm, inasmuch that we heard the trees falling almost all around us. Our situation appeared to be somewhat trying, but as we had no alternative, soon composed ourselves and went to sleep.

"19th. Being likely for a fair day we set off, though the bushes were very wet, and rode to Lake Erie, twenty-seven miles; pitched our tent on the margin thereof. We passed some very bad swampy road in the morning, the timber and land much as yesterday. Almost all the way, so far as I have come through the New York State, there appear to be very few stones; but after riding eight or ten miles this day, we came to abundance of the most beautiful poplar trees I have ever seen; and about one mile before we crossed Cattaraugus River, we came into a Bottom of very rich land, wherein abundance of black walnut stands, many of them three, four, five and perhaps some six feet diameter, and sixty or seventy feet to the first limb. Crossed Cattaraugus, being ten miles from our lodging, and rode ten more to an Indian village; stopped about a while with them, but as their chief was not at home we soon left them and rode seven miles through a low piece of land heavily timbered with Hemlock, Sugar-maple, &c., to the lake as aforesaid, which to be sure at first view exhibited a grand prospect here in the wilderness, appearing both as to motion and sound like the ocean; had a good supper of chocolate, cooked by Halfday, who is yet with us, got a comfortable night's sleep, and early in the morning for the first time heard a wolf howl.

"20th. Rode twenty-eight miles down the lake on the beach or margin thereof, to the mouth of Buffalo Creek; crossed it in a boat and swam our horses over, it being a very deep channel about thirty or forty yards wide, and lodged at

Joseph Elihcott's head-quarters, he being the principal surveyor or superintendent of the Holland Company's business; were kindly entertained free of cost. This day's ride down the lake was a delightful journey, affording such a variety of prospect of the wonderful work of nature; some places the land at the margin of the lake appeared to be pretty level; in most others there was a wall on our right hand in many places fifty, some sixty and some near if not quite one hundred feet high, and almost perpendicular."

The Holland Land Company is several times mentioned in Isaac Coates' Journal. It was intimately connected with the settlement of Western New York.

In 1791, Robert Morris purchased of the State of Massachusetts large bodies of land in Western New York, the title to which had been ceded to that State by the State of New York. The whole amount purchased was estimated at about 3,800,000 acres.

By several conveyances made in 1792 and 1793, Robert Morris conveyed about 3,800,000 acres of these lands to trustees for certain residents in Holland. Although these deeds of conveyance were given to three distinct companies of proprietors, their interests were so closely blended, several of the same persons having large interests in each of the three different estates; that they appointed one general agent for the whole, who managed the concerns of the tract generally, as though it all belonged to the same proprietors; simply keeping his accounts separate, and apportioning the expenses *pro rata*, so the whole of the proprietors came to be spoken of collectively as the *Holland Company*.

The contract made by Robert Morris included the extinguishment of the Indian title to the land, which was effected at a council of the Seneca Indians, held at Genesee, on Genesee River, in 1797, excepting thereout certain reservations which remained in the possession of the Indians.

Joseph Elihcott was appointed principal surveyor, and commenced his operations as soon after the settlement of the title as he could make the preliminary arrangements.

(To be continued.)

ABOUT the time of the invention of the telescope, another instrument was formed which laid open a scene no less wonderful, and rewarded the inquisitive spirit of man with a discovery which serves to neutralize the whole of the argument. This was the microscope. The one led me to see a system in every star; the other leads me to see a world in every atom. The one taught me that this mighty globe, with the whole burden of its people, is but a grain of sand in the high field of immensity; the other teaches me that every grain of sand may harbor within it the tribes and the families of a busy population. The one told me of the insignificance of the world I tread on; the other recommends it from all its insignificance—for it tells me that in the leaves of every forest, and in the flowers of every garden, and in the waters of every rivulet, there are worlds teeming with life; and numberless as are the glories of the firmament. * * * By the one there is the discovery that no magnitude, however vast, is beyond the grasp of the Divinity; but by the other we have also discovered, that no minuteness, however shrunk from the notice of the human eye, is beneath the condescension of his regard.—*Dr. Chalmers*.

FOR "THE FRIEND."

Westtown.

The first term in the new building after its completion has passed, and the second one commenced under favorable auspices.

The immunity from serious sickness or accidents of any kind, up to the present time, are causes for reverent gratitude. The exterior appearance of the structure has fully equalled the expectations of Friends engaged in its erection, and has been favorably commended by others not members of the Society for the absence of useless ornaments, as well as for its substantial and enduring appearance; whilst the interior arrangements are found to be well adapted to the various purposes for which they were designed. By the removal of some trees in the girls' grounds, a fine view to the west has been obtained, and it is thought by some that similar pleasant prospects of the distant hills to the east and south can be had by the removal of only a few trees in these directions. These vistas will add much to the attractiveness of already attractive Westtown. A number of shade trees and shrubs have been planted this autumn in different parts of the grounds—among them a group of eight Japan Maples on the south side, in front of the girls' end of the building, which, when in leaf, with their variegated foliage continuing throughout the summer and autumn, will be a pleasant feature in the landscape. They are of low growth, not exceeding six feet—generally three or four feet in height. Our late valued friend, Dr. Charles Evans, expressed in the Committee his objection to having too much shade around the building. Sunlight and openings to see out and upwards are very desirable, and are perhaps as much in place as trees undoubtedly are in theirs. The fact of there having been subscribed and nearly all paid in, the large sum of \$300,000—mostly by members of Philadelphia Yearly Meeting—is commendable; also, that the addition of \$10 per session for board and tuition has not prevented the application for admitting as many pupils as can be accommodated—there being at present about 300 scholars in the building.

Sincerely three and a half years have elapsed since ground was broken for the erection of the large structure now so favorably completed, giving rise in the reflective mind to feelings of gratitude to Him, who, we humbly believe, still condescends to rule and to reign in the hearts of all who in sincerity look to Him for guidance and support in all their movements. Whilst thus remembering our outward blessings, the desire has arisen that spiritual ones may not be withheld, as on them alone the value and future usefulness of the institution must rest. The late Joseph J. Lewis, of West Chester, near the close of a long life (a considerable portion of it in public, and who, after an absence of more than fifty years, gladly returned to the Society by a suitable and sincere acknowledgment) said, that the impressions made upon his mind by the preaching of Thomas Scattergood at Westtown, when he was about eight years of age, had never been effaced.

The venerable and beloved poet, John G. Whittier, speaks of Westtown in a private letter, as "a place where the principles and testimonies of the Society of Friends have always been upheld and maintained." The

desire that it may always continue to be so is felt by many.

The following passages taken from a letter written by a member of North Carolina Yearly Meeting, not long since, manifest that such feelings of interest are not confined to members of Philadelphia Yearly Meeting:—"I do feel a deep interest and earnest solicitude for Westtown Boarding School. Oh! may those dear Friends who have the care and management of it be strengthened and encouraged to continue to ask wisdom from above, and to have their spiritual eyes so anointed with the eye-salve of the Kingdom, that they may be able to discern between the precious and the vile. That the school may be kept in its ancient purity. That the innovations that have crept into our beloved Society and made such deprivations, may not be permitted to get in and then divide and scatter, as it has, whenever it has been allowed. It seems to me that the enemy is watching for opportunities to insinuate himself in some way or another to mar the beauty and good order that has been maintained. Oh! said my soul, may you be on the watch and stand firm in the faith of our Lord Jesus Christ, in maintaining the principles of Friends in their ancient purity. That whilst there has been much good done in that school, there may be much more."

W. P. T.

FOR "THE FRIEND."

"Go ye into all the world and preach the Gospel to every creature."

Christians agree in the matter of this being a Divine positive command of the Lord Jesus Christ. But they do not agree that Christians should look upon themselves as being called upon to go irrespective of a special call to the work. "Go—go," is insisted upon by some, while the needful requisites to the preaching of the Gospel are left out of sight. The command to "Tarry ye at Jerusalem till ye be endued with power from on high," is construed to mean that a *willing* mind constitutes the fitness and readiness; saying, Yes, I will go. Then, with purse prepared or made up, and the written gospel in hand, they start out into the world, professedly to baptize in the name of the Father, and the Son, and the Holy Ghost. Scriptural facts in the case are these—that without waiting upon the Lord to know his will, and witnessing the soul-cleansing operations of his Word dividing asunder between thing and thing, and giving a clear discernment as to the thoughts and intent of the heart, how futile would be all attempts to convert the world.

Professing Christians should be careful not to belie their profession. To preach Christ with an apprehended aim to obey and to please Him, by claiming authority from Him, but without being prepared and commissioned by Him, never did nor never will establish Truth in the view of nations. No man hath a right to claim that he is empowered to do that of which Christ himself is the author and sole distributor in the saving of souls. The Apostle declared, "By grace are ye saved through faith; and not of yourselves: it is the gift of God." "For it is God which worketh in you both to will and to do of his good pleasure." Therefore it is through faith in the cleansing operations of the Holy Spirit, that power and efficacy is felt in the healing of every malady that may infest the soul. The scriptural injunction is, "Be ye clean that bear the vessels of the Lord." Such as believe not in the secret, immediate influences of the Holy Spirit may mistake as to time and place, both when to go

and when to stay at home, when to speak and when to be silent. At the same time they may claim to be ministers of the Gospel.

It is true that the written gospel may be preached by the letter-learned with great flippancy of speech, but without power to convert the soul. Instances are recorded in the New Testament of individuals being filled with the Holy Ghost for a special purpose; but these did not receive it, except as administered by Him who gave it. Divine Grace represents the oil the wise virgins had in vessels wherewith to trim their empty lamps. This, no one mortal can communicate to another, as was instanced in the parable of Jesus—"Lest, said the wise, we have not enough for ourselves and you."

P. R. G.

Keep in Moderation.

In speaking of the harm done to the cause they wish to promote by those advocates, who indulge in extravagance of language or action, *The Christian Advocate* relates the following anecdote.

"Just prior to the late war a conversation occurred between two ministers. One said to the other: 'You and I agree in our sentiments, and if I am correctly informed you utter your sentiments unequivocally, and you keep the peace with your congregation. Even if they don't agree with you, they come to hear you. You preach abolition, don't you?'"

"O, yes, every body who hears me knows that I am in favor of the abolition of slavery."

"Well, I can't keep the peace with my people. They are nearly all down upon me now, and they say that as soon as the time comes around to vote they will vote me out of my place, and I cannot understand it."

"Well," said the minister first addressed, 'I will come around sometime and hear you, and if I can see any thing which accounts for the general dislike which all parties have of your preaching I will frankly tell you.'

When a suitable occasion came the visit was paid; the visiting brother arriving during the first prayer. After the usual appropriate supplications for a public congregation, the pastor said, "And now, we commenced upon the condition of four millions of our fellow-creatures ground down under the iron heel of slavery. We know, O Lord, that there are some people, even in this congregation, so low, base, and mean, that they don't like to hear Thy servant pray for the slaves; but, O Lord, all the powers of hell, much less such mean tyrannical spirits as those which we have to contend with here, can't close Thy servant's lips. He will pray for the slave if he dies on his knees," and much more of the same kind. He was taking advantage of a prayer addressed to the Deity, and using Billingsgate against the people who were there, and who were unable to reply or defend themselves. Afterward his friend told him that though he was an abolitionist, during that prayer he almost sympathized with the other side. The peculiarity in this brother was constitutional. Everywhere he went he broke up congregations, though he had great natural abilities. He denounced all offenses, whether against God's law or simple propriety, in the unvarying tone of harsh malediction. Yet this man could have uttered the same ideas with moderation and candor, and carried his congregation with him. Force is not the equivalent of violence, nor are earnestness and maniacal excitement convertible terms. "Enthusiasm does it; fanaticism overdoes it."

*A fourth edition of the History and Catalogue has been nearly, if not quite completed, and it is hoped, will soon be issued.

Consistency.

The following incident illustrates the importance of those who represent the Society of Friends, being in themselves consistent examples of the proper effect of its principles.

"In the Twelfth Month, 1797, our friend Thomas Scattergood, from America, inclined to have a meeting with the inhabitants of Litchfield; the town hall was applied for as the most suitable place; the bailiff seemed willing, but it being wanted on a First-day morning, he did not chuse to consent without leave from the Dean. Two young men went to him, who conversed with him some time on the subject, but could not prevail to obtain the hall; however, another place was procured, and a satisfactory meeting held. The people of the town reproached the conduct of the dean and bailiff, many speaking to them afterward of their unchristian conduct.

"A few days after, the following letter was sent, addressed to Thomas Robinson, Birmingham, without any signature:

"Dear Sir,—In consequence of a meeting held by persons of your profession, in the city of Litchfield, I am induced, from motives of good esteem, to lay before you and your friends the alleged reason by which you were not accommodated with the hall of this place.

"The Quakers are a people few like to combat with, and the Dean of this place, whether from prejudice or not (shall not say, of course,) will oppose where opposition in point of principle is the pretext; and, therefore, to ask favors from a man whose principles of religion are diametrically opposite to yours, requires men sound in your doctrine, solid and sedate in deportment, and wisdom equal to the task; instead of which, I fear the two young men appointed were not at all qualified with a branch of so dignified a character, which their insufficiency in point of giving answers, clearly proved. They were too much like ourselves in both deportment and manners to avail, and their contentances not even tinged with that overpowering awe which so very eminently characterizes many of your persuasion. I therefore mention this with desires, that should a like opportunity offer itself, you would appoint men of that order, whose appearance will not only request, but demand. Therefore, with sincere desires for the further preservation of every Christian denomination, but particularly those whose integrity of heart is the dictator of every action,—I remain a friend to sincerity, and the reverse to the hypocrite. R. A.

Litchfield, January 1st, 1798."

MANY of the rules which we with great labor committed to memory in our school days are gradually suffered to fall into the mind's background, and gradually to be wholly forgotten. It is well that it is so. The learning of them served a good purpose. It taught us at that time to fix the attention and to hold the mind to its work upon a given task. It prepared the way for the time when we should clearly understand the matters with which the rules were dealing, and could afford to forget the rules because we did not need them longer. It would be a clog upon the mind's free and healthy action if we had to carry with us all the apparatus and machinery by which our powers had been trained. It would be as if the house must always have the ladders and scaffolds standing around which aided so greatly in its building. They were means, not ends, and may well disappear.—*Selected.*

WHO HAVING EYES SEE NOT.

First Traveller:

Below the burning earth,
Above the blazing sky,
My throat was parched, my heart is faint,
What God that I might die.

Second Traveller:

I've journeyed all the day
Beside a pleasant stream,
Where lilies bloom among their pads,
And quiet cattle dream.
A fruitful, tranquil land,
Men call it Arcady,
And I will show thee where it lies,
If thou wilt come with me.

First Traveller:

Where is that pleasant land?
My heart is beating cold;
Methinks the journey there is long,
For one so weak and old.

Second Traveller:

"Where is that pleasant land?"
Dost thou not hear and see
These cheerful sounds and lovely sights?
Lo, this is Arcady.

First Traveller:

No, nothing can I see
But these same brown skies,
Nor hear, except from dusty grass,
The insects' murmured cries.

Second Traveller:

The choral sounds so sweet!
Those skies so soft and blue!
Couldst thou not see some time ago
How lush the grasses grew?
I cannot make thee hear,
I cannot make thee see,
And I know beyond a doubt
That this is Arcady.

—*Christian Pyle, in "The American," of Philadelphia.*

CHRIST IN THE TEMPEST.

Storm on the midnight waters. The vast sky
Is stooping with the thunder. Cloud on cloud
Reels heavily in the darkness, like a shroud
Shook by some warning spirit from the high
And terrible wall of heaven. The mighty wave
Tosses beneath its shadow, like the bold
Upheavings of a giant from the grave
Which bound him prematurely to its cold
And desolate bosom. Lo, they mingle now—
Tempest and heaving wave, along whose brow
Trembles the lightning from its thick fold.

And it is very terrible. The roar
Ascends to heaven, and thunders break
Like a response of demons, from the black
Rifts of the hanging tempests—yawning o'er
The wild waves in their torment. Hark! the cry
Of the strong man in peril, piercing through
The uproar of the waters and the sky:
As the red bark one moment rises to view
On the tall billows, with the thunder cloud
Closing around above her like a shroud.

He stood upon the reeling deck. His form
Made visible by the lightning, and his brow
Uncovered to the visiting of the storm,

Told of a triumph man may never know—
Power mightier than he ever, he still!"
The great waves heard Him, and the storm's loud
tones
Went moaning into silence at his will;
And the thick clouds, where yet the lightning shone,
And shot the latent thunder, rolled away
Until no trace of tempest lurked behind,
Changing upon the pinions of the wind
To stormless wanderers, beautiful and gay.

Dread Ruler of the tempest! Thou before
Whose presence boweth the uprisen storm;
To whom the waves do homage round the shore
Of many an Island empire, If by form
Of the Great One thou wilt thine eye may claim
Thine infinite regard! O breathe upon
The storm and darkness of man's soul the same
Quiet and peace and humbleness which came
O'er the roused waters, where thy voice had gone
A minister of peace—to conquer in Thy name.

J. G. Whittier.

MY SPRINGS ARE ALL IN THEE.

Unto the hills eternal
My longing eyes I lift;
Through wintry clouds or vernal
There is an azure rift
My faith-illumined vision
Sweeps o'er the crystal sea
Into the fields Elysian,
"My springs are all in Thee."

In Thee, exhaustless Fountain,
Source of all life and power,
From out Thy holy mountain
My strength comes every hour.
And Thou alone canst keep me,
A channel deep and free,
Through which Thy love flows richly,
"My springs are all in Thee."

O'er sorrow's roughest billow
In darkness Thou wilt guide,
Thy promises my pillow,
Under Thy wings I hide;
I joy in meditation,
My comfort is in Thee;
Thou art "my expectation,"
"My springs are all in Thee."

—*Christian Advocate.*

Mistaken Eyesight.

In some cases there is a constant tendency of the eyes to deceive and make mistakes—so much so that it is necessary to allow for the deception, and make a thing crooked in order that those who look upon it may believe it is straight. For example, a tall column, if made perfectly straight in its sides, would appear to us to be slightly concave, or smaller in the middle than at the top and bottom. Hence the Greeks in making their Doric columns were obliged to swell them a little in the middle, and thus make them appear straight.

A similar deception is practised on the eye in making the letter S, both ends of which are supposed by many people to be alike; but when it is turned upside down we at once see the difference, for the lower end is made larger than the upper, and when it is reversed this difference seems exaggerated, and appears greater than it really is.—(S.)

A long horizontal line deceives the eye. The front of the Grecian Parthenon, which is one hundred and one feet, three and a half inches long, curves upwards two and one-eighth inches in the centre, and then appears perfectly level to the eye. If it were level it would appear to sag in the middle. So the building all through is distorted a little, that it may appear to be correct. The straight columns lean inward a little, that they may appear to stand perfectly true and plumb. The corner pillars slant still more, and the corners are made with broader angles, that they may appear to be right-angled.

Now all these, and many similar facts, show that the human eye is not to be depended upon in all respects; and that a thing which seems to man's eye to be *just right* is quite sure to be a *little wrong*. That which looks to be straight is crooked, while that which is really mathematically straight and correct, appears crooked. The world's eye is perverted. It does not see things just as they are. There is a little variation, a slight perversion, and if we do *just right* we shall be quite sure of having the appearance and reputation of doing wrong. A man, then, must chuse between doing right and seeming right. If he does right, he will not *seem* right. If he is determined to *seem* right, he will be obliged to swerve from the paths of exact righteousness. Man's natural eyes are not more perverted than the eyes of his understanding.

Through all the ages of human history the men who have feared God and wrought righteousness have been under constant reproach as wrongdoers. Their acts have been misunderstood, their motives have been misrepresented, and they themselves have suffered reproach as evil doers, for doing what was the will of God.

The Guahivos.

In the number for Twelfth Month, 1887, of *Tinehi*, a journal issued in British Guiana, is an interesting description of a visit paid to one of the tribes of aboriginal Indians who inhabit the thinly settled country east of the Andes and near the headwaters of the river Orinoco. It is but seldom, in these days of commercial and colonizing enterprise, that a traveller has such an opportunity of seeing a people almost unaffected by the influences of modern civilization. The writer of the account, E. A. Wallace, says:—

"During the revolution in New Granada, in January, 1885, my business of plant-collecting being prevented by want of mules and muleteers, owing to the revolutionary authorities having stronger claims on their services than I had, I was led by curiosity to visit San Martin. This village, which is situated near the head of the river Meta, (a tributary of the Orinoco) and about twenty leagues from the slopes of the Andes, bears the worst name for fever of all the towns and villages in the neighborhood, and on this account has hardly ever been visited by foreigners. I was therefore very agreeably surprised to find it the cleanest and apparently the healthiest place that I had visited. The inhabitants appeared to be well-to-do, and what is rather strange in this part of South America, not a single beggar could be seen.

"While exploring the neighborhood, I heard many tales of a strange tribe of Indians called Guahivos, who were living on the river Ariare, about a hundred and fifty miles distant, some of whom occasionally visited San Martin. Having a little leisure, I determined to pay these Indians a visit, and finding on enquiry what articles of negotio would be likely to please them, I loaded my saddle-bags and started quite alone, followed by many an *Adios* from my acquaintances in the village, who never expected to see me again.

"The little that was known of this people was gathered from a few Indians who had occasionally visited San Martin for purposes of barter. The Spanish Conquistadores had never subjugated them, and it was commonly reported that no one had ever visited their habitations. As I held the same opinion as "Walking Stewart," that no tribe of people would wantonly injure one who unreservedly threw himself upon their hospitality, the gloomy forebodings expressed by my friends in San Martin had but little influence upon me. It was useless to look for a guide—nor did I want one. Their villages were known to be on the left bank of the river Ariare, which runs past San Martin; I had therefore only to ride down the broad savannah, keeping the forest of the Ariare on my right hand, and I must eventually arrive at my destination.

"I set out from San Martin riding a good mule, and taking with me sufficient food for a few days, armed also with a double-barrelled breech-loader and a revolver, more as a means of obtaining food and as a protection against wild beasts than any defence against the In-

dians. After six hours' riding I reached the last cultivation of the Columbians, where there lived a family engaged in the business of stock-raising—the only occupation on these glorious plains so well suited for it—and here I passed the night."

"Game was in abundance, and I had no difficulty in procuring more than I could eat. Each night the grass was my couch, as it was safer to sleep in the open plain than to sling a hammock in a belt of forest, since pumas and jaguars abound wherever the trees afford them a shelter. About noon on the fourth day I reached a small village of the Indians, deserted apparently at my approach. Having tied up my mule, I took out a few strings of beads, and looked about for any trace of a human being.

"On peeping into the adobe hut, which was very dark and clouded with smoke, I discovered an old woman and very infirm, with a sick child in a hammock. To each of these I gave a string of beads, with which they were evidently pleased; but they were apparently scared, and it was not possible to make them comprehend anything by means of signs. Soon two younger women came in, and these also received a string of beads. With them I succeeded better, and they brought me a piece of cassava bread. Presently the others came in by twos and threes, till they numbered about thirty. All the men carried bows and arrows, and some a long blow-pipe in addition. The arrows were about seven feet in length and were furnished with a very formidable head consisting of a blade of bamboo, as sharp as a razor, and from twelve to fifteen inches in length, by two inches in width, appearing capable of making a fearful wound. Fortunately I had made enquiries in San Martin as to what the Indians particularly feared, and had accordingly provided myself with some pieces of steel to strike on flint, some roughly-made metal arrow-heads, some red and blue handkerchiefs. To all the women I gave beads, but with the men I could make but little headway, until an old man, who was evidently their chief, arrived. Him I propitiated with a piece of steel and an arrow-head, with which he was childishly pleased. The others now crowded round, and to every man I gave some trifling present. Our only means of communication of necessity was by signs, which they were very quick to interpret. They were extremely curious about my coat, feeling it all over, and looking at it inside and out.

"This encampment is a few hours' journey above the junction of the rivers Ariare and Gavivare, and is situated at the edge of the belt of forest bordering the former stream. No one is stopped in the houses at night on account of the mosquitoes; these beset themselves to the grass of the savannah; some to the trees, among which they slung their hammocks, high up out of reach of these pests; others, among whom was myself, slept on a sand-bank by the river-side.

"I stopped six weeks with these Indians, who treated me with the greatest kindness. They lived on game, of which there was an abundance, fish, which they killed with bows and arrows, and maize, cassava and plantains. Besides these they ate several fruits which they procured from the forest, and among these I noticed the seed of a palm, known in British Guiana under the name of Durabana, from which "bush chocolate" is made.

"Their clothes were made of the inner bark of a tree, very tough and very close in texture; they called it *taka-taka*. The men wore a small

lap of this material; but the women made use of a piece about four feet square, which they drew across the body under one arm, and then fastened over the other shoulder, thus giving themselves the appearance of being clothed in a sack which had been cut open along the bottom and one side. Men and women were all more or less painted in red and blue, especially about the face, chest and arms.

"They are a rather short race, but very sturdily built, the muscles of their arms being very finely developed. They are of a more decided red color than any other tribe I have seen. They are exceedingly good shots with the bow and arrow, and are very skillful in killing the turtle, which they shoot in the following manner: when a turtle is seen floating on the surface of the water, they shoot an arrow high into the air, and this arrow, falling with great power and velocity, pierces the shell of the animal. These arrows are fitted with a loose head, triangular in shape, very heavy, and made of some extremely hard wood. This head is attached to the shaft by a long piece of twine, which is wound several times round it, and, as the turtle dives, the shaft becomes detached, and floating on the surface of the water, informs the hunters of the movements of their prey. Their skill in this mode of shooting is really surprising. Except those who had been to San Martin, none had seen fire-arms; and they marvelled greatly over the hole that a bullet from my revolver had made in the stem of a tree, and were even more amazed when I brought down a couple of muscovy ducks, right and left, with my breech-loader.

"The men wore pieces of reed, about four inches long, passed through the ears, nose and lower lip, giving them a very grotesque appearance. These people are evidently a race of hunters and probably a warlike race, as they seemed to have no industries. At the same time they appear to be a temperate race, as during my visit they did not have any drunken fest, which they would surely have done on such a (to them) great occasion, if such orgies were at all in vogue."

"I obtained from them a curious powder, which is taken like snuff, and which has the effect of making them drunk. It produces, besides, the effect of opium, as they were evidently in a happy state while under its influence. This substance, which seems to be prepared from a gum, is called *Yopai*, and is very volatile—its virtues being lost in a few moments."

"Nothing happened to mar the peacefulness of my visit, and we parted with many expressions, or rather signs, of friendship. I gave them all the little things I could spare, and they loaded me with arrows, hammocks, and other curiosities, until my mule and myself looked somewhat like a travelling caravan. The chief sadly wanted my coat, but this was more than I cared to part with. Kingsley mentions the Guahivos in "Westward Ho!" as belonging to the earth-eating tribes, but I saw nothing during my visit that would corroborate his statement."

Dear Friends,—For our gatherings and meetings in the name of Jesus have we suffered imprisonment and spoiling of goods, and stoning and beating, and shedding of our blood and life itself; so they have been purchased at a dear rate. Therefore all in the power of God keep your testimony in the name of Jesus for them.—*George Fox.*

Oriental Lights.

"For They are Free."—The case of the spies whom Joshua sent from the south country into Palestine, and those that he sent to Ai, illustrates how universal it is for Orientals to overestimate or to underestimate difficulties and dangers. To sit down and count the cost before any important action is not one of their characteristics. They do almost nothing in a calm and deliberate manner. Although men and women in years, they are still in many respects simply children,—impulsive, passionate, and reckless of health, property, and life. Time and again I have conversed with men who were ready to undertake some difficult task, which, I was certain, was not in their power to accomplish. They were guided, not by reason, but by imagination. To illustrate how common it is for Orientals to act before deliberating, I may mention, what indeed is a thing of not infrequent occurrence in that country, that thirty or forty of the principal men of Beit Jala, an important village near Bethlehem, called upon me, stating that they were in trouble with their authorities, and that they wanted to "renounce their religion and adopt the American religion." This, in their estimation, was equivalent to changing their nationality. "To adopt the American religion" would make them American subjects. Their story was a long one, but after a while I persuaded them to wait and consider the matter, and call again the next week. By that time the affair was over, and they had settled back into their old ways. In some cases, what I have in mind should be described as thoughtlessness, in others as recklessness. Unfortunately it enters also into moral actions, such as truthfulness and honesty. That an Oriental will lie as soon as speak the truth is a common remark, and one which experience confirms. Charity leads us to feel that the Oriental mind does not comprehend clearly the distinction between right and wrong. When, however, Orientals sin, nothing is easier for them (if they are found out), than to repent; that is, by words, manner, and solemn promises. Both in their sinning and in their repenting, the weakness of their moral character appears.—*S. Merrill, in S. S. Times.*

Natural History, Science, &c.

Balloonists in Danger.—On the 20th of the Eighth Month, a party of three persons ascended in a balloon from a military station in Belgium. The breeze was blowing from the southeast, but when a certain height was reached, the balloon encountered a contrary current, and passing over Antwerp, drifted seaward. The Scheidt was crossed twice, and the aeronauts thought they were travelling west, when in reality they were drifting to the North Sea. At 2 A. M. the lights of fishing boats were perceived, and the fishermen shouted that they were drifting to sea. Ballast was thrown out, but at dawn (5 A. M.) the balloon descended once more, and the car touched the water. All the remaining ballast was thrown out, and the balloon ascended for a short time; but catching sight of a steamer, the party descended, and were rescued by a boat dispatched by the steamer; and were landed at Dunkirk on the 22nd. The balloon, relieved of its weight, again ascended, and when last seen, was travelling towards the Scottish coast.

Breaking Glass by Electricity.—In making window glass, the glass-blower first blows out a large cylinder, the bottle-shaped end of which is cut out by draining out of the pot a thin thread

of semi-fluid glass, which is quickly wrapped around the cylinder, heats the part it comes in contact with, and a crack is made by touching the place with a cold iron. In place of this method, in some factories, a fine wire is wrapped round the cylinder at the place where the fracture or cut is desired, and the ends of the wire connected with a small galvanic battery. The wire speedily becomes white hot from the current of electricity passing through it; and then a single drop of water on the heated glass causes a clean breakage.

The "New Process" Flour Manufacture.—The *Southern Workman* contains an account of the flour mills of Minneapolis, which describes the "New Process" of making flour by *crushing* the wheat instead of grinding. This is effected by passing it through successive pairs of chilled iron rollers, grooved with varying fineness and at varying angles.

They are arranged in seven grades, with seven pairs in each set, so that the grain is broken forty-nine times. After each grinding, or "reduction," it is raised again to the top of the mill to pass through the "diamond reels." These are long cylindrical frames, covered with bolting cloth of canvas or silk, of all grades of fineness, from 18 to 157 meshes to the square inch. The central part of the grain of wheat is softest and most easily ground. The harder layer, which adheres so obstinately to the inner coat of the bran, is, however, the best and most nutritious part of the wheat. To save this "middlings," separate it from the poorer flour and purify it from the bran, is the triumph of the "new process."

After all its forty-nine crushings, the "middlings," now reduced to a coarse flour or meal, is still dark with obstinate specks of bran. In a frame of fine bolting cloth, through which the middlings flour can pass, but gradually, it is shaken and shaken. The persistent bran particles have one weak point which proves fatal to them. They are lighter weight than the particles of flour—like the chaff which the wind driveth away." A delicately adjusted fan creates a suction above the frame, and as its shaking tosses the brown and white atoms into the air, the light-weights are caught up by the whirlwind and whisked off on a horizontal current into a chamber where blanketed shelves await them, on which they can finally settle as must "dust to dust."

One more most "intimate enemy" remains to be disposed of. This is the wheat germ, which, indispensable as it is from the vegetable's point of view, is quite otherwise from the baker's, making the bread "sticky." It has passed with the middlings through all the ordals of the reels and rollers. But, like the bran, it has one weakness at least decisive—not lightness, but softness, a set of smooth, white, innocent-looking porcelain rollers rightly set, have no effect on the gritty little middling bits,—which indeed roughen them in time—but readily press the tender germ out of shape so that it is rejected by the silk-meshes.

And now, having stood all tests, the "middlings" hastens to its last "reduction." This is effected by no "new process," but between such primitive "burr-stones" (harring some improvements in size and perhaps otherwise) as burred away over the falls of St. Anthony half a century ago. We were shown one handsome pair of a "violet flint" stones, imported from France at a cost of \$800. The seventeen other pairs used in the mill are of the American white flint.

After the burr-stones, the very best grade of flour gets one more going over in a cylinder set with whirling knife-blades, supposed to make it lie more lightly, without lumping. Then, nothing can excel the fineness of the wheat. To keep it always up to the standard, a bakery is constantly running in connection with the mill, putting the flour every hour to the "proof of the pudding," which, as is well known, is "in the eating." If any loaf falls below the mark in the opinion of the expert taster, the fault is not laid to the baker, but sought for in the machinery, which may sometimes need repair or readjustment.

Lava Soil.—The pulverized lava soil in the volcanic island of Hawaii, when irrigated, is found to be extremely productive. This is supposed to be due to the presence of a much larger proportion of phosphates and nitrogen than is contained in most soils. To the same cause is ascribed its durability. Another advantage which it possesses is its good natural drainage; so that it is found to be peculiarly adapted to growing the sugar-cane, which is extensively cultivated there.

Extraordinary Memory.—Professor White, in the *Chautauquan*, says that a woman who is a member of Howard Crosby's congregation in New York, has been writing out from memory, without a note, her pastor's sermons after hearing them. She has written out some 2000 sermons in the past 25 years, and Dr. Crosby declares that she never omits a conjunction or article, and follows him even in his Greek, Latin and Hebrew expressions.

Force of a Fungus.—The extraordinary force exerted by growing fungi was shown the other day in a New Hampshire village. It was noticed that a cone about seven inches in diameter was rising in the middle of an asphalt walk. Beneath it a mushroom was discovered, which had cracked and raised a solid stretch of asphalt two inches in thickness.

The Army of Bears.—The peasants of the villages in the Russian Government of Olomet are expecting great things from the sportsmen's detachments which have recently been introduced into the army. It appears that the district is overrun with bears, and that, in a number of villages, the inhabitants are literally afraid to go out of their own four walls. The cattle which had been grazing on the meadow in the vast forest surrounding the district have all been devoured; there is neither horse nor bull to be found with which to plow fields, and not a peasant dares turn out for the gathering of the annual harvest of mushrooms and berries in the woods. A sportsmen's detachment has, however, been ordered to the district, and it is to be hoped that the beleaguered monks will soon be rescued from their uncomfortable position in a district encircled and overrun by bears.—*Pall Mall Gazette.*

The Loon or Great Northern Diver.—In the summer of 1887, I spent a few weeks on the borders of Trout Lake, St. Lawrence County, N. Y. This beautiful little lake-dotted lake, some three miles long, has been inhabited for years by three or four pairs of loons. There they lay their eggs and rear their young, and there I found a good opportunity to study them. On one occasion a small party of us discovered a nest. When we were yet a good way off, the wary siter slid from its sight into the water, darted along beneath our boat, and was far out into the lake before she came to the surface. The nest, simply a little cavity in dry mud, was on

the ruins of an old muskrat house, not more than eight or ten inches above the water. There were two very dark eggs in it—never more than two are found in the nest of the loon—nearly as large as those of a goose.

The time of sitting, as I was informed, is four weeks. Wilson says of the loons that "they light upon their nests;" but a careful observer, who had several times seen the female make her way from the water to her nest, told me that they shove themselves to it on their breasts, very much as they push themselves in the water.

It was also informed that the young are never fed upon the nest, but are taken to the water on the back of the mother, where they remain until they are fed for a time, and then are launched upon the waves for life. At this age one can throw up to them and take them in the hand, which they delight in giving hard nips with their long and limber bills; but when a month old they seem as wild and cunning as their parents.—S. P. Cheyne, in *Century*.

Pure Ice.—Pure ice can only be produced from water free from impurities, and ice for domestic or surgical purposes should never be collected from ponds or streams which contain animal or vegetable refuse, or stagnant and muddy contents.

Geology of the Bermuda Islands.—At the Academy of Natural Sciences, Phila., Professor H. Phillips communicated some of the results of his exploration of the Bermuda Islands, made last summer in company with members of his geological class.

After describing the geographical position of the islands, he stated that they extend northwest and southwest for about twenty miles. They are surrounded by a coral reef, which on the north and east, approaches them in places to within a few hundred feet and is exposed at low tide, but which on the north and west is fully nine miles distant and always submerged, with the exception of a portion known as North Rock. Vessels can only reach the islands through an opening at the southeastern section of the reef, opposite St. David's Light. The land itself encloses three bodies of water, of greater or less extent, the general ascertained depth being 14 fathoms.

The land is uniformly low. The greatest elevation on the island does not exceed 200 feet.

The rocks and soil are formed of carbonate of lime. The highest points are simply due to the action of the wind and surf on the denuded and decomposing coral growths, the elevations, occurring where the wind has been active in piling up the sand. When sections are made, lines of stratification are found in the very thin layers known as paper sheets. In these strata various shells are found imbedded, proving conclusively that they have been covered by the action of the water. The ordinary soft rock, in process of removal, or when required for building material, is sawed into blocks and allowed to madden in the sun. In many places, however, harder material, called by DuRoi the base rock, is found. The bottom of the lagoons is everywhere covered with a fine, pulpy, white ooze, composed of the remains of foraminifera and disintegrated rock material.

Items.

Southern Denunciation of Lynching.—The *Durham N. C. Daily Post* (June 18th):—

"The news of the lynching of three Negroes at Oxford on Saturday night, should cast a gloom over our entire State; the people of North Carolina have the reputation of being a peaceable, law-abiding

people, and every one of her citizens should take pride in sustaining this reputation. Every such crime as this lessens the reputation. No matter how many the men were of the offensive charged against them, they had a right to a fair and impartial jury; then, if pronounced guilty, they should have paid the penalty of their crimes; the fact that a man has committed a capital crime justifies no man or set of men in taking the law into their own hands and inflicting that punishment which the law reserves to itself.

"Besides being radically wrong, lynch-law is a dangerous precedent to establish. The more frequently such crimes are committed in a community, the more careless will men become in investigating the circumstances surrounding murders, arson, &c., and innocent men will often be in danger of losing their lives at the hands of enraged mobs."

Murders Produced by the Use of Alcohol.—In an article on Homicidal Mania, by Dr. George H. Savage, in the *Fortnightly Review* for Fourth Month, the use of alcohol is mentioned among other causes which lead to the development of this homicidal tendency. The author says:

"Murders are often committed as the result of the loss of control produced by drink, and I need only refer to each assize for cases in evidence.

"Among the results of chronic alcoholism (drunkenness) in this disorder the senses are often perverted, and the friends' faces appear to be like those of devils, and the painful sensory impressions may drive the patient into a state of frantic panic in which murder of a wholesale or general character may occur. In more chronic alcoholic poisoning the patient may be more deeply affected, and from these unusual feelings the patient may believe that he is being conspired against.

"Once I saw a foreman of works who was fully persuaded that the workmen, whom he did not suspect in a strike, were in league against him; and it was only when a dangerous thing to have allowed him to continue with his work, that he was cured."

"In another case the uneasy feelings led to ideas of conspiracy and plot, and this to a belief that some one was doing all this to get rid of the husband of a pretty wife. The same one was soon identified as the doctor, of whom the patient became dangerously jealous. In a man whose mind is so affected as the result of chronic alcoholism, he is a very dangerous man. The one peculiarity of nearly all insanity drink is the general moral weakness produced; so that lying, dishonesty, immorality, and malignant ingratitude are the results."

Penance.—"While I was in San Salvador I saw a strange sight in the street one fine day. A man charged with a large penance by crawling from one church to the other. Both churches were in the same street, and the distance between them was about half a mile.

"The man had on a white suit of light over-clothing, and a white cap was drawn down over his face. He crawled on his elbows and knees, and in the middle of the street, over the irregularly laid jagged stones.

"One or two women stayed with the man and spread pieces of cloth to soften somewhat the hardness of the road. What was his sin I did not learn."

The Christian Advocate publishes the above, and adds the judicious comment, that the man had the spirit of the Lord who cried, "Lord, have mercy on me a sinner, this penance was not needed. If without that spirit, it could do no good.

Masonic Ceremonies in the Erection of a Methodist Meeting-house.—In laying the corner-stone for a Methodist meeting-house recently, the ceremonies were conducted by the Masons. This action is condemned by the *New York Advocate*, a leading Methodist Journal, on the ground that no human services should be allowed to participate in the religious services of the Methodist Episcopal Church.

A Large Gift.—Daniel Hand of Clinton, Conn., has contributed to the American Missionary Association, more than one million dollars, the income from it to be used in the education of Negroes in the Southern States. The circumstances connected with this gift are interesting. D. Hand was a native of Connecticut, and at the breaking

out of the war of the rebellion was in business in Charleston, S. C. As he retained his allegiance to the General Government, he was obliged to go North, and the property which he could not convert into cash, he left in charge of his clerk, George Williams, with instruction to use it according to his judgment. Williams proved a faithful steward, and invested in Pine lands, which advanced much in value. Hand, supposing his property had been confiscated by the Confederate Government, allowed more than twenty years to pass before making any inquiries—and did not have a settlement of accounts until 1857. As the money was made in the South, and he had no family living that needed support, he concluded that the right disposition to make of it, was to use it in providing for the education of the Negroes there.

THE FRIEND.

ELEVENTH MONTH 24, 1888.

After the close of a public meeting held at Parkerville, Pa., a few weeks since (one of those which have grown out of the concern of our late Yearly Meeting), a person who had attended it, and had probably been sensible of the spiritual life with which it was favored, asked one of the members of the meeting, Why Friends did not hold such meetings every week? adding, that if they were held, he would attend them.

What reply was made to the query, we do not fully know; but the first thought that occurs in reference to the subject is, that such meetings can only be held properly and profitably, as the Head of the Church impresses the minds of his servants with a sense of duty in that direction, and opens the way for the accomplishment of the service. He alone knows the hearts of the people, and what will most effectually promote the spread of his kingdom among men; therefore, there can be no wiser course followed by those who love Him and his cause, than to wait on Him for direction, both when to move in the holding of such meetings; and, when they are convened, how to hold them to his honor.

The spiritual growth of men—their progress in that knowledge of God and of Jesus Christ whom He has sent, which is eternal life—depends on their individual communing with Him, and yielding themselves unreservedly to the operation of his saving Grace to assure them on having the feelings frequently excited by the eloquence of man, or even by messages which may be delivered with Gospel authority. The end of true ministry is to awaken people from a state of indifference, and to turn their attention to the Heavenly Teacher in their own minds. It is one of the great dangers attending a stoted ministry, that the hearers are prone to rely upon it for spiritual refreshment, instead of laboring to draw near in spirit to the unfailing Source of life and light. A living ministry is a great blessing to the Church, and is a precious gift from its holy Head; but, like other gifts, those who partake of its ministrations may not make the best use of them, but may so depend upon them as to neglect that individual exercise which is needful for their spiritual health.

We suppose that he who asked, Why Friends did not hold such public meetings every week? had the opportunity, if he wished, of meeting regularly with those Friends, who twice a week convene in their meeting-house for the purpose of performing Divine worship. If all such persons, who are in measure awakened, could be brought to see that the Spirit of God is the only

source of spiritual life and health; and that its power may be felt to perform its blessed offices in the heart, without the intervention of any man; there would be ground to hope for a true revival of religion.

An unknown correspondent sends a communication from Iowa, to which no name is attached, expressing the desire that both "members of the Church," and those outside of its fold, should see the necessity there is for all of us "to lay up our treasures in Heaven," and not have their time and thoughts absorbed in laying up earthly treasures.

We do not feel bound to publish anonymous communications, but in this case, we can endorse the concern of the writer, who, in support of his views, refers to several passages in the New Testament, from which the following are selected:—"Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and thieves break through and steal; but lay up for yourselves treasures in Heaven, where neither moth nor rust doth corrupt, and where thieves do not break through and steal." "Ye cannot serve God and mammon." Matt. vi. 19, 20, 21.

"For what is a man profited, if he shall gain the whole world, and lose his own soul?" Matt. xvi. 26.

"The cares of this world, and the deceitfulness of riches, and the lusts of other things entering in, choke the word, and it becometh unfruitful." Mark iv. 19.

And in the 12th chapter of Luke, the parable of the rich man whose ground brought forth plentifully, and the advice which our Saviour gave to his disciples. "Take no thought for your life, what ye shall eat; neither for the body what ye shall put on;" "but rather seek ye the kingdom of God."

SUMMARY OF EVENTS.

UNITED STATES.—The Department of State has been officially informed of the condemnation and seizure by the Haytian Prize Court, of the American steamship *Haytian Republic*. The condemnation was pronounced on Eleventh March. The following day the United States Minister protested against the proceedings, alleging that the Prize Court was illegally constituted, and appealed to a higher court. He also advised the captain of the seized vessel to refuse to surrender the craft. The United States man-of-war was stationed on the scene the same day to support the protest of the United States Minister.

The Canadian steamer *Osiria*, which arrived at Queenstown on First-day evening, made the fastest eastward run on record. Her corrected time was 69 days, 2 hours and 55 minutes.

An interesting astronomical expedition is being fitted out at Harvard College for a two-fold purpose. The first in order of time will be an expedition to California for observation of the total eclipse of the sun on First month last, 1887. Immediately after the eclipse one of the corps of observers will proceed to Peru, taking with him a part of the apparatus. He will be joined later by others, and the work will then be entered upon, which has been a year or more in contemplation of making a complete survey of the southern heavens.

The State of West Virginia has chosen Democratic Presidential Electors.

It is now estimated that not less than a million dollars have changed hands in Indiana alone on the result of the election.

The *New York Journal of Commerce*, the organ of the business community in New York city, and politically Democratic, declares in a leader against the proposed course of obsequious negotiation, and urges the Democrats to join Republicans in abolishing all internal revenue laws.

Forty-two dead bodies have been taken from the fire in Rochester, noticed in last week's Summary. The engines at the burned works have been arrested on suspicion of having set fire to the building.

An earthquake occurred in California on the 18th instant. The University of California reported the shock to have been the severest since 1871. In some places children are said to have rolled out of their cradles.

A telegram from Albuquerque, New Mexico, says the grass in that region is shorter than it has been for five years, and a hard winter will cause a loss of millions of dollars to stock growers. All the cattle shipped up to date have been corn fed, and the supply of corn is running low.

Springfield, Ohio, has a breed inspector. Seventy new cases of yellow fever and twelve deaths, were reported at Jacksonville, Fla., for the week ending Eleventh Month 19th. The disease has appeared in a mild form in South Jacksonville, across the St. Johns River, where a number of cases are reported.

An order has been made by Judge Allison, dividing the Twenty-fifth and Twenty-eighth Wards in this city, on the lines reported by the Commissioners appointed by the Court and ratified by the voters at the two wards at the recent election. Part of the former Twenty-fifth Ward becomes the Thirty-third Ward, and part of the former Twenty-eighth Ward is now the Thirty-second.

Deaths in this city last week numbered 254, an increase over the previous week, and a decrease of 48 compared with the corresponding period last year. Of the foregoing 184 were males and 170 females; 40 died of consumption; 32 of pneumonia; 21 of old age; 19 of diseases of the heart; 18 of diphtheria; 18 of convulsions; 11 of cancer; 11 of inflammation of the stomach and bowels; 10 of paralysis and 9 of typhoid fever.

Markets, &c.—U. S. 4½, reg. 107½; coupon, 108½; 4's, 122; currency 6½, 121 1/4.

Cotton was quiet but steady at 10¢.

Wool—Clear and Medium—Western and Pennsylvania superfine, \$3.75 a \$4; do, do, extras, \$4 a \$4.25; No. 2 winter family, \$1.26 a \$1.60; Pennsylvania process, family, \$4.75 a \$5; Pennsylvania roller process, \$5 a \$5.75; fine clear, \$5 a \$5.50; do, straight, \$5.50 a \$5.75; Indiana, clear, \$5.50 a \$5.75; do, straight, \$5.50 a \$5.75; St. Louis and Southern Illinois, clear, \$5 a \$5.50; do, do, straight, \$5.50 a \$5.75; winter patent, fair to choice, \$6 a \$6.75; Minnesota, clear, \$5 a \$5.75; do, straight, \$5.85 a \$6.50; do, patent, \$6.50 a \$7.15. Rye flour extra and lower; 100 barrels sold at \$5.80 per barrel.

Grain.—No. 2 red wheat, \$1.05 1/4 a \$1.05 1/2.

No. 2 mixed corn, 50 a 51 cts.

No. 2 white oats, 35 1/2 a 35 3/4 cts.

Beef cattle.—Extra, 5 a 5 1/2 cts.; good, 4 1/2 a 5 cts.; medium, 4 1/4 cts.; common, 3 1/2 a 3 3/4 cts.; 3 a 3 1/2 cts.

Sheep.—Extra, 5 a 5 1/2 cts.; good, 4 a 4 1/2 cts.; medium, 3 1/2 a 4 cts.; common, 2 1/2 a 3 cts.; Lambs, 4 a 5 cts.

Hogs.—Extra Chicago 7 1/4 a 8 cts.; fair Western 7 1/4 a 7 1/2 cts.; common Westerns, 7 1/4 a 7 1/2 cts.

Milk calves were active and 45¢ per at 3 1/2 a 7 cts.

Milch cows were active—40¢ at 2 1/2 a 3 1/2.

The House of Commons on the evening of the 16th instant, Solicitor General for Ireland, Mr. B. O. in the absence of Balfour, Chief Secretary for Ireland, who is ill, brought in the bill to further facilitate the purchase by tenants of land in Ireland by adding £5,000,000 to the amount applicable under the Ashbourne act.

In explaining the proposed measure, Madden described the Ashbourne act as a great success. There had been, he said, 14,328 signed agreements for the purchase of land under the act, and 8000 had been completed. There were only two courses open to the Government. One was to abandon the scheme of land purchase, and the other was to extend the act. The fact that the act had been a conspicuous success justified the Government in extending the same. It was the duty of the Government to reduce or cancel arrears of rents that are found to be excessive."

The Berlin *Post* of the 16th, says: "The increase of France's military forces brings us nearer to war. This cannot be denied, and at a time when the peace powers are scarcely able to keep pace. The same remark may be applied to Russia, the increase of whose military strength cannot be explained as a defensive measure."

It is denied emphatically in Russian Government

circles, that the new changes in the organization of the troops in Western Russia have a warlike interest. The object of the movement, it is declared, is merely to develop the defenses necessary to preserve a military balance as compared with the forces maintained by neighboring powers.

Zanzibar, Eleventh Month 16th.—British officers boarded the Belgian steamer *Brabo* off the coast to-day, and found that she was carrying 600 slaves, 100 of whom were British took away two slaves, who swore that they had been forcibly kidnapped, and allowed the vessel to proceed. The mode of obtaining slaves appears to be to make advances to the owners to enable them to purchase others, and then, secretly, to kidnap them. It having been found that arrangements for the traffic were made through a former Belgian consul.

A very heavy shock of earthquake was felt in Guayaquil, Ecuador, at 35 minutes past 2 o'clock, on the afternoon of the 16th inst. The people rushed from their houses panic-stricken.

Our State Department is advised of the appearance of yellow fever at Palma Island, one of the Canaries, in a despatch from Quebec, the *Public Ledger*, of this City, says: "The Government of the Province of Ontario, and efforts to represent the French Canadian sentiment in Canada, has made a decided sensation by publishing an article in which it points out the advantages of annexation over Imperial federation, a possible contingency. It argues that annexation would not only secure to the Province of Ontario, but would retain their present limits, they would enter the Union as States, whatever might be the extent of their respective territories and the disproportion between them and disproportion already existing in the United States. Prices paid for wheat at the Province of Delaware of Canada. The Federal debt of \$300,000,000 would be a mere drop in the bucket at Washington. The militia would be reorganized on the economical plan of the other States, and the army of customs officers would vanish. The article will probably bring a movement among the French for annexation to the States."

NOTICES.

A meeting of Friends Teachers' Association will be held at 140 North Sixteenth Street, Philadelphia, on Twelfth Mo. 1st, 1888.

Program:

1. Preparatory English.—Francis B. Gunmore.
2. Character Training in Schools.—Henry N. Hoxie
3. Relation of Exercise to Study.—Prof. Ladd.

To be followed by discussion.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting. Those of our members feeling their minds drawn toward this position, are desired to make early application to any of the undersigned.

Anna Frame, Barnesville, Belmont Co., Ohio.
Hannah Tutum,
John W. Smith, Harrisville, Harrison Co., Ohio.
Sarah F. Holloway, Fishing, Belmont Co., Ohio.

WANTED.—An enterprising Friend with family to take charge of a Delaware County Dairy Farm.
Address, THE FRIEND.

DIED, Ninth Mo. 20th, 1888. ANX C., wife of Isaac C. Evans, in the 74th year of her age, a beloved member and elder of Chester Monthly Meeting. Pa. 11, her exemplary quiet walk, she was a good example, a true friend, and a true member of society; and we be- lieve she died faithfully and with a joyful heart. During her lingering illness, she was preserved in a sweet frame of mind, though longing to depart, yet patient by waiting all the appointed time, until the wedding garment was completed, and her Heavenly Father was pleased to say, "It is enough." She was favored with a peaceful, quiet dismissal, and we humbly trust through the mercy of God in Christ Jesus, she has been permitted to enter into the glorious rest of the righteous. The precious promise reveres, as applicable to her, "Blessed are the pure in heart, for they shall see God."

—, on the 24th of Tenth Month, 1888, at his residence near Medford, N. J., CHARLES WILKS, in the 63rd year of his age, a member of Burlington Monthly Meeting of Friends.

THE FRIEND.

A Religious and Literary Journal.

VOL. LXII.

SEVENTH-DAY, TWELFTH MONTH 1, 1888.

No. 18.

FOR "THE FRIEND."

Incidents and Reflections.—No. 178.

MINISTRY.—THE FRESH CALL.—RESTRAINTS
OF THE SPIRIT.

The true minister of the Gospel, he who has received his gift from the Head of the Church, and who is careful to wait for the renewed Divine command for its exercise, and for the fresh extension of Divine power, often goes to his religious meetings not knowing whether any vocal labor will be required of him on that occasion; and if it should be called for, in what manner he may be led to labor. Sometimes he may feel it his place to set an example of deep, inward, silent waiting on the Lord. Thus Stephen Grellet mentions that when in Philadelphia, in 1805, he attended five meetings, in all of which his mouth was closely sealed. He felt that the Society was then in a low state, spiritually, owing to many "having departed from that retredness of spirit and lowliness of mind, which characterized our former Friends, and the primitive Christians." Not long after this, he had two meetings among the "Nicholites" in Delaware or Maryland, of which he says, "Silence, solemn silence was what, by my example, I had to direct them to. It is safe for us to follow Divine guidance, and I believe that this silent testimony, when of the Lord's ordering, often speaks to the attentive mind a volume of instruction." Of a meeting at Third Haven, Maryland, he records, "The expectation of the people was so outward, that the Lord was pleased to send them away disappointed: silence was my service amongst them." When at Congenies, in France, in 1807, he attended a meeting among the few there professing with Friends, which was held in silence. He says, "My mind was much engaged for them, that they may be gathered into that state, where our whole expectation is from the Lord alone; in which, therefore, the soul is prostrated before Him, hearkening to the secret language of his Spirit, and waiting for his Divine guidance." When recording his travels in England, in 1812, where he frequently felt restrained from vocal expression, he remarks, "It seems to some a very strange thing that I should appoint meetings among them, and then have nothing to say to them. O, could they read in my soul, they would know, that on many such occasions, deep is my travail before the Lord, and fervent also my supplications for them."

The "Divine guidance," for which Stephen Grellet felt the necessity of waiting, sometimes leads a minister to pass by what may seem favorable opportunities for religious service; or even to decline invitations to hold meetings with those who appear desirous of his company and labors. It was, no doubt, under these restraining influences, that Paul felt himself at one time forbidden of the Holy Ghost to preach the word in Asia, where on other occasions, he labored abundantly.

The Journal of Stephen Grellet mentions that in his journey from Verona, in Italy, through the Tyrolese Alps, to Munich, in Bavaria, in 1820, he made no stay in any of the towns through which he passed. He "felt deeply" for the inhabitants, but "prayer seemed to be the only service required." On the same journey he says, "We came to Vauvert [in France,] at which place I apprehended that I might stop to have a meeting, but on coming to it, the way entirely closed in my mind." At a neighboring town where he stopped, he found that the people at Vauvert had been much disappointed that he did not stop there. Their clergyman had sent for three others, like-minded with himself, to come and assist him; their intention being "to frustrate my having a meeting by substituting for it a disputation on some of their favorite tenets; but the Lord has defeated their purpose; safe it is to follow his Divine guidance."

The "Divine guidance" for which the minister ought to wait in the exercise of his gift, has often led him into a line of labor which seemed unfeared for, so far as his own knowledge or reason could determine; but which He who knoweth all things, saw to be needed.

Stephen Grellet mentions that in 1832, he had a meeting at Ban de la Roche, the scene of the labors of that good man Oberlin; in which, along with the word of encouragement and comfort, he says, "I had also a solemn warning to proclaim to some, accompanied with earnest entreaties to turn away from their rash and evil purposes, and, after the example of the prodigal son, to return to their Heavenly Father. I was astonished at myself, to have this kind of labor among such a people; but I was afterwards told that a son of the late worthy Oberlin was in the practice of frequenting unprofitable company; he had concluded to go that very night to Strasbourg and enlist as a soldier; hearing of the meeting, curiosity brought him there; the word preached sank deep into his heart; the Spirit of Truth, the faithful Witness, performed his office in him; his purposes were changed, and he spent the night in retirement and prostration of soul before God."

In the course of David Sands' service and travels in Ireland, the following very remarkable circumstance occurred; proving that the ways of Providence are frequently inscrutable, in his gracious interposition for the deliverance of his creatures from the power of the enemy, and in leading his ministers and messengers by a way that they know not, in the simple obedience of faith, that so He may make them instru-

mental in effecting his wise and gracious purposes. As he was riding along he felt a concern to stop and appoint a meeting, to which his companions offered some objections; as it was a place but thinly peopled, and the night very stormy; so that probably few would attend. But David Sands did not feel easy to give it up, saying, "If there are but few, the great and good Shepherd has promised to be with us, and I shall feel clear in having done what appears to be my duty." They yielded to his concern, and notice was given. At the time appointed a greater number assembled than was expected. The meeting became settled in much solemnity. He arose, commencing his testimony with these words, "Resist the devil, and he will flee from you. Turn unto Him who is able and willing to save; although your sins be as scarlet. He will make them white in the blood of the Lamb. He is still waiting to be gracious, and though you have strayed far from the fold, He will lead you as unto pleasant pastures, where streams of living water flow for evermore." He had much to offer, all pointing and leading to the one great Fountain of mercy; and then added: "I am bound to express my feeling and impression, (though I know not for whom it is intended,) that I believe there are those present who have been so far led astray by the enemy of their soul's salvation, as to be ready to take their own life." Soon after this the meeting broke up, when a man of a respectable appearance, under great distress of mind, approached him, saying,—"Your message is to me; it is true that I now have the instruments of death in my pocket. I have become weary of life, and have no resolution to withstand the tempter, so as to face the cruel blasts of adversity, and had determined this night to commit the fatal deed. Yet I felt the awful responsibility; and having heard of this meeting, and knowing that Friends often sat in silence, I believed that I should be enabled to become calm and composed before the awful close of life. But now I have abundant reason to bless God, in that He has made you the instrument of saving my life, as also my immortal soul; which, but for this interposition, would have rushed unhindered into the presence of an insulted God." His heart now overflowed with gratitude both towards David Sands as the instrument, and unto the Lord, by whom he was thus sent to save a fellow-creature from destruction.

It is stated that soon after this wonderful providential interposition, this person became a changed and greatly improved character.

An anecdote is recorded of a gay and thoughtless young man, who had early imbibed infidel principles, that he was invited to go to a place of worship, but refused positively. Some weeks after, he was passing by the same place, and being alone, and having nothing to do, he thought he would go in without being observed. On opening the door he was struck with awe at the solemn silence of the place. The text used by the preacher arrested his attention—"I discerned among the youths a young man void of understanding;" his conscience was smitten by the

power of the Spirit; a view of his profligate life passed before his eyes, and he trembled under conviction for sin. It proved a time of serious awakening, and of turning from the way of sin into the path that leads to life and peace.

The effect produced by ministry may be regarded as one test of its value. Louis XIV, of France, once said to Massillon, the celebrated preacher, "Father, when I hear others preach, I am very well pleased with them; but when I hear you, I am dissatisfied with myself." Happy would I have been for him, if this dissatisfaction had led to a more thorough amendment of life than history leads us to suppose was the case! A shipbuilder in speaking of the preaching of George Whitfield, said, that when he went to his parish church, he could build a ship from stem to stern under the sermon; but under Whitfield's discourses he could not lay a single plank! Another critic remarked, that Whitfield treated religion "as if he meant what he said." But it must be born in mind that the effects produced are often not known either to the preacher or to the most of his audience; and he is required to sow in faith, being careful simply to obey the Divine commands, which should direct him in all his steps. J. W.

FOR "THE FRIEND"

Isaac Coates' Visit to the Seneca Indians, and to Canada.

(Continued from page 135.)

Isaac Coates was greatly interested in the horizontal strata of limestone and slate which were exposed on some parts of the shore of Lake Erie; and in the regular joints or fissures by which these strata were divided into squares or blocks, almost as if built up by the hand of man.

Ninth Mo. 21st. They crossed the Niagara River—"the great outlet of all the Northwestern lakes and waters, which makes a very great river, above a mile wide, and great depth; running very rapid. We crossed the river in a boat, which the heavy current drives across in a few minutes, which to some of our company appeared a little terrifying."

Their object in going into Canada was to visit the Friends who were settled in those parts, and who were members of Philadelphia Yearly Meeting. These Friends had for some time claimed the care of the Yearly Meeting, which had sent out a committee to visit them, who reported in 1798 that they found about sixty members, mostly in two settlements. At one of these the settlers held a meeting; and the committee had encouraged the others to do the same. They found a number who had been disowned, some of whom they encouraged to seek for re-instatement, and had brought acknowledgments from them to their Monthly Meetings. They had had religious opportunities with families who had never been members, but who seemed convinced of Friends' principles.

In 1799 the Yearly Meeting concluded again to send a committee to visit Friends in Upper Canada, "with powers to establish a Monthly Meeting, and to assist them in the opening it; if the committee when amongst them, and duly considering their situation and peculiar circumstances, should be easy to proceed therein—the said Monthly Meeting to be under the particular care of this Yearly Meeting."

It was in the discharge of the duty thus laid upon them by the Yearly Meeting, that Isaac Coates and his companions extended their journey into Canada.

The Journal states that they rode to Asa Schooly's, where we met with our beloved Friends, William Blakey, Nathan Smith and Jacob Paxson, who we had heard arrived two days before us. Here we all propose to stay this night. They said they could contrive for bedding for us all; but Thomas Stewardson and myself were desirous to sleep on the floor with our blankets, believing it would be best on several accounts, but we could not do it without hurting our friends' feelings.

"22nd, and First of the week. Attended their meeting, which is held in the house of our friend Asa Schooly, which to me was a dull time, though some lively communication therein. After dinner took an affectionate farewell of Halliday Jackson, who is about to return, through a lonesome wilderness, to Genesinghuta, the place of his present abode. We then classed ourselves in order to visit the families in this neighborhood—Nathan Smith, Jacob Paxson, and James Cooper going in one company; and William Blakey, Joshua Sharpless, Thomas Stewardson and myself in another.

"We then proceeded to visit the families of John Cutler, a member; John Harset and Azariah Schooly, neither of the two last in membership, but hopeful, well-inclined people; and returned to lodge at the same place.

"I may here note that Joshua Sharpless, in getting into the boat at Buffalo Creek, slipped and fell on the edge of the boat; which at first did not seem very bad, but hath been gradually getting worse. We now think some of his short ribs are broken, and it looks as if he would hardly be fit to travel to-morrow.

"23d. Joshua Sharpless being too much amiss to venture out, we set out without him, and had religious opportunities in the families of Daniel Pound, the widow Morris, and Obadiah Dennis; the second of which, in a particular manner, was a favored opportunity; and then returned to our old lodging, where we all met and had a religious opportunity in the family.

"24th. J. Sharpless being unable to travel, we left him and rode thirty miles to John Hill's, where we lodged. On our way we rode fourteen miles down the river Niagara, crossed Chippeway River, and passed the Great Falls; several of our company were disposed to take a view of the great phenomenon, but James Cooper and myself thought there was not time sufficient to satisfy our curiosity, so rode on and left them to take a slight view. We all met at the aforesaid Hill's, and had an opportunity of retirement in the family, in which was some pretty close work.

"25th. Set off from John Hill's, he accompanying us, and rode eleven miles to Friends' Meeting, at the place called the Short Hills; which in the fore part was very heavy and trying, but more lively before the conclusion. After meeting, William Blakey, Thomas Stewardson and myself visited Samuel Taylor and family, and went to Jeremiah Moore's to lodge, in whose family we had a solid opportunity.

"26th. We visited the family of Enoch Shrizley, Solomon Moore, Jacob Moore and Thomas Rice—none of them members, but all the descendants [of Friends] and appear to be thoughtful people. In the evening had a religious opportunity in the family of John Taylor, whose wife and children are members, but John was disowned by the Falls Monthly Meeting, and is now desirous of being reinstated, and sent an acknowledgment by William Blakey. Here we lodged.

"27th. Joshua Sharpless met us yesterday in the afternoon, being somewhat better, but

weakly yet; we visited the families of Joshua Gillam and Benjamin Hill, both members, and the family of Thomas Gillam, not a member; it being a tender visitation to him. We then returned to Jeremiah Moore's, where we met with the rest of our company; had a solid conference amongst ourselves respecting the nature of our appointment, which hath felt increasingly weighty. Four of us lodged here, to wit—Nathan Smith, Thomas Stewardson, Joshua Sharpless and myself.

"28th. Joshua Sharpless went along with James Cooper to see a friend. Nathan, Thomas and myself visited two families who are a little inclined to the Methodists, and returned to Moore's to dinner. In the afternoon paid some social visits and lodged at the same place, which at present is a temporary home.

"29th, and First of the week. Attended Friends' Meeting at their usual time and place. After meeting, walked four or five miles along with Nathan Smith to Samuel Becket's, where Nathan had appointed a meeting to begin at four o'clock, to which the neighbors and many of the Friends from about their meeting-house came; which I hope was a time of profitable instruction to some of them. On taking a view of the earnest desire which many of them have to attend such places, the compassionate feelings of my heart were very much awakened, especially for their women, many of them going four or five miles on foot, some of them with young children in their arms, and others in such a state that I should have thought scarcely fit to travel far on horseback; yet they would and did walk faster than was easy for me, and returned to their homes in a dark night—the men carrying lighted torches in their hands to show them the way along their muddy and roaty roads. Lodged at the same place.

"30th. Spent part of the day agreeably with some of our friends, also had a solid opportunity with a man who we believed had taken imagination for revelation, which had led him into some strange acts and predictions. I hope his state was so clearly opened and laid close home to him that it may be of use to him; he acknowledged he had been deceived and followed a lying spirit. In the evening five of us returned to my lodging.

"First of Tenth Month. We all attended a conference, before appointed, to be held at Friends' Meeting-houses in Pelham Township, otherwise the Short Hills, with the members of said meeting and the Friends of Black Creek; which was conducted with great solemnity; in which I was more fully convinced that there is a small number of seeking, religiously minded Friends in both places, and that if they abode in the patience and perseverance, the way would open ere long for the establishment of a Monthly Meeting amongst them; but the rest of my brethren believed the time was already come; so after expressing my doubts of their being fully ripe to be entrusted with the executive part of our discipline, I freely submitted my feelings to the judgment of those whom I esteem to be deeper in religious experience. It was then agreed to open a new Monthly Meeting to-morrow at eleven o'clock, to be known by the name of Pelham Monthly Meeting, in Upper Canada; to be composed of Friends of Pelham and Black Creek, and held alternately at each place the first Fourth-day in every month.

"2nd. Attended the opening of the new Monthly Meeting, it being a favored opportunity, which revived a hope that if the small number of Friends composing said meeting

kept in the humility, and a steady attention to best direction, their number and experience may so increase that the testimony of truth may be supported amongst them."

(To be continued.)

FOR "THE FRIEND."

Vital Christianity.

Vital Christianity is a pearl of great price, and of Divine origin. And as it springs from God, so it leads to Him. While a spurious or dead Christianity, springs from man, and leads no higher than earth. But the pure and saving kind receives its vitalizing power of warmth and light from the Sun of Righteousness. And to such as believe in his name or vitalizing power, He will "arise with healing in his wings, and they shall go forth and grow up as calves of the stall;" or as trees of righteousness, or plants of renown, bearing fruit in his name.

Spurious or lifeless Christianity, which makes such a fair show in the world, costs but little self-denial or cross-bearing; and goes pretty comfortably hand in hand with the world. And as it emanates from an earthly fountain, it can be got from books and sermons, or the teachings of man, without the Divine life and power. But as a stream cannot rise higher than its fountain, so it cannot raise such as believe in, and follow it, higher than earth. For the light which it receives and reflects to others may be compared to the light of the moon, which is only a borrowed and reflected light, and is often changing, and belongs only to this world. Or is

"Like a comet's wandering light;
Eccentric, ominous, and bright;"

Yes, "bright;" for the children of this world are in their generation wiser than the children of light. But the true light "comes down from the Father of lights, in whom there is no variability or shadow of turning." And it is from this light that the Christian gets his vitality and power, which enables him to prevail over all the powers of the enemy.

There have been false pretenders, deceitful workers in all ages of the world. The seducing spirits which we now have to guard against, showed themselves in the time of Pharaoh, for the Egyptians then had their wise men, and sooth-sayers, and astrologers, and sorcerers, who, with their magical powers, could wonderfully imitate the true power of God. But we read in Deuteronomy xiii. 1, 2, 3, 4, &c., that Moses cautioned his people not to hearken unto their words; for he says, "the Lord your God proveth you, to know whether ye love the Lord your God with all your heart and with all your soul," &c. And Christ himself says, "Beware of false prophets, which come to you in sheep's clothing," &c. And He says in another place, "There shall arise false Christs and false prophets, and shall show great signs and wonders, inasmuch that if it were possible, they shall deceive the very elect." But He says, "Go ye not after them." And the Apostles were full of warnings against the deceivableness of unrighteousness, and showing the danger of departing from vital Christianity.

We may become so blinded as to teach lies in hypocrisy, and seek the applause of men, more than the praise of God, and hardly know it. For it is said, "Evil men and seducers shall wax worse and worse, deceiving and being deceived." Thus they become blind leaders of the blind, and stumble at the Word; taking the imaginations of men for vital Christianity, and so go on hand in hand with the world in the broad way to de-

struction; crying, peace, peace, where there is no peace; and saying, thus sayeth the Lord, when the Lord has not spoken. These are busy-bodies, earnest-workers, fluent-speakers, doing many wonderful works; even professing to cast out devils in the name of the Lord. But is there not great danger, that when that great day shall come, and they shall apply for entrance into the heavenly kingdom, that they will hear the woful language of "depart from me, ye workers of iniquity, I know you not." So we see what the deceivableness of unrighteousness leads to, in them that perish because they have not come in, and placed their confidence more in the spirit of man than in the Spirit of the Lord.

Human life and activity may satisfy the busy mind of the unrenewed man in the things of religion; but if they go in advance of the Spirit of God, they amount to nothing. For Christ says, "Without me ye can do nothing." Yet we see that man, by his cultivated faculties, can speak great swelling words of vanity, yet they amount to nothing towards advancing the heavenly cause, as they lack Christ's vitality.

Now the reader may see that I greatly fear that vital, heart-changing Christianity, is at too low an ebb amongst us, and that the spurious or bogus kind predominates too much in many places. And I also fear that a great portion of the ministry of the present day is tending to draw away from Christ to man, and from the daily cross of self-denial into a conformity to the broad ways of the world, where vital Christianity cannot dwell. I aim to speak the things alluded to above in truth and soberness; with a hope that they may be a benefit to some weary Christian traveller, when the band that now holds the pen, is laid beneath the sod.

D. H.

DUBLIN, IND., Tenth Mo. 27th, 1888.

The Sioux Reservation.

We have received a pamphlet entitled "A History of the Sioux Agreement," written by T. A. Bland, of Washington, giving an outline of the recent efforts to obtain possession of a large part of the Sioux Reservation in Dakota. As a matter of historic interest, the following outline of these efforts has been condensed therefrom.

THE TREATY OF 1868.

By the treaty of 1868, the Sioux surrendered to the United States immense tracts of land in Dakota and Wyoming, retaining only the South West corner of Dakota as their permanent home. That treaty contains this stipulation—"No treaty for the cession of any portion or part of the reservation herein described, which may be held in common, shall be of any validity or force as against the said Indians unless executed and signed by at least three-fourths of all the adult males occupying and interested in the same."

THE BLACK HILLS CASE.

A few years later gold was found in the Black Hills by prospectors who went there in violation of the treaty. The news got into the papers; other gold-seekers rushed to the Black Hills. In 1874, General Custer marched into that country at the head of an armed force, with the avowed purpose of protecting prospectors for gold.

The Indians were ultimately aroused to the importance of repelling the invaders of their country. Custer and his command were cut to pieces, annihilated; but the miners did not share their fate. A commission was sent to the Sioux

to get them to surrender the Black Hills to the Government. This commission did not pretend to comply with the treaty of 1868, by securing the signatures of three-fourths of the Indians. They got the signatures of some of the chiefs and head men to the agreement, and on their recommendation, Congress ratified it, and the President proclaimed it. There were but few of the Sioux braves who joined Sitting Bull and Gall in the war against Custer. Red Cloud, Spotted Tail, and other prominent chiefs who had signed the treaty of 1868, refused to go to war even to repel an invading army from their country, because that treaty had a clause which read as follows:

"ARTICLE 1. From this day forward all war between the parties to this agreement shall forever cease. The Government of the United States desires peace, and its honor is hereby pledged to keep it. The Indians desire peace, and they now pledge their honor to maintain it."

These noble red men of the forest and plain said:

"We have pledged our word of honor with the Government that we would never go to war with each other, and we will keep our word whether the white man's Government does or not."

These chiefs signed the agreement to surrender the Black Hills. They then said to the Commissioners:

"You know that we are not going to war, so we ask you to tell us where to camp that the soldiers may not disturb us."

The Commissioners assigned them a camping-ground and left them temporarily. Almost immediately after the departure of the Commissioners, General McKensie, acting under authority of General Crook, swooped down upon those law-abiding and peace-loving Indians with his armed force at midnight. They made no resistance, but surrendered without firing a gun. They were robbed of their horses and other property, and their wigwags were burned.

The Indians were liberated after a brief imprisonment, but their property was not restored to them. It has not yet been restored, nor have they received one dollar in lieu thereof.

THE SIOUX COMMISSION OF 1882.

In 1882, Congress authorized the Secretary of the Interior to negotiate with the Sioux Indians for some modification of existing treaties; and a Commission was appointed to visit them for the purpose of securing their consent to have separate reservations set apart for each tribe, and to surrender about 11,000,000 acres of their lands.

The occasion for this commission arose from the fact that some time previously the Chicago, Milwaukee and St. Paul Railroad Company had secured a charter for a line across the reservation from Chamberlain, on the Missouri River, to the Black Hills, and also the consent of a few of the Indians to right of way for very small price. The charter and questionable right of way were of but small value without a large slice of Indian land, embracing the White River Valley on the south of said contemplated railroad, and the fertile region north of it, watered by the Red River and its numerous tributaries. But if this heart of the reservation, embracing the bulk of its best lands, through which the railroad would run, could be gotten from the Indians, not only would a large number of people move into the country and make *bona fide* settlement, but the opportunities for speculation in town-site lands would be immense, and the railroad company and the land syndicate connected with it would have a monopoly of this."

These Commissioners told the Indians that if they would sign a paper agreeing to have their reservation divided between the six tribes of the Sioux nation, the Great Father would give each tribe a patent to their share, and that he would give them 25,000 cows and 1000 bulks, and that he would also extend the time in which he would furnish them schools for their children; but they did not tell them, that by signing the paper they would give up any of their lands. A few signed, but the great mass suspecting trickery, refused to do so.

After the Commission made their report to Congress, a sub-committee of the Indian Commission of the United States Senate visited the Sioux country in the summer of 1883. Senators Dawes, Logan, and Cameron constituted this committee. These Senators were charged with the duty of investigating the charges of fraud made by the Indians and their friends against the Sioux Commission, and report to the Senate.

The report of this sub-committee says:—
 "They (the committee) found that the Commission, consisting of ex-Governor Edmunds, and ex-Chief Justice Shannon, of Dakota, and James H. Teller, brother of Secretary Teller, obtained the consent of the chiefs by systematic threats and misrepresentations. By this means the Indians apparently agreed to give up 11,000,000 acres of lands for 25,000 cows and 1,000 bulks—at the highest prices an equivalent to 9 cents an acre. At every agency the Indians disclaimed this bargain, and the chiefs who made it repudiated their own action. They were told that the Commission had absolute power to take their lands without consideration, and force them to migrate; and that the whole army could be called upon at any time to drive them away."

The Senate Commission found that out of a population of 28,000 Indians, only 430 had signed the agreement, hence they recommended that the report of the Commission be rejected, and the agreement laid aside as null and void. It was so ordered.

THE DAWES' SIOUX RESERVATION BILL.

Soon after the rejection of the report of the Sioux Commission of 1882, Senator Dawes introduced a bill to divide and reduce the Sioux reservation, putting \$1,000,000 in the United States Treasury for the benefit of the Sioux, and authorizing the President to have the reduced reservation surveyed and divided in severalty. This bill did not become a law.

The same bill was reintroduced into the 49th Congress, but failed to pass, and died with that Congress.

THE SIOUX COMMISSION OF 1888.

In the second month, 1888, another bill was introduced into Congress for the division and sale of a large part of the Sioux reservation, which became a law on the 30th of Fourth Month; under the provisions of which, Commissioners were appointed to obtain the signatures of the Indians. The proceedings of these Commissioners appear to have been, in some measure, of the same arbitrary and despotic character which have often marked the dealings of our Government officers with Indian tribes. Theoretically, the two parties were on an equal plane, negotiating a transaction which, if right to be carried into effect, ought to be to their mutual benefit. But the U. S. officers apparently could not divest themselves of the feeling that they were dealing with persons who could not judge for themselves what was to their own interest; and therefore their treatment of them was such as would have been very offensive if

meted out to themselves. As an illustration of this it may be mentioned that at Standing Rock agency, where the first conference was held, the leading journals of the country sent correspondents to report the proceedings.

"These correspondents gave the facts as they occurred, and as the facts showed that the Indians conducted themselves in a dignified and diplomatic manner, and gave good reasons for not signing the agreement, and that the Commissioners acted in a very disrespectful and unbecoming manner, and made speeches which were disgraceful to themselves and the Government they represented; the Commissioners did not like to have the people know these facts, so Captain Pratt took possession of the telegraph and refused to permit anything sent over the wires without his supervision."

The only effect of this was that special couriers had to be employed to carry their letters to Bismarck, 65 miles, whence telegraphic communication could be had. But the general interest felt, and the publicity given by the journals of the United States to all transactions, no doubt had a powerful influence in preventing the application of stronger pressure to compel the Indians to agree to proposals with which they were not satisfied.

The manner in which these proceedings were regarded by some of the leading journals is shown by the following extract from an editorial in the *New York Tribune*.

"The line of argument employed by the Commissioners is degrading and humiliating to the National honor in the last degree. They say in effect: 'We represent a great nation, but one whose honesty can not be depended upon. It is true that Congress has decreed that this reservation shall not be opened unless the consent of three-fourths of the Indians to whom it belongs is obtained. But you must not rely upon that pledge being kept. On the contrary, we now tell you plainly that unless you accept the treaty, even against your judgment, there is imminent danger that the United States will steal your land without more ado.'"

"What the Commissioners are now doing is only too apparent. They are trying to bulldoze the Indians; trying to intimidate them into consenting to the treaty; and, what is worst of all, trying to do this by alleging the dishonesty and perfidy of their own Government. The Sioux are plainly told that they must not rely upon the good faith of Congress, or believe that it will keep its engagements; and in the same breath they are chidden because they suspect the sincerity of the Government in its promises of payment for their lands."

These statements led to the introduction into Congress of a resolution, requesting the Secretary of the Interior to inquire "whether undue influence has been used to secure the signatures of any of the Indians to the treaty."

But little success attended the efforts of the Commission at Standing Rock, and a general council was called to meet at Lower Brule agency, to which representatives from all the six tribes were invited. Some refused the invitation; others assembled, to whom a message was delivered from the Secretary of the Interior, of which the *Philadelphia Ledger* says, it was "apparently based on the notion that the Indians, who in this regard, are treaty powers, could be at the same time dealt with as undutiful children." It further says, "Those who spoke for the opposition to the bill at the Lower Brule Conference conducted themselves with dignity, and spoke with good sense, eloquence and force." The

result was a general refusal to agree to the terms of the bill: a council at Washington was arranged for, which was attended by 60 of the chiefs and head men of the different tribes.

At Washington some symptoms appeared of the same arbitrary course that had been pursued at Standing Rock. The interpreters were ordered not to interpret for anybody but the Government officials. The reason for this order was believed to be the desire to prevent the Indians from having communication with any but those who favored the Government policy!

At the Council, which was opened on the 15th of Tenth Month, the Indians stated their objections to the bill—They were satisfied with some of the features of the new law, but not with others. They wished the price to be paid for the lands raised from 50 cents to \$1.25 per acre. They complained that the Government had not yet fulfilled its part of the treaty of 1868, which promised schools and teachers for 20 years, but these had been furnished only 10 years. They asked that the lands be classed as grazing instead of farm lands, that 320 acres instead of 160 be allotted to each head of a family, and that the women and children have the same amount apportioned to them as the old men. Chief John Grass said, in his speech: "Think of our fathers and grandfathers. They used to own all of these lands which the white man now lives upon. They were ours once, but we have been driven away from them. We are a poor and ignorant people, and you are the cause of our being poor. Looking back, I say to you that whatever we ask should have due consideration. Put the key which opens our reservation in your pockets for a while. Do not be in a hurry; wait until these matters are well considered. Ascertain first whether, after our lands are gone, we will have enough left to do so."

Mad Bear said that though the Indians had red skins they were one people with the whites, and were all of one blood. He asked that their requests be given due consideration. He spoke of the failure of the Government to faithfully keep the treaties of 1868 and 1876, and asked how they could be expected to enter into still other agreements when the old ones had never been fulfilled. "Does a man," he asked, "who sells a horse for money to be paid at a future date sell another horse to the same man if he refuses to pay for the first?"

"Charger complained that the Government never gave the Indians a voice in the details of their treaties, but fixed everything to suit themselves, and then asked the Indians to agree. He objected to the Santees having any share in the proceeds of the proposed sale. He complained that the lands which had been set apart for his people were not good lands. Much of it, he declared, was dry, sandy and worthless."

White Ghost and Drifting Goose both spoke of the efforts of the Commissioners to scare the Indians into signing. They had used harsh words to them, and had even taken hold of them and tried to drag them up to the table to sign; but they had refused to be forced to sign.

"Swift Bear, No Flesh, Little Chief and others, said the Indians who have spoken have spoken for all, and they indorsed what had been said.

On the 17th the Secretary sent for the Indians and told them he had laid their objections before the President, and he thought there was ground for some of them. If they were willing to have the reservation opened, he would recommend Congress much more favorable terms, and would prepare a paper for them to sign.

Swift Bear, Little Wound and others said that they could not decide for their people; that they would take back the Secretary's words, which were plain, and would consult their people. The Secretary peremptorily refused to assent to this plan. "Unless," he said, "you give your assent, as far as you are concerned, not to be binding on your people, I shall declare the entire negotiation at an end, and so report to Congress."

The Indians returned to their rooms, and after two days' deliberations, decided not to commit themselves or attempt to commit their people to the Secretary's offer. This refusal ended their mission at Washington, and after a brief call upon the President, they were sent home. There the matter rests for the present.

FOR "THE FRIEND."

The notice in THE FRIEND of Eleventh Month 10th, on the subject of the distribution of Tracts, was so in accordance with my feelings that I felt it right to express it; and encourage our members, younger as well as older, to distribute them, as way opens, in our different neighborhoods, and also on leaving home during the summer months; good may result therefrom.

A circumstance occurred some years ago, which may be an encouragement to attend to the impressions of duty in this respect. A worldly woman who was brought low with sickness, and did not recover, was awakened to her condition by reading the tract "What shall we do to be saved?" In referring to it to one who visited her, she said: "I have read other tracts, but never one like this;" and through *best help* it was instrumental in turning her attention to serious things; she asked to have the Bible read to her; and gave good advice to those about her; it was believed she made a peaceful close. May we do the little, in this way, our hands find to do, and a blessing may rest upon the labor.

It is no doubt generally known that tracts can be had at Friends' Book Store, No. 304 Arch St., Philad'a, without charge.

It is felt by all to be an admirable thing, when it can in no degree be ascribed to the hardness of either stupidity or confirmed depravity, to sustain for a considerable time, or in numerous instances, the looks of scorn, or an unrestrained shower of taunts and jeers, with a perfect composure, which shall immediately after, or even at the time, proceed on the business that provokes all this ridicule. This invincibility of temper will often make even the scoffers themselves tired of the sport; they begin to feel that against such a man it is a poor style of hostility to laugh. There is nothing that people are more mortified to spend in vain than their scorn.—*John Foster.*

THE late Professor Agassiz once said to a friend, "I will frankly tell you that my experience in prolonged scientific investigations convinces me that a belief in God—a God who is behind and within the chaos of vanishing points of human knowledge—adds a wonderful stimulus to the man who attempts to penetrate into the regions of the unknown. Of myself, I may say, that I never make the preparations for penetrating into some small province of nature, hitherto undiscovered, without breathing a prayer to the Being who hides his secrets from me only to allure me graciously on to the unfolding of them."

HYMN.

Jesus! lover of my soul,
Let me to thy bosom fly,
While the bullets hurt me, roll,
While the tempter still is high.
Hide me, O my Saviour, hide!
Till the storm of life is past;
Safe into the haven guide;
Oh, receive my soul at last!

Other refuge have I none;
Hangs my helpless soul on thee;
Leave, ah, leave me not alone,
Still support and comfort me.
All my trust on thee is stayed;
All my help from thee I bring,
Cover my defenceless head
With the shadow of thy wing.

Pleanteous grace with thee is found—
Grace to pardon all my sin;
Let the healing stream abound,
Make and keep me pure within.
Thou of life the fountain art,
Freely let me take of thee;
Spring thou up within my heart,
Rise to all eternity.

—Charles Wesley.

SUBMISSION.

The lesson art thou learning,
O tried and weary soul?
His ways art thou discerning
Who works to make thee whole?
In the haven of submission
Is thou satisfied and still?
Art thou clinging to the Father,
'Neath the shadow of his will?
Now while his arms enfold thee,
Think well, He loveth best,
Be still and He shall mould thee,
For his heritage of rest.

The vessel must be shapen
For the joys of Paradise,
The soul must have her training
For the service of the skies;
And if the great Refiner
In furnaces of pain
Would do his work more truly,
Contend all his dealings gain.
For He himself hath told thee
Of tribulation here:
Be still and let Him mould thee
For the changeless there.

From vintages of sorrow
Are deepest joys distilled,
And the cup out-reached for healing
Is oft at March still set;
God leads to joy through weeping,
To quietness through strife,
Through yielding into conquest,
Through death to endless life.
Be still, His hath enrolled thee
For the kingdom and the crown;
Be silent, let Him mould thee
Who calleth thee his own.

Such silence is communion,
Such stillness is a shrine;
The fellowship of suffering,
An ordinance divine.
And the secrets of abiding
Most fully are declared
To those who with the Master
Gethsemane have shared.
Then trust Him to uphold thee
'Mid the shadows and the gloom;
Be still and He shall mould thee
For His Presence and for Home.

For Resurrection stillness
There is Resurrection Power;
And the prayer and praise of trusting
May glorify each hour;
And common days are holy,
And years no Easter tide.
For those who with the Risen One
In Risen life abide,
Then let his true love fold thee,
Keep silence at his word.
Be still and He shall mould thee;
O rest thee in the Lord.

SELECTED.

THE OLD GARRET.

SELECTED.

A charming old place was that great dusty attic,
With its dim wood and splendor and with its noose
The store-room of rubbish, the joy of the children,
That precious old garret in grandmother's house!
There were chairs lame and backless, and books minus
covers,
A tiny tin foot-stove, a great spinning wheel,
And another much smaller that went by a treadle,
A pair of wool cards and a queer little reel.

There were bunches of odorous herbs on the rafters,
"Much better than drug-stuffs," grandmother would say;
And we daintily tasted of mint and of catnip,
As we spent in the garret some long rainy day—
Going up the steep stairs with our clatter and laughter
While grandmother's chiding up after us stalks:
"Now, children, be sure and not get into mischief,
And whatever you do, pray, don't trouble the wheels!"

But how could we help it, when there they were
standing,
Just longing for some one to give them a twirl!
So out of sheer pity we patted them lightly,
And sent them away in the spring of their whir.
Then there was a cradle, the quaintest of cradles,
With a roof o'er the head, and with red painted
sides;

How many dear babies had slept in its shelter,
And cooed as they went on their lullaby rides.
There were roomy old chests that were filled to o'er-
flowing
With treasures and relics of years long since gone;
We dressed in the garments of obsolete pattern,
And made the place ring with our chatter and song.
No zest of the pilgrim in search of rare relics
In old moldy ruins or catacombs' gloom,
Can equal the eager and patient sauntering
Of children left loose in an old attic room.

We made believe visits and parties and weddings;
We sewed for the dolls, assumed housekeeping cares,
And had circuses gay with the dogs and the kittens
We carried or coaxed up the steep narrow stairs,
Alas for the children, the poor little children,
Who never in such an old garret may play!
A garret stored full with its treasures of rubbish,
The dearest of dens on a long rainy day!

—Good Housekeeping.

FOR "THE FRIEND."

The Society of Friends and Their Lives.

There is much said and written concerning the work of our predecessors in the Society of Friends, and their language, I fear is often misunderstood because we are not willing to come into a condition where we might understand many things that we now pervert for want of spiritual experience.

Let us remember that 'tis the Spirit that quickeneth, the flesh profiteth nothing." Our Saviour said, "The words I speak unto you they are spirit, and they are life." In George Fox's account of his religious experience, he says that in his young years he felt a gravity and stayeredness of mind and spirit not usual in children, to such an extent that when he saw old men carry themselves lightly and wantonly towards each other, he said to himself, "If ever I come to be a man, surely I should not do so, nor be so wanton."

We like to claim the great religious reformer as our worthy predecessor, and yet do not imitate his weightiness of spirit, nor sufficiently dwell under that deep seriousness which at times is brought upon many now, and which has a preserving and purifying tenelency. Thus we see many of the youth spend their time in mirth and lightness; and thus too, often supported by those that stand in high positions in the church. May we consider these things thoughtfully and prayerfully! I do not mean that we shall disfigure our faces that we may appear unto men to be religious, but that we hearken to Paul's

exhortation to Timothy, "Let no man despise thy youth, but be thou an example of the believers in word, in conversation, in charity, in spirit, in faith, and in purity." "Meditate upon these things, give thyself wholly to them, that thy profiting may appear to all."

Now I query seriously, if there is not a danger of sinking back into a state, that while it may not be the same priest-ridden condition in which the people formerly were, really is no better, the spiritual perception being darkened. George Fox declares that his work was "to direct the people to the same Spirit that gave forth the Scriptures—also up to Christ and God, that they might be taught, and their hearts established unto salvation, and know this spirit to teach them all things." It is not preaching or outward baptism and sacrifices that sanctify and cleanse; but Christ, the power of God, moving the soul. His Divine revelation will fully equip us for every emergency of life. The Lord spake through one of the prophets, "Look unto me at the ends of the earth, and be ye saved;" thus giving an assurance that we can be kept from the undue desires of our natural will by watchfulness and obedience through Divine help. There is no danger of adhering too closely to the Spirit of Truth; but the danger lies in the tendency to compromise with our surroundings. There have been times of apostasy from the Spirit of Christ through all history, and this has brought a feeling of sorrow on the true Church.

Now, what is the Christian type? What the standard? They must come to know Christ born in their own souls and then obey. "For both He that sanctifies, and they who are sanctified, are all one; for which cause He is not ashamed to call them brethren." Let us read the account of the lives of our early Friends, with an eye single to the all-prevailing principle that moved them, and we will find we must be born of the Spirit, growing in grace to enable us to stand against the inroads of sin. I do not advocate the necessity of doing just such work as they did, but of learning spiritual discipline under the same humble teaching; enabling us to take up the work of our life and carry it forward by the help of the Father; which will be attended by a continued development of light and experience. Let us remember there are degrees of knowledge, both mental and spiritual; and if we fail to improve that entrusted to our care, our condition is comparable to that the prophet saw in the vision of the men sent out to walk and to fro through the earth—their report was, "We have walked and to fro through the earth, and behold all the earth stiteth still and is at rest." The angel exclaimed, "O Lord of hosts, how long will thou have mercy?" Let us be careful that we do not give security to this ease-like condition; this state of indifference which refuses to be grafted into the Divine Father's life.

Intellectual knowledge has been improved and a steady advance maintained. Science in every phase is making an onward march, yet that portion of man's life which tends to his purest happiness is dwarfed, and its condition will be according to the degree of his obedience to his spiritual perceptions. George Fox exhorted his friend on this wise, "In the measure of the life of God wait for wisdom from God; wait for the living food from the living God to nourish up to eternal life, from that fountain whence comes life." In that condition I do not understand him to mean that we shall sit idly down, but rather that in our zeal we shall not move until we have gained a knowledge by experience; yes, an inner, practical, soul experience. He com-

pares some to untimely figs; some as being like those trees whose fruit withers. Again, he gives this exhortation, "In that which convinces you, wait, that you may have that removed you are convinced of; dwell in the life, love, power and wisdom of God, preserving unity one with another and with God." There is much we do not understand of the language and spiritual lessons of our old teachers for want of a deep yearning after the same qualifying life.

John Woodman spake plainly and convincingly that "The Holy Spirit, which alone can restore mankind to a state of harmony with God, may with singleness of heart be waited for," and not in the eagerness of our new-made zeal indulge a desire to imitate the works of others.

"It is not enough," says Tertullian, "that a Christian appears to be chaste and modest, but he must be so; a virtue of which he should have so great a store that it should flow from his mind upon his habits, and break from the retirement of his conscience into all the superficies of his life."

I desire that we may be revived by the true inward experience of the power of Christ in the soul, and that all that bear the name of Friend may turn away from that which hinders the work of the Spirit. Let us prepare ourselves to take up the web of the true life that the woof may continue one unbroken chain ready for all hands to cast in the threads assigned to us, that the whole fabric be a perfect similitude after the pattern.

HOOPERSTON, Ill.

MARY G. SMITH.

Natural History, Science, &c.

Utilizing Old Tins.—At the Columbia Rolling Mill, in Jersey City, taggers' iron is made from old tin cans and other waste sheet metal. The tin cans are first heated in an oven raised to a temperature of about 1000°, which melts off the tin and lead. The sheet-iron which remains is passed first under rubber-coated rollers, and then chilled under rollers, which leaves the sheet smooth and flat. After annealing and trimming, they are ready for shipment. The tin and lead which is melted from the cans is run into bars and sold. The sheet-iron obtained from the refuse cans, &c., is said to be of good quality, and is used for buttons, tags, and objects of a like nature.—*Scientific American.*

Recovery of Long Lost Tapestry.—When Marguerite of France was married to Victor Amadeus of Savoy, she took with her to Italy twenty pieces of the very finest Gobelins tapestry, illustrating classical legends. This tapestry, which was of immense value, disappeared mysteriously when Napoleon invaded Italy, for it had been hidden away in case the French might think proper to carry it off, which they would certainly have done. It had been so carefully concealed, that, after some years, when calm was restored, it was found impossible to discover it, and the two officials who had put it away were both dead. The tapestry had been almost forgotten till recently, when the master of the royal household was making a thorough investigation of the palace at Turin from roof to cellar, and behind some huge chests in a store-room in the highest story, he found a secret chamber, in which was concealed the long lost tapestry, and it had been very little injured by its hundred years of hiding.—*London Truth.*

Surf-riding at Sumoa.—On the water, surfing is greatly in vogue when the sea is in a fit condition; but I don't think, from accounts

I have read, that the Samoan practice comes anywhere near in danger or skill that of this amusement in other islands. It is here practised only in shallow water inside the reef in canoes, or by swimming. With the former, the occupant will paddle out until he gets within the line of breakers, when turning round stern to sea, ready for a start, with gentle backing, he will hold his canoe there in position until he sees a good roller approaching on which to run. As soon as it reaches him, with a dash or two the paddle he sets his ship going on the crest of the wave, which immediately takes possession of her; and in the midst of the white water hissing and boiling all around, she starts in mad career for shore, like an arrow shot from a bow. One wave will perhaps leave her, but a second will soon catch her up; then she will plunge until the full course is run, when out again to seaward will paddle the canoeist, if he desire to repeat the process.

The great difficulty in this sport lies in keeping the craft at right angles to the wave. The smallest inclination from the straightest course, unless immediately strongly checked, will end by her taking charge of herself, broaching to, and consequently capsizing.

When surf-swimming is indulged in, the bather wades out as far as he can go on the reef, sometimes quite a considerable distance carrying with him a flat board about three feet long. On a suitable wave arriving he throws himself on his chest flat on the board, and, as the billow breaks over him, is carried on its foaming crest with great velocity towards shore.

Young people appear never to tire of this sport. Day after day when the weather is suitable, the line of white surf appears closely dotted with brown spots,—the heads of the bathers; and the ringing shouts accompanying an ultra-successful effort are to be heard continuously, sounding merrily above the loud booming of the surf on the shore.—*Charward's "My Conclude in Sumoa."*

The Wood Rat of New Mexico.—Nearly four years ago, when I first came to Fort Wingate these animals were plenty about the station. Their nests consisted of a pile, often as much as 6 or 7 bushels of rubbish and sticks, gathered about the roots of some tree. Inside of the pile, near the centre, the rat constructs what is really its true nest, a globular wad of the soft shreds of the pine bark, and such other pliable material as it can secure. This part of the structure is about as big as a man's head, and has an opening at one side; and so all the rubbish heaped upon and about it simply serves as a protection against marauding animals.

To capture one of them I generally put on a pair of stout gloves, and kicking among his pile of rubbish with my boots, I pounced upon the heart of the establishment just as soon as I could seize the entire mass in my hands. I have kept this little animal in confinement for months at a time. They are, on the whole, difficult to tame, and make constant efforts to secure their liberty. Food of all kinds is eaten by them; and on several occasions, where one of my captives got out in the pantry, his cage was in sight to behold next morning, for he had packed it full of oyster crackers, apples, lump sugar raisins and almonds, to the measure of a full half-peck.—*Dr. Shufeldt, in Forest and Stream*

Hybernating Retreats of Snakes.—The Hybernating holes are almost always found where an outcrop of rock has a cleft which leads to an open space below. The one described below,

was in Fairfield County, Conn. The snakes did not usually leave it in the spring until the frost was thoroughly out of the ground—in the latter part of the Fourth Month. Jacob Pentz, who has written an article on the habits of the Blacksnake in *Forest and Stream*, says they did not issue out of their winter home singly, or in couples, but reptile would follow reptile in quick succession. "This outgoing was all finished in two or three days. Hundreds would be no synonym for the number, it was thousands. One April morning—in I think in 1863—the late Colonel N. B. Horton, and myself killed over forty all Blacksnakes, in as many minutes; and that same morning over a hundred had been killed by the son of the man who owned the farm. All kinds of snakes seemed to come together here for their winter's slumber. Adders and Milksnakes were the greater in number after the Blacksnakes."

Poi.—Poi, a favorite article of food among the inhabitants of the Sandwich Islands, is a sticky paste prepared from the root of the *Taro* (*Arum esculentum*). The roots are baked in underground ovens, and are then ready to be eaten in their simple form. In making poi, they are then placed in a wooden bowl, or on a scooped-out board, and pounded with a stone pestle. As the root is waxy and close-grained, this is exhausting work. This pounded root can be kept for months if it is kept dry and packed away in dracena-leaves. To convert it into poi, water is added, and it is kneaded into a smooth paste, and then left for several days to ferment, when it acquires a rather agreeable, slightly sour flavor.

To eat poi properly and gracefully is an art, difficult to acquire. You dip a finger into the bowl, draw it out thickly coated with paste, give it a scientific twist, and suck it. The paste is so intensely adhesive that no particle which has touched one person's finger can ever escape to mingle in the general mass, so that the fact of several persons eating from one bowl is less nasty than it sounds.—*C. F. G. Cumming's Hawaii.*

Items.

General Sherman on Southern Slavery.—I saw the whole process of emancipation from beginning to end. I have attended the auction sales of slaves in the rotunda of the St. Louis hotel, New Orleans, of which Colonel Minge, of Illinois, was the proprietor and landlord. I have seen old men, women, and children put up at auction and sold like animals; the father to one, mother to another, children to a third, and so on. I have seen young girls in new calico dresses inspected by men buyers as critically as would be a horse by a purchaser—eyes, hair, teeth, limbs, muscles, &c.—and have seen spirited bidding for a girl of handsome form and figure by men of respectable standing. Such things were then common—not so now; and say what we may, we are more the creature of habit than of original thought.

As a rule the family servants were treated as well as the large hired servants of to-day; but the "field-hands" were regarded and treated as animals; and it was one of the most extraordinary anomalies in political history, that the owners of these slaves, who were not one-twentieth of the whole population, should have ruled their fellow-citizens with despotic severity. They controlled the fashions of their neighbors, dictated to the counties or parishes and States, and were even arrogant to the United States of America in Congress assembled.—*From North American Review.*

Perivious Reading.—In an address delivered by J. W. Shelby, the following statement is made:—"Through inquires made at a boarding school attended by boys whose ages ranged between 8 and

17 years, for the purpose of determining to what extent cheap novel reading was indulged in, the following startling facts were gleaned:

"Of the thirty boys in attendance, eighteen or twenty furnished a complete list, as far as they could remember, of all the books they had ever read in their lives. One had read the life of Jesse James, and preferred it to that of Lincoln or Garfield; four had perused one of Zola's vilest novels; the same number regularly reads the *Police Gazette* and the *Police News*; a number indulged in dime novels, of which one had read as many as sixty. One boy named 69 books which he had read—all fiction, and mentioned that he could give 97 more; another furnished a list of 79, also fiction; another, of 40; another, of 50; another, of 136; while the most astonishing exhibit was made by a boy of 17, who enumerated the titles of 407 books he had read, of which 395 were dime novels."

Methodist Doctrine as to the Future Condition of the Heathen.—The *Christian Advocate* says, that the doctrine of Methodism on this subject is, "that the heathen have more or less light, and that all who live up to the light they have, as nearly as the Gospel requires Christians to live up to the light they have, will be saved." In support of this statement, it quotes from John Wesley,—"I do not conceive that any man living has a right to sentence all the heathen and Mahomedan world to damnation. It is far better to leave them to Him that made them, and who is 'the Father of the spirits of all flesh,' who is the God of the heathens as well as the Christians, and who hateth nothing that He has made."

How Marriage is Regarded Among the Jews.—Ask the Jewish house-wife, the Jewish mother, whether marriage is a failure? She will not understand you. She will stand bewildered in the face of such a question, and if you explain to her what you mean, she will tell you that a Jewish mother sees in marriage the acme of happiness, because of womanly duty; that all these new fangled notions are simply the outcome of the brain of some man or woman who missed the true mark of life and died in a failure. She will point to her children, as Cornelia of old did. She will extol her husband as the ideal of her life. She may not have read as much as the girl of the period, may not be as accomplished, nor figure as a speaker in a-semblages for the advancement of woman suffrage, but she will exemplify to you how a true woman lives, how a true mother, a devoted wife, arranges her life, and you will find that true happiness is found in such a family, and that marriage is the most sacred bond in existence, which to question is to lay a sacrilegious hand upon the rock upon which society rests.—*Hebrew Standard.*

Bare Color.—The United States Circuit Court in Arkansas, recently rendered a decision to the effect, that "white wine, if fermented in a wooden beverage, and cannot lawfully be sold in a State whose statutes prohibit the sale of alcohol or any spirituous, ardent, vinous, malt, or fermented liquors. The object of such statutes is to prevent the use of alcohol as a drink; and any liquid which contains it, and which is not under the restriction imposed by these laws, unless it is specifically excepted by the terms of the act."

THE FRIEND.

TWELFTH MONTH 1, 1888.

In THE FRIEND of the Eleventh Month 10th, there was a notice of two meetings for the public held on the 21st of Tenth Month, since that date a number of similar ones have been held; and so far as information has reached us, there is reason to believe that they have been satisfactory and profitable seasons.

It is not proposed to give detailed accounts of the religious concerns that were brought to view

in all of these gatherings, nor to publish such notices of them as would have a tendency to puff up the minds of those who had been engaged in vocal labor in them, as if they had anything to boast of—for it is the overshadowing presence of the Lord that is the crown of all assemblies for worship; and it is his free gift and blessed help that enables any of his servants to do aught that tends to promote his kingdom in the earth. If they are preserved faithful to Him, they are bound to acknowledge that it has been the Lord's doings, and that the praise and glory all belong to Him.

Yet there seems a propriety in keeping our readers informed of what is going on within our own borders, so that their interest and sympathy may be kept alive towards the efforts that are being made to stir up the pure mind in our own members, and to spread among others a knowledge of the doctrines and testimonies which we hold, and which we believe are in accord with the teaching of our Saviour and his apostles.

Meetings of the kind referred to were held in Friends' Meeting House in West Philadelphia, on Tenth Month 28th; at Millville, N. J., where there are extensive factories of different kinds, on Eleventh Month 4th; in the south-eastern part of Philadelphia, on Eleventh Month 8th; and the same evening at Mt. Holly, N. J.; one in Camden, N. J., and one in the north-eastern part of Philadelphia, on the 11th of the Eleventh Month; and one at Middletown, Pa., on the 18th of the same.

The evening of the Eleventh Month 8th was rainy, and the company which assembled at the meeting then held in the southern part of Philadelphia was not large, about 75 in all,—but it was a good meeting, in which we act forth to the audience the ground of salvation, through the goodness and mercy of God, who so loved the world, that He sent his beloved Son, Jesus Christ into the world, who suffered for our sakes, that He might be a propitiation for the sins of mankind, and reconcile us unto God; and whose Spirit visits the hearts of all to redeem from sin those who will obey its teachings, and thus fit them for an inheritance with the saints in light.

The meeting held in a public hall in Camden, on the afternoon of Eleventh Month 11th, was largely attended, by an apparently thoughtful and seriously-minded company of persons. Much quietness and settlement prevailed throughout, and, after it was ended, the expressions of several of those present showed that they had felt it to be a time of Divine favor. The general statement of Christian doctrine was in accordance with that above mentioned as having been preached on the 8th of the month. But special emphasis was laid on the importance of heeding the teachings of Christ both by his light in the heart and as recorded in the New Testament. The audience were invited to seriously consider how far they conformed in doctrine and practice to the precepts contained in the Sermon on the Mount. Among the points brought to view, one was, that our Saviour taught his disciples to return good for evil, not to retaliate, or use violence to others; but the spirit of the world teaches directly the contrary, and leads to war, while Christ teaches peace.

The meeting on the same afternoon on the Frankford Road, in the north-eastern part of Philadelphia, was held in a Presbyterian Meeting House, and was reputed to be "satisfactory alike to visitors and visited, judging from the expressions in regard to it, of the regular pastor and several of the leaders in his congregation.

Quite a desire was manifested that they might have more meetings of a similar character."

It was with a feeling of satisfaction that we read the following expressions of Cardinal Manning, as showing on his part a more liberal and Christian view of the nature of religion; and of the situation of those who are honestly endeavoring to walk in the right way, according to the degree of light furnished them; than some of his fellow-members of the Roman Catholic profession have entertained.

"It is a consolation and a joy to know that in the last three hundred years multitudes of our own countrymen, who have been born out of the unity of the faith, nevertheless believed in good faith that with all their hearts they had revealed himself in Jesus Christ. It is my consolation to believe that multitudes of such persons are in good faith, and that God in his mercy will make allowance for them. . . . We rejoice to commend them to our Heavenly Father, believing that though they may be materially in error, and in many respects materially in opposition to his truth and his will, yet they do not know and morally cannot know it, and therefore He will not require it at their hands."

SUMMARY OF EVENTS.

UNITED STATES.—A great storm swept along the Atlantic coast on the 25th and 26th instants, and a large number of vessels were stranded on the New England coast. The schooner Edward Norton, of Boston, went ashore on First Cliff Point, Mass., and immediately went to pieces. Fifteen of her crew of sixteen were drowned. Heroic work was done by volunteer life-savers.

The greater part of Pocomoke City, Maryland, including hotels and six warehouses, was destroyed by fire on the night of the 22d. Nearly 2,500 persons are homeless. The losses aggregated \$253,000; the insurance \$158,000.

The total internal revenue receipts for Tenth Month last year were \$1,275,122 greater than those for the corresponding month last year.

It appears from a statement by one of the officers of the U. S. steamer Boston, that the steamer Haytien Republic was captured while coming out of the harbor of St. Mary, for the purpose of raising the blockade, by the Haytien man-of-war Desallies. Captain Ramsay, of the Boston, had several interviews and interceded with the President of Hayti, who refused to release the steamer, and the matter was referred to the Secretary of State at Washington for final action.

Judge Macomber, of New York, has written an opinion in which he holds that strikes are not legal excuses for failures to complete contracts.

In 1884, Maria E. Beasley, of Philadelphia, took out a patent for a machine for the construction of barrels. Up to that time barrels had been made almost altogether by hand. The machine is worked by three men and turns out more than 600 completed barrels a day. M. E. Beasley was born in North Carolina. Her first invention was a machine for hooping barrels. It cost her \$1,700 to invent a day, and is used by the Standard Oil Company.

For the week ending Eleventh Mo. 25th, there were reported 55 new cases and 6 deaths from yellow fever, in Jacksonville, Florida. On the night of the 24th a heavy frost and other parts of the State gave rise to the hope that no more new cases will occur this season.

On the 23d the City Council of Jacksonville passed an ordinance which provides that a fine of from \$50 to \$500 or imprisonment in jail from 30 to 90 days shall be imposed on any person found concealing infected articles, and appointed a committee to act with Surgeon Porter in the selection of a Board of Appraisers, whose duty it shall be to pass judgment on the value of infected goods which are to be destroyed. The deaths in this city last week numbered 345, a decrease of 9 as compared with the previous week, and of 12 as compared with the corresponding period of last year. Of the whole number 176 were males and 169 females; 34 died of consumption; 20 of pneumonia; 29 of diseases of the heart; 19 of old age; 19 of convul-

sions; 15 of inanition; 12 of inflammation of the brain; 11 of typhoid fever and 10 of paralysis.

Market, Dec. 1. U. S. 4½, reg. 100; coupon, 8½; 4's, 128½; currency, 121.

Cotton was quiet but steady at 10½ cts. per pound for middling uplands.

Flour and Meal.—Western and Pennsylvania superfine, \$3.50 to \$3.75; do., do., extra, \$3.75 to \$4; No. 2 white family, \$4.10 to \$4.16; Pennsylvania extra, \$4.02 to \$4.10; Pennsylvania roller, 85c to \$3.50; Ohio, clear, \$4.75 to \$5.25; do., straight, \$5.25 to \$5.50; Indiana, clear, \$4.75 to \$5.25; do., straight, \$5.25 to \$5.50; St. Louis and Southern Illinois, clear, \$4.75 to \$5.25; do., straight, \$5.25 to \$5.50; Patent, extra, 85c to 10c; do., 85c to \$1.00; Minnesota, clear, \$4.65 to \$5.25; do., straight, \$5.50 to \$6.25; do., patent, \$6.50 to \$7. Rye flour moved slowly at \$3.75 to \$3.80 per barrel for choice.

Beef cattle.—Extra, 5 a 5½ cts.; good, 4½ a 5 cts.; medium, 3¾ a 4½ cts.; common, 2¾ a 3½ cts.; fat cows, 2 a 3 cts.

Sheep.—Extra, 5 a 5½ cts.; good, 4½ a 5 cts.; medium, 3¾ a 4½ cts.; common, 2¾ a 3½ cts. Lambs, 4 a 6½ cts.

Hogs.—Extra Chicago 7½ a 8 cts.; fair Westerns, 7½ a 7½ cts.; common Westerns, 7½ a 7½ cts.; State, 7 a 7½ cts.

Milk calves were active at 5 a 8 cts.

Milk cows were only in fair request at \$30 a \$55. For the U. S. Gladstone's amendment to the Government's bill to extend the Ashbourne Land Purchase act, was defeated on Eleventh Month 20th, by a vote of 246 to 330. The motion to introduce the bill was agreed to.

Parnell declared emphatically that he approved the bill, but he believed that it was so designed that under the present circumstances it would be impossible to put it into effective operation. He had always held, he said, that the creation of a peasant proprietary was the only means of solving the land question. "Subsequent to the death of Daniel O'Connell," he said, "I would support the principles of Gladstone's bill of 1886, and Parnell indicated by a shake of the head that he would not. "Then," asked Churchill, "what other scheme would you support?" Parnell replied, "I would only support a bill dealing with arrears," which he said it was modified by dealing with arrears."

On the 26th, David Sheehy, member of Parliament for South Galway, a Nationalist, during the session of that body stated that he was leaving the House, when an opponent handed him what appeared to be an ordinary visitor's card. Upon going into the lobby a constable from Ireland served him with a summons under the Coercion act. He moved to report progress in order to give the House an opportunity to discuss this audacious breach of privilege.

Balfour deplored the incident, and did not know under what authority it had happened. He entirely disapproved of such measures occurring within the precincts of the House.

John Morley proposed that a committee be appointed to inquire into the circumstances of the incident. This being agreed to, a committee was appointed, including J. Morley, Sir William Harcourt, Sir Charles Russell, C. S. Parnell, Timothy Healy and E. Goschen.

The Times Government inquiry into the matter of Parnellism and crime, has made slow progress during the past few days.

The British cruiser Hyacinth has taken possession of the Cook Islands in the name of the British Government. The natives are rejoicing.

A despatch received in London on the 21st from Zanzibar says that British authorities have issued a proclamation in regard to the slave trade, in which they warn British subjects of the penalties which they will incur in making illegal contracts. The slave owners have united in a monster petition against the proclamation, claiming that Italy, and the workmen of France will be invited to adhere, in the name of the brotherhood of labor. The Milanese workmen will ask other associations to co-operate. "War is a game that were their subjects wise, kings would not play at."

The *Vicentina* says that the Russian Government has informed a number of Bulgarian refugees that Russia renounces all interest in Bulgaria, and that the decision dates from the time of Emperor William's visit to Vienna, Russia having abandoned all hope of German mediation.

It is announced from Constantinople that the Turkish Budget shows a deficit of \$7,500,000.

NOTICES.

A Meeting of Friends Teachers' Association will be held 1404 North 82d Street, Philadelphia, on Twelfth Mo. 1st, 1888, at 2 p. m.

Program:

1. Preparatory English.—Francis B. Gimmore.
2. Character Training in Schools.—Henry N. Hoxie
3. Relation of Education.—Prof. Ladd.

To be followed by discussion.

THE TRACT ASSOCIATION has just published:

A Card Calendar for 1889. Price 5 cents; mailed free 10 cents;

"Our Unconscious Influence." A new 4-page tract; "Our Unconscious Influence." A new 4-page tract;

"Character Training in Schools."—Henry N. Hoxie

"Relation of Education."—Prof. Ladd.

To be followed by discussion.

"On Conformity to the World;" Extracted from Mar-

Janine Graham's Letters."—8 pages;

"Brief Memoir of Joseph Pike, an Irish Friend, who died in the year 1729."—12 pages;

"Christian Baptism;" by Jeremiah Leslie, of Zane-

ville, Ohio; a Member of a Society that Practices

Water Baptism."—24 pages;

"Honesty and Knowledge;" a sermon that feareth th-

Lord, shall be praised."—4 pages;

"What is it?"—4 pages.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting. Those of our members feeling their minds drawn toward this position, are desired to make early application to any of the undersigned.

Aaron Frame, Barnesville, Belmont Co., Ohio.
Hannah Tatum, "
John W. Smith, Harrisville, Harrison Co., Ohio
Sarah F. Holloway, Fishing, Belmont Co., "

WANTED.—A enterprising Friend with family take charge of a Delaware County Dairy Farm.
Address, THE FRIEND.

DIED, Ninth Month 24th, 1888, in the 73d year of his age, JOSIAH FAWCETT, a member of Salem Monthly Meeting, Ohio. He was for several years afflicted with a very painful disease, which was endured with much fortitude and Christian resignation. He frequently expressed himself as feeling a willingness to be removed from works to rewards; but at the same time was ready to submit to the will of his Heavenly Father. As the end drew near, and it appeared that the hour of death was approaching, he was frequently engaged in fervent supplication that he might be accepted; and his last ineluctable utterance was an invocation to his Redeemer to take him to himself. After which he peacefully passed away, leaving the consoling evidence behind him that his end was peace.

—, on the 7th of Tenth Month, 1888, in the 77th year of his age, RICHARD E. FAWCETT, a member and elder of Salem Monthly Meeting, Ohio. Although the death of this dear Friend was sudden, it was unperceived, and he died in the same peace and joy which he had enjoyed in the case; and he seemed to fully realize his mission, and was in a quiet waiting frame of mind, that indicated, as well as expressions that came from him, that he was endeavoring to be prepared for the solemn journey. His circumstances and exemplary life were such, as his very diligent attendance at religious meetings, frequently when scarcely able to do so, we evidence that he had a substantial foundation on which to build his hopes of an everlasting happiness. His friends have the consoling belief that he has joined that company who have washed their robes as made them white in the blood of the Lamb.

—, Eleventh Month 18th, 1888, in this city DEBORAH HOPKINS, daughter of the late Richard Hopkins, in the 31st year of her age, a member Western District Monthly Meeting of Friends.

THE FRIEND.

Incidents and Reflections.—No. 177.

MEANS OF CONVERSION.

Among the instrumental means which the Almighty has made use of to awaken the sinner to serious reflection on his situation, an interesting one is related by Audubon in his Ornithological Biography. In speaking of the Zenaida dove, he says:—

"A man who was once a pirate assured me, that several times, while at certain wells dug in the burning shelly sands of the well-known Key, which must be here nameless, the soft and melancholy cry of the doves awoke in his breast feelings that had long slumbered, melted his heart to repentance, and caused him to linger at the spot in a state of mind, which he only who compares the wretchedness of guilt with the happiness of former innocence, can truly feel. He said he never left the place without increased fears of futurity, associated as he was, although I believe by force, with a band of the most desperate villains that ever annoyed the Florida coast. So deeply moved was he by the notes of any bird, and especially by those of a dove, the only soothing sounds he ever heard during his life of horrors, that through these plaintive notes, and then alone, he was induced to escape from his vessel, abandon his turbulent companions, and return to a family deploring his absence. After paying a parting visit to those wells, and listening once more to the cooings of the Zenaida dove, he poured out his soul in humble supplication for mercy, and once more became what one has said to be 'the noblest work of God,' an honest man. His escape was effected amidst difficulties and dangers; but no danger seemed to him comparable with the danger of one living in the violation of human and Divine laws; and now he lives in peace in the midst of all his friends."

Captain Mitchell K. was from early life accustomed to the sea. He commanded a merchant ship that sailed from Philadelphia. After his marriage, he again went to sea, and one day committed to writing, while in a highly devotional frame of mind, a prayer for the temporal and eternal happiness of his beloved wife and unborn babe. This prayer, nearly filling a sheet of paper, was deposited, with his other writings, at the bottom of an old oak chest. The captain died before the completion of the voyage, in the

year 1757, and his instruments, papers, &c., were returned to his wife. Finding they were generally what she could not understand, she locked up the chest for the inspection and use of her babe, (who proved to be a son) at some future period. At eighteen, this son entered the army, and in 1775 marched for Boston. He gave the reins to his lusts, and for many years yielded to almost every temptation to sin. At last, he was called to the death-bed of his mother, who gave him the key of his father's chest, which, however, he did not open, lest he should meet with something of a religious kind, that would reprove his sins and harass his feelings. At length in 1814, when in his fifty-sixth year, he determined to examine its contents. When he reached the bottom, he discovered a paper neatly folded, and endorsed—"The prayer of Mitchell K. for blessings on his wife and child, August 23, 1757." He read it. The scene, the time, the place and circumstances under which it was written and put there, all rushed upon his mind, and overwhelmed him; for often had his widowed mother led him to the beach, and pointed to him the direction on the horizon, where she had traced the last glimpse of flowing canvas that bore his father from her, never to return. He threw the contents back into the chest, folded up the prayer, and put it in the case with his father's quadrant, locked up the chest, and determined never again to unlock it. But his father's prayer still haunted his imagination, and he could not forget it. From that time he became an altered man, and lived and died as a Christian.

William Tennent once took much pains to prepare a sermon to convince an infidel of the truth of Christianity. But, in attempting to deliver this labored discourse, he was so confused as to be compelled to stop. This unexpected failure in one who had been admired for the force of his eloquence, led his infidel auditor to believe that he must at other times have been aided by a Divine power. This reflection proved a means of his conversion. Tennent afterwards used to say, that his *dumb sermon* was one of the most profitable sermons he had ever delivered.

An anecdote was introduced by the late Nathan Kite, into one of the many articles he wrote for THE FRIEND, of a sailor whom the captain of a ship found, in time of a storm, on his knees below decks, repeating prayers. The captain roughly shook him with the admonition, "Say your prayers in fair weather." On arriving at port, he left the vessel, but these words of the captain abode so constantly with him that he was led to consider his manner of life, and seek for help from the source of all blessings, and ultimately became a preacher of the religion he had once practically despised. The captain in the meantime continued to lead a careless and unconcerned life; and a few years after, being on land, was persuaded by a friend to visit a place of worship, where his former worthless sailor was now officiating as a minister, although he knew it not. In the course of the services, the preacher recognized his former captain, and

with a loud voice uttered the command which had so deeply impressed him—"Say your prayers in fair weather." He then related the circumstances which had led to his first utterance, the effect it had had on him, and the desire he felt, that it might prove profitable to others. The events of that day are said to have made it a turning point in the life of the captain also.

In the Journal of David Sands a letter is inserted, which he received from one whom the Spirit of Christ had reached through his ministerial labors. The writer of the letter says:—

"I was a poor benighted traveller, wandering in darkness and doubt; often querying with myself, who is Jesus of Nazareth, whom they call Saviour and Redeemer? I have never known Him, or seen his works, though it is said He wrought miracles, raised the dead, and even gave up his life for the redemption of sinners. I heard and read all this, but still queried,—Is it not a fable? What have I to do with Him? His blood, if it was shed, is nothing to me. I was, like Paul, a persecutor. I cried peace, while peace was a stranger to my heart; I wandered up and down the earth in search of rest to my weary soul; in the bright allurements of folly I believed I should find it; but like a phantom, when near, it eluded my grasp. Thus I passed my days in seeking pleasure, my nights in mourning; and while my Heavenly Father was striving with me, and knocking gently at the door of my heart; though I was ready at times to cry out with anguish, I still rejected Him, saying, as it were, 'Go thy way for this time, at a more convenient season I will send for thee.'"

"While wondering which way to turn my steps, I heard that some people called Quakers had arrived in our village, and were going to have a meeting in the school-house that evening. I had heard that yours were a self-denying people; singular in dress and address; and I determined to go, being more prepared to receive amusement than instruction; in truth, I tried to be an unbeliever in the things of God, and of his heavenly kingdom. When I entered the house, I was struck with the awful solemnity that overshadowed you. It were vain to attempt to describe my feelings, while we sat in this solemn silence. It seemed as though my poor tempest-tossed spirit would have burst its confines, and deserted its earthly tenement. While in this state of conflict you arose, and commenced with those ever-memorable words: 'Come unto me, all ye who are weary and heavy laden; take my yoke upon you, for it is easy, and my burden, for it is light.' Oh! that blessed invitation of our dear Redeemer unveiled the darkness, and I could see, as in a glass, the very depths of my soul, and was ready to cry out, 'Lord, be merciful to me a sinner.' Never shall I forget the sweet words of hope, which flowed from your tongue, words of eternal life; your countenance became radiant with the theme of the goodness and glory of the Almighty God and Father, who gave his dear Son, that through Him we might be saved. Oh! how soon the glimmering of hope

dispelled the darkness of infidelity! I felt the invitation was to me, and most joyfully accepted it, for I was indeed weary and heavy laden, and longed for rest. I returned home, my heart filled with praises to God; the image of my suffering Saviour was before me, and I felt I could suffer and die for his precious sake."

In a letter to his wife, written from Ireland in 1798, when that country was agitated by civil war, David Sands mentions the following interesting case of one who became convinced of the peaceable nature of the kingdom of Christ. The letter says:—

"Some conviction has appeared in the course of my late journey, and that amongst the men mighty in war. A person who had long approved himself one of the most fearless and undaunted, and an officer of no inferior rank, having sat with us in several meetings which I had in a town that had been besieged, and many lives lost, and from which the clergy had fled, invited me to his house to breakfast, which I felt easy to accept. After it was over, I had a religious opportunity with himself and his family. He was much tendered and reached, as he had been in meeting before. He arose, and stripping off his military clothes, and laying by his sword, asked for some other garments, saying to his wife and children, 'I shall never fight more, for I am convinced it is not in accordance with the Spirit of Christ. I am a Quaker.' Since this, he appears very soft, and I hope he will make a valiant man in the cause of Christ."

In the course of one of David Sands' early journeys in the work of the ministry, he arrived at a town or village where the Society of Friends or their principles were unknown. He put up at an inn where was to be a large ball or assembly that evening.

Being their custom, on such occasions, to invite strangers who might happen to be there, to join them; and his appearance being new to them, and very singular, they invited him to attend. He accepted the invitation, and after they were all assembled, and their ninth and music commenced, he walked into the midst of them. His solemn and impressive demeanor struck the company with awe; the music and dancing ceased, and they all stood in silent amazement, waiting the result; when he commenced addressing them to the following import:—

"My friends, for what purpose is this gay company assembled? Is it to worship Almighty God; Him from whom all your favors and blessings flow; who, in his love and compassion, gave the dear Son of his bosom as a ransom, that through Him you might have eternal life? Or have you rather suffered yourselves to be led captive by the enemy of your souls' peace, who, for a season, may hold out bright and pleasant allurements to tempt your unwary feet to stray from the true fold of peace, revealed in and through Christ Jesus your Saviour and Redeemer; He who suffered his precious blood to flow to wash away your sins? Oh! be persuaded by a brother who loves you with that love which flows from the Fountain of all good, to turn from these follies and devices of Satan, which will lead you astray. Oh! be persuaded, I say, to seek the Lord whilst He may be found, turn to Him and He will turn unto you; knock, before the door of mercy is eternally closed, and He will receive you and encompass you with unbounded love, and lead you gently into pleasant places, even into the kingdom of heaven, where you will rejoice for evermore; singing praises unto the Lamb. Yea, He will be unto

you as a shield and buckler; and as your strong defence in times of trouble. Suffer Him not to stand knocking at the door of your hearts until 'his head shall become wet with the dew, and his locks with the drops of the night.'"

This did he continue to address them until the power of the Most High was so made manifest among them, that they listened to his communication with deep interest; and, as some of them afterwards expressed, he appeared as a messenger from heaven, sent to warn them of their danger. Many of them were brought to tears whilst he was speaking; and after he concluded, acknowledged, with gratitude, their sense of his solicitude for their welfare; saying, "We have heard this night what we never can forget." After taking a tender leave of them, they separated, almost forgetful of the cause for which they had assembled. J. W.

FOR "THE FRIEND"

Isaac Coates' Visit to the Seneca Indians, and to Canada.

(Continued from page 139.)

"After meeting, took leave of our kind friends near the meeting-house and rode five miles to our friend, Samuel Becket's, who is a member of said meeting, and kindly entertained six of us, Joshua Sharpless staying at James Crawford's.

"Tenth Month 3rd. Thomas Stewardson, James Cooper, Jacob Paxson and myself set off, intending for Newark down the Niagara River; dined at Queenstown, or the landing, where all the goods conveyed thus far by water are unladen, and those intended to be re-shipped and taken into Lake Erie are carried or carried by land above the Great Falls; from thence to Newark, it being a newly-settled town at the mouth of the river Niagara, containing about one hundred houses, which is a beautiful place opposite the American fort, called Niagara Fort, and just where the river empties into Lake Ontario, which is another wonderful fresh water sea in this Northern country. Lodged at Geo. Bradshaw's. In this place oats are six pence per quart, hay four shillings per night for horses. This day's ride twenty-two miles.

"4th. Rode fifteen miles up the river to William Lunday's; left our horses there, and walked about a mile to a meeting appointed by Nathan Smith and William Blakey, in a meeting-house near the Falls, called the Federal Meeting-house, it being built by the inhabitants for any minister of any religious denomination to preach in; but I understand meetings are very rare in it—no Friends live hereabouts but William Lunday, and he by some means forfeited his right before he came here, but is kind to us. I thought the opportunity was owned, particularly toward the close. In the afternoon, William Blakey, Nathan Smith and Thomas Stewardson set off for Black Creek, Jacob Paxson being very poorly, stayed at Lunday's. James Cooper and myself went about five miles down the river to view a great curiosity called the Whirlpool. On our way we met with an acceptable repast on excellent peaches. We came to the bank of the river, which I believe is three hundred feet above the water, near perpendicular, in which we had a fair view of that astonishing place; the river rushing with great impetuosity against the bank of wall of rocks at a short turn in the river, and then turns in a cove of perhaps ten acres, in which it whirls round and round, striving to escape at a narrow passage of perhaps one hundred yards, being all the opening there is between the high hills,

Into this pool abundance of logs and timber is carried, and perhaps cannot get out for some weeks. It is amazing to behold the whirls that are formed, the logs sucked down, and sometime after, shooting up (perhaps one hundred yards from the place they went down end foremost) fifteen or twenty feet perpendicular out of the water; that upon the whole it is an indescribable agitated place. Returned and lodged at Wm. Lunday's.

"5th. William Lunday accompanied James Cooper and myself in order to take a satisfactory view of the great cataract. We went about three-quarters of a mile below the falls and then descended down a bank of limestone rocks, I suppose near three hundred feet, which was not quite perpendicular, to the surface of the water, sometimes holding by roots, sometimes by twigs, and some of the way down a ladder; other times, sticking our toes in the cavities and holding by the craggy parts of the rocks. When down, we clambered along the rocks, logs, slabs and timbers up the river to the place where the water shoots over the rock and falls one hundred and sixty feet. We went as far as we thought was safe, being as wet with the spray of the water and sweat as if we had been in a heavy shower. I had an inclination to have gone further in behind the water, but Lunday said it was dangerous, for, as he said, if the wind was to shift against us we should be in danger of being suffocated with the spray and sulphur, which smelled very strong; but I thought there was not quite so much danger as he alleged, believing he was a good deal timid. However, I thought best to decline, lest I should suffer for my temerity. On clambering along the rocks by the water, and a wall or mountain of rocks one hundred and sixty feet high in some places over my head, hanging twelve or fifteen feet over plumb, it appeared truly awful and dangerous; which put me upon thinking what my view was in going into such apparent danger, as it is evident great columns of them frequently break off and fall down; but, as I believed, it was not altogether to gratify an idle curiosity, for the whole of the prospect led me into a reverent frame of mind, admiring the wonderful works of, and in some measure adoring, the Great Author. I then thought, if I should there be buried in oblivion, perhaps, my soul was as much in a state of aspiration and adoration, as it might be when the unavoidable event should take place; which consideration led me on without much fear at that time, though naturally timid. I need not undertake to describe this wonderful phenomenon, as many pens have been employed in setting forth its magnitude, but as I have taken a view of the river in places many miles down, I am fully of the mind, the Great Falls at some period was nine miles further down the river, and that they are gradually wearing up, and perhaps in time may drain the great Lake Erie. It is wonderful to behold the agitation of the water in the rapids above the falls, and also below them; column after column dashing against each other and rising a great height, with such foaming and confusion that the whole appears truly awful. We were very wet when we left the place, got on our horses and rode to Chippewa, fed our horses, took a snack ourselves, then rode to Black Creek settlement twenty-four miles, and lodged at Anna Morris', who is a kind agreeable young widow.

"6th. Attended the meeting at Asa Schooley's, it being large for that place. After meeting we had a conference with the members of that

meeting, and laid before them the need we thought they had of a house to meet in, which they seemed surprised to build; and on considering their circumstances, being most of them new settlers and not in very affluent life, we made them an offer of thirty dollars towards purchasing materials, but they modestly declined accepting it, and said they could do it themselves. And now we have prepared things in order to set my face homewards to-morrow, which feels very pleasant.

"7th. William Blakey, N. Smith, J. Paxson, Thomas Stewardson and myself lodged at our kind friend Asa Schooley's last night, who with his valued wife equipped us for our journey through the wilderness. Early in the morning, after taking an affectionate farewell of our kind host, I set off with T. Stewardson and rode thirteen miles to the ferry; had a fine passage over the river, which is a terror to many; then rode three miles up the lake to the mouth of Buffalo Creek, put up our horses and waited until all the rest of our company came, which was now augmented to the number of eleven. William Lippincott, John Hill and ——— Carpenter joining with us to go to the States. Four of us lodged at Joseph Ellicott's, who was very kind, gave us a good supper and breakfast.

"8th. Set off from Ellicott's, it having been a very wet night and dull morning. Rode eighteen and one-half miles to where there is a large new house, building for a house of entertainment; fed our horses and dined on our own provision; then rode the rest of this stage, an open plain full of limestone, which doth not appear to me to be very valuable, the grass and herbage of an inferior kind; some of the way, pretty good land, covered with beech and sugar maple. From thence to Tonnywonto [Tonawanda], a large stream running into Lake Ontario, eleven and a half miles. Between these places there is some excellent land covered with beech, sugar maple, bass, black walnut, shell-bark hickory, poplar and divers other sorts of timber. Just after we crossed the Tonnywonto, I rode a few rods to the left hand to see the memorable and celebrated rock under which Captain Lindsay and his men about two years ago encamped and lodged, a very cold, wet night, without fire; and just after I got into the road again had the mortification to lose a great part of my horse-feed by means of the bag coming untied and scattering on the ground, which my mare may have cause to lament in this wilderness country. Then rode eleven miles further to a small stream, struck up a fire, and lodged in the woods at the east end of the White Oak Plains, having passed over some very poor land, some good, and a large plain, pretty much without timber or luxuriant herbage. In our way this day we met many people moving from Bucks County and the Jerseys to Canada. It is amazing what numbers of people emigrate from those two places over the Niagara River. Where we have pitched our tent there are several other fires, at some of which there are several Indians out a hunting, and have large bundles of skins. This day's ride forty-one miles.

"9th. Set off early and rode to Ellicott's store-house, thirteen miles, having an order from him to get anything wanted for our horses stood in need of. This stage all the way excellent limestone land, covered with ash, beech, bass, sugar maple, &c., in abundance—a deep soil, and not so broken with the rock nor yet so dead a level as in some places, and is tolerable well-watered with lively streams.

Soon after I set off this morning my mind became serene, which led me into an humble state; and thankfulness and gratitude to Him who hath hitherto preserved me and showered down many blessings and favors upon me, ascended from my soul, accompanied with strong desires that the rest of my time may be spent in a manner worthy of such favors."

(To be concluded.)

FOR "THE FRIEND."

Some Account of Joseph Wilson.

It is often instructive and encouraging to survivors, to trace the footsteps of those who have passed the time of their sojourning here in fear, finished their course with joy, and received the end of their faith, even the salvation of their souls. Considerations of this nature have led to the preparation of the following account of Joseph Wilson, who departed this life the 17th of Sixth Month, 1871.

He was the son of Israel and Martha Wilson, being the youngest of a family of twelve children, and was born near Freeport, Harrison Co., Ohio, the 24th of Third Month, 1815.

The care and concern of religious parents, who endeavored to train up their children in the nurture and admonition of the Lord, was not lost upon their son Joseph. His mother died when he was about ten years old; but his father, who had no greater joy than to see his children walking in the Truth, and who for many years filled the station of a worthy elder in the religion of Society of Friends, lived to see his youngest child, as well as others of his family, a constant and useful member of the same religious society.

The subject of this memoir was naturally of a lively and energetic disposition, and was not unacquainted with those inclinations and temptations, which, when followed, lead into byways and crooked paths, far from the flock and fold of Christ; but by early attention to the witness for truth in his own heart, and a due regard for the care and counsel of those who watched over him for good, he was preserved in his youth from those vanities which lead into vexation of spirit; and as he grew in years, he grew in grace and in the knowledge of the truth as it is in Jesus.

In the twenty-second year of his age he was suitably united in marriage with Eliza, daughter of John and Abigail Branson, and settled within the limits of Flushing Monthly Meeting, Ohio, where he continued a member during the remainder of his life. Thus settled, with an increase of care and responsibility devolving upon him, and with but little of this world's goods to call his own, he did not forget the impressive injunction of our blessed Saviour, "Seek first the kingdom of God and his righteousness;" and by attending thereto, he found the annexed promise verified in his own experience: that all things necessary should be added. After his marriage he occasionally committed to writing in the form of a diary, some account of his spiritual exercises as he journeyed through life. The following, without date, was written about the thirtieth year of his age:

"Are there not many who set out in life with good intentions, and as they may think, with fixed resolutions to lead an upright and godly life; who have been willing to make some sacrifices, and favored to overcome many of the enemies of their souls' peace, but who notwithstanding have taken up a rest far short of the true rest? May this be the inquiry of each of us who are in the younger and middle walks of

life. Is this my present dangerous resting place? Are these not sacrifices yet required of me? Some besetting sin still lurking within, which causes the Divine light to be veiled in great measure from my view? David said, I will not offer unto the Lord my God an offering that doth cost me nothing. He knew that an offering that cost nothing, was worth nothing, and that God would not accept a lame offering. We also know it; why then deceive ourselves and tempt God? Ananias and Sapphira aimed to make some sacrifice, but were not willing to offer up all. This is surely a notable warning for any of us who are refusing to give up what we are persuaded is called for at our hands. What a band there is amongst us approaching the meridian of life, endowed with bright talents which should be employed to the honor of Him who gave them; but with respect to some of us is there not ground to fear that these talents will be buried in the earth? Could we be induced to place a proper estimate upon those things which are not seen, except with the eye of faith, and which are eternal, a less value would attach in our view to those perishing things which soon pass away forever. Why are we not wise? Why do we not consider our latter end? Why, after making some sacrifices and being in many respects consistent, do we remain far short of the true rest, not yet being redeemed from the earth. May we seek for Divine help to be raised out of this polluted state, giving up all for Christ's sake that we may become his true followers. Will any thing short of this avail us in a day that is coming, and we know not how near it is at hand, when, if we have not peace with God, we would give the whole world, were it in our possession, to obtain it?"

Second Month 4th, 1843. "Attended meeting to-day, where comfortable feelings were in some measure witnessed; the wicked were advised to forsake their ways, and the unrighteous man his thoughts, and turn unto the Lord and He would have mercy, and to our God, and He will abundantly pardon. There is much contained in these words: I want that we may duly consider our ways and ponder the paths in which we walk. I trust I am not ignorant nor wholly unthoughtful of the danger of unwatchfulness. How strictly it is enjoined upon us to watch. 'Let us watch and be sober.' 'What I say unto you, I say unto all, watch!' and whilst this state of watchfulness is abode in, evil thinking and evil speaking is excluded, and He to whom we are accountable is honored; He who is the strength of our days and our portion forever. Unto Him may we ascribe thanksgiving and praise."

Fourth Month 23rd. "A day of strippedness and poverty; almost destitute of that living substance which I have sought for. So little fervency of spirit whilst at meeting that drowsiness seemed to be the enemy that I had to contend with. Alas! I am ready to exclaim why is it so? Perhaps it is in order that I may see how little I can do for myself, and how entirely dependent I must be on the Lord alone, if I share in any degree the light of his glorious countenance."

Third Month 9th, 1845. "Attended meeting to-day, and was favored to feel that our Heavenly Father had not wholly forsaken us in our stripped and tried condition. This afternoon attended the funeral of our departed friend M. S., who after a few days illness was summoned from works to rewards. Similar occurrences of late have not been frequent, and we may think that the Lord's hand has been heavy upon them; but I trust none will be disposed to murmur or call in question his doings: for I believe that

mercy has been mingled with judgment; the warning voice having been sounded in the ears of survivors, be ye also ready; and if we who are spared a little longer are not found in our allotments at the end of our days, the condemnation will be the greater. Oh! that we all may be found pursuing the straight and narrow way until we arrive at the haven of eternal rest.

Twelfth Month 16th. "This day, through unwatchfulness, the enemy of man's happiness caused me to err in word and feeling; for which, alas, sorrow has taken hold of me. May this and similar circumstances teach me, that I am no longer safe than while on the watch. I do desire that the Lord's hand may not spare, nor his eye pity, until there is an overcoming the enemies of my soul's peace; an attainment that I do not expect in my own strength merely."

(To be continued.)

The Rock-hewn Temple in the Isle of Elephanta.

The celebrated temple dedicated to the Hindu Gods is situated on a small, rocky island in the harbor of Bombay. A description of it by Dr. Mutchmore, of Philadelphia is published in *The Presbyterianian*, from which the following is taken.

As the top of the mountain is reached a great ravine appears, the soil and rocks cut down together until a level area of two hundred feet square is reached, from which the excavations are made for the wonderful rock temples. There is a perpendicular face of solid trap rock, without seam or lamination, rising about sixty feet from the platform gained by cutting into the hill. In this solid trap rock the temple has been made by human hands alone. It is the work of the sledge, mallet and chisel, and has cost as much labor as the building of the Pyramids of Egypt, and is in many respects a greater wonder of the sacrifice of mind, muscle and perseverance. The temple consists of two parts, a central hall about ninety feet square, four aisles or vestibules, each sixteen feet high and fifty-four feet long. The roof, which bears the top of the mountain up—not less than one hundred perpendicular feet of rock and clay—is supported on twenty-six pillars—eight of them now broken—and sixteen pilasters. These have been cut out of the solid rock, as have been all the chambers and images. The columns that sustain the weight of the mountain are exquisitely wrought into flutings and figures, and, as the rock roof is not entirely level, the columns are from fifteen to seventeen feet high, round, fluted, octagonal, plain and square, two and a half or more feet at the lower end, resting on a wider base three feet square.

Entering the chamber, its object is made apparent as a place of worship by the colossal three-headed bust on the south wall. This colossal form reaches the full height of the chamber—fifteen feet—and is cut from the same dark trap rock, as hard as the hardest flint stones from the Hudson, used for pavements in the United States. This bust represents Shiv, or Siva, who is the leading character in all the groups in this rock-hewn temple. The front face is Shiv in the character of Brahma, the creator; the east face is Shiv in the character of Rudra, the destroyer; the face on the west side is that of Shiv in the character of Vishnu, the preserver; the face in the centre is gentle and reposeful.

There is in another chamber of this temple, on the western side, a symbolical group, cut from the same hard stone out of which the temple and its belongings have been chiselled,

the representation of the marriage of Shiv and Parvati. The figure of Parvati is one of the most symmetrical in proportion in the whole temple. Facing this marriage scene is one of the most remarkable of all the sculptures. The main figure represents Shiv in the terrible form assumed when he heard from his first wife, Sita, that he was not invited to a sacrifice given by her father. The face is marked by succeeding flashes of passion, and across the left shoulder and down on the thigh hangs a rosary of human heads. In another chamber may be seen the sculptured forms of Shiv and Parvati seated together, surrounded with groups of male and female divinities showering down flowers from above. The rock is cut into various shapes to represent the clouds that rest on the summits of Karlas.

The age of this temple cannot be traced. It was hewn in the solid trap rock of the mountain, with all its wonderful sculptured forms and groups cut, as the chambers were made, out of the same material as it stood in the rock. Its history goes no further back than the ninth century, giving the temple an antiquity of about one thousand years.

ALL strive to keep out of contention and strife, for that is like a wind and a storm amongst the plants and trees of God; for the holy men and women of God must be patient, and the Lamb will have the victory.—George Fox.

THE BLUEBIRD.

"On his breast the earth; on his wings and back the sky."—THEOPHIL.

BY HENRY W. AUSTIN.

To the window of my garret
Came a bluebird yesternorn,
And I fancied for a moment
'Twas the soul of Spring, a new born;
But I heard thy wail, October,
Sighing like a ghost forlorn;
And the gray clouds, full of menace,
Frowned the dancing leaves to scorn;

Flew away ere I could open
Unto such a heavenly guest
That old window of my garret,
Near to which, perhaps, a nest
Full of bluebirds once was hidden,—
So, before his Southern quest,
He had paused for one more visit
Near the place he loved the best,—
The old nest where he was born:

Yes, was born. There is a hollow
In the apple-tree close by;
And the bluebird (who doth carry
On his back and wings the sky)
And upon his breast the brown earth
Of the spring-time soft and shy),
Trusteth often to things hollow—
Precious hopes,—as you and I
Oft have done and may again.

May again? Nay, will do always,
Let us pray—since far more wise
Is the habit of believing,
Than the wisdom cynics prize:
Rather let us be like bluebirds,
Who, although the brown earth tries
Up their breasts to spread its color,
Carry on their wings the skies—
But my bluebird flew away;
Flew away; and thus this other
Fancy came: how oft, indeed,
Heavenly guests unsought might seek us
In our grayest days of need,
If we only to the music
Of their coming wings gave heed!
But they find our garret windows,
Closed too oft,—and so they speed,
Like my bluebird, far away!

—The Sunday School Times.

A SOLITARY WAY.

SELECTED.

There is a mystery in human hearts,
And though we be encircled by a host
Of those who love us well, and are beloved,
To every one of us, from time to time,
There comes a sense of utter loneliness.
Our dearest friend is "stranger" to our joy,
And cannot realize our bitterness.
"There they are not only wholly understanders,
None to enter into all I feel?"
Such is the cry of each of us in turn.
We wander in a "solitary way."
No matter what or where out lot may be;
Each heart, mysterious even to itself,
Must live its inner life in solitude.

And would you know the reason why this is?
It is because the Lord desires our love,
In every heart he wishes to be first.
He therefore keeps the secret-key Himself,
To open all its chambers, and to bless
With perfect sympathy, and holy peace,
Each solitary soul which comes to Him.
So when we feel this loneliness, it is
The voice of Jesus saying, "Come to Me;"
And every time we are "not understood,"
It is a call to us to come again;
For Christ alone can satisfy the soul,
And those who walk with Him from day to day
Can never have "a solitary way."

And when beneath some heavy cross your faint,
And say, "I cannot bear this load alone,"
You say the truth. Christ made it purposely,
So heavy that you must return to Him.
The bitter grief, which "no one understands,"
Conveys a secret message from the King,
Entreating you to come to Him again.
The Man of Sorrows understands it well,
In all points tempted. He can feel with you,
You cannot come too often, or too near.
The Son of God is infinite in grace,
His presence satisfies the longing soul,
And those who walk with Him from day to day
Can never have "a solitary way."

BEYOND THE CROSS.

SELECTED.

Still will we trust, though earth seems dark and dreary,
And the heart faint beneath his chastening rod;
Though rough and steep our pathway, worn and weary,
Still will we trust in God!

Our eyes see dimly lit by faith anointed,
And our blind choosing brings us grief and pain;
Through Him alone who hath our way appointed,
We find our peace again.

Choose for us, God! nor let our weak preferring
Grieve our poor souls of good thou hast designed;
Choose for us, God! thy wisdom is unerring,
And we are fools and blind.

So from our sky the Night shall furl her shadows,
And Day pour gladness through his golden gates;
Our rough path lead to flower-crimmelled meadows,
Where joy our coming waits.

Let us press on in patient self-denial,
Accept the hardship, shrink not from the loss;
Our guerdon lies beyond the hour of trial,
Our crown beyond the cross.

—Christian Life.

First (or Faustus) having printed off a considerable number of copies of the Bible, to imitate those which were commonly sold in manuscript, undertook the sale of them in Paris, where the art of printing was then unknown. As he sold his printed copies for sixty crowns, while the scribes demanded five hundred, this created universal astonishment; but when he produced copies as fast as they were wanted, and also lowered his price to thirty crowns, all Paris was agitated.

The uniformity of the copies increased the wonder. Informations were given to the magistrates against him as a magician; his lodgings were searched; and a great number of copies being found they were seized. The red ink, with which they were embellished, was said to

be his blood. It was seriously adjudged that he was in league with the devil; but, on discovering his art, the parliament of Paris passed an act to discharge him from all persecution, in consideration of his useful invention.—*Arvine's Cyclopaedia.*

FOR "THE FRIEND."

Tropical Africa.

The work with the above title, by Henry Drummond, well known in scientific circles, describes a visit paid by him to the eastern portion of Central Africa. He ascended the Zambesi and Shiré Rivers to Lake Nyassa, and visited the high lands lying between its northern end and the southern extremity of Lake Tanganyika. One of the main points of interest in his little book, is the insight he gives into the slave trade, of which the Arabs are the great agents. Professor Drummond says:—

"On the longest day of a recent summer—mid-winter therefore in the tropics—I left London. A long railway runs across France, Switzerland, and Italy, brings one in a day or two to the Mediterranean. Crossing to Alexandria, the traveller strikes across Egypt, over the Nile, through the battlefield of Tel-el-Kebir, to the Red Sea, steams down its sweltering length to Aden, tranships, and, after three lifetimes of deplorable humiliation in the south-west Monsoons, terminates his sufferings at Zanzibar.

"Zanzibar is the focus of all East African exploration. No matter where you are going in the interior, you must begin at Zanzibar. Oriental in its appearance, Mohammedan in its religion, Arabian in its morals, this cesspool of wickedness is a fit capital for the Dark Continent. But Zanzibar is Zanzibar simply because it is the only apology for a town on the whole coast. An immense outfit is required to penetrate this shopless and foodless land, and here only can the traveller make up his caravan. The ivory and slave trades have made caravanning a profession, and everything the explorer wants is to be had in these bazars, from a tin of sarlines to a repeating rifle. Here the porters, the necessity and the despair of travellers, the scum of old slave gangs, and the fugitives from justice from every tribe, congregate for hire."

"Africa, speaking generally, is a vast, ill-formed triangle. It has no peninsulas; it has almost no islands or bays or fjords. But three great inlets, three mighty rivers, piercing it to the very heart, have been allocated by a kind Nature—one to each of its solid sides. On the north is the river of the past, flowing through Egypt, as Leigh Hunt says, 'like some grave, mighty thought threading a dream'; on the west the river of the future, the not less mysterious Congo; and on the east the little-known Zambesi.

"The physical features of this great continent are easily grasped. From the coast a low scorched plain, reeking with malaria, extends inland in unbroken monotony for two or three hundred miles. This is succeeded by mountains slowly rising into a plateau some 2000 or 3000 feet high; and this, at some hundreds of miles distance, forms the pedestal for a second plateau as high again. This last plateau, 4000 to 5000 feet high, may be said to occupy the whole of Central Africa. It is only on the large scale, however, that these are to be reckoned plateaux at all. When one is upon them he sees nothing but mountains and valleys and plains of the ordinary type, covered for the most part with forests.

"I have said that Nature has supplied each side of Africa with one great river. By going

some hundreds of miles southward along the coast from Zanzibar the traveller reaches the mouth of the Zambesi. Livingstone sailed up this river once, and about a hundred miles from its mouth discovered another river twisting away northwards among the mountains. The great explorer was not the man to lose such a chance of penetrating the interior. He followed this river up, and after many wanderings, found himself on the shores of a mighty lake. The river is named the Shiré, and the lake—the existence of which was quite unknown before, is Lake Nyassa. Lake Nyassa is 350 miles long; so that, with the Zambesi, the Shiré, and this great lake, we have the one thing required to open up East Central Africa—a water-route to the interior. But this is not all. Two hundred and fifty miles from the end of Lake Nyassa another lake of still nobler proportions takes up the thread of communication. Lake Tanganyika is 450 miles in length. Between the lakes stands a lofty plateau, cool, healthy, accessible, and without any physical barrier to interrupt the explorer's march. By this route the Victoria Nyanza and the Albert Nyanza may be approached with less fatigue, less risk, and not less speed, than by the overland trail from Zanzibar. At one point, also, along this line, one is within a short march of that other great route which must ever be regarded as the trunk-line of the African continent. The watershed of the Congo lies on this Nyassa-Tanganyika plateau. This is the stupendous natural highway on which so much of the future of East Central Africa must yet depend.

"Ten days languid steaming from Zanzibar brings the traveller to the Zambesi mouth. The bar here has an evil reputation, and the port is fixed on a little river which flows into the Indian Ocean slightly to the north, but the upper reaches of which almost touch the Zambesi at some distance inland. This port is the Portuguese settlement of Quilimane, and here I said good-bye to the steamer and to civilization. Some distance in the interior stands a solitary pioneer mission station of the established church of Scotland, and still farther in, on Lake Nyassa, another outpost of a sister church. My route led past both these stations, and I had the good fortune to pick up on the way two or three young fellow-countrymen who were going up to relieve the mission staff. For the latter part of my journey I was quite alone. All African work, as a rule, is done single-handed. It is not always easy to find a companion for such a project, and the climate is so pestilential that when two go, you and your friend are simply nursing each other time about, and the expedition never gets on. On the whole, however, the solitary course is not to be commended. An unutterable loneliness comes over one at times in the great still forests, and there is a stage in African fever—and every one *must* have fever—when the watchful hand of a friend may make the difference between life and death."

"Breakfast and luncheon and dinner are all the same in Africa. There is no beef, nor mutton, nor bread, nor flour, nor sugar, nor salt, nor anything whatever, except an occasional fowl, which an Englishman can eat. Hence the enormous outfit which he must carry with him. No one has any idea of what can be had in this till he camps out abroad. Every conceivable, digestible and indigestible is to be had tinned, every form of fish, flesh, fowl and game, every species of vegetable and fruit, every soup, sweet and *entree*."

After reaching the Zambesi, our traveller embarked on a little steamer of the African Lakes Company (an English Commercial Association) which was to take him on the Shiré River to Lake Nyassa. The Zambesi is the great river of Eastern Africa, and after the Congo, the Nile, and the Niger, the most important on the continent. Rising in the far interior among the marshes of Lake Dilolo, and gathering volume from the streams which flow from the high lands connecting the north of Lake Nyassa with Inner Angola, it curves across the country for over a thousand miles like an attenuated letter S, and before its four great mouths empty the far-travelled waters into the Indian Ocean, drains an area of more than half a million square miles. As it cuts its way down the successive steps of the central plateaux its usually placid current is interrupted by rapids, narrows, cascades and cataracts, corresponding to the plateau edges, so that like all the rivers of Africa, it is only navigable in stretches of one or two hundred miles at a time.

"Next afternoon, our little vessel left the Zambesi in its wake and struck up a fine, lake-like expansion to the north, which represents the mouth of the Shiré. Narrower and deeper, the tributary is a better stream for navigation than the Zambesi. The scenery also is really fine, especially as one nears the mountains of the plateau, and the strange peoples and animals along the banks occupy the mind with perpetual interests. The hippopotami prowling round the boat, and tromboning at us within pistol-shot, keep us awake at night; and during the day we could see elephants, buffaloes, deer, and other large game wandering about the banks. To see the elephant at home is a sight to remember. The stupendous awkwardness of the menagerie animal, as if so large a creature were quite a mistake, vanishes completely when you watch him in his native haunts. Here he is as nimble as a kitten, and you see how perfectly this moving mountain is adapted to its habitat—how such a ponderous monster, indeed, is as natural to those colossal grasses as a rabbit to an English park."

"The question of the disappearance of the elephant here and throughout Africa, is, as everyone knows, only one of a few years. It is hard to think why this kindly and sagacious creature should have to be exterminated; why this vast store of animal energy, which might be turned into so much useful work, should be lost to civilization. But the causes are not difficult to understand. The African elephant has never been successfully tamed, and is therefore a failure as a source of ivory. As a source of ivory, on the other hand, he has been but too great a success. The cost of ivory at present is about half-a-sovereign per pound. An average tusk weighs from twenty to thirty pounds. Each animal has two, and in Africa both male and female carry tusks. The average elephant is therefore worth in pounds sterling the weight in pounds avoirdupois of one of his tusks. I have frequently seen single tusks turning the scale upon ninety pounds, the pair in this case being worth nearly £100 sterling,—so that a herd of elephants is about as valuable as a gold mine. The temptation to sacrifice the animal for his tusks is therefore great; and as he becomes scarcer he will be pursued by the hunter with ever-increasing eagerness. But the truth is, sad though the confession be, the sooner the last elephant falls before the hunter's bullet the better for Africa. Ivory introduced into the country at present an abnormal state of things. Upon

this one article is set so enormous a premium that none other among African products secures the slightest general attention; nor will almost anyone in the interior condescend to touch the normal wealth, or develop the legitimate industries of the country, so long as a tusk remains. In addition to this, half the real wools which now exist in Africa, ivory is at the bottom."

"For every tusk an Arab trader purchases he must buy, borrow or steal a slave to carry it to the coast. Domestic slavery has had enough, but now begins the long slave-march with its untold horrors—horrors instigated and perpetuated almost solely by the traffic in ivory. The extermination of the elephant, therefore, will mark one stage at least in the closing up of the slave trade. The elephant has done much for Africa. The best he can do now for his country is to disappear for ever."

(To be continued.)

BEAUTY constantly unveils herself, if we only have eyes to see her. The gorgeous tints and deep shadows thrown by the setting sun at this season glorify our squares and ugliest city tenements till they glitter like the golden palace of a Bagdad caliph. A certain literary man, compelled to spend the summer in the city, sought intercourse with nature and nature's God by retiring daily to a shady corner in one of our most frequented "squares." The little green bench he sat upon was not very promising either as an oratory or a place for scientific study. Nevertheless, within a few weeks he became delightfully familiar with the teeming life of insect, plant, and bird, which centered about that bench. He identified several species of rare insects, and made observations of their habits which are not without permanent scientific value. Meanwhile, having a devout heart, he learned deeper and delightful lessons concerning things invisible. Neither Beauty, Knowledge nor Spiritual Life has "gone on vacation."—*N. Y. Christian Advocate.*

Natural History, Science, &c.

Habits of the Rattlesnake.—A writer in *Forest and Stream* says that on the great plains of Nebraska, and in the mountains of Wyoming, he has frequently teased the Rattlesnake with sticks. If the Rattler coils up he will not strike, but, if crowded, will uncoil and glide away; but if he is closely followed, he will crumple himself up in zig-zag folds, strike viciously, and then draw back for another spring. They frequently strike three or four times in succession, with such rapidity that their movements can hardly be followed by the eye. They do not jump, as is generally supposed, but simply straighten themselves out to their full length. Though poisonous in the extreme, the Rattler is not generally vicious, but if left to themselves will glide quietly away. They never strike without first sounding their rattle.

The same writer says, that it is reported that there are no poisonous serpents, insects or plants, on the shores and islands of Puget Sound; and his own observations in his hunting and fishing excursions in that section of country confirm the truth of the statement.

Eggs of Fishes.—Many fish deposit their spawn upon the shoals of the sea-shores or upon the beds of shallow inland streams; but we now know that there are many marine species which deposit their eggs at the surface of the ocean, where they float until incubation is complete.

In 1864 Professor G. A. Sars, of Norway, first discovered that the eggs of the Cod floated at the surface. Since then large additions have been made to our knowledge of floating eggs. Many of these are kept in position by drops of oil, which render them lighter than the water.

Among the fishes which produce floating ova are the Cod, Mackerel, Spanish Mackerel, Bonito, Haddock, &c. A very curious and interesting contrivance for causing the ova to float, which, owing to their weight would otherwise sink, is resorted to by the beautiful Paradise fish of China. The male fish constructs a floating raft by expelling from his mouth bubbles of air coated with a fatty secretion, which, collecting on the surface, cling together, until a raft of viscid scum several inches in extent is formed. After the eggs of the female are deposited on the bottom in the usual manner, the male collects them in his mouth and ejects them into this frothy receptacle, which he keeps in constant repair, and preserves its buoyancy by additional frothy bubbles, until the young fry are hatched out, which occurs in about two days.

Another method of floating the ova is that of the *Lophius* or Goose-fish—the eggs, numbering about 50,000, are enclosed in a ribbon-shaped, gelatinous mass about a foot wide and 40 feet in length, which floats near the surface.

The eggs of the little Black-headed Minnow and of the Goldfish are adhesive; and the male fish takes them one by one and fastens them to the leaves and stems of water-plants. Other species deposit their spawn in masses, which adhere to sea-weeds and other submerged objects. The eggs of the Sharks and Rays are four-sided horny cases two or three inches in length, with long filaments at the corners which coil about sea-weeds, &c.

The eggs of the Myxine or Hag-fish are enveloped in horny cases, provided at each end with the filaments which end in triple hooks by which they attach themselves to each other and to foreign objects. In some of the flying fishes the eggs are entirely covered with delicate threads which entwine with each other, and they are thus held together in considerable masses.

The Stickleback and several other fishes construct nests in which the eggs are deposited, and which are carefully guarded by the male fish, until the young are hatched.—*Dr. J. A. Henshall in the Journal of the Cincinnati Society of Natural History.*

The Feather-Cloaks of Hawaii.—The old war cloaks and helmets were made of feathers—"Each feather fastened separately into a loop of fine string, so that the inside of the cloak resembled a closely woven net, while on the surface the feathers are laid as smoothly as on the living bird, forming a rich glossy fabric.

"These cloaks and helmets were reserved for the highest chiefs, on the most ceremonious occasions.

"One very rare and precious feather was especially reserved for the king, who alone had the privilege of wearing a cloak of these glossy golden treasures; and as each bird only yields two, the slaughter of these innocents involved by the making of one royal robe is something horrible to contemplate, and the value of the garment is incalculable. In fact, such a cloak was a priestly heirloom; and though his Hawaiian Majesty now appears in full American uniform, the feather cloak of the great Kamamacha is still worn as the coronation robe, and at the opening of Parliament it is spread as a symbolic covering on the throne. It is in charge of the

king's sister, Kamakacha, as Mistress of the Robes. It is eleven feet in width and five feet in length, one sheet of lustrous gold, gorgeous to behold.

"But only think of the number of birds represented by such a garment! Why, about a thousand feathers are required to make a lei, or neckpiece, which when finished, is not very attractive, the feathers being strung together so as to make a round neckpiece, which is rather suggestive of frayed-out silk. But then no commoner could possess so valuable a jewel, so the feather lei holds its place in the regalia. The leis, however, are often made of small round yellow feathers, which are very inferior in value to the sharp-pointed royal feather. The bird which yields this priceless treasure is the Oo, or royal bird, a species of honey-sucker, peculiar to certain mountainous districts of these Isles. It is of a glossy black, and its tiny golden feathers lie underneath the wing, one on either side.

"The birds are now very rare, though the method of gathering the annual harvest does not now involve their destruction. It was the great Kamemacha I, who first thought of saving their lives, and ordered the bird-catchers to set the birds free when they had plucked the two coveted feathers. So now cunning fowling goes to the mountains frequented by the Oo, and set up long poles, well baited, and smeared with a very adhesive sort of bird-line. On these the birds alight and are captured, robbed of their precious little yellow gems, and then set free again. The feathers are only an inch long, sharp-pointed and very delicate. Five sell for six shillings. So you can easily understand that at that valuation the royal feather-cloak is as costly a crown jewel as could be worn by any sovereign. Certainly so much human labor was never expended on the setting of any diamond."

Sturgeon Fishing in Russia.—The fisheries on the Volga are situated near the mouth of the river. Cords furnished with large fish-hooks are attached to long cables and sunk to the bottom of the river. The eggs are made into caviare, by soaking in strong brine, and afterwards draining and drying. Large quantities of it are exported.

The swimming bladders of the fish are separated from the internal skin, cut lengthways, and made up into tablets or small rolls, which constitute almost the whole of the isinglass which is consumed in Europe. Mixed with glue it is of great adhesive power, and is used for uniting broken glass and porcelain. The fat of the sturgeon when fresh is used for oil and butter, and is largely consumed by the inhabitants of southern Russia. The skin is used as leather; and in some cases, the skin of the young fish, when it is thoroughly cleaned and well dried, is a substitute for window-glass in parts of Russia and of Tartary.

Items.

War Expenditure of Great Britain.—At a Peace Conference recently held in Bradford, England, the following statement was made, as reported in *The Herald of Peace*. "The expenditure of Great Britain upon the army and navy alone—leaving out of question the sum we were called upon to pay in the shape of interest on and reduction of our National Debt—was over 900,000,000, during thirty years, the average lifetime in this country. Consequently, during a single lifetime we impoverished the people to a figure very much larger than the total of our National Debt, which we regarded as such a vast and immovable burden, that we called upon that of every 2% collected into the national exchequer in

the shade of taxation, 16s. was swallowed up by war expenditure and the interest on the National Debt, and less than 4s. was required for carrying on every branch of the civil government."

A French Missionary's Courage.—One anecdote will illustrate the character of the French missionary explorer. He was telling his guest the story of a man's crisis, a native saying, "We were all but lost!" "But," interrupted Major Pinto, "you had devoted and well-armed native followers, and could easily have overcome that difficulty." "Not without bloodshed," said the missionary; "and I could not kill a man even to save my own life." "You are mistaken," returned the other, "it was a type of manhood perfectly new to me. I could not understand how, in that fervent southern organization, there could exist a cool courage that I tried in vain to grasp. It was the courage of the early martyrs, which it is given to few to fathom and experience. For myself, I confess I do not fathom it, although it none the less compels my admiration. Here was a man, crossing the dangerous wilds of Africa unarmed, or, more correctly speaking, only with a cane scarcely strong enough to cut down the blades of grass he met on his path! He possesses a courage and a reliance on Divine protection, which I grieve not to call my own.—Major Pinto's *How I crossed Africa.*"

Kansas Yearly Meeting, (Smaller Body).—Kansas Yearly Meeting began at Spring River, Kansas, with a session of Ministers and Elders, on Fifth-day, the 24th of Fourth Month.

The Yearly Meeting opened with a meeting for worship at 10 o'clock on Sixth-day, the 26th. After a comfortable opportunity for worship with open shutters, the meeting entered upon the transaction of the business.

Epistles were received from all the corresponding Yearly Meetings. The comfort derived from the reading of the epistolary correspondence afforded continuous evidence that the Divine blessing still rests upon this bond of fellowship and official communication between the meetings of Friends who are concerned to maintain the ancient standard of Quakerism.

On the seventh-day the Representatives reported the names of Cyrus W. Harvey and Levi Bowles for clerk and assistant, and they were appointed for another year.

The public meetings on First-day were attended by the public, and were felt to be occasions of comfort.

On Second-day morning the meeting entered upon the consideration of the state of Society as shown by the answers to the queries. The counsel offered by exercised Friends, was marked rather more than usual with a pleading, that Friends might so submit to the operations of Divine grace that all our deficiencies might be removed, and we may be made for successful labor in the spreading of the Truth as held by Friends.

One marked feature of the Yearly Meeting was the increased opportunities given for religious worship throughout the Yearly Meeting; nearly all the business sessions were preceded by a period of worship, and the meetings of the Yearly Meeting, and two large and favored night meetings were held during the course of the Yearly Meeting. Much comfort was found in this variation from the usual custom of our meetings.

A large committee was appointed "to visit all our separate meetings and families; and labor by appointing meetings, the Truth may open the way."

The committee appointed last year to endeavor to increase the subscription of seven hundred and sixty dollars made last year, to one thousand dollars, according to the terms of subscription, made report that the amount subscribed by Friends of Kansas Yearly Meeting had reached nearly the same sum of one thousand dollars. This fund is in the nature of an endowment, the interest only to be used in aiding poor children of Kansas Yearly Meeting in obtaining an education in Friends' schools. As Kansas Friends have now made liberal subscription to aid their own poor, it is very desirable that Friends in other parts of the country may make additional contributions to this fund, so that in the future all Friends' children may be educated in Friends' schools.

The Committee of Education report but one Friends' school, (Spring River Academy,) sustained last year.

The business of the Yearly Meeting closed on Fourth-day, Tenth Month 31st, and adjourned to meet at Emporia next year.—*Concluded from Western Friend.*

Meetings in Burlington Quarter.—Much interest has been awakened in Burlington Quarter by the labors of the Committees of the Yearly and Quarterly Meetings, who have held nine public meetings, and attended most or all of the Particular Meetings within its limits. A communication, dated Eleventh Mo. 29th, invited these labors, from which we gather, that the two public meetings at Columbus were especially favored, the hall in that place being nearly filled both times, although the last one was on a very wet evening. "The presence of the dear Master was sensibly felt to be with us, and more undivided attention and perfect quiet I never witnessed in any meeting of Friends. Our views in regard to baptism, were very clearly set forth at the last one, and earnest prayers were offered for an awakening, and a closer walk with God. It might truly be said, 'There was united labor for Truth's honor.' After the meeting the people seemed loath to leave, and several of them, both men and women, who were a woman, a Pre-tylerian, said, 'she had been at a good many gospel meetings, but never to one where she felt so sensibly the solemnizing effect of the Spirit present with us;' adding, 'if I am ever anything but a Presbyterian, it will be an Orthodox Friend.' There was a great desire expressed for more such meetings.

At Burlington Quarterly Meeting, which was held the day following, there was a united travail of soul for the prosperity of Zion, and the enlargement of her borders. The young and strong were affectionately pleaded with to be willing to lay aside everything that was hindering them from a full surrender of their souls to the Lord, who had gifts to dispense to his willing and obedient children. Prayer was offered in brokenness of spirit, and such was the tenderness that prevailed that tears flowed from many in the assembly. The shutters were raised in the second meeting, that all might hear the excellent testimony forwarded by *Quarterly Monthly Meeting* in regard to our late valued Friend, Henry Wood. "After the meeting," says our informant, "there seemed such a tender gravity on many faces, I have concluded there was much yet to encourage us to go forward."

THE FRIEND.

TWELFTH MONTH 8, 1888.

In the last number of THE FRIEND an article was published which gave an outline of the proceedings in reference to the selling of part of the Sioux Reservation in Dakota; and of the objection by the Sioux of the terms of purchase offered by the United States. A friend, who is well informed on matters affecting the interests of the Indians, says:—

"I have understood that the 60 Indians which came on to Washington, were brought by the Commissioners at a few days' notice. They were not selected and appointed by their own people in a regular way to represent them, but were such as the agent chose."

If these 60 Indians had been so overruled by any pressure brought to bear upon them at Washington, as to have agreed to the terms of the bill passed by Congress, their consent would not have given any legal sanction to the measure. Because both the treaty of 1868 and the bill itself require the written assent of three-fourths of the adult male members of the Sioux nation to make valid any agreement for the sale of their land.

In connection with this subject it may be

mentioned that a correspondent of the Philadelphia *Ledger* of Eleventh Month 13th, writing from Washington, says that it is supposed that the report to Congress of the Commissioners appointed to treat with the Sioux respecting the sale, will contain a recommendation that the price asked by the Indians who were at Washington (\$1.25 per acre) be granted, "and the reservations thrown open without further attempt to gain their consent."

The only ground which occurs to us on which honorable men (and we should be sorry to think the Commissioners were not such) could justify to themselves such a deliberate ignoring of solemn treaty obligations as are involved in opening the reservation to settlement in defiance of the will of its present owners, is—that they they regard the Indians as children, who are not capable of judging what is to their own advantage, and that, therefore, it is right to force them into measures which they are unwilling to adopt.

Such despotic measures are essentially unjust to themselves; and if our Government can be influenced to ignore its own agreements, it will be a proof that the "righteousness which exalteth a nation" does not fully govern its counsels; and it will tend to depress the hope of the continued prosperity and happiness of our beloved country, which every true Christian must believe to depend on the favor and protection of the Almighty. "Sin is not only 'a reproach to any people,' but it always brings with it punishment in some form.

In an Appeal to our fellow-citizens, on behalf of the "Colored Races," issued by Philadelphia Yearly Meeting in 1858, occurs the following paragraph:—

"It is one of the fixed laws of the moral government of the Sovereign Ruler of the Universe, attested by experience and by Holy Scripture, that wickedness and oppression are, sooner or later, followed by his just judgments. The annals of those that have preceded us furnish abundant evidence that national sins have ever incurred national calamities; and that a course of iniquity and violence, however prosperous for a time, has eventually terminated in disgrace and ruin."

The principal object of that Address was to endeavor to awaken the consciences of the people of the United States to the evils of their system of slavery. Only three years after it was issued, the war between the North and the South broke out, caused by slavery, and inflicting on this country a terrible loss of property and life, in which we may trace a "just judgment" of the Almighty on the "wickedness and oppression" which had preceded it.

The same Address says, "It will hardly be denied by any one acquainted with the subject, that a vast amount of injustice and other wickedness has been perpetuated in the intercourse of the whites with the Indians, for which a heavy load of responsibility rests upon the nation. These feeble and defenceless remnants of the tribes who once possessed the soil upon which we have grown rich, have strong claims on our sympathy and Christian liberality; and every principle of religion and humanity dictates, that in their weakness and destitution they should be treated with kindness and generosity."

If the sale of a portion of the Sioux Reservation would be to the interest of its present owners, we believe the only just and righteous course would be to so arrange the terms of sale as to be satisfactory to the Indians themselves,

so that of their own free will they would sign an agreement to that effect; and to not to sanction any fraud or oppression in procuring their signatures,—still less to violate the treaty of 1802, or to take by force the land which is rightfully their own.

Such a violation would (so far as the expense of the Government was concerned) lower the respect of its citizens for the obligations of morality, and tend to encourage selfish and unprincipled men in carrying out schemes for their own emolument at the expense of those who might be unable to protect themselves.

SUMMARY OF EVENTS.

UNITED STATES.—Congress reassembled on the 3rd instant. The President's message was received in both houses and read. Those portions relating to the surplus, tariff revision and fisheries were listened to with close attention by both Republicans and Democrats. In the Senate the message was laid on the table and ordered to be printed.

The President reiterates and emphasizes the views he has previously expressed in regard to the tariff and the dangers to be apprehended from the surplus in the Treasury. A "just and sensible revision" of the tariff is recommended. He also advises an amendment to our naturalization laws. The public debt statement shows that the debt was increased \$11,199,817 during the Eleventh Month. The total cash in the Treasury is \$612,784,621.91. "There is, of course, no actual increase in the debt itself, but merely a reduction in the cash in the Treasury available for the payment of the debt."

Wealth in the South is estimated to have increased fully fifteen per cent. during the past eight years, and great industrial development is now in progress.

Fully 8,000 miles of railroad will have been constructed this year in the United States, and the prospects are that next year will witness a large increase in these operations.

A telegram from Sauk Centre, Minnesota, to the St. Paul *Presser Press* says, the true source of the Mississippi river has been discovered in a prairie, and that place is "It is two small lakes, one of which they named Lake Josephine. The lakes are fed by many small creeks, and their waters are emptied into Lake Glazier, which lake was discovered by Captain William Glazier, who claimed it to be the source of the waters of the Mississippi."

A large vein of coal has been discovered eight miles south of Chamberlain, Dakota.

At Parkersburg, Penn., two houses are being erected which will have paper walls, paper partitions and paper roofs.

According to *Breadster*, reports from all the important cranberry raising districts indicate a short crop. Prices are accordingly high, so that the growers are likely to realize as much as last year, when they put more money on the non-fertile Boston *lobe* reports for southern Massachusetts than the Carver, Marion, Rochester, Middleboro and Mattapoisett crops on the whole will amount equal their total products of one year ago. On Cape Cod the crop is considerably below that of last year. West Barnstable usually ranks next to W. Barnstable in the amount of crop, and there they have shipped several thousand less than one year ago. Harwich in another large cranberry-growing town, and it is there where the vine and fire worms did much damage early in the season. The total from Plymouth County and Cape Cod, for last year was 83,500 barrels. This year, from the best estimates made, the total crop will fall short 10,000 to 15,000 barrels. The New Jersey crop is only an average one, and the many and large wild bugs of Wisconsin are yielding up but a small portion of what is considered an average crop in that large cranberry-growing district.

The shut-down in the coal mines along the Monongahela River began on the 1st instant. The operation is being signified by the "black flag," the operation, which will throw thousands of men out of work, is expected to last for a long time. It is announced that the 6000 miners of the river will hold a Convention in Monongahela City to take steps, if necessary, to make the shut-down general. They will also move toward the coal fields in cooperation of the miners of the Kanawha region.

The steam oiler Allentown, owned by the Philadelphia and Reading Railroad Company, is reported

to have foundered off Cohasset, Massachusetts, on the 24th ultimo. An immense amount of wreckage has come ashore. There is no news of the crew, which comprised 18 men.

Yellow fever has not entirely disappeared in Jacksonville, Florida; 25 cases having been reported for the week ending Twelfth Month 3d. There were also 3 deaths.

Deaths in this city last week numbered 302, a decrease of 43 from the previous week, and a decrease of 16 compared with the corresponding period of last year. Of the foregoing 145 were males and 157 females; 45 died of consumption; 28 of diseases of the heart; 25 of pneumonia; 14 of inflammation of the stomach and bowels; 13 of convulsions; 12 of old age; 12 of inflammation of the brain; 10 of cancer and 9 of scarlet fever.

Markets, &c.—U. S. 4½, 108½; 4½, reg., 127½; coupon, 128½; currency 6's, 121; 4's, 131.

Cotton was quiet but steady at 10-16 cts. per pound for middling uplands.

Flour and Meal.—Flour was dull and weak under excessive supplies. Sales of 125 barrels Pennsylvania family, at \$4.75; 250 barrels Ohio, straight, at \$5.50; 250 barrels winter patent, at \$6.15 a \$6.25, and 375 bbls. Minnesota patent, at \$6.75 a \$6.85. (Quotations: Western and Canadian superfine, \$8.00 a \$7.75; do, do, extra, \$7.75 a \$4.00; do, do, extra, \$4.10 a \$4.00; Pennsylvania family, \$4.62½; Pennsylvania roller process, \$5 a \$5.50; Ohio, clear, \$4.75 a \$4.25; do, straight, \$5.25 a \$5.50; Indiana, clear, \$4.75 a \$5.25; do, straight, \$5.25 a \$5.50; St. Louis and Southern Illinois, clear, \$4.75 a \$5.25; do, straight, \$5.25 a \$5.50; winter patent, fair to choice, \$5.75 a \$6.10; Minnesota, clear, \$4.65 a \$5.25; do, straight, \$5.50 a \$6.25; do, patent, \$6.50 a \$7. Rye flour was dull and even. Small sales at \$3.65 a \$3.70 per barrel for grain.—No. 2 red wheat, \$1.01 a \$1.01. No. 2 mixed corn, 44 a 44 cts. No. 2 white oats, 34 a 34½ cts. Beef cattle.—Extra, 5¼ a 5½ cts; good, 4½ a 5 cts; medium, 4¼ a 4½ cts; common, 2¼ a 3 cts; fat cows, 2 a 2½ cts.

Sheep.—Extra, 5¼ a 5½ cts; good, 4½ a 5 cts; medium, 4 a 4½ cts; common, 2 a 3 cts. Lambs, 4 a 6 cts.

Hogs.—Extra Chicago 7½ a 7½ cts; fair Westerns, 7½ cts; common Westerns, 7 a 7 cts; State, 6¼ a 7 cts.

Milk cows were in fair request at \$30 a \$55. Milk calves were active at 5 a 8 cts.

FOREIGN.—On the night of the 31st instant the House of Commons, in consideration of estimates. An appropriation of £12,707 was asked in order to complete the sum of £40,770, for expenses of the Irish Secretary's office. John E. Ellis (Liberal) moved that the amount asked be reduced by £425, his purpose being to raise a general debate on Secretary Balgair's administration.

The committee investigating the circumstances of the arrest of D. Sheehy, M. P., by an Irish constable, in the precincts of the House of Commons, has heard the Chief Inspector of Parliamentary Police, who said that if the constable's business had been known he would not have been admitted to the House. After the examination of other witnesses, the inquiry was adjourned.

In a political speech delivered in Mid-Lothian, Scotland, last week, Lord Salisbury said—"I earnestly hope the day is not far distant when women also will bear their share in voting for members in the political world and in determining the policy of the country. I am convinced of no argument by which that if the country's business had been known he would not have been admitted to the House. After the examination of other witnesses, the inquiry was adjourned."

Those who are in the habit of instantly re-elected Lord Mayor of Dublin by the unanimous vote of the Aldermen.

The French Budget Committee has assented to the plans of Freycinet and Leytal, Ministers of War and of the Interior, respectively, for an increase of 100 million of francs. The allotments for 1889 amount to 125,000,000 francs.

De Lessips has published an appeal to the patriotism of his countrymen to subscribe for Panama Canal bonds to the amount of \$100,000,000 francs, which, he says, will enrich France as the Suez Canal did.

A grand canal is now proposed to extend from Bordeaux on the Atlantic coast to Narbonne on the

Mediterranean, about 330 miles. It will cost about \$130,000,000. The depth will be 27 feet, so as to admit the largest ships.

Hertenstein, President of Switzerland, who recently underwent the amputation of his right leg, because of disease of the bone, has been elected to the office of President. The Vatican has received hundreds of telegrams inquiring whether the Pope intends to quit Rome. Cardinal Rampolla has replied to the Nuncios abroad that nothing has been decided upon.

Eastern Siberia has closed its doors against Chinese immigration. The Government of the Russian Provinces of the Amoor has proposed to restrict the entry of Chinese, with this statement—"The Manchurians form an element which is dangerous to the interests of our Russian provinces, as they are ignorant, industrious, endurance and fragility, competition of any foreign labor system whatever with their is prevented."

It is reported that the Chinese lepers in British Columbia have communicated the leprosy to the Indians in that province. The Indian population is about 40,000, and it is feared the aborigines will be nearly exterminated within a quarter of a century by the terrible Oriental malady.

NOTICES.

WESTERN BOARDING SCHOOL STAGE.—During the winter months the stage will stop at Westport Station on the arrival of the 8:35 and 2.47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

J. G. WILLIAMS, *Supr.*

Westport, Pa.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting, Westport, Ohio. Applications, with references, should be forwarded to the position, are desired to make early application to any of the undersigned.

Aaron Frame, Barnesville, Belmont Co., Ohio.

Hannah Tatum, John W. Williams, Harrisville, Harrison Co., Ohio.

Sarah E. Holloway, Flushing, Belmont Co., Ohio.

DIED, Twelfth Mo 30th, 1887, at his residence, near Snyder, Ohio, AMOS HEBBS, aged 79 years, a member of Flushing Monthly and Guersney Particular Meeting, Belmont Co., Ohio. He removed with his parents, William and Mary HEBBS, at the age of six years, from London County, Va. He was a consistent member of the Society of Friends during his long and eventful life; and died trusting in his Saviour, having borne his affliction and suffering of his body with Christian patience and fortitude.

He was born in London, England, on the 12th of May, 1788, at his residence, Wellington, Ontario, Fifth Mo. 12th, 1888, J. DAH B. HERTHENSTEIN, a member and elder of West Lake Monthly and Wellington Particular Meeting of Friends. His illness was short but painful, which he bore with Christian fortitude and patience. After a time all pain left him, and he quietly and peacefully passed away, in the 67th year of his age. "Mark the perfect man, and behold the upright, for the end of that man is peace."

At Atlantic City, N. J., on Ninth Mo. 29th, 1888, WILLIAM P. CAMPBELL, daughter of George and the late Mary Sharpless, aged 43 years, a member of Frankford Monthly Meeting of Friends. It was her lot to spend many of the latter years of her life from home, filling positions in families of Friends, for which she was loved by all who knew her. Her mother also was a highly valued assistant in the Frankford Asylum, and latterly resided at Gurney Cottage, Atlantic City, a branch of that Institution, occupying an important post, which it is believed she filled acceptably to all.

The cause of her death was a cancer of the breast, which she was concerned to perform all her duties, gave evidence that she was favored with access to the source of all good; and building upon this foundation she became a sterling character, and a bright example in life, beloved by all who knew her.

In reflecting upon her humble Christian walk, the lamented one said—"Whoso offereth praise, glorifieth me, and to him that ordereth his conversation aright, will I show the salvation of God." To her many friends who remain, her memory is precious. The interment took place at the Friends' Burial Ground, in the Grove, on the 2nd of Tenth Month, in the presence of a large company of friends.

—, on the 19th ultimo, at Campbell, Florida, after a short illness, WILLIAM P., son of Isaac and Mary B. Campbell, aged 27 years, a member of the Westport Monthly Meeting of Friends. He was a very serious and pious Christian, and was favored to feel before the close, a latter evidence that he would be permitted to enter into rest, trusting in Christ.

FOR "THE FRIEND."

Incidents and Reflections.—No. 178.

KINDNESS.

A pleasant anecdote is related of a woman, who was travelling in winter on one of the northern railways in Great Britain. The weather was cold, but she did not suffer from it; she was comfortably shut up in a first-class carriage, warmed with hot water, and had every thing to shield her from the severity of the season. In the course of the journey she had to change to another line, and went into a small waiting-room till the train was ready. The only other passenger was a respectable looking woman of the middle class. She was bitterly cold, and was trying to get some warmth into her benumbed feet. From economical considerations she had been obliged to travel in a third-class carriage; and she spoke of how cold it was there, especially at the feet.

The first passenger had in her bag a pair of warm woollen slippers, which she had not put on in the carriage in which she had been travelling; she thought, 'I will give them to this person, they may make her more comfortable.' But then came the second thought, "No, I think not; why should I? And besides, she may think it odd if I offer them: it would be a strange thing to do to one to whom I am a perfect stranger." And she tried to dismiss the idea; but the pleadings of conscience would not be quieted. With some hesitation the offer was made, and was at first met with the natural expression of not liking to deprive the owner of them; but when assured they had not been wanted during the journey, nor would be put on, they were gratefully accepted; and on the giver expressing a hope they would keep her feet warm, and make the rest of the journey more comfortable, she replied, "I am sure they will; but it is not the feet only that will be warmed: *kind words warm the heart*, and that is better still."

William Howitt has preserved an anecdote respecting one of the Dukes of Portland, which illustrates his kindness of heart, and his practical benevolence. He found that one of his tenants in Nottinghamshire, England, a small farmer, was falling, year after year, into arrears of rent. The steward wished to know what was to be done. The duke rode to the farm, saw that it was rapidly deteriorating, and the man, who was

really an experienced and industrious farmer, totally unable to manage it from poverty. In fact, all that was on the farm was not enough to pay the arrears. "John," said the duke, as the farmer came to meet him as he rode up to the house, "I want to look over the farm a little." As they went along, "Really," said he, "every thing is in very bad case. This won't do. I see you are quite under it. All your stock and crops won't pay the rent in arrear. I will tell you what I must do: I must take the farm into my own hands; you shall look after it for me, and I will pay you your wages." Of course, there was no saying nay—the poor man bowed assent. Presently there came a reinforcement of stock, then loads of manure, at the proper time seed, and wood from the plantations for repairing gates and buildings. The duke rode over frequently. The man exerted himself, and seemed really quite relieved from a load of care by the change. Things speedily assumed a new aspect. The crops and stock flourished; fences and out-buildings were put into good order. In two or three rent days, it was seen by the steward's books that the farm was making its way. The duke on his next visit said, "Well, John, I think the farm does very well now. We will change again; you shall be tenant again, and, as you now have your head fairly above water, I hope you will be able to keep it there." The duke rode off; the man stood in astonishment; and on applying to the steward, he found that he was actually re-entered as tenant to the farm, just as it stood in its restored condition.

An incident of a rather remarkable character, was related in an article in the *Forum*, by W. M. F. Round, the Secretary of the New York Prison Reform Association. He says:—

"Nearly two years ago there came to my office from an inland prison a man whose criminal record was made up of deeds of robbery and violence of the most aggravated kind. His coming was preceded by a letter from the warden of the prison, saying that the man would probably come to me, and pronounced him thoroughly bad, a dangerous character, the most treacherous, the most violent man that he had ever had in the prison. The letter was before me on my desk when the man announced himself. I looked up and saw a tall, broad-shouldered, athletic man, with an evil eye and a sloping forehead. He was more than six feet tall, and as he stood by me I thought how easy it would be for him to pick me up, strangle me, rob me and throw me under the table.

"'Well,' I said, 'what can I do for you?'"

"'I want work,' he replied.

"'Where are your recommendations?'"

"'Haven't any!'"

"'You're a pretty bad man, aren't you?'"

"'Pretty bad, I guess, I never claimed to be so snait.'"

"'What are you going to do if you can't get work?'"

"'Well, I ain't a goin' to starve; you can bet your life on that.'"

"'I don't believe I can get work for you,' I

said, 'I have a letter from Warden ——. He says you are the worst man he ever had in the prison. I'll read it to you.' So I read the letter, and the man's face grew more clouded as he listened. After I had finished I said: 'That is a pretty poor recommendation; nobody will have you on that; I believe that I'll have to employ you myself.'

"'What at?' he asked.

"'To do errands and work about the office.'"

"'Office boy?'"

"'Yes.'"

"'What, me?'"

"'Yes; why not?'"

"'I'm too big.'"

"'We could get along with your size if you'd promise not to grow any larger.'"

"'How much would you give?' he asked. I told him. 'That is too little,' he replied; but I soon convinced him that it was enough to live on till he could get something better. So he accepted the situation. A few days after I sent him on an errand to my home. My mother said to me when I returned: 'Will, what a dreadful man you've got in your office. His face frightened me. I'm afraid he will do you some violence.' 'So am I,' I replied; 'but there is nobody else to have him.'

"A day or two after that I wanted cashed a check of seventy-five dollars, and sent it, for the purpose, to one of my neighbors in the building. My clerk took it out, returned immediately, and said my neighbor had just sent to the bank and on the return of the messenger would send me up the money; and then my clerk went out to luncheon, leaving Williams and myself alone in the office. Soon my neighbor's boy came in with seventy-five dollars in bright, new bills, laid them on my desk, and went out. My desk was in the corner of the room and faced the wall. A moment later, as I wrote, I felt that somebody was close behind me. There was no shadow, no noise, only the consciousness of some one near me. I went on with my letter, finished it, signed it, sealed it, addressed it, and then, by some impulse, which I shall never be able to explain, except as an inspiration, I wheeled quickly round, stood up, brought my hands down on Williams' shoulders, and said in a voice that startled my own soul:

"'Williams, if you go wrong you will break my heart!'"

"He sunk into a chair by my side, absolutely melted; great tears rolled down his cheeks and fell upon the floor. I looked down; his shoes were off, and while he put them on, I unfastened the door he had locked. He evidently meant to rob me, and to use whatever violence was necessary.

"Not one other word on the subject has passed between Williams and myself. In that moment the man was startled into a belief that his soul was somehow linked with the souls of other men for a better purpose than a life of crime—that any hurt to his own soul must hurt others—that humanity had an interest in him and he in humanity. A new look came into Williams' face,

a new impulse into his life; he remained under my eye for some weeks, and then went to a neighboring city, where he obtained honest employment and won the confidence of his employer. He was leading an honest life when I last heard from him."

FOR "THE FRIEND."

Isaac Coates' Visit to the Seneca Indians, and to Canada.

(Concluded from page 147.)

During this day's journey, I. Coates crossed the Genesee River, on the west side of which he passed a small Indian town, and came to a wide road, laid out by the State of New York. The natives, meeting with fifteen or sixteen wagons, with families removing to Upper Canada.

"Tenth Month, 10th. I was very much surprised to see the improvement which is made in this new settled country, especially along this road. I am informed that it is but ten years since it began to be settled, and now there is not half a mile without a house, and many of them very good ones, many capital barns, a great deal of land cleared, and very good cattle in the fields. The people principally emigrated from the New England States, and this is a specimen of their industry.

"When we had rode ten miles from our lodging, we parted, Joshua Sharpless, Nathan Smith, James Cooper and myself turning off the main road to the north, in order to pay a visit to some Friends who are settled at a place called Mud Creek.

"11th. Rode seven miles to Jeremiah Smith's. The house appeared so miserable I was ready to wish I had not come into these parts; but in a little time after I entered, my mind was saluted with something like, 'Peace be to this house,' and felt myself very happy in company with the family, and believed that divers of them live very near the Fountain of Good. In the evening, rode two miles to Abraham Lapham's to lodge.

"12th. In viewing Lapham's farm, I was astonished to see the improvement made in the time. He told me it was but four years last spring since he began on it in the woods, and now he has got more than one hundred acres of land, fenced in fields and meadows, all in either land with grain or grass, and most of it excellent; has built a saw mill, and has a dairy of cows so good that notwithstanding it hath been an unfavorable season, they have made above two thousand pounds of cheese; and yet he appears, with his precious wife, to be well-concerned Friends, and is free to devote much of his time in the service of Truth; that truly in this far back settlement in the Chenesei [Genesee] country, State of New York, the appearance of things is comfortable, and affords an encouraging hope, that if the few Friends here settled, improve as well, and hold up as good a light in a religious sense, as they do in improving the wilderness country, they may yet become as a city set upon a hill, that cannot be hid.

"In the evening, Calb Cumber and another Friend came to see us, and we spent some time in agreeable converse.

"13th and 14th of the week. Rode two miles to Nathan Comstock's, where Friend's meeting is held, which was large this day for such a new country. It was a favored meeting, in which the Gospel was preached. Near the close I could not feel easy without requesting an opportunity with Friends selected from others, which was readily complied with; wherein I endeavored to relieve myself of a heavy burden which

I had silently borne ever since I came into these parts, on account of such a rapid increase of the abominable practice of distilling the precious wheat into whiskey. Though I believe there are a few well-concerned Friends here, yet doubts accompanied my mind that they were too easy about the wickedness of such a perversion of the blessings of Divine providence; and endeavored to put them upon nobly bearing a testimony against it, and set the light upon the candlestick, believing that the destruction or salvation of their country very much depended on the conduct pursued in that respect."

"Continuing their journey through central New York, they crossed a fine stream, the outlet of Crooked Lake. A few Friends resided in this neighborhood; also some of the devoted followers of Jemima Wilkinson (whose home is not far distant) who were very fired of their adherence to her. Nathan Smith felt a draft in his mind to have a meeting appointed. It was accordingly held, was largely attended considering the place, and proved "a memorable, favored time, in which the Gospel was preached in the demonstration of the Spirit and with power, and I believe many hearts were contrited. Divers who had been, and some who are the adherents of Jemima. After meeting, walked home with Joseph Jones, spent the afternoon with him at his lodging."

Jemima Wilkinson was born in Rhode Island in 1753. She pretended that she had been restored from death, and claimed the possession of supernatural powers—such as power to read the secrets of the heart, and to heal diseases. She removed, with some whom she had persuaded to believe her wild and visionary statements, to New York State, where Isaac Coates and his friends found her. She died in 1819.

On reaching the Tioga River, our travellers followed it for forty-two miles, crossing the stream in this distance no less than ten times. They came to a block-house, where it was proposed to spend the night; but as the place had a poor reputation "at the general account of the mischief done to travellers by the man of the house or some of his family," Isaac Coates felt uneasy to stay there, and, though it was late in the afternoon, they went on, "feeling a good deal unhappy at our entering a lonesome desert, not knowing whether we should meet with any suitable place to encamp, and two of our company being a little infirm. But in riding about three miles we came to a stream of water, and there fixed things in order for lodging in the woods, which we got completed before night, and had a comfortable night under a tent made of bushes, by a large fire. My companions said the place should be called 'Coates' Camp,' which name I have no doubt it will go by."

"After leaving the Tioga River, their route led them across the Allegheny Mountains to the Lycoming and other branches of the Susquehanna, reaching Muncy in time to attend the first opening of the Monthly Meeting in that place, on the 23d of Tenth Month. Here they were kindly entertained by those hospitable friends, William and Mercy Ellis.

"At one house where I. Coates spent a night, on the West Branch of the Susquehanna, he found a farm of great fertility, and the family apparently in affluent circumstances. They had been settled there twelve or fourteen years, and yet had no barn or stable fit to put a horse into. But they had ten or twelve hounds, a tame wolf, &c., and he supposed spent much of their time in hunting. The family were from Maryland; and their shiftness way of getting along con-

trasted unfavorably with the thrift and industry of the Yankee settlers in the interior of New York State. I. Coates adds, "But we were kindly entertained here, therefore it will not be proper to cast any reflections on their economy."

From Muncy he continued his journey southward, forded the Susquehanna at Catawissa, which was then a town of about forty houses; crossed the mountain ranges of Schuylkill Valley; attended a little meeting of Friends at Reading, in Exeter, on the 27th of Tenth Month. His journal closes with the remark: "The pleasure I felt in meeting with my children was more sensible than easy to describe."

FOR "THE FRIEND."

Some Account of Joseph Wilson.

(Continued from page 148.)

Tenth Month 28th, 1849. "In reviewing the past and looking to the future, I have been made sensible of the unsatisfying nature of earthly pursuits and avocations. There is a possibility of looking forward from day to day, and from year to year, to a greater attainment and enjoyment of earthly things; and in the eager pursuit hereof, smothering the witness for God in our own hearts. I have erred on this point, and the effect has been, barrenness and poverty of spirit. Oh! the deadening tendency of earthly-mindedness; it lessens the little we might do in advancing the Redeemer's kingdom in the earth; it disqualifies us for that spiritual worship which is due from man to his Creator; and were it not that the Lord's power is above every other power, the enemy, it seems, would hedge me in on every side. May I, more often than the morning, be found seeking help where alone it is to be found."

First Month 6th, 1850. "In the thirty-fifth year of my age; my life is passing away, and the query arises, what art thou doing to advance the Redeemer's kingdom in the earth?"

Sixth Month 9th. "A wilderness state has been my portion for weeks and months past, such as could not easily be described to one who has never witnessed something of the kind; but when light, Divine light once more shines upon our pathway, what abundant cause for thankfulness, what cause to adore that Hand which has been round about, strengthening to resist temptation, even forty days in the wilderness. I crave the continuance of that preserving care which has hitherto been extended for our good, and our glory as we are."

Seventh Month 28th. "I am aware that a loss has been sustained by me for want of daily entering into the closet of my own heart, and secretly communing there. It is in vain to attend meeting once or twice a week, expecting to meet the Beloved of souls there, if the mind is suffered at all other times to dwell on earthly and perishing things; for where the treasure is, there will the heart be also. I desire to be preserved from placing an undue affection on any earthly treasure."

Twelfth Month 27th. "My petition is for preservation in the hour of temptation; and that day by day the manna may be given, to keep alive during the wilderness journey of my poor mind; that the land of promise, of light, and spiritual enjoyment, may eventually be my happy experience. I trust I am not going too far in this petitioning; and may my future course give evidence of my sincerity."

Fifth Month 11th, 1851. "While sitting in meeting to-day under a comfortable feeling that I was not wholly forsaken, this solemn query

seemed to arrest my mind: why should we be spending the strength of our days in the pursuit and acquisition of perishing things? Why not devote our time and talents mainly for the advancement of righteousness in the earth, and laying up treasure in heaven? This would be worth more to us in the evening of our days than all this world can give."

Twelfth Month 14th. "I have been recently convinced of the necessity of giving up unreservedly to be formed and fashioned into just such a vessel as the great Potter would have me to be; but how hard it seems to sacrifice all, body, soul, and spirit. I sometimes fear I shall never experience an overcoming all the enemies of my soul's peace. The language of our Saviour was on this wise; if ye love any thing more than me, ye are not worthy of me. It is an easy matter to make some sacrifice; but to give up all and follow Christ, is a great attainment indeed. I believe I have at times been enabled in sincerity to petition: 'Lord, let not thy hand spare, nor thine eye pity, till thou hast brought forth judgment unto victory in me'; but alas! my instability! How needful daily to watch unto prayer, to keep my covenants and pay my vows, that I may not always be a dwarf in religion."

Third Month 4th, 1852. "How often has this solemn language of the mournful prophet been brought to my remembrance: 'Oh! that I had in the wilderness a lodging place of wayfaring men, that I might leave my people and go from them; not on account of any defect in the principles professed by the Society of which I am a member, but a lack of a right zeal in the maintenance of those principles. Were we obedient to the law written in the heart, better fruits would appear; and those bitter fruits which emanate from an antichristian spirit, would be so abundant. I desire that we may be properly humbled by these things, and favored to see ourselves as we are seen, repent, and bring forth fruits meet for repentance, that the just judgments of a beneficent and allwise Creator, may be averted, and the Church permitted to enjoy her sabbaths again."

Ninth Month 26th. "Frequent, and I trust earnest, have been my desires, that I might be found in the way I should go; and not swallowed up by lukewarmness and indifference with regard to my soul's eternal welfare."

Tenth Month 20th, 1853. "The secret aspirations of my heart are, 'Spare thy people, O Lord, and give not thy heritage to reproach. May the god of this world not be suffered to blind our eyes, nor cause the beauty of holiness to be dimmed in our view; may we be enabled to bridle our tongues, and let the Lord be our fear, and our dread!'"

First Month 15th, 1854. "Very often of late has this passage of Scripture been brought to my remembrance: 'So teach me to number my days, that I may apply my heart unto wisdom,' that wisdom which is the gift of God only; and which would enable me to discern between the precious and the vile, between that which serveth God, and that which serveth Him not; that all within me which is for the sword may be given to the sword, in order that the good may be raised up and fruit may appear to the praise of Him who said, 'My grace is sufficient for thee.'"

Tenth Month 12th. "An event occurred to-day which I think right to record. While working with my horses, one of them, a valuable animal, slipped, fell, broke and mangled a limb, so as to make it appear needful to relieve its sufferings, by putting an end to its existence. The

loss sustained, though very considerable, does not so much impress my mind as the singularity and solemnity of feeling occasioned thereby. I have remembered that it is said, that the hairs of our head are all numbered, and that a sparrow does not fall to the ground without our Heavenly Father's notice. I accept the event, named above, as being permitted for mine, and my family's good, and hope it may be an incentive to a closer walk with God; and I think I have had some evidence sealed upon my mind, that He afflicts not willingly, but in love to the children of men."

(To be continued.)

An Episode in the Franco-German War.

Next morning by eleven we all re-assembled in the second *salle* of the Hagen. In the great room the marriage breakfast was laid out, and in the kitchen Hagen and his Frau were up to their eyes in mystic culinary operations. Minna looked like a rose-bud in her pretty low-shaking blue dress, and the pastor in his cassock belched the diversity of color. We had done shaking hands and were forming a circle, prior to the commencement of the ceremony, when young Eckenstein started, and made three strides to the open window. His accustomed ear had caught a sound which none of us had heard. It was the sharp peremptory note of the drum, beating the alarm. As it came nearer, and could no longer be mistaken, the bright color went out of poor Minna's cheek, and she clung, with a brave touching silence, to her sister. In two minutes more Eckenstein had his helmet on his head, and his sword buckled on, and then he turned to say farewell to his girl ere he left for the battle. The parting was silent and brief, but the faces of the two were more eloquent than words. Poor Minna sat down by the window, straining her eyes, as Eckenstein, running at speed, bent his way to the rendezvous.

* * * * *

I wandered along amid the carnage, eeking out the contents of my flask as far as I could, and when the wounded had exhausted the brandy in it, filling it up with water, and still toiling on in a task that seemed endless. At last, in a sitting posture, his back against a hawthorn tree in one of the grassy ravines, I saw one whom I thought I recognized. "Eckenstein!" I cried, as I ran forward, for the posture was so natural that I could not but think he was alive. Ah, me! no answer came—the gallant young *Feldwebel* was dead—shot through the throat. He had not been killed outright by the fatal bullet; the track was apparent by the blood on the grass where he had crawled to the hawthorn tree, against which I found him. His head had fallen on his chest, and his right hand was pressed against his left breast. I saw something white in the hollow of the hand, and easily moved the arm, for he was yet warm; it was the photograph of the little girl whom he had married but three short days before. The frank eyes looked up at me with a merry unconsciousness, and the face of the photograph was spotted with the life blood of the young soldier.—*Archibald Forbes, in The Arbitrator.*

Lawful Things.—Study to use lawful things lawfully. Oh! how subtly the devil works, to make the mind so dwell upon its temporal and lawful gratifications, as that they may have the larger share of its attention.—*Edward Alexander.*

For "The Friend." Reading the Vail.

The reading of the vail in the outward temple at Jerusalem, in the time of the crucifixion of our Saviour, seems to point to the rending or separating of the old ceremonial law and worship which made nothing perfect, that we, under the new dispensation of the Spirit, might have more free access or insight to the law of the Spirit of life in Christ Jesus, as that is the most holy of all, and will set us free from the law of sin and death. So the vail that separates the holiness of man, from the holiness of the Lord, is rent from top to bottom; and the true Christian believer has now full privilege to enter into the most holy place, or the holy of holies, "by the blood of Jesus, by a new and living way, which He hath consecrated for us, through the vail, that is to say, his flesh." So let us hold fast the profession of faith without wavering; and remember that there remaineth a rest to the people of God, while here, and for the people of God in the world to come.

But after we have been "illumined we will have to endure a great trial of afflictions," and bear the cross for Him, as He bore it for us, so as to be crucified to sin, and die into our fleshly propensities, which separate us from his holiness. For such as are dead unto sin, are alive unto Him, and the life that they now live in the flesh, they live by faith and obedience to Him who died for us and rose again into newness of life. And if we are crucified unto sin under the cross, we also shall be raised from our spiritual death into newness of life, to the glory of the Father, and walk with Him in righteousness and true holiness. For the vail that had hitherto kept us in bondage under the old ceremonial law, would be rent and taken out of the way, so as to give us boldness and confidence in our worship, to enter into the most holy place, and worship God in the beauty of holiness, and in spirit and in truth.

"For God is a Spirit! and they who arise

Would perform that pure worship He loveth,
In the heart's holy temple will seek with delight
That spirit the Father approveth."

But many now, I fear, while under profession of high spirituality, are reading Moses with a vail over their eyes, which vail is done away in Christ, and they seem to know it not because darkness has blinded their eyes. But when that which is perfect is come, then that which is in part shall be done away. And now the law of the Spirit of Life in Christ Jesus, has set all, governed by it, free from the law of sin and death; and those who have witnessed the vail to be rent, or taken out of the way, have access into the most holy place, where they may receive their ministry from the Minister of ministers and deliver it in the tabernacle, or place of worship which the Lord has appointed, and not man. But the old outward law, though it made nothing perfect, was all right in its place; and I think might be looked upon like the baptism of John, and as designed to prepare the way of the Lord, or as a schoolmaster to bring us to Christ, who is the way, the truth and the life. And the vail is done away in Him. And now all that work righteousness are accepted by Him, where He, the forerunner, has gone to prepare a place for all his redeemed children who go up to Him out of great tribulation. In the death of Christ, the vail which separated the human from the Divine, or the holy from the most holy, was taken away, being slain, or nailed to the cross. So that now in Him, spiritually, dwell-tho' the fulness of the Godhead bodily. And there is no

sectarian difference between the Jew and the Gentile, for we are all one in Christ Jesus: The enmity being nailed to the cross, and the handwriting of ordinances done away. So that he is no longer "a Jew which is one outwardly; and circumcision is that of the heart, in the spirit, and not in the letter, whose praise is not of men, but of God."

But it seems very evident now, from the outward observations that we see still existing amongst us, in our worship, that the veil remains to this day, untaken away from the heart in the reading of Moses. For now, as at the crucifixion, darkness covers the earthly mind, and gross darkness the people; but not entirely from the same cause; yet I think that all which was written concerning the crucifixion was literally true. But that need not prevent us from making a spiritual application of it. But the veil must not only be rent from top to bottom, but it must be taken out of the way before we can see clearly to the end of that which is abolished, or before we can enter the holy of holies. But when we do enter, we will find the darkness will flee away and the true light will shine. And without enquiring into the nature or cause of the darkness at the crucifixion, we shall see that many a mundane thing has been suffered to intervene, or come between us and the Sun of Righteousness, which has tended to eclipse the brightness of his shining; such as the lust of the flesh, the lust of the eyes and the pride of life, which are not of the Father but of the world that lies in wickedness. But if the cup of suffering which the righteous partake of on account of these things, and on account of the darkness which covers the earthly mind, should only be as a prelude to the crucifixion of the carnal or fleshly nature in us, let us in submission, drink it, saying, not my will, O Lord, but thine be done. For without this, we shall not be permitted to enter in through the veil into the holy of holies, nor see the King in his beauty, and behold the land, which to the natural man is very far off.

D. H.

DUBLIN, 18th, Eleventh Mo, 18th, 1888.

WITHOUT a laborious investigation of the opinions of the various denominations of Christians, but not without sacrifices, hindrances, and discouragements, by little and little, not rashly, but after mature deliberation, in simple obedience to apprehended duty, I attended the religious meetings of Friends. To me, solemn and reverential was that stillness, that silence, which seemed to hush every thought. I believe, that in this still calm, there is a renewal of spiritual strength to be known; yea! an enlargement of spiritual understanding, in communion with the Father of spirits, which surely is true spiritual worship. Thus, as an individual, I was led step by step, and found no difficulty in comprehending the ground and consistency of adopting plainness of speech, behaviour, and apparel; all seemed consonant with apostolic counsel, evangelic doctrine, and the example of the early Christian converts. A corruption of language and manners has crept in, and is adopted by many Christian professors, in the present day. The Society of Friends having seen this, and being gathered in early times, as a "people turned to a pure language," I marvel not at their setting a cautious guard against innovations.—*Mary Cupper.*

THE man whose religious principles do not regulate his business transactions and social intercourse has no religious principles worth speaking of.

THE CHILDREN'S HYMN.

From the sunny morning
To the starry night,
Every look and motion
Meets our Father's sight.
From our earliest breathing
To our latest year,
Every sound we utter
Meets our Father's ear.

Through our earthly journey
Where-so'er we go,
Every thought and feeling
Doth our Father know.

Let us, then, be careful,
That our looks shall be
Brave and kind, and cheerful,
For our Lord to see.

Let us guard each accent
With a holy fear,
Fit our every saying
For our Lord to hear.

Let us not writh in us,
Hidden or confessed,
Ever bring a sorrow
To our dear Lord's breast.

Help us, O our Father!
Hear our earnest plea;
Teach Thy little children
How to live for Thee!

—The Presbyterian.

OUR HOMESTEAD.

Our old brown homestead reared its walls
From the sycamore dust aloft,
Where the apple-boughs could almost cast
Their fruit upon its roof;
And the cherry-tree so near it grew
That, when awake, I've lain
In the loneliness of night, I've heard the limbs
As they creaked against the pane;
And those orchard trees, oh, those orchard trees!
I've seen my little brooders rocked
In their tops by the summer breeze.

The sweet-brier under the window-sill,
Which the early birds made glad,
And the damask rose, by the garden fence,
Were all the flowers we had,
I've looked at many a flower since then,
Exotics rich and rare,
That to other eyes were lovelier,
But not to me so fair;
For those roses bright, oh, those roses bright!
I have wined them in my sister's locks
That are twined in the dust from sight.

We had a well, a deep old well,
Where the spring was never dry,
And the cool drops down from the mossy stones
Were falling constantly;
And there never was water half so sweet
As the draught which filled my cup,
Drawn up to the curb by the rude old sweep
That my father's hand set up.
And that deep old well, oh, that deep old well!
I remember now the plashing sound
Of the bucket as it fell.

Our homestead had an ample hearth,
Where at night we loved to meet;
There my mother's voice was always kind,
And her smile was always sweet,
And there I've sat on my father's knee,
And watched his thoughtful brow,
With my childish hand in his raven hair,—
That hair is silver now!
But that broad hearth's light, oh, that broad hearth's
light!
And my father's look, and my mother's smile,
They're in my heart to-night!

—Phoebe Cherry.

OUR TIME is fixed, and all our days are numbered,
How long, how short, we know not; this we know:
Duty requires we calmly wait the summons,
Nor dare to stir till Heaven shall give permission.
—Blair.

THE SILENT MESSAGE.

Be still, just now, be still!
Something thy soul hath never heard,
Something unknown to any song of hand,
Something unknown to wind, or wave, or star,
A message from the fatherland, afar,
That with sweet joy, the homesick soul shall thrill,
Cometh to thee, if thou canst but be still.

Be still, just now, be still!
And know that I that speaketh am thy God.
The lonely vale of sorrow I have trod,
I know it all. I know it and I can feel
Thy spirit's pain, but I that pain can heal,
Thou never yet hast proved my wondrous skill;
Hush! I will speak, if thou wilt but be still.

Be still, just now, be still!
There comes a Presence, very mild and sweet;
White are the sandals on the noiseless feet:
It is the Comforter, whom Jesus sent
To teach thee, all the words He uttered meant.
The waiting, willing spirit He doth fill:
If thou would'st hear his message, soul, be still.

The Sun states as a fact an incident which has much of philosophy for all. A wealthy lady of New York broke one of her legs last winter. It was properly set, but while it was healing she used a pair of crutches, and the habit of using them grew upon her until she felt unable to walk without them. One day recently she started out upon her crutches to visit a neighbor, living a block or so away, and met a distressed, rugged-looking man who had lost a leg, and was hobbling along on a pair of old stils. Her sympathies were aroused. Grasping her crutches in one hand, she stood erect for a moment, asked the man if he would take them, gave them to him, and walked off with perfect ease, and in this way learned for the first time since she broke her leg that she had no need for artificial aid in walking. This would have been heralded around the world as a marvelous cure if some patient faith-healer had only told her to lay aside her crutches.

Light Literature.—People clamor for light reading. Well, there is indeed a [great] supply of light reading—in Sunday-school libraries, in society novels, in flashy newspapers. It is everywhere—on the news-stand, in the parlor, in the chamber. A reading generation is reading prodigiously for mere amusement or for immoral excitement, and what is the result?

The keeper of a penitentiary said the other day that the majority of the kids locked under his care became vicious from the reading of light, cheap, sensational stories in papers filled with pictorial illustrations of crime. And parents in the city and in the country, intelligent and religious parents too, allow their children to drink from these polluted fountains with seeming unconcern. They sow the wind, and are surprised when comes the whirlwind.—*Christian Intelligence.*

THE knowledge of the Lord in his new covenant of Light, with which He enlightens every one that cometh into the world, shall cover the earth as the waters do the sea: Yea the Light will give the knowledge of the Lord, and the knowledge of their sin, and the knowledge of their Saviour, and the knowledge of their way to God, and the knowledge of their life,—for it is the Light in man, and the life in Christ the Word; and that they believe in the Light as Christ commands, become children of the Light, and so grafted into Christ the Word of life.—*George Fox.*

FOR "THE FRIEND."

Tropical Africa.

(Continued from page 156.)

BLANTYRE MISSIONS.

In ascending the Shiré, the traveller encounters rapids, which require a land transportation for seventy miles. About half-way up this seventy miles, stands the first white settlement in East Central Africa, the Blantyre Mission. Of his visit to it, Professor Drummond says:

"Bringing about a hundred natives with a promise of a fathom of calico each, to carry our baggage, we set off on foot for Blantyre. The traditional characteristics of African caravaning were displayed in full perfection during this first experience, and darkness fell when we were but half-way to our destination. It was our first night in the bush, and a somewhat unusual introduction to African travelling marked it. At midnight we were roused by startling cries from our men, who lay sleeping on the ground around us. The watch-fires must have burned down, for a lion had suddenly sprung into the camp, seizing the man who lay nearest the forest, the animal buried its claws in his breast, and was making off into the darkness, when the shouting frightened it and made it drop its prey. Twice during the night the lion came back, and we whites had to keep watch by turns till morning with loaded rifles. This is altogether an exceptional case, for with a good fire one can generally spread his mat anywhere in the tropics without fear of midnight attack. This is a famous place, however, for lions, and one can as certainly depend on their gruesome concert in the early morning as on the sparrows' chirp in England.

"Towards sunset the following evening our caravan filed into Blantyre. On the beauty and interest of this ideal mission I shall not dwell. But if anyone wishes to find out what can be done with the virgin African, what can be done by broad and practical missionary methods, let him visit Dr. Clement Scott and his friends at Blantyre; and if he wishes to observe the possibilities of civilization and colonization among an average African tribe living on an average African soil, let him examine the mission plantations, and those of John and Frederick Moir at Mandala, and of the brothers Buchanan at Zomba; and, further, if he desires to know what the milk of human kindness is, let him time his attack of fever so that happily it may coincide with his visit to either of these centres of self-denying goodness and hospitality."

LAKE SHIRWA.

"Somewhere in the Shire Highlands, in 1859, Livingstone saw a large lake—Lake Shirwa—which is still almost unknown. It lies away to the East, and is bounded by a range of mountains whose lofty summits are visible from the hills round Blantyre. Thinking it might be a useful initiation to African travel if I devoted a short time to its exploration, I set off one morning accompanied by two members of the Blantyre staff and a small retinue of natives. Steering across country in the direction in which it lay, we found, two days before seeing the actual water, that we were already on the ancient bed of the lake. Though now clothed with forest, the whole district has obviously been under water at a comparatively recent period, and the shores of Lake Shirwa probably reached at one time to within a few miles of Blantyre itself. On reaching the lake a very aged female chief came to see us, and told us

how, long, long ago, a white man came to her village and gave her a present of cloth. Of the white man, who must have been Livingstone, she spoke very kindly; and indeed, whenever David Livingstone's name is crossed in Africa the fragrance of his memory seems to remain.

"The waters of Shirwa are brackish to the taste, and undrinkable; but the saltiness must have a peculiar charm for game, for nowhere else in Africa did I see such splendid herds of the larger animals as here. The zebra was especially abundant; and so unaccustomed to be disturbed are these creatures, that with a little care, one could watch their movements safely within a very few yards. It may seem unorthodox to say so, but I do not know if among the larger animals there is anything handsomer in creation than the zebra. At close quarters his striped coat is all but as fine as the tiger's, while the form and movement of his body are in every way nobler."

"We were much surprised, considering that this region is almost uninhabited, to discover near the lake shore a native path so beaten, and so recently beaten, by multitudes of human feet, that it could only represent some trunk route through the continent. Following it a few miles, we soon discovered its function. It was one of the great slave routes through Africa. Signs of the horrid traffic soon became visible on every side; and from symmetrical arrangements of small piles of stones and freshly-cut twigs, planted semaphore-wise upon the path, our native guides made out that a slave-caravan was actually passing at the time. We were, in fact, between two portions of it, the stones and twigs being telegraphic signals between front and rear. Our natives seemed much alarmed at the discovery, and refused to proceed unless I promised not to interfere—a proceeding, which, had we attempted it, would simply have meant murder for ourselves and slavery for them. Next day, from a hill-top, we saw the slave encampment far below, and the ghastly procession marshalling for its march to the distant coast, which many of the hundreds who composed it would never reach alive."

"Talking of native footpaths leads me to turn aside for a moment to explain to the uninitiated the true mode of African travel. It may be a surprise to the unlightened to learn that probably no explorer in forcing his passage through Africa has ever, for more than a few days at a time, been off some beaten track. Probably no country in the world, civilized or uncivilized, is better supplied with paths than this unmappped continent. Every village is connected with some other village, every tribe with the next tribe, every state with its neighbor, and therefore with all the rest. The explorer's business is simply to select from this network of tracks, keep a general direction and hold on his way. Let him begin at Zanzibar, plant his foot on a native footpath, and set his face towards Tanganyika. In eight months he will be there. He has simply to persevere. From village to village he will be handed on, zig-zagging it may be sometimes to avoid the impassable barriers of nature or the rarer perils of hostile tribes, but never taking to the woods, never guided solely by the stars, never in fact leaving the beaten track, till hundreds and hundreds of miles are between him and the sea, and his interminable footpath ends with a canoe, on the shores of Tanganyika."

"Nor is there any art in finding out these successive villages, with their intercommunicating links. He *must* find them out. A whole

army of guides, servants, carriers, soldiers and camp-followers accompany him in his march, and this nondescript regiment must be fed. Indian corn, cassava, mawwa, beans, and bananas—these do not grow wild even in Africa. Every meal has to be bought and paid for in cloth and beads; and scarcely three days can pass without a call having to be made at some village where the necessary supplies can be obtained. A caravan, as a rule, must live from hand to mouth, and its march becomes simply a regulated procession through a chain of markets."

"The native tracks which I have just described are the same in character all over Africa. They are veritable footpaths, never over a foot in breadth, beaten as hard as adamant, and rutted beneath the level of the forest bed by centuries of native traffic. As a rule these footpaths are marvellously direct. Like the roads of the old Romans, they run straight on through everything, ridge and mountain and valley, never shying at obstacles, nor anywhere turning aside to breathe. Yet within this general straightforwardness there is a singular eccentricity and indirectness in detail. Although the African footpath is on the whole a bee-line, no fifty yards of it are ever straight. And the reason is not far to seek. If a stone is encountered, no native will ever think of removing it. Why should he? It is easier to walk round it. The next man who comes that way will do the same. He knows that a hundred men are following him; he looks at the stone; a moment, and it might be unearthed and tossed aside; but no, he also holds on his way. It is not that he resents the trouble, it is the idea that is wanting. It would no more occur to him that that stone was a disagreeable object, and that for the general well it might displace it, than that its field-par was of the orthodox variety."

"Owing to the ravages of the slave, the people of Shirwa are few, scattered and poor, and live in abiding terror. The densest population is to be found on the small island, heavily timbered with baobabs, which forms a picturesque feature of the northern end. These Wanyassa, or people of the lake, as they call themselves, have been driven here by fear, and they rarely leave their Lake-Dwelling unless under cover of night. Even then they are liable to capture by any man of a stronger tribe who happens to meet them, and numbers who have been kidnapped in this way are to be found in the villages of neighboring chiefs. This is an amenity of existence in Africa that strikes one as very terrible. It is impossible for those at home to understand how literally savage man is a chattel, and how much his life is spent in the mere safeguarding of his main asset, *i. e.* himself. There are actually districts in Africa where three natives cannot be sent a message, in case two should combine and sell the third before they return."

(To be concluded.)

An eminent French surgeon once boasted that he had successfully performed a certain delicate and dangerous operation a great number of times. When asked how many cases recovered he replied, "They all died;" but the operation was a marvelous success! Is it not so with much of the work of the church? By great preaching and grand singing and stately services and admirable (which device a spiritual success is achieved; but the souls who come and hear and go, die. Church work which does not save men is no great success.—Selected.

Decision of Character.—The last decisive energy of a rational courage, which confines in the Supreme Power, is very sublime. It makes a man who intrepidly dares everything that can oppose or attack him within the whole sphere of mortality; who would retain his purpose unshaken amidst the ruins of the world; who will still press toward his object while death is impending over him.

It was in the true elevation of this character that Luther, when cited to appear at the Diet of Worms, under an assurance of safety from very high authority, said to his friends, who conjured him not to go, and justly brought the example of John Huss, who, in a similar situation, and with the same pledge of protection, had notwithstanding been burnt alive. "I am called in the name of God to go, and I would go, though I were certain to meet as many devils in Worms as there are tiles on the houses."—*John Foster.*

Nor long ago I was talking with a shrewd Scotchman who had left the church of which he was a member, because the minister had followed the fashion, and was constantly setting forth the most subtle forms of unbelief. The minister called to see after the missing sheep, and inquired as to the reason of his absence. "Well," explained the wanderer, "I don't go to church for controversy, but for communion with God. When you preach you put me up to tricks of argument and difficulties that I am all the better for not knowing. You give me on Sunday what I have to get rid of for myself, and it takes me the whole week to do it. It reminds me of an ostler who went to confession. He had gone satisfactorily through the list of questions touching frailties common to humanity; then the priest came to those special to the man's calling. "Do you butter the horses' teeth that they may not eat their corn?" The simple ostler expressed his indignant horror. "Sure and your reverence, such a thing I never heard of in my life." The next time the man came to confession, this sin came out. He had buttered the horses' teeth, &c. The priest was indignant now. The ostler explained: "Well, your reverence, ever since you put me up to it, I have not been able to get it out of my head."—*Mark Guy Pearce in The Christian Advocate.*

Natural History, Science, &c.

Seized by a Cuttle-Fish.—The Wellington (New Zealand) Press relates that Archibald McGovan, a diver, was seized by a cuttle-fish, five fathoms under water, and had an almost miraculous escape. "On going down for the purpose of laying some blocks, he was attacked by the octopus, which succeeded in fastening on to him, and, in spite of all his struggles, chained him to one of the piles in the retaining wall. McGovan, however, had the good sense to remain quiet, and the octopus, whose arms measured quite nine feet, quitting its hold of the pile, was brought to the surface on the back of the diver. These monsters are very numerous in Wellington Harbor, Evans Bay, and along the neighboring coast."

Floating Islands.—Henry's Lake is one of the wonders of the Rockies. Directly on the summit of the continental divide, in a depression or gap called Targess's Pass, is a body of water that was given the above name in honor of an old trapper who made his home on its borders for several years in the enjoyment of sweet solitude.

Henry's Lake is of oval shape, and has an

area of forty square miles. It is entirely surrounded by what seems to be solid land, and one really concludes that it has no outlet. On the west side lies a level meadow, which floats on the water, and the hidden outlet is beyond it. Near the rim of the basin, which at no distant day must have been the pebbly beach of the lake, is a shallow pool, out from which flows a creek, the source of the north fork of Snake River.

A species of the blue joint grass of luxuriant growth floats upon the water and sends out a mass of large hollow white roots, which form a mat so thick and firm that a horse can walk with safety over the natural pontoon. The decaying vegetation adds to the thickness of the mat, and forms a mold in which weeds, willows and small trees take root and grow. Back from the new border the new land is firm, and supports pine and aspen trees of small growth.

An island of the same turf formation floats about the lake. The floating body of land is circular and measures 300 feet in diameter. A willow thicket thrives in the centre, interspersed with small aspens and dwarf pines. The little trees catch the breeze, and are the sails that carry the island on its orbit. One evening it was within a stone's-throw of our camp. Next morning it was five miles away.—*Virginia City (Nev.) Chronicle.*

Recent Archaeological Discoveries.—At Doboj, in Bosnia, the remains of a fortress, erected probably to hold the Dacians in check, were recently traced by Dr. Tuhelka, who is the custos of ancient monuments in Bosnia. They lay on the summit of a cliff, which is at the junction of the Bosna and Usura, and were covered with a shallow layer of mould. The ruins formed a series of terraces, at the highest point of which was a sort of citadel. An inscription was found, which showed that at some time the first Belgic cohort was in garrison at the spot. The utterly shattered condition of the remains of masonry, which are simply rubbish, indicates that they have been the scene of some great catastrophe. It has been suggested that an earthquake may have been the destructive agent, for a quantity of broken skeletons have been found buried in the greatest confusion all over the place in crumbled masonry and mortar. The place is an admirable situation for defence, being practically impregnable on two sides, and it dominates the surrounding country. Various articles, such as would be likely to be found in a Roman military colony, have been collected.—*Pall Mall Gazette.*

Deep Soundings.—The British surveying ship Egeria, under command of Captain P. Aldrich, has, during a recent sounding cruise and search for reported banks to the south of the Friendly Islands, obtained two soundings of 4295 fathoms and 4430 fathoms respectively, the latter in latitude 24 deg. 37 min. S., longitude 175 deg. 8 min. W., the other about 12 miles to the southward. According to *St. James' Gazette*, these depths are more than 1000 fathoms greater than any before obtained in the Southern Hemisphere, and are only surpassed, as far as is known, in three spots of the world—one of 4655 fathoms off the northeast coast of Japan, found by the United States steamship Tuscarora; one of 4475 fathoms, south of the Ladrones Islands, by the Challenger, and one of 4361 fathoms, north of Porto Rico, by the United States ship Blake.—*Leolyer.*

Star-fish.—The U. S. Fish Commission has been investigating the depredations made upon

the oyster beds in the waters of Rhode Island and Connecticut by the star-fish. These had multiplied to such an extent as to threaten the ruin of the oyster trade. In New Haven Bay they were very numerous, and some of them were 12 inches in diameter. Oysters are said to grow faster in Long Island Sound than in the Southern waters because of the abundance of the animalcule on which they feed, and which are brought in by a spur from the Gulf Stream. The Fish Commission are studying the habits of the star-fish, in hopes of being able to devise some plan for the protection of the oyster beds from their ravages.

Big Trees of California.—A correspondent of the *Christian Advocate* asserts that some trees have been discovered in California larger than any of those in the Mariposa Grove. He says: "Several groves of the Sequoia Gigantea have long been known to exist in the Sierra Nevada Mountains, in the eastern part of Fresno and Tulare Counties, and others have been discovered recently. One tree which has been visited by hundreds of people measures 103 feet in circumference a few feet above the ground. As these mountains are more fully explored, other 'giants' are found. A gentleman, who claims to have been one of the party who discovered the 'monarch' of them all, told me that it required fifty paces to compass it, walking as close to it as possible. He estimated its circumference at five feet from the ground to be 135 feet; others who have seen it say it is not over-estimated. Its height is not proportionate to its size, however, for it has met the disaster so common to such trees—the loss of a great part of its top, all the branches, and part of the original trunk. It is probable that an accurate measurement of this new wonder will determine it to be the largest tree trunk in the world.

"The more accessible of these groves of Sequoia (of which there are several varieties) are already invaded by the lumbermen. The very large trees are seldom felled, as they are difficult to cut down, and frequently shatter badly when their immense weight crashes to the ground. Trees of 12 to 15 feet diameter are frequently felled, sawed into logs of convenient length, then split open or into sections by the use of blasting powder, when they can be handled with the usual logging appliances."

Influence of Tobacco Smoke on Young Children.—"During my many years of practice, there have been many occasions on which I have found it necessary to warn persons who used tobacco against using it in the sick-room, especially in the lying-in room. I have often known poor men, after coming from work, and also in the early morning, to fill the room, where there was an infant only a few days old, with tobacco-smoke; and that some of these children sickened and died from the effects of it I have no doubt. Three years ago, I was passing along Green Lane, a street running from Roxborough to Manayunk, when I met a young man proudly carrying a child of but a few months on his shoulder, with the child's face close to his own head. He was smoking, and, as he faced the wind, the smoke was carried back into the child's face. It was Sunday, and himself and wife had apparently just started to visit friends in Manayunk—a very short distance. After I had gotten away from them I reproached myself for not having accosted them and warned them of the child's danger. It is quite probable that, before they reached their friends, the child was sick; then, if a doctor was sent for, he was

doubtless told: "It was quite well when we left home, and we can't tell whatever has made it so sick." Being so very sick, and malaria being so plentiful in that region, the doctor could readily see that it ought to have medicine—some antiseptic or some germicide—and then—we, we may fancy the rest.

"I have often, when called to young children, believed that the cause of the sickness was due to the fumes of tobacco; removing them from the cause often soon placed them in safety. And yet that many suffered from that cause, and that it was not recognized as such by me, I have no doubt."—*Dr. Corson in Medical and Surgical Reporter.*

Items.

Working Men and War.—At a meeting held at Milan, Italy, on the 21st of Eleventh Month, forty-six workmen's societies protested against the triple Alliance and against war in general. A resolution was adopted declaring that they would not support the Italian Government in the event of war. The protest will be sent to workmen's associations throughout Italy, and the workmen of France will be invited to adhere, in the name of the brotherhood of labor. The Manchester workmen will ask other associations to cooperate.

The Report of the "Sunday Breakfast Association."—This Association has existed for ten years, and its object is to provide breakfast on First-day mornings during the winter, for the poor and homeless, with the hope not only of relieving some of their physical wants, but of helping them morally by the religious services which the recipients of its bounty are invited to attend. The Annual Report for the past season gives the number who were fed on the 26 days that the Hall was opened, as 25,808, of whom about two-thirds were breakfast visitors, and nearly 10,000 were fed at teas. The meals generally consisted of either coffee or tea, with sandwiches containing corned-beef. The average cost of a meal was something more than 4 cents.

Dr. McCosh, late President of Princeton College, on Secret Societies.—When I became connected with Princeton, the secret Greek Letter fraternities had considerable power in the college. The trustees, years before, had passed a law requiring every entering student to come under a solemn obligation to have no connection whatever with any secret society. I felt from the beginning that the college was in this respect in a very unhappy position, the students signing a pledge which a number of them knowingly violated. On inquiry I discovered that while some of the societies did mean to foster pleasant social feelings, and to create a taste for oratory, yet that their influence was upon the whole for evil. I soon found that the societies sought to deprive the secret Greek Letter fraternities of support those who were under college discipline. I felt that, as the head of the college, I must put an end to this state of things. I was powerfully aided or rather led, in carrying this out, by the late Dr. Atwater, who had more credit than I in suppressing the secret societies.

"One courageous student set himself vigorously to oppose the attempt to get the college honors to members of the fraternities. The difficulty was to get evidence. But certain lodges got photographs taken of their members. These fell into our hands. The offenders stood clearly before us. I summoned them before the faculty. They did not deny the charge, and we sent them home. In a short time each sent in a paper in which he promised to give up all connection with secret societies. I retained those papers for a time to secure that the promise should be kept, but I have shown them to no one. The faculty restored the students who, I believe, kept their word. Now the great body of the students would earnestly oppose reintroduction of these fraternities into our college. Most of the professors in the American colleges profess to lament the existence of such societies, but have not the courage to suppress them."

Egyptian War "Glory."—A somewhat extraor-

dinary disclosure was recently made at Aberdeen, when the Austrian vessel "Dubi" arrived at the port loaded with bones for manure. The captain stated that she got her cargo at Alexandria, and that all the bones came from Cairo. They were supposed to be chiefly the bones of giraffes, camels, and camels, but when they were being put on board many complete human skeletons were seen among them. The captain refused to slip these, and told the natives that he would have no bones of the Christians. The natives denatured. When he inquired where they got them, he told him that it was the custom of natives to go in large boats to the scenes of battlefields, and then dig in the trenches for the remains of white men. After collecting the bones they sold them to merchants, who, in their turn, shipped them to various ports for manure. The captain of the "Dubi" fears that notwithstanding the precautions he took when loading, a good many human skeletons are mixed up with the others. Many of the natives, he says, followed the line of the Nile expedition, and brought in large quantities of human remains.—*Herald of Peace.*

The Conscience of the Nineteenth Century.—Dr. Lyman Abbott, in an article on "The New Reformation" in the *Century*, says: "Certainly the conscience of the American people, I should rather say of the whole Western people, is not so unresponsive and never so resolute in dealing with practical life. If the most trustworthy expressions of religious feeling are those embodied in life, the sense of sin and the purpose of reformation have been far more effectively expressed in this century than in the last; then millions of slaves were sold in bondage in America, and other millions under the British flag in its colonies, with only a feeble and wholly ineffective protest. Drunkenness did not lead to social disrepute either in Old or in New England. Churches paid for drinks on occasions of dedications and ordinations, and the minister's sidewalk took on the aspect of a public bar. The conscience of England abolished slavery in all English dominions in 1833; that of the United States, moving more slowly and having a more onerous task, accomplished its work thirty years later, and at an awful cost. But the task was accomplished in America on the very spot where in the first place this century the northern missionary was publicly whipped on the bare back, not for circulating antislavery tracts, but for having one in his possession, now stand the buildings of the Fisk University, dedicated to the education of the emancipated negro. If drinking has not been diminished—upon that question social statisticians are not agreed—drunkenness certainly has decreased, both in England and in the United States."

ALFRED THE GREAT, who died in the year 900, was of a most amiable disposition. During his retreat at Athelney, in Somersetshire, after his defeat by the Danes, a beggar came to his little castle and requested alms. His queen informed Alfred that they had but one small loaf remaining, which was insufficient for themselves and their friends, who were gone in search of food, though with little hope of success. The king replied, "Give the poor Christian one half of the loaf. He that could feed five thousand men with five loaves and two fishes, can certainly make the half loaf sufficient for more than our necessity." The poor man was accordingly relieved, and Alfred's people shortly after returned with a store of fresh provisions.—*Arvine's Cyclo-pedia.*

"*Better be Sure than Sorry.*"—I do not think there is any need of covering the flower-beds to-night. I do not believe there will be frost enough to harm."

"Better be sure than sorry," the gardener replied; "if the frost should nip them it would then be too late, you know."

To the cavils of the skeptic and sneer of the scorner, who do not believe because they do not understand, or think there is no danger because

they would have it so, this same answer would be wise: "Better be sure than sorry." If there should be an eternity, then the question, "Where shall I spend eternity?" puts all other questions in the shade. The frost may nip all the springing hopes of the soul. "Better be sure than sorry." Thousands of souls are hesitating about giving heed to their immortal interests. "We do not think there will be frost to-night," they say. "Better be sure than sorry." If the frost of death should blight the soul, it will then be too late forever.—*W. J. L., in the Mid-Continent.*

THE FRIEND.

TWELFTH MONTH 15, 1888.

The Society of Friends has ever directed the attention of its members, *primarily and principally*, to the Light of Christ—the impressions made upon the mind by the Holy Spirit—as the source of true spiritual knowledge. Yet it has also highly valued the Holy Scriptures as a record of the Divine will and dealings with man, which "holy men of old wrote as they were moved of the Holy Ghost." The teachings of the Society have been in accord with the advice given by William Penn to his children: "As to the things of God, his truth and kingdom, I refer you to his light, grace, spirit and truth without you, and the Holy Scriptures of truth without you, which from my youth I loved to read, and were ever blessed to me; and which I charge you to read daily."

At the present time, the injudicious efforts of some to promote the systematic study of the Bible as part of the preparation for Gospel ministry, has awakened uneasiness in many, who see in it a danger of departing from the ancient testimonies of the Society of Friends as to the call and qualification for such service. It would be a result much to be regretted, if this well-founded uneasiness should so react on the minds of any, as to render them less frequent in the perusal of the Bible, than was formerly the case, or than the advices of the Church would lead to.

The Yearly Meeting of Philadelphia has felt it right to caution its members against "a dependence on critical investigation into those Divine truths which can only be discerned spiritually," and thus "substituting a literal knowledge of the Scriptures for an inward growth in grace," and it has believed that it was not wise or expedient for parents to depute to others, in what are called First-day Schools, that religious instruction which it is their own duty to bestow upon their offspring; yet it has exhorted parents "Fervently to seek a right qualification to impart to their children such religious instruction as may be adapted to their respective ages and states;" and it has advised them to "Begin early to instil into their tender minds the principles of truth, and instruct them in the nature and necessity of being born from above; and to labor to bring them acquainted with the Holy Seed, which is sown by the Divine Hand in every heart."

The tendency of the First-day school system for our own children, (we speak not now of those neglected ones, whom it is a work of charity to gather together and instruct in the Scriptures), is to relieve the parents of the sense of responsibility for the instruction of their families. But if any of these are so far enlightened as not to encourage the system, and yet neglect their own

duty; are not their children left in a more destitute condition than those of others?

In many families of Friends it is the daily custom, either at the morning meal, or in the evening, or at such other times as may be most convenient, for a portion of Scripture to be read to the assembled household; with a suitable time of silent waiting on the Lord; which gives opportunity for a feeling of reverence and solemnity to overspread the minds, or may open the way for any remarks to be made which arise with a degree of freshness and life.

Many families also are in the practice, on the afternoons of the First-day of the week, of having such family gatherings, in which more time is occupied with appropriate exercises, and frequently the writings of some of the early members of our Society, or other religious works, are read, as well as the Scriptures.

We believe these customs are very useful. They tend to direct the attention both of young and old, to serious subjects, to cherish a reverent regard for our Heavenly Father, and to impress on the mind many religious truths. We wish they were *universal* among Friends, wherever they are so situated as to make them practicable. In visiting in different neighborhoods, such seasons of religious fellowship have often proved refreshing; and it is a cause for sorrow where no way is open for them.

A letter from a friend in one of the Western States says, "I have no doubt that there are many families, where even a chapter read in the family is rarely ever heard; where children really have no religious influence except an occasional attendance of meeting." We would be very glad if our voice could reach to every such family, pleading with them no longer to neglect doing what they can to promote the spiritual welfare of those connected with them; but rather, to be expressed by that worthy minister, John Banks, be "willing to lay hold of *every help and means*, God, in and through Jesus Christ, has ordained for our salvation."

William Penn in America is the title of a work by William J. Buck, a member of the Historical Society of Pennsylvania. It aims to give an account of that part of William Penn's career, connected with the founding of his American colony from the time he received the grant of Pennsylvania, in 1681, until his final return to England in 1701.

In the preparation of this narrative, the author has made use of the printed books which relate to the history of Pennsylvania and of William Penn, and to a large collection of manuscripts, many of which are in the possession of the Pennsylvania Historical Society. It makes a 12mo. volume of 424 pages, and can be obtained of Jacob Smedley, 304 Arch St., Philadelphia, sent post paid for \$2.50. Only 300 copies have been printed.

SUMMARY OF EVENTS.

UNITED STATES.—The release of the American steamer *Huyton* Republic held by the Republic of Hayti, has been demanded through the proper diplomatic channels by the United States Government, and if the demand is not complied with within a reasonable time, steps will be taken to enforce it. Secretary Whitney has given instructions to have the ships *Richmond*, *Galena* and *Yankee*, now at the New York Navy Yard, prepared for service as far as possible. The commandant of the Norfolk Navy Yard has been instructed to prepare the *Osipce* for sea service as soon as possible.

Assistant Secretary Maynard, in a letter to the Collector of Customs at San Francisco, says that, while

Chinese merchants are not affected by the Chinese exclusion act, the Department must decline to issue instructions with regard to the manner of identifying Chinese merchants on their arrival in the United States. He says, also, in regard to Department's previous orders, that "for convenience" be issued to Chinese persons other than laborers, that the collector has full authority to disregard them, especially so in view of his intimation that such certificates are fraudulently used by Chinese laborers.

A despatch from Durango, Colorado, says the Commission appointed to treat with the Southern Utes for their removal to their new reservation, have completed their labors at the agency by giving the Indians a separate district. The Commission will leave for Washington in a day or two, when the treaty will be submitted to Congress for approval. In addition to their lands the Indians are to receive \$50,000, or \$5000 each for ten years, and when located on the new reservation \$20,000 worth of sheep. The Indians appear willing, and many express a desire that the treaty may be ratified by Congress during the present session.

A clerk in the Washington City Post-office, was arrested last week for opening letters. He said it was his duty to do so, and that he did so every day. "He attributed his downfall to dancing."

A geysir, which is throwing hot mud all over the surrounding prairie, has broken out 60 miles from Yankton, Dakota.

A marked increase in smoking during the last six years is reported from Yale College. This year only 16 per cent. of the freshmen use tobacco. Can this abstinence have anything to do with the superiority of the men in athletic sports? A man attacked the jail in Birmingham, Alabama, about midnight on Seventh-day last, for the purpose of lynching R. R. Hayes, charged with the murder of his wife and child. When the lynchers were within a few feet of the jail door they were fired upon by the Sheriff's officers and repulsed. Three men were instantly killed, and a fine of ten dollars was mortally wounded. Some of the victims were citizens who were trying to persuade the lynchers from making the attack. The excitement is intense. The military of the State have been called upon to preserve the peace of the city, and to protect the prisoner and officers of the jail.

Only two cases of yellow fever have been reported in the limits of Jacksonville since last week's Summary. These were both declared convalescent. The total cases to date number 4705, and the total deaths 412.

It is said that Pennsylvania experts have discovered valuable slate and coal in Carlton County, Minnesota. It exists along the St. Louis River, between Thomson and Cloquet. The experts say the surface indications are exactly the same as those where the best coals deposits in Pennsylvania exist.

There were 316 deaths in this city last week, which is 23 less than the previous week, and 14 more than the corresponding week last year. Of the whole number, 169 were males and 147 females; 47 died of consumption; 25 of pneumonia; 25 of diseases of the heart; 14 of old age; 13 of diphtheria; 13 of paralysis; 12 of inflammation of the brain; and 8 of Bright's disease.

U. S. 4½'s, 10½; 4's, reg., 127½; coupon, 128; currency 6's, 118 a 128.

Cotton was quiet but steady at 103-16 cts. per pound for middling uplands.

Flour and Meal.—Western and Pennsylvania superior, \$7.75 a \$1.40; do., do., extra, \$8.25 a \$4. No. 1 winter family, \$1.10 a \$1.50; Pennsylvania family, \$1.82 a \$1.90; Pennsylvania roller process, 85 a \$3.50; Ohio, clear, \$1.75 a \$3.25; do., straight, \$1.55 a \$3.50; Indiana, clear, \$1.75 a \$3.25; do., straight, \$1.55 a \$3.50; St. Louis and Southern Illinois, \$1.85 a \$3.75 a \$3.25; do., do., straight, \$1.55 a \$3.50; winter patent flour to choice, \$5.75 a \$6.50; Minnesota, clear, \$1.65 a \$3.50; do., straight, \$1.50 a \$3.25; do., patent, \$6.50 a \$7. Rye flour was weak and prices ranged from \$3.75 to \$4.00 for best quality.

Grain.—No. 2 red wheat, \$1.04 a \$1.01.

No. 2 mixed corn, 43 a 44 cts.

No. 2 white oats, 31 a 34 cts.

Beef cattle.—Extra, 54 a 52 cts.; good, 44 a 5 cts.; medium, 41 a 42 cts.; common, 21 a 35 cts.; fat cows; 2 a 21 cts.

Sheep.—Extra, 51 a 52 cts.; good, 41 a 5 cts.; medium, 4 a 42 cts.; common, 2 a 31 cts. Lambs, 3 a 6 cts.

Hogs.—Extra Chicago 73 a 74 cts.; fair Westerns,

73 a 74 cts.; common Westerns, 7 a 74 cts.; State, 63 a 7 cts.

FOREIGN.—The most notable event of the week occurred on the night of the 4th instant, when Lord Randolph Churchill made a furious assault upon the Government's Southern policy, which had it been carried, would probably have thrown the Ministry out of office, as his motion, which he supported in a vigorously denunciatory speech, would virtually have been a vote of "want of confidence."

It has been ascertained that a majority of the House of Commons will support female franchise. If the Government does not introduce a bill to this end, Morley, it is confidently said, will take the initiative, and the Liberals will get the credit of beginning this popular innovation.

Mr. Dabulahi Naoroji (former Indian candidate for Holborn) as "a black man," Lord Salisbury has exploded a mine of Anglo-Indian indignation under himself. This is explained by the fact that the tawny-limbed men of India take it as one of the rudest of insults to class them as Africans.

A despatch from India received in London on the 10th instant, says:—The *Bombay Gazette*, discussing the "Black Man" question, says: "Lord Salisbury, in referring to D. Naoroji, seems to have spoken in terms as disrespectful as were discourteous." The *Times* of India refuse to believe that Lord Salisbury used the words. The *Indian Mirror* says: "The words are a libel upon the whole Indian race, and a deliberate insult, meriting the town's severest displeasure." Other newspapers, of course, strongly condemn, insisting that Lord Salisbury is unworthy to retain his position.

The committee appointed by the House of Commons to inquire into the arrest within the precincts of the House of D. Sheehy, an Irish member, have adopted a report by a majority of one, which sets forth that "the Irish Executive appear to have taken no precaution to issue proper instructions to the Irish police for the observance of due respect to the House of Commons."

Reports are coming in from various districts of Ireland, in Limerick especially, the distress among the agricultural laborers is enormous. Many are asking to be assisted to emigrate to Buenos Ayres.

In a recent interview General Boulanger said: "The Government will try to postpone the general election to the autumn, and to make it a purely local election by an electoral campaign. But it will make no difference; the Revisionist party I represent will be returned by a large majority."

The young German Emperor has been suffering from an affection of the ear of a painful character. In consequence of this affection the Emperor suffers terribly from insomnia, frequently walking up and down his room almost the entire night.

A despatch to the *Telegraph* of Berlin from Zambar, states that a fight had occurred near Bagamo, and that it is rumored that the Germans have retreated, after losing several men.

The *Norse Venge* advocates vigorous measures in order to reverse Persia's anti-Russian proclivities.

The Government has given \$1,000,000 to the State of Mexico, says that Louis Juller has begun work on his Chihuahua and Sierra Madre Railroad.

NOTICES.

WESTWOWN BOARDING SCHOOL, STAGE.—During the Winter term the stage will be at Westwown Station on the following dates, and the trains from Philadelphia, to convey passengers to the school, and at other times on timely notice:

J. G. WILLIAMS, *Supr.*
Westwown, Pa.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting. Three of our members feeling their minds drawn towards this position, are desired to make early application to any of the undersigned.

Aaron Fraum, Barnesville, Belmont Co., Ohio,
Hannah Tatum, do.

John W. Smith, Harrisville, Harrison Co., Ohio,
Sarah P. Holloway, Flushing, Belmont Co., do.

WANTED.—An enterprising Friend with family to take charge of a Delaware County Dairy Farm.
Address, THE FRIEND.

MARRIED, on Fourth-day, the 28th of Eleventh Month, 1888, at Friends' Meeting on Twelfth Street, SAMUEL L. WHITSON and FRANCIS E. LINTON, both of Philadelphia.

FOR "THE FRIEND."

A Visit to the Nickel Mine in Lancaster Co., Pa.

Having long felt interested in the deposit of nickel ore, situated about four miles southwest of the "Gap," in Lancaster County, Pa., and a kind friend in Chester County, who is somewhat interested in minerals, having offered to accompany me to the place, I left Philadelphia on the morning of the 22nd of the Eleventh Month, with the intention of attending the Western Quarterly Meeting held at London Grove on that day and the next, and afterwards of visiting the nickel mine, if the way should open.

The variety of rocks which a traveller may pass through on the course of an hour's ride from Philadelphia on the railroads which diverge from it, shows that Pennsylvania furnishes an ample field for the study of geology. Near the city, along the banks of the Schuylkill, are hard and massive rocks of a grey color. Then comes a deposit of clay. Twelve or fourteen miles west, we enter upon a region of softer rocks of a slaty structure, with reddish soil; and, as we descend from this formation, we enter Chester Valley, underlaid with a heavy bed of bluish limestone, now tilted up so that the layers of stone are no longer horizontal, but in some places approach a vertical position. These well-defined formations are but a few of the many kinds which might be enumerated.

The thought must often occur to the observer, "How can we account for such different formations lying side by side? What forces have been at work to produce such remarkable results?"—This question has engaged the long-continued and earnest attention of those who have devoted themselves to the study of geology—a science of great practical value, and one which opens to the student ennobling views of the operations of those forces and properties with which the Great Creator of all things has endowed the materials of which the world is constructed; and under the influence of which they have been so arranged as to form this beautiful and wonderful earth on which we live.

It has been observed that in boring deep wells, or sinking mining shafts to a great depth in the earth, the degree of heat steadily increases. So that it is probable the intensity of the heat at very great depths is far beyond that of our hottest furnaces, and sufficient to reduce to a melted state the most infusible of substances,

if this effect were not in part counteracted by the enormous pressure to which they are exposed by the weight of the rocks and waters above them.

It is supposed that in the interior of the earth, the various elementary substances (about sixty in number) which chemists have found in the parts accessible to man, exist, either in some forms of combination or mingled together without being chemically united, their mutual attractions being suspended by the excessive heat. As the primeval earth gradually cooled, these various elementary substances were more or less generally diffused through the hardened crust that was first formed. The original rock that was thus formed may have been somewhat like a volcanic lava. But it has long since been buried from sight, and is nowhere visible on the surface of the earth. The rocks and soils which we now find have been formed by the crumbling and washing away of this original rock; much change has been effected in the materials derived from it; both by mechanical action, and by the dissolving out from them of various substances by water, acids and other solvents. These changes in the earth's surface are still going on, but much less rapidly than in those early times, when the heat was greater, and the atmosphere more heavily charged with acid vapors.

Every observer must have noticed the power of running water in carrying the soil and crumbled rocks from the hills into the valleys; and finally into the bed of the ocean. There they settle down into horizontal layers, and are gradually transformed into stone, as may be seen in many parts of the earth, where the surface soil is removed or the rocks exposed by quarrying, or in cuttings for railroads. In the rock cuttings of Eastern Pennsylvania, these layers or strata are very well marked; but instead of being horizontal, they are tilted up at various angles and very irregularly twisted. They must have originally been deposited in level planes; and therefore these curves and irregularities must have been since produced. The manner in which the most of this has been done, it is generally supposed has been by the very slow contraction of the earth's surface, caused by its gradual cooling. This has had the effect of *crumpling* the hardened layers that had been deposited, slowly forcing them up into irregular ridges, sometimes of great length, like the mountain chains of the Rocky Mountains and the Andes, which extend almost the whole length of the American Continent. Besides the formation of these ridges, there have evidently been other great changes in the surface of the earth, justifying the language of the poet,

"Earthquakes have raised to heaven the humble vale,
And gulf the mountain's mighty mass entombed,
And where the Atlantic rolls, wide continents have bloomed."

It is pretty certain at least that much of the continent of America was under water at one period.

No sooner were any of the rocks whose formation we have been describing, lifted above the

ocean, than they also began to experience the effect of the same forces which had crumbled and washed down the rocks of a former age. Thus a new set of deposits was continually being made in the ocean bed, which in time would form rocks of a later date. This process is still going on; and thus we have rocks of various ages—the oldest lying underneath the others. Geologists have given the name of *Laurentian* to the oldest known rocks of America, because they cover a large part of Canada north of the *S. Lawrence River*. Some of these are found in Pennsylvania, on the South Mountain, near Reading. The gray rocks on the Schuylkill at Philadelphia, and the slaty rocks which the Pennsylvania railroad enters a few miles west of the city are also very ancient, though regarded as more recent than the *Laurentian*.

If a piece of this gray rock, which is known to Geologists as *Gneiss*, is closely examined it will be found to contain three different minerals closely intermingled—Quartz, Feldspar, and Mica, all crystalline in structure. The Quartz, (also called *Silica*) is a very abundant material in nature. It is found almost pure in sandstone, is the principal ingredient in the sand on our sea coast, and forms the beautiful, transparent crystals known as rock-crystal.

The Feldspar may be distinguished by showing smooth faces with a pearly lustre. It is a compound mineral; that found in the rock we are describing consists of Quartz, Alumina and Potash. Alumina is the chief material in common clay, although nearly all clays contain more or less of sand (quartz) and other ingredients.

The Mica (often called *Isinglass*) is in thin elastic plates, and is easily split into leaves thinner than paper; it has a brilliant lustre. It also is a compound mineral—and contains Quartz, Alumina, Iron, Manganese, Potash and Fluorine. It is evident that the mud out of which our *Gneiss* was formed, and which was derived from the wearing away of the older rocks, must have contained all these different substances, Quartz, Alumina, Potash, Iron, Manganese and Fluorine, and probably many others, disseminated through its mass. As an illustration of the wide diffusion of different elementary substances in nature, careful analysis has detected a minute portion of Gold in the brick-clays of Philadelphia, which are mainly Alumina and Quartz. The amount of gold contained in the bricks of which the city is built has been estimated by the officials at the United States Mint, as very large—but the expense of obtaining it in a separate form would be ten times all it is worth. Under the long continued influence of heat and moisture, the materials of the *Gneiss* Rock, which were contained in this primitive mud, were drawn to each other by their mutual attractions, and entering into combination assumed the crystalline forms in which we now find them.

Granite is a rock similar to the *Gneiss*, but the traces of the original layers in which the materials composing it were deposited, are more thoroughly obliterated; so that it is more massive in its structure.

The slaty rocks among which I passed in my morning ride, form a belt on the southern side of Chester Valley, widening as we go westward. In composition they are similar to the Gneiss rocks near Philadelphia, but they contain less Feldspar, much more Mica, and some Magnesia. This abundance of Mica gives them a more scaly or slaty structure, so that they are easily broken into thin slabs, and it also gives them a glistening appearance or lustre.

On the northern side of this slaty region there is an abrupt descent into the Chester Valley. Along the sides of this south valley hill, the railroad gradually descends in its westward course, till it fairly enters the valley, and reaches Downingtown, where I left the cars and found a kind friend in waiting to convey me further.

(To be continued.)

FOR "THE FRIEND."

Some Account of Joseph Wilson.

(Continued from page 155.)

Fifth Month, 1855. "A time of treading down, a time of mourning; not altogether on my own account, but on account of the ravages and desolations within the borders of our once peaceful Society. It is lately a time of shaking amongst us, and of commotion in the world at large. What may be the end of these things is not for us to know. Perhaps the design is, that those things which are shaken may be removed, that those which cannot be shaken may remain."

Fourth Month 6th, 1856. "Many months have passed since any record has been made in this little book: dispensations of different kinds have been meted out to me; poverty and strippings often; but no more, I am persuaded, than to show me, my entire inability of myself to do any good thing; yet good is the word of the Lord. He does at times make us to know that He is not far from us, and that He can make the barren land a fruitful field. May I be preserved from giving way to temptation during any dark and cloudy day which may yet enshroud my path."

Sixth Month 29th. "Poor and often closely tried, but not wholly forsaken. What shall I render unto the Lord for all his benefits?"

Seventh Month 22nd. "I think I may record with thankfulness of heart, of having been permitted to live a little nearer the Fountain of light and life, for a few days past, than has at some other times been my portion; but I know not how soon Best Wisdom may see meet to apportion unto me the wormwood and gall, not doubting but that I stand more in need of the operation of the refiner's fire, than of the continued extension of heavenly love."

Eighth Month 26th, 1857. "I think I have had satisfactory evidence that although we are a poor, and as to numbers a stripped people, yet not forsaken. How strong the inducement has felt to me, to endeavor to serve the Divine Master better, and to love Him more. Could we individually be brought to examine how the account stands between us and our God, and to know that the work of regeneration was going on, and that the Lord was on our side; whom then need we fear, or of whom be afraid? for I am persuaded that no man, or body of men, has power to rob the truly devoted and obedient soul, of an interest and inheritance with the saints in light. May none therefore cast away the shield of faith, and weakly compromise the trust devolving upon them. May we put on the whole armor of Christ, that we may be able to stand, and having done all, to stand."

Ninth Month 6th. "Stayed from meeting on account of the indisposition of my wife. I may say that I seek not an excuse to be absent from meeting; for I feel it to be a privilege to be permitted to mingle with my friends, for the solemn purpose of acknowledging our dependence upon, and worshipping the Father of all our sure mercies; and my mind has of late been increasingly impressed with the awfulness of our thus assembling for this professed purpose. Should any of us when thus convened, by drowsiness, or by light and irreverent conduct, betray us as mockers or hypocrites, would it not be better to make no profession of Godliness, than to be stumbling-blocks to observing and enquiring minds?"

The two following extracts from letters, written during this year (1857), to one of his children, it was thought might be suitably inserted here.

Third Month 29th, 1857.

"My beloved daughter,—While sitting this evening in silent meditation, my thoughts turned towards my absent daughter, and the desire arose in my heart, that she might be preserved from the vain and delusive snares of a world that lieth in wickedness and forgetfulness of Him who created all for his own glory. However bright thy future prospects may be, remember that thy safety consists in watchfulness, and living daily in the fear of thy Creator; and if thy days should be lengthened out, prepare for disappointments and trials, for these are dispensations meted out to us all. Thou knowest that thy father loves his children, and I would much prefer for thee as an inheritance, wisdom and virtue, rather than silver and gold; and I have faith to believe if they are in possession of the former, things necessary will not be withheld from them."

Twelfth Month 29th, 1857.

"Dear ———: Thou knowest I have a tender regard for all my dear children; for truly they are all dear to me, and I much desire for them thoughtful and susceptible minds; this leads into a careful review of our conduct at the close of the day; hence our words and actions, and motives to action, are closely scrutinized, and the day's work will keep pace with the day: may this be thy experience. Literary attainments are useful and commendable, but they should never usurp the place of the one thing needful. I do not think it necessary to encourage thee to attend to thy studies, believing thou wilt apply thyself as closely as will conduce to thy health."

Seventh Month 18th, 1858. "I have not for many months felt a necessity of making any record in my diary. Notwithstanding, I have, I trust, felt as deeply and earnestly concerned to scrutinize not only my actions, but also the motives to action."

Eleventh Month 14th. "Closely proving dispensations have of late been meted out to me; whether my head will be borne above the billows which rise up before me, time only will determine. May the Most High be my refuge and safe hiding place, amidst the commotions which seem to be shaking our poor Society to its foundation. Oh! may the time be hastened when those things that cannot be shaken may remain; when there may be a united concern for the promotion of that which will give honor to the adorable Head of the Church: yea his own works shall praise Him, and the creature shall be humbled."

Twelfth Month 28th. "I have no doubt of the propriety of having our hands daily employed for the maintenance of ourselves and

families; and we ought to guard against the concern for these things, having the chief seat in the heart. Is it not our duty as well as our interest, to keep the fear of the Lord always before our eyes? and daily to endeavor to draw near unto Him? that He may be pleased to draw near unto us? As this watchful seeking state is abode in, we are at times permitted to be made partakers of that stream which flows from the Celestial Fountain, amply compensating us during our earthly pilgrimage, for love and obedience, and bestowing in our hearts the tribute of thanksgiving and praise."

(To be continued.)

Among the Peasants in the Dolomites.

Under this heading Julia Robertson contributes to the *Sunday School Times* an interesting article on the people of Cadore, a district of country about eighty miles north of Venice. It lies off the usual track of travellers, "behind stupendous ramparts of dolomite, whose thousands of tall, sharp peaks bristle like lance points against the sky." She appears to have spent some time there, and to have formed a favorable opinion of the honest and independent character of the peasants.

"A pleasant episode in our stay here was the giving away, during our rambles, of a number of pretty picture and text cards, and we have been quite surprised at the delight with which they were accepted. Only once in all our two months here did a woman look askance at the offered card, drawing back and saying, 'We have had the Madonna, and that's enough.' Some days of our stay had passed before a good opportunity of giving the cards arose. At length, however, as we were going up a steep, bosky glade called Ranza, a whole troop—fully twenty—of children collected around us. They had baskets on their shoulders, and rakes and cards, and were going up the hills to help their parents turn their hay. They swarmed around us, chattering away, and looking with amazement at the novel sight of a lady on a donkey. Producing one of the cards with a picture of sheep and mountains, I asked, 'Who wants this?' A momentary hush of shyness fell on the cluster of little ones; then one hand was held out, then another, and the sight of a ship brought the boys to the fore. I said, 'These are good words of the *Signor Gesù* [the Lord Jesus]; so, besides looking at the pictures, you must read the words, and remember them.' Several began to read them on the spot with great interest, saying 'Hello, hello,' as they read, whilst the others pressed forward for their share. Then, like magic, they all scampered off ahead, stopping now and then among the trees to compare pictures. Over twenty minutes later, our path brought us in sight of a neighboring slope, on which, at the door of a hay-barn, was an old woman. Just at that moment a number of our little friends were to be seen rushing towards her with extended hands, and we could hear them crying out to her, '*Vedi, vedi, un santo!*'—'See, see, a holy thing!' It was a pretty sight, and it encouraged me to go on with my card-giving. For some days we contented ourselves with giving them to the children; but we soon got hints that they gave pleasure at home, and that the parents wanted some too. That the cards produced effect, the following instance will show:

"My donkey boy, a lad of seventeen, losing patience with the donkey one day, burst out, as he lifted his stick, '*Gesù Chr—*' when I stopped him, saying that was a name to rever-

ence. Later, in our expedition, I was giving cards to some children, and at hap-bazard, I pulled out of the packet one for him. He (and I too) was struck by the fact that the text on it was, 'At the name of Jesus every knee shall bow.' Not long after, his anger was again roused, and he began, 'Ge—', and then stopped short with a glance at the card in his hand.

"Once when we were climbing a steep path behind the village, and passing a garden which was walled off from us by a thick hedge of lilac-bushes, there was a rustle in the leaves, and a little unseen speaker said, 'You gave me a "santo" at Rauza; thank you.' Requests for them would come in various shapes. Sometimes a party of biggish boys would hang about us, saying nothing; but when, to try them, I would pull out of my pocket the little black book in which I carried my 'santos,' the faces would brighten, and the boys would come eagerly forward for their prizes. Once, when in a shop, I noticed my sunshade, that I had laid on the counter, giving off little puffs, and, on looking down, I saw a mite of a brown finger poking at it. The owner of the brown finger was a ragged urchin of seven. He had spied out the little black book as it lay under the sunshade, and he thus proffered his request for a 'santo.' Another day, as we were visiting a picturesque mill turned by the water that rushes down from the glacier of Contela, I gave a card to the miller's little daughter. There were a number of women in a farther shed, and presently two of them came forward. I thought, 'At last we are going to be scolded as "Protestants," but no; it was to ask if they could have some of the 'good words,' and I was only too glad to satisfy them all. We read some of the texts aloud, and the women took them and kissed them when they said they were the real words of 'il buon Gesu' [the good Jesus]. Then, crowding round the door, they waved after us as long as we were in sight. A couple of hours later, when coming down from Grea, a high-pledged village, where there is a lovely old Gothic chapel, we met one of our friends from the mill toiling up to meet us, bringing with her an old white-haired dame. 'O signori!' panted the woman, 'we were wondering if you had any "santos" left, and if you would give one to my neighbor, who has come with me, and she has a daughter at home, and I have a sister who is ill.'

"One more instance and then I have done. Coming home from almost our last walk as we came up from the valley below, we saw in the distance a party of hay-makers lay down their rakes and make for our direction. While they were yet a good way off, we caught the well-known word 'santo,' and we could see that they were evidently urging one of their number to act as spokeswoman. I held up my little black book, and, seeing it, they nodded and smiled as they hastened to us. The card one woman got had on it the parable of the Pharisee and the publican, and she began to read it aloud. At each clause of the Pharisee's prayer she shook her head, "Thank God, I am not like other men"—*uente*; "I fast twice in the week"—*uente*; "I give tithes of all I possess"—*uente*; "But when she came to the publican she said, 'Ah questo no bene, questo è giusto,'—'Ah, that is well; that is the right thing.'

"It is not often in Italy that evangelized work, even of this simple kind, affords an equal pleasure on both sides. Too often there exists a feeling of mutual distrust. Here frequently the peasants would say to us, 'Our life is all

work, few prayers, few services, all the year through;' but their faces would brighten up as they read the words of cheer and hope and encouragement of our Lord himself."

FOR "THE FRIEND."

Barclay of Ury.

BY JAMES J. LEVICK, M. D.

It is difficult for us who live in a Republic where good manners, mental culture and integrity of character, command admission to the best society, to understand the great importance attached by the English people to rank and to title. It is so with very many of them, however unwilling they might be to confess it even to themselves. No biography of an Englishman has ever been written in whom, if there existed any relationship, however remote, to "noble" blood, this fact has not been carefully noted. And yet, perhaps, this should not excite our surprise. For centuries this estimate of rank and of title has been transmitted from father to son. Nor are rank and title without their seeming value. So sharply defined are the lines which socially separate royalty from nobility, and nobility from gentry, that whatever may be the wealth or the local influence of the latter, their usefulness as citizens, and their real worth of character, unless they have held some high office under government they must, in many instances, yield precedence to others, who may be, in every other way, their inferiors, but who have this potent charm of knighthood or of nobility.

If such a state of things exists now that democratic principles are supposed to have made such growth in England as well as in America, what must have been the value attached to rank, title and family influence, two centuries ago? With a king restored to the throne, a court crowded with flatterers eager to destroy all traces of the simplicity of the Commonwealth, preference eagerly sought; what courage—far more than human—must it have required, to forego the advantages which social position, the favor of the court and alliance with distinguished families then gave. And yet this is just what, in the early history of the Religious Society of Friends many of its members did without hesitation, and apparently without regret.

Among these early Friends were men who had been officers of the army, clergymen of the Established Church, favorite preachers who renounced their pulpits and gave up "their living." There were men of culture, like Isaac Pennington and Thomas Story, the latter of whom writes, in his journal, that he was brought up as a gentleman and was skilled with the sword, with firearms and other many accomplishments. In Wales, many of those who became Friends belonged to families tracing their ancestry back to the ancient Welsh princes, and had been taught, almost from their cradle, as all such Welshmen are, to pride themselves on their birth and lineage. In Scotland the Baron of Swinton, and the Provost of Aberdeen, Andrew Jeffrey, were men of mark and influence. The son of Sir William and Lady Margaret Penn, the prospective Viscount Weymouth, and daughter of Sir William and Lady Mary Spryngett, had an enviable social position, while even gentle Thomas Ellwood was not without the advantages of birth and noble connexions, as he tells in his quaint autobiography: "My mother was nearly related to the wife of Lord Wenham of Thame Park." For him Ellwood was named, and he had stood as his sponsor at the font.

"I think," he adds, "I should have received from this lord some advantageous preference in this world, as soon as he found me capable . . . had I not in a little time after been called into the service of the best and highest Lord, and thereby lost the favour of all my friends and relatives." That this loss occasioned him no lasting regret, is told in the next paragraph where he speaks of it as "a most happy change."

But that this renunciation of the world, with the social sacrifices it involved, required a more than human strength to bear, there can be no doubt. Seen through the mists of two centuries the picture is dim, the reality obscured. Or, as sometimes happens, the very love and reverence we have for these early Friends casts a glamour about their sufferings which makes them seem light or unreal. We read of months or of years of imprisonment, but we fail utterly to comprehend what this means. It is only when we bring home to ourselves what for ourselves or for those we love, months and years of imprisonment would mean, that we begin to understand the terrible meaning it had for them. They were human, as we are; they had their strong hometies, warm affections, social enjoyments, even, it may be, their social ambitions. Human nature, two centuries ago, was much what it is now, and humbly speaking, the sufferings which they endured were just as hard for them to bear as they would now be for us. This we should never forget; nor should we ever forget that as there was something more than human required, so, in great mercy, there was a strength more than human, granted them.

Tried with cruel mockings and scourgings, with bonds and imprisonments, their faith in the immanence of the Holy Spirit, the companionship of Christ, never failed them; and however much, as men and women, they suffered, they found in this faith a companionship which cheered them in the solitude of the dungeon, protected them in the cell of penitence, saved them when the fire of persecution was at its height. They knew, as only such as they could know, the full meaning of the words of the Babylonian king—"Did we not cast three men bound into the midst of the fire, and lo, I see four, and the form of the fourth is like the Son of God."

My thoughts have been turned in this direction from having lately visited the home of two men, the descendants of an ancient and honorable family, themselves in every way worthy of such an ancestry, the one a brave soldier, the other a polished scholar; the one the owner and the other the heir to a noble estate, a house which the people of Aberdeen loved then, and love now to honor—*David and Robert Barclay, of Ury*. And yet these two men in obedience, as they deemed it, to the call of duty, put in jeoparty social position, preferment in Church and in State, all, indeed, that most men think of value in life.

And when, later in life, "time, which malleth all things even"—or rather He who rules in the affairs of nations and of individuals, had so wrought that much of what seemed forever lost to them was restored; it was not until they had known much loss of substance, personal insult, and long imprisonment.

I cannot, perhaps, better describe this visit than by quoting from a letter written in Eighth Month last by me to my sisters. "The drive from Breemar, a favorite summer resort in these highlands, to Ballater, is a delightful one, through long avenues of trees, over an excellent road, and by the sparkling river Tay. Six miles brought us to *Balmoral*, the Queen's high-

hard home, a pretty homelike palace in a most picturesque situation, commanding a fine view of the surrounding country, hills and all. On the high hills are great cairns or heaps of stones, memorials of the Queen's friends; one immense one is called the Allert memorial. As we approached the palace, the first conspicuous object we saw was a large marble cross to the memory of the Princess Alice, and then the palace, to which there is a beautiful drive through a long avenue of trees. Then the grave of the Queen's faithful John Brown was pointed out, and his home in his latter years. We left our coach at Ballater, and thence by rail to Aberdeen."

(To be concluded.)

FOR "THE FRIEND."

Cast Down but not Destroyed.

This language fully sets forth the condition of mind and heart of the wayward traveller Zionward, who often feels as though he would succumb in the conflict between flesh and spirit; and doubtless many, if not all, who have been willing to follow Christ in his renewing work upon them, with the fervent desire to know his overruling power in them to give them the victory over themselves, are thus proved, which victory can alone be known by the crucifixion of everything that is unholy in thought and desire—the secret spring from whence flows every unhalloved thing in life and conversation.

It is under the oppression of this constraint that the experience is often passed through of feeling, and through weakness sometimes believing, we are forsaken. But verily at no time is God the Father nearer to his struggling child, begotten again in Christ, than at these seasons.

In this struggle for mastery between the two natures, we are made to feel our own impotence, and under this sense of depression are ready to sink, and are in measure led to understand what it is to suffer with Christ.

He, the Blessed One, in the agony of his soul, as well as the suffering of body, which He, on our account endured, cried out, "My God, my God why hast Thou forsaken me." Was He really forsaken?

Being in all points tempted like as we are, yet without sin, it pleased Him in fulfilling the Father's will to be made like unto us, sensible of human weakness; but the pure Life could not be forsaken, and hence the triumphant close, in the language, "It is finished," and the Blessed Son of God yielded up his life on the cross.

And at that terrible hour, darkness, we read, covered the land. Thus did God evince He had not, and could not, forsake his Beloved Son.

Nevertheless for our instruction it is left on record, that the Son of God, when He appeared as the son of man, in the agony of his suffering, cried out, "My God, my God, why hast thou forsaken me?" He, in the purity of his nature, bore under the weight of our guilt.

How different with us. We suffer under the conflicting nature in ourselves and in others, in order to know a deliverance from the power of evil, by the bringing forth in us of his new nature.

As in Adam all died, so in Christ shall all be made alive. But it is a life through death. Christ died for sin. We have to die to sin. And as long as there remains in us aught of the unrenewed and unsanctified nature, there must of necessity be more or less of conflict, if on our part we are truly seeking to know perfect deliverance.

And this can only be realized by this baptism unto death, that like as God raised Christ from the dead, even so we should walk in newness of life.

The more refined and purified our natures become, the more sensitive we are to suffering both in ourselves and in others.

We have a beautiful example of this in the pure-minded John Woolman, who was on all hands, like his Blessed Master, dipped into suffering with suffering humanity from whatever cause.

There is a suffering we often bring upon ourselves by wilful disobedience, or by thoughtlessness, unwatchfulness, and consequently a neglect of secret prayer. There is then but one road to restoration—repentance and faith. That godly sorrow that begetteth life, through faith in our Saviour, by whom is realized the truth, in the fresh flowing of his life into the soul—his blood doth cleanse from all sin.

I believe at no time was there more needed than the present, entire dedication of soul to God, or willingness to be counted as nothing in the eyes of our fellows, and if need be, to be possessed of nothing, and so to be like our Blessed Master, in that entire strippedness of all that is of account in this world, in order to fulfil the perfect will of God.

It is no light responsibility to write thus, and so to be placed upon a pinnacle, but there is with me a conviction that the pure life of our Lord cannot arise into dominion in the professing church at the present day, because the way and will of man has taken the place largely, and doth rule in the place of the will of God.

Still to the individual soul who is willing to follow through all the Father is pleased to lead into, until Christ be formed within, such, notwithstanding all suffering, desertion and sorrow, will know the joy of the Lord to fill the soul more than in the time when corn and wine abound.

Let Zion's children still rejoice, even though it be with trembling, for God is still in their midst, and they shall no more be termed forsaken.

He who writes this seeks to be one, though the very least of these, and is content to do that which is comparable to washing the feet of the disciples, to our mutual encouragement in travelling after purity and dedication of soul and all to God. To whom, with the dear Son of his love, and the Eternal Spirit, be the honor and the glory of that which is his work alone, both now and forever, Amen.

CHARLES W. THOMSON.

3809 Mt. Vernon St., West Phila.

Twelfth Month, 1888.

FOR "THE FRIEND."

CHILDISH TOUCHES.

Wearv and worn a mother
Lay when the sun was low,
With the lines of care engraven
Deep on her aching brow.

Near her a childish figure,
Busy with doll and toy,
Prattled in infant pleasure,
Laughed in her artless joy.

Till leaving all her treasures
On carpet scattered wide,
The fair head nestled sweetly
The mother's form beside.

And o'er her cheek and forehead,
The tiny hand was drawn
With touch as soft as dawning
And voice like cooling song.

But slowly a look of wonder
Rose in the soul-lit eyes,
Where scarcely the light had faded
Caught from their native skies.

And her gaze was fixed intently
Over the eyebrow's arch,
While the lisping query faltered,
"Mamma, what for these marks?"

There is cloquence warm and glowing
Oft on the gifted tongue;
We may read with eyes o'er flowing
Songs that the hardy have sung.

There are tones that can sway the hearer
As leaves in autumnal blast,
And powers that can form the spirit
As metal in mould is cast.

But at times these delicate touches
Press on a hidden spring,
Opening wider the heart-valves,
Sounding the secret string.

Long may it be ere the meaning
Cometh, dear child, to thee—
When thou, of thy knowledge can answer,
Why should these furrows be?

Yet, if by wearisome pathways,
Chastening grievous and long,
The Saviour designeth to draw thee
Into his numberless throng,

We would not take from the sorrow,
Nor lessen the lines of care,
Since trials of Heaven's disposing
Will all be unfolded there.

FOR "THE FRIEND."

LINES WRITTEN BY THE SHORE.

"His voice was as the sound of many waters." Rev. I. 15.

"As the sound of many waters?" Let my finer senses
hear

'Tis the melody mysterious that is wafted to my ear.
'Tis the murmur of a motion that is felt on every shore,
'Tis the throbbing of pulsations that are beating evermore.

All the rivers' cleansing currents, all the playful
rhythmic rills,
All the healing springs and fountains gushing out
among the hills;

Veins of life the valleys threading, merge their music
in the skies,
Mingling in the "many waters" their soft whisperings
to me.

Waters—making tributary drops that fall, and streams
that run,
Bearing on the world's great commerce, binding na-
tions into one;

Waters—whose perpetual giving plenshes the earth
and skies,
Yielding to the clouds their treasures, to all creatures
their supplies.

So the voice within my spirit is a whisper "still and
small";
Of the Life that floods all being, searching, compre-
hending all.

'Tis the Word that woke Creation, 'tis the Light and
Life of men,
'Tis the Word that in Redemption, speaks the dead to
life again—

Word of Him whose intercession pleads the sighing of
the sad,
Word of Him whose benediction is a river making
glad.

Every font of healing opened, every pool by angel
stirred,
The great deep of God's compassion blends and billows
in that word.

Welling from the deepest fountain, swelling to the
utmost shore,
Through all ages, to all nations—it is sounding evermore:

In the heart, its gentlest accent makes the Father's
pleasure known;
All the courts of Heaven it filleth, rich with blessing
from His Throne.

Tropical Africa.

FOR "THE FRIEND."

(Continued from page 157.)

LIVINGSTONIA.

After leaving Blantyre and coming to the banks of the Shiré above the rapids, Professor Drummond embarked on a little steamer, the *Itala*, which plies between the cataracts, on the Upper Shiré, and the shores of Lake Nyassa, carrying supplies to the few missionaries settled on the western shore. It belonged originally to the missionaries, and was carried here from England a few years ago in seven hundred pieces, and bolted together on the river bank.

In a few hours after entering Lake Nyassa, the steamer anchored in the Bay of Livingstonia—a deserted mission-station, which is thus described:—

"Magnificent mountains of granite, green to the summit with forest, encircled it, and on the silver sand of a still smaller bay stood the small row of trim white cottages. A neat path, through a small garden led up to the settlement, and I approached the largest house and entered. It was the Livingstonia manse—the feat missionary's house. It was sparsely clean; English furniture was in the room, a medicine chest, familiar-looking dishes were in the cupboards, books lying about, but there was no missionary in it. I went to the next house—it was the school, the benches were there and the black-board, but there were no scholars and no teacher. I passed to the next: it was the blacksmith's shop; there were the tools and the anvil, but there was no blacksmith. And so on to the next, and the next, all in perfect order, and all empty. Then a native approached and led me a few yards into the forest. And there among the mimosa trees, under a huge granite mountain, were four or five graves. These were the missionaries.

"I spent a day or two in the solemn shadow of that deserted manse. It is one of the loveliest spots in the world; and it was hard to believe, sitting under the tamarind trees by the quiet lake shore, that the pestilence which wasteth at midnight had made this beautiful spot its home. A hundred and fifty miles north, on the same lake coast the remnant of the missionaries have begun their task again, and there, slowly, against fearful odds, they are carrying on their work."

MALARIA.

"Malarial fever is the one sad certainty which every African traveller must face. For months he may escape, but his finger is upon him; and well for him if he has a friend near when it finally overtakes him. The higher plateaux, presumably, are comparatively free from it, but in order to reach these, malarious districts of greater or smaller area have to be traversed. There the system becomes saturated with fever, which often develops long after the infected region is left behind. The known facts with regard to African fever are these: First, it is connected in some way with drying-up water and decaying vegetation, though how the germs develop, or what they are, is unknown. Second, natives suffer from fever, equally with Europeans, and this more particularly in changing from district to district and from altitude to altitude. Thus, in marching over the Tanganyika plateau, four or five of my native carriers were down with fever, although their homes were only two or three hundred miles off, before I had even a touch of it. Third, quinine is the great and almost the sole remedy; and fourth, no European ever escapes it."

"Instead of being one hundred and fifty miles long, as first supposed, Lake Nyassa is now known to have a length of three hundred and fifty miles, and a breadth varying from sixteen to sixty miles. It occupies a gigantic trough of granite and gneiss, the profoundly deep water standing at a level of sixteen hundred feet above the sea, with the mountains rising all around it, and sometimes sheer above it, to a height of one, two, three and four thousand feet."

THE HEART OF AFRICA.

"Africa rises from its three enclosing oceans in three great tiers, and the general physical geography of these has been already sketched—a first, a coast-line, low and deadly; farther in, a plateau the height of the Scottish Grampians; farther in still, a higher plateau, covering the country for thousands of miles with mountain and valley. Now fill in this sketch, and you have Africa before you. Cover the coast belt with rank yellow grass, dot here and there a palm; scatter through it a few demoralized villages; and stock it with the leopard, the hyena, the crocodile, and the hippopotamus. Clothe the mountainous plateaux next—both of them—with endless forest,—not grand unbragging forest like the forests of South America, nor matted jungle like the forests of India, but with thin, rather weak forest,—with forest of low trees, whose half-grown trunks and scanty leaves offer no shade from the tropical sun. Nor is there anything in these trees to the casual eye to remind you that you are in the tropics. Here and there one comes upon a bonuss or fan-palm, a candle-bark-like euphorbia, a mimosa aflame with color, or a sepulchral banab. A close inspection also will discover curious creepers and climbers; and among the branches strange orchids hide their eccentric flowers. But the outward type of tree is the same as we have at home—trees resembling the ash, the beech, and the elm, only seldom so large, except by the streams, and never so beautiful. Day after day you may wander through these forests with nothing except the climate to remind you where you are. The beasts, to be sure, are different, but unless you watch for them you will seldom see any; the birds are different, but you rarely hear them; and as for the rocks, they are our own familiar gneisses and granites, with honest basalt-dykes boring through them, and leopard-skin lichens staining their weathered sides. Thousands and thousand of miles, then, of vast thin forest, shadeless, trackless, voiceless—forest in mountain and forest in plain—this is East Central Africa."

"Hidden away in these endless forests, like birds' nests in a wood, in terror of one another, and of their common foe, the slaver, are small native villages; and here in his virgin simplicity dwells primeval man, without clothes, without civilization, without learning—the genuine child of nature, thoughtless, careless, and contented. This man is apparently quite happy; he has practically no wants. One stick, pointed, makes him a spear; two sticks rubbed together make him a fire; fifty sticks tied together will make him a house. The bark he peels from them makes his clothes; the fruits which hang on them form his food. It is perfectly astonishing when one thinks of it what nature can do for the animal-man, to see with what small capital after all a human being can get through the world. I once saw an African buried. According to the custom of his tribe, his entire earthly possessions—and he was an average commoner

—were buried with him. Into the grave, after the body, was lowered the dead man's pipe, then a rough knife, then a mad bowl, and last his bow and arrows—the bowstring cut through the middle, a touching symbol that his work was done. This was all."

THE ARAB INFLUENCE.

"Among these simple and unprotected tribes, Arabs—uninvited strangers of another race and nature—pour in from the North and East, with the deliberate purpose of making this paradise a hell. It seems the awful destiny of this homeless people to spend their lives in breaking up the homes of others. Wherever they go in Africa the followers of Islam are the destroyers of peace, the breakers up of the patriarchal life, the dissolvers of the family tie. Already they hold the whole Continent under one reign of terror. They have effected this in virtue of one thing—they possess firearms; and they do it for one object—ivory and slaves, for these two are one. The slaves are needed to buy ivory with; then more slaves have to be stolen to carry it. So living man himself has become the commercial currency of Africa. He is locomotive, he is easily carried, he is immediately negotiable.

"Arab encampments for carrying on a wholesale trade in this terrible commodity are now established all over the heart of Africa. They are usually connected with wealthy Arab traders at Zanzibar and other places on the coast, and communication is kept up by caravans, which pass, at long intervals, from one to the other. Being always large and well supplied with the material of war, these caravans have at their mercy the feeble and divided native tribes through which they pass, and their trail across the Continent is darkened with every aggravation of tyranny and crime. They come upon the scene suddenly; they stay only long enough to secure their loot, and disappear only to return when a new crop has arisen which is worth the reaping.

"Sometimes these Arab traders will actually settle for a year or two in the heart of some quiet community in the remote interior. They pretend perfect friendship; they molest no one; they barter honestly. They plant the seeds of their favorite vegetables and fruits—the Arab always carries seeds with him—as if they meant to stay for ever. Meantime they buy ivory, tusk after tusk, until great piles of it are buried beneath their huts, and all their barter-goods are gone. Then one day, suddenly, the inevitable quarrel is picked. And then follows a wholesale massacre. Enough only are spared from the slaughter to carry the ivory to the coast; the grass-huts of the village are set on fire; the Arabs strike camp; and the slave-march, worse than death, begins."

Such tragedies, Drummond states, are being constantly repeated; and his book contains a map of Africa, which shows the principal routes of the slave caravans, the parts whence their supply of slaves is drawn from, and the large districts of country which have been depopulated by this horrible traffic.

Natural History, Science, &c.

Prevention of Yellow Fever.—B. F. Butler in the *North American Review* gives an interesting account of the measures adopted to prevent the ravages of Yellow Fever, when New Orleans was occupied by the Union troops under his command in 1862.

The city is surrounded by swamps except on the river side, where it is protected by the "levee",

a bank erected a century ago. It is built upon what might be termed an immense raft of trees, timber and shrubbery, knit together by vines and branches, and covered and weighted down by the sand and mud deposited by the Mississippi. In building on such a substructure no foundation can be laid, but the surface of the earth is levelled and on that are placed cypress planks, on which begins the building of the walls. The United States Custom House, a very large building of granite, was built on an immense raft of live oak; and in 1862 it had settled nearly six feet. Of course there are no sewers or underground drains, but only surface water-courses or ditches to carry off the drainage; nor any underground burial of the dead. The corpses are placed in oven-like vaults of brick built on the surface.

The warmth of the climate, the fertility of the soil, and the abundance of moisture, causes a very luxuriant vegetable growth, from whose decay arise malarial exhalations, so that "fever and ague" prevail in New Orleans to a greater or less extent throughout the year. The visitations of Yellow Fever generally begin about the first of Sixth Month, and continue until checked by frost. If it should once obtain foothold, it would probably prove very fatal among the Northern troops, who were quite unacclimated, and therefore most likely to be the victims of the disease.

The first step taken in the way of precaution was to place a skilful physician in command at the quarantining grounds, about seventy miles below the city, who was to faithfully search every vessel coming up for its cleanliness and freedom from disease; and who was held personally responsible if any Yellow Fever was permitted to pass. So thoroughly was this part of the work done, that but one case of the disease was brought by ship, and the circumstances of this were such that the physician was not to blame.

General Butler, from his study of the subject, had drawn the inference that the atmosphere most favorable for the spread of Yellow Fever was one in which emanations from decaying vegetable matter were mingled with those from decaying animal matter. From the character of the surrounding country, the vegetable effluvia could not be prevented, his efforts therefore were turned to the removal of the other source of danger.

Eleven hundred men were set to work cleaning the city. A part of the force was sent to the French Market, in which vicinity the disease had always broken out and raged in its worst form. It was dug and scraped all over, and the filth removed and sent down to the river. They went through every street where there was any suspicion of animal matter. They hoed out, brushed out and swept out every drain and ditch in the city, and took advantage of the rains of early summer, which came down in drenching showers, to drive all the filth into the basins.

Stringent orders were issued that nothing should be thrown into the streets or alleys, but that every family must keep a barrel or box in which all offal must be deposited; and three times a week these were emptied and the contents carted away. Once in ten days all areas and back yards were inspected, to see that they were kept clean.

The result was that during the summer there was but one case of Yellow Fever, which broke out on a man who had come from Nassau, where the disease was raging; and besides this, the general health of the city (due no doubt to the sanitary precautions enforced by military rule),

was better than any other city in the United States.

How to weigh an Elephant.—An interesting anecdote is told of one of the Mahratta princes of Hindoostan. A high official at court had vowed to distribute among the poor an amount of silver coin equal in weight to his own elephant, but there seemed no way of ascertaining what this weight was. The prince suggested an ingenious plan. The elephant was made to walk into a flat-bottomed boat, and then the height of the water on the outside was carefully marked. After the elephant had gone out, the boat was loaded with stones till it sank to the same mark. The stones were then taken out and weighed in parcels—and thus the weight of the elephant was determined.

Consumption in New Hampshire.—The Secretary of the Board of Health of New Hampshire has examined the returns of deaths in that State for some years past, and finds that about 13 per cent. of them are due to this disease. The cases are more numerous in low grounds with moist soil, and fever in higher situations with dry soils. This corresponds with the observations made by physicians long since, that consumption was comparatively rare in the elevated plateau in northern Pennsylvania and Southern New York from which flows the waters of the Delaware and Susquehanna rivers, but that it appears, as we descend into the valleys, and lower levels.

Remnants of the Caribs.—On the Island of Dominica, the last Administration Report estimates the number of the original Carib population (the descendants of those who occupied it when the West India Islands were discovered by Columbus) at about 300. The children are healthy, and they do not appear to be decreasing, but are gradually becoming mixed by intermarriage with the Negroes, so that the pure Carib will soon cease to exist. They occupy a large reserve on the windward side of Dominica, and are very peaceable, living on vegetables and fruits which they cultivate, and on fish.

Origin of Waist-belts.—The fashion of wearing waist-belts by persons about to enter upon any athletic exercise is supposed to have originated from the prevailing costume worn in Oriental countries in ancient, and to some extent in modern times. The flowing garments interfered with the free motion of the limbs, unless they were secured by being tucked up in a girth or belt. The apostle alludes to this habit, when he speaks of "girding up the loins of the mind," in order to run the race set before us. The custom has survived the necessity which gave rise to it. The modern form of men's apparel requires no such appliance, which, instead of being beneficial, restrains the free action of the lungs and is therefore an injury. Customs often remain long after the disappearance of the causes which led to them. In illustration of this *Science* says, "The Hittites wore peaked-toed, turned-up shoes thousands of years after their ancestors had come from the mountains of the north, where the form of their snow-shoes suggested the peculiar pattern."

Deception of the Senses.—The erroneous impressions made upon the senses are in very many cases, wrong interpretations by the mind of the sensations experienced. Thus an object passing before the eye may be a fly insect, and yet may be supposed to be a large animal at a distance. A small ball held between two crossed fingers seems to be double, because under ordinary circumstances an impression on the right side of one finger and on the left side of its neighbor (to

the left) could only be brought about by the simultaneous contact of two objects. The child who looks at a spoon half immersed in water, and thinks it is bent, because it appears to be, has not learned to correct the impression made on his senses, by the teachings of experience or reason.

"Fatigue the eye for red, and it sees white light as green. Plunge the hand from hot water into lukewarm water and it will feel cold. When a disturbed mental judgment is present to misinterpret such unusual sensations, illusions of a very serious type may arise. The witchcraft delusions and the spiritualistic movements show what will beliefs may be entertained, when fanned by emotional enthusiasm."—*Condensed from "Science."*

Journey Across Greenland.—Letters have been received from two of the Danish exploring party who undertook to land on the Atlantic coast of Greenland, and cross over to the western side. They left the Norwegian sealing vessel, the *Jason*, on the 17th of Seventh Month, in two boats, but were 12 days in getting through the shore-ice to the land, drifting in the meantime some 300 miles to the southward. Twelve days more were spent in working back along the coast, so that they did not begin their actual crossing till Eighth Month 15th. The letter of Dr. Naussen, who had charge of the expedition, says, "We reached a height of 10,000 feet, with a temperature of 40° to 50° below zero. For several weeks we remained at an altitude of over 9,000 feet. Tremendous storms, low, new-fallen snow, enormously difficult passages. Towards the end of September we reached at last the western side above Godthaab. Had a perilous descent on ugly and very uneven ice, but got safely down. Managed to build a kind of boat from the floor of outfit, bags, bamboo reeds and willow branches." After 4 days rowing in this frail vessel, Dr. Naussen and one of the men reached Godthaab, whence boats were dispatched for the other men.

Items.

Prison Reform.—An article in *The Christian Advocate* on this subject, by William M. F. Round, Secretary of the New York Prison Association. It states that when he became interested in Prisons, he found

"1. That there were a great many innocent men in prison.

"2. That there were a great many gully men in prison who were there because Christians had neglected their responsibilities toward them, because society had made it easy for them to drift into crime, and in some cases had almost driven them into crime.

"3. That there were a great many men in prison who had inherited criminal traits as much as they might have inherited a mole on the back or a wart on the nose.

"4. That there were a great many men in prison who were criminals from intelligent choice; who overcame obstacles to be criminals; who fought with inclinations to goodness to be criminals. These men were the avowed enemies of Christian society, and a Christian society was bound to regard them as its enemies.

"The classes mentioned in the first three paragraphs demanded my sympathy and help on the simple ground of humanity, but the class named in the fourth paragraph demanded my attention on a higher ground, that of my allegiance to Christ. Because He came into the world to save sinners, it was my duty to try and save sinners. Because He loved his enemies, I was bound to find some way to love these enemies of mine."

He felt that he had no part in the benediction pronounced by our Saviour on those who visited his brethren in prison.

work of the Lord. If the Church ever comes up out of the wilderness, it must be by its members "leaning on the arm of its Beloved" in their own experience—depending on the Light of Christ inwardly revealed, and thus coming to know God and Christ.

It would be a sad mistake to suppose that the labors of the Church are confined to those in the station of ministers, or to any special class of its members; for all have their own share of spiritual labor to perform; primarily for their own growth in grace, and then for the good of others, in such ways as may open before them in the light of Truth.

Kansas Yearly Meeting—the Loverly Body.—We have received from a Friend, who we suppose to be a member of the meeting above mentioned, the following letter to which we cheerfully give room:—

"With thou allow me to make a little correction in thy notice of Kansas Yearly Meeting in THE FRIEND of Eleventh Month 17th, 1888.—And the system of paying preachers was advocated." I was surprised at this remark, as I had not heard of anything of the kind in the Yearly Meeting this year; and have written to a friend who attended all the sessions of the Yearly Meeting who says, "I have no recollection of the paying of preachers being advocated directly at all in our Yearly Meeting." Some of the visiting ministers mentioned the subject at different times. While there may be many members of Kansas Yearly Meeting approving of paying ministers, the question was not opened up in meeting. We have many things to deplore amongst our members, but it is cause for thankfulness that there is an earnest enquiring after truth amongst the young, and much of the extremely advanced teaching of past years has been seen to be in the wrong."

Twelfth Month 11th, 1888.

We have not before us the printed account from which the brief notice in THE FRIEND was condensed; but it appears from this letter that those who mentioned the subject in the Yearly Meeting were "some of the visiting ministers," and not their own members. The statement in the letter, which indicates that some of the Kansas Friends have seen that the "advanced teaching of past years" has been wrong, is an encouraging one. There could be no surer foundation for the restoration of unity and harmony in the Society of Friends than a general return to first principles, both as to doctrinal belief and as to practice.

SUMMARY OF EVENTS.

UNITED STATES.—The U. S. Senate still continues to discuss the Tariff bill.

The Constitutional Amendment providing for the relief of the Court of Appeals in New York State, has been carried, and it is expected may be assigned to the 1st. This amendment authorizes the Governor of the State, upon the Court of Appeals certifying that its calendar is overcrowded, to designate seven justices of the Supreme Court to constitute a second division of the Court of Appeals to try such cases as may be assigned to it, and thus aid in clearing the calendar.

The *Catholic Standard* says there are in Philadelphia 143 Catholic "churches," 285 priests, 27,000 children in parochial schools, and an estimated Catholic population of 400,000.

United States detectives have arrested three men, in Perry Township, Mercer County, Penn., for making counterfeit coin. Nearly half a bushel of small coin, the dies and all the apparatus used were found and confiscated. The prisoners were taken to Ettsville. The arrest is regarded as an important one, as the gang has been in existence for a long time.

Isiah W. Williamson, of Philadelphia, has given \$1,500,000 for founding the Williamson Free School

of Mechanic Trades. Boarding, lodging, clothing, instruction in the trades, and all else shall be free, and no charge is allowed to be made any scholar for what he receives.

A despatch from Port Huron, Michigan, says that Government officers have captured at Port Hope a lot of opium, smuggled from Canada and landed by a little schooner, which at once put back to Canada. The opium is valued at \$100,000.

There were 99 deaths in Indiana last year from the one cause of "drunkenness."

It is stated that there were more applications for divorce than there were marriage licenses issued, during last month, in St. Louis, Mo. Cases of this kind in the vicinity of Albuquerque, New Mexico, within the past two weeks, and the breaking out of small-pox has caused much additional alarm.

The deaths in this city last week numbered 331, and 157 in the week during the previous week, and 57 less than during the corresponding week last year. Of the foregoing 172 were males and 159 females: 42 died of consumption; 36 of pneumonia; 20 of old age; 18 of convulsions; 15 of inflammation of the brain; 15 of diseases of the chest; 12 of dropsy; 12 of cholera; 12 of casualties; 11 of diphtheria; 10 of cancer and 10 of typhoid fever.

Markets, &c.—U. S. 4½s, 108½; 4s, reg, 127½; coupon, 128½; currency 67½, 418 a 120.

Flour and Meal.—Western and Pennsylvania superfine, \$3.90 a \$3.75; do, extras, \$3.75 a \$4; No. 2 winter family, \$3.00 a \$3.50; Pennsylvania family, \$3.40 a \$3.75; Pennsylvania durum extra, \$3.40 a \$3.50; Ohio, clear, \$4.75 a \$5.00; do, straight, \$3.50 a \$3.50; Indiana, clear, \$4.75 a \$5.00; do, straight, \$3.50 a \$3.50; St. Louis and Southern Illinois, clear, \$4.75 a \$5.00; do, do, straight, \$3.50 a \$3.50; winter patent, \$4.50 a \$5.00; Pennsylvania, \$3.50 a \$4.00; do, \$3.50 a \$3.50; do, straight, \$3.50 a \$3.50; do, patent, \$3.25 a \$3.75. Rye flour was quiet \$3.25 to \$3.50 per barrel.

FOREIGN.—At a meeting of the Parnell Commission, held on the 12th inst., Attorney General Webster, for the *Times*, announced that he would now proceed with the examination of a number of hundreds of names of Wexford, in order to show the condition of that county. Sir Charles Russell, for the Parnellites, protested.

Presiding Justice Hamner said that he could only say to the future with alarm. The court had been engaged for three days, but had not yet arrived at the end of any one branch of the inquiry. Only two branches had been entered upon, and several branches of equal importance remained untouched. He again made an earnest appeal to counsel to do their utmost to compress the inquiry and to avoid wasting years of the life of those engaged in the case.

In a letter received at Suakin from Osman Digna, and which is supposed to have contained the announcement that Emin Pasha and a white traveller (presumably Stanley) had fallen into the hands of the Mahdi, were enclosed copies of a despatch from a Perth letter to Lady to the Khafia, giving the date of Emin Pasha's surrender as Tenth Month 10, and a letter to Emin Pasha from the Khedive, which the latter handed to Henry M. Stanley when he was a Cairo. The circumstances are not well confirmed.

In the French Chamber of Deputies, on the 14th inst., Peytral, Minister of Finance, submitted a bill authorizing the postponement for three months of the payment of the Panama Canal Company's liabilities, including interest, and the redemption of bonds. The bill was defeated.

De Lessips and his colleagues have resigned from the Tribunal of the Seine. The Panama Canal Company not being able to raise money to continue its work, is likely to result to persons of small means, who have invested in the concern.

The French mint will soon replace the bronze sous by nickel and ten centime pieces which will be perforated in the center, after the manner of Chinese coins. This enables them to be strung and counted or handled with great ease. The Bulgarian Government, also, is preparing a nickel coinage.

At a meeting of the Reichstag, Windthorst, moving his resolution relative to the suppression of the East African slave trade, said that the resolution was based upon the speech from the throne, and that Germany should co-operate with the other powers. The motion was adopted, only the Socialists and a few Liberals with the exception of Goldschmidt opposing.

Hamner has been elected President of Switzerland, and Ruchonnet Vice President.

The trials of experiment made at Spiez with a new shell fired from a hundred ton gun, far surpass all expectations. The destructiveness of the shell exceeds that of any ever before used.

Cardinal Laviger delivered an address in Naples upon the evening of the 13th inst., on the Anti-slavery question. He maintained that the only war worthy of European powers was a war against traffic in slaves. The address made a deep impression upon the audience, which was very large.

Thirty persons have been bitten by mad wolves in villages in the neighborhood of Orsova. A majority of them have already died, after suffering great agony.

Advises received in St. Petersburg from Chardjui, reporting that Persia prohibits the sale of corn to Russians, increases the feeling that decisive action is necessary in order to prevent the annihilation of the Persian Government. The Russian Government desires to safeguard its interests without provoking a conflict with England.

An official report made to the Dutch Indian Government on the origin and character of the memorabilia which are found in the South Straits estimates that the amount of ejected matter from Krakatoa must have been at least 10 cubic miles, or a sufficient quantity to make a range of hills about one thousand feet higher than the surrounding plain. The velocity of ejection is stated to have been considerably greater than that of the heaviest rifle ordinance, and "the ejected material must have reached a height of thirty miles, or six times the height of the highest mountain in the world."

The world's coal supply, it is roughly guessed, will last 100,000 centuries. Here is an estimate of resources: Central and Northern Asia, 50,000 square miles; Russia, 22,000; Island of Formosa, 10,000; Southern Europe, 30,000; Japan, 45,000; China, 400,000; Japan, 6,000. Southern Illinois is a vast bed of coal, and Pennsylvania and West Virginia are well supplied. Australia has 68,000 square miles. There are enormous patches of coal scattered all over the world, the extent of which is unknown.

NOTICES.

WESTWON BOARDING SCHOOL STAGE.—During the Winter term the stage will be at Westwton Station on the arrival of the 8.53 and 2.47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

J. G. WILLIAMS, *Supt.*
Westwton, Pa.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting. Those of our members feeling their minds drawn towards the position, are desired to make early application to any of the undersigned.

Aaron Fane, Barnesville, Belmont Co., Ohio.
 Hannah Farnum,
 1017 Market St., Harrisville, Harrison Co., Ohio.
 Sarah F. Holloway, Flushing, Belmont Co., "

WANTED.—An enterprising Friend with family to take charge of a Delaware County Dairy Farm.
Address, THE FRIEND.

DEPS. on the morning of the 4th of Ninth Month, 1888, at the residence of our sister Obad Pierpoint, near Springville, Iowa, MATILDA PIERPOINT, in the 82nd year of her age, a member and elder of Springville Monthly and Particular Meeting of Friends. This dear Friend was born in the station of elder for nearly 38 years; was strongly attached to the principles of Friends, and diligent in the attendance of our religious meetings, whilst her health permitted. She had been confined to a sick-bed for nearly three years before her death. Her friends have the comforting hope that, through redeeming love and mercy, her spirit has entered into ever-lasting life.

On the 10th of Tenth Mo, 1888, RUTHANNA PIERPOINT, wife of Obad Pierpoint, a member of Springville Monthly and Particular Meeting of Friends, in the fortieth year of her age, after an illness of six weeks, died at her residence, on a sick-bed, with a mother, and a very kind neighbor. Her expressions upon her death-bed were such as to convince her friends that she was resigned to whatever might be the Master's will. She was frequently heard to say, she would do everything, and we believe that her end was peace.

THE FRIEND.

FOR "THE FRIEND."

A Visit to the Nickel Mine in Lancaster Co., Pa.

(Continued from page 162.)

Chester Valley is a very interesting feature of the geology of Eastern Pennsylvania. It runs in a straight line from the Schuylkill River, where it is about two miles wide, through the whole of Chester County, and to about the middle of the lower part of Lancaster County. It is a bed of magnesium limestone, the rocks of which, like nearly all others in South-eastern Pennsylvania, are much tilted; the white marble strata, which are found along its southern edge, are sometimes quite vertical. This shows that since the limestone was deposited in its present situation it must have been subjected to the action of those forces which have produced ridges and inequalities in all parts of the earth. The most active of these forces has probably been the slow contraction of the earth's surface due to its gradual cooling, which has left it in a condition compared by one geologist to an apple slightly withered, in which tiny hills and valleys have taken the place of its formerly smooth surface.

Lime and Magnesia are abundant among the materials which compose our earth, so that there is no difficulty in accounting for their presence in immense quantities; but it is an interesting subject of inquiry to ascertain how these have been thus gathered together into such great beds, instead of being diffused through every part of the earth's substance, as they probably were in the beginning. It has been through the solvent power of water, aided by heat and the presence of Chlorine and other substances which have an attraction for these earths. The composition of both the ocean and the atmosphere was probably very different in former geologic times from what it now is; and former the water and the air were much more heavily charged with substances in solution. A bay or arm of the ocean, it is believed, occupied the site of this limestone valley; and as the waters flowed into it from the adjacent country, holding certain salts in solution, there resulted a precipitation of the lime and magnesia which had been dissolved in the ocean, and which descended to the bottom in the form of Carbonates of Lime and Magnesia, such as we now find there. In the subsequent changes, which twisted and ridged the whole face of the country; and lifted it far above the level of the sea, this valley partook.

It has been largely due to this solvent power of water, that man has been indebted for the gathering together of many of those mineral deposits which are so valuable to him; and which otherwise might have been so widely diffused, as to be utterly useless, like the gold disseminated through the bricks of Philadelphia. Water has been one of the chief instruments in the hands of the Great Artificer of the Universe in fitting the earth for the habitation of man.

It is not a mere matter of supposition, that the sea-water of former ages differed in its composition from that of the present ocean; for fossil sea-waters are found in certain regions imprisoned in the pores of the older stratified rocks. These are vastly richer in salts of Lime and Magnesia than those of the present sea; because from these latter have been separated by chemical processes much of the limestone beds that now exist.

Leaving behind us "the valley," with its many points of interest, my friend conveyed me to the neighborhood where the Western Quarterly Meeting is held. He was an observant farmer, and his conversation was both interesting and instructive. One trait in the instincts of the chicken family, I did not remember to have heard mentioned before. It was, that if the chickens went to their roosts early, the next morning would certainly have fine weather; but if they continued scratching for food till a late hour, rain was sure to follow. There was instruction also in his remarks on the perpetual vigilance that was necessary to keep a farm free from weeds—cutting them up as soon as they appeared, and never allowing one to mature its seed. How well would it be, if all Christians kept as strict a watch against the growth of evil habits or the intrusion of evil thoughts into their minds!

We lodged that night at the house of a Friend, where we enjoyed the society of congenial spirits. Among the suggestive thoughts which were brought forward in the freedom of conversation, was the effect which ritualism and superstitious observances sometimes have upon the minds of persons who at heart are desirous of knowing the Truth. Where outward performances and mere opinions are suffered to take the place of vital religion in a community, such persons are sometimes disgusted, and renounce all profession of religion, which they confound with the counterfeit of it presented to them for adoption. Yet they might be prepared to recognize the distinction between right and wrong, the sense of which produced in the heart by the operation of the Holy Spirit, lies at the foundation of true religion.

This brought to mind the impressive statement of Robert Barclay in the Proposition of his *Apology* which treats of Worship; who says:—"When I came into the silent assemblies of God's people, I felt a secret power among them, which touched my heart; and as I gave way unto it, I found the evil weakening in me, and the good raised up; and so I became thus knit and united

unto them, hungering more and more after the increase of this power and life, whereby I might feel myself perfectly redeemed. And indeed this is the surest way to become a Christian, to whom afterwards the knowledge and understanding of principles will not be wanting, but will grow up so much as is needful, as the natural fruit of this good root."

It is not so much the conviction of the understanding as the change of heart, on which the spread of religion depends. In connection with this subject, one of the company referred to the view advanced by the celebrated John Foster in one of his essays, that whenever the world is favored with a more general and effectual revival of religion, it will be the result of a fresh outpouring of the Spirit of Christ.

To depend on outward training and study as a preparation for the exercise of Christian ministry, is a departure from its true ground, as viewed by the Society of Friends; who have ever regarded it as a Divine gift, and have looked upon submission to the internal operations of Grace as the one essential preparation—making them quick of understanding to know the Lord's messages, and faithful in their delivery. Whatever may be the outward attainments of such true ministers, they are concerned that their preaching should not be "with enticing words of man's wisdom, but in the demonstration of the Spirit and with power."

The commingling of thought and feeling with which we were favored, recalled the language of the Psalmist, "How good and how pleasant it is, for brethren to dwell together in unity!"

Of the Quarterly Meeting itself, not much need be said. It was a satisfactory occasion, and the business was harmoniously transacted; but the current of Divine life and enjoyment was not thought by some to rise so high as at some former seasons. One of the most interesting subjects that came before it, was the indulged meeting opened at Kennet Square, in the Ninth Month. Much interest appears to be felt in it by the Friends residing in that town; the attendance has been larger than was expected, and the meetings were thought to be often favored with a comfortable degree of solemnity. If Friends there keep their right places in the truth, there is hope that this meeting will become permanently established.

On the morning of the 24th, our projected visit to the Nickel Mine was paid. Leaving the neighborhood of West Grove at an early hour, we came after a time to the Newport and Gap Pike—leading from Newport, below Wilmington, on the Delaware River, to the Gap in Mine Ridge, where the Pennsylvania Railroad enters the broad valleys of Lancaster County. It was formerly a most important thoroughfare, along which the farmers of Lancaster County hauled their wheat and other produce to tide-water, by the shortest available route. The construction of railroads has taken from it a large part of the travel.

The Gap is a very marked depression in the Mine Ridge in Lancaster County. When the

Pennsylvania Railroad was first constructed through it, the contractors found almost insuperable difficulty in laying the tracks at the level fixed by the engineers, owing to the presence of a large body of quicksand, fed by the springs of the high ground adjoining; which continually flowed in upon them. By blanking and piling and other devices, this was finally overcome, but at a great expense. Some years ago the railroad company wished to lower the rails about 18 feet more, so as to diminish the grade which they were then compelled to use in reaching the summit of the pass, and which required them either to lessen the number of cars, or increase the locomotive power of their freight trains. The former experience with the treacherous gap had not been forgotten; and no contractor was found willing to undertake the task for a specified sum. So the company carried the plan into effect with their own employees—but at enormous cost—as we could well believe as we rode over the bridge on the carriage road, from which we looked down on the track, and saw the width and depth of the excavation.

The route we had come gave us the advantage of seeing this and other points of interest, but when we left the Gap, we paid rather dearly for it, for the road from that point was so miserably cut up into deep ruts, by the heavy mining teams, and these had suddenly frozen in their rough condition, that after spending about an hour and a half in going four miles, we were truly glad to reach our destination without broken wheels or other accident.

(To be concluded.)

For "THE FRIEND."

Some Account of Joseph Wilson.

(Continued from page 162.)

First Month 29th, 1860. "No record may appear for the last twelve months or more, yet I am still spared; in order (may it be found) that I may be fitted and prepared for a passage into eternity, as stainless as was that of the dear child whose lifeless corpse lay in this room one week ago. She was pleasant and helpful to me through life, and as she gradually and calmly descended to the grave, the tender ties of nature increased. Never did I fully know the strength of a father's love, until the last few days of her life, when neither parental affection nor human intervention, could longer be of any avail. Had it not been that she committed herself wholly and entirely into the hands of Omnipotence, with a comfortable hope that He would graciously receive her into his resting place, how deep indeed would our sorrow be! we feel the bereavement; yet we rejoice in the belief that she is gathered in peace and is safe."

Fifth Month 13th. "Again and again brought into the stripping room; none to look to, or trust in, but our Almighty Creator; and the light of His countenance much veiled from me. Though He slay me, yet will I endeavor to trust in Him."

In the Sixth Month of the following year he has writes to a friend:

"I thought on perusing thy letter that thy key, or the canopy of thy mind was more serene; but Divine love and favor were more sensibly bartaken of, than at some other times; well, if such is at times our experience, is it not as a brook by the way? a time of renewal of covenant and thankfulness of heart. But I have frequently thought, that these seasons of favor precede baptisms, even deeper plunges than we may have before known; and if thou should sometimes feel

as though the deeps were round about thee, and the weels wrapped about thy head, thou knowest in whom thou hast believed and trusted, and who has delivered thee in more than six troubles. * * * I often feel as though I wanted the prayers of my friends, I mean the faithful; for of ourselves what can we do? We may mourn as a dove, or cry as children, but is this enduring what is needful for us with patience? To be left for a longer season with scarce a ray of light or a crumb to feed upon, this, as John Barclay expresses it, is indeed a trial of faith."

In the Eleventh Month of the next year, he again wrote to the same friend:

* * * "Well, my dear —, I have frequently thought of thee to-day, as well as at other times, and have felt a measure of the fellowship of the gospel flow in my heart towards thee, and a freedom to tell thee so. I do not doubt but thou hast stripping and proving seasons, as well as my poor self and others, but I trust thou wilt never be tempted to cast away the shield of faith, as though thou hadst never been anointed with the Royal oil. It is said that because iniquity shall abound, the love of many shall wax cold; does not and has not iniquity mightily abounded, to the bearing down and keeping down the gentle, meek, and peaceable spirit of the gospel in many, who have been making profession thereof?"

To —,

First Month, 1864.

* * * "O, I trust thou wilt never give up the true Counsellor for any other; for surely He has guided thee from thy youth; He has been with thee in six troubles, and will not forsake thee in the seventh, as thou continues to look unto Him. But why should I thus write to one who has seen more of the Lord's wonders in the deep, than I ever expect to see while in mutability. This much, however, I have learned: I cannot save myself of myself; I cannot keep myself alive in a spiritual sense. A few days ago (and I thought I might revive it) the sufferings of the Saviour, and the cruelty of his persecutors were brought fresh to my remembrance. Not only was He reviled, scoffed at, and spit upon, but a crown of thorns put upon his head, vinegar mingled with gall given Him to drink, and He was nailed to the cross. It seemed to turn thus in my mind: what hast thou suffered, or what wilt thou endure for his sake? I do not feel as though I have strength to make any promise, only as He may be pleased to enable me to perform."

Fifth Month 15th, 1864. "The changes through which my mind passes, seem almost as great, and as frequent, as of the climate in which my lot is cast; sometimes favored with a little help and strength and encouragement to press forward towards the mark for the prize, and again left as a wanderer in a land of pits and snares, not feeling able to lay hold of any help, or scarcely so much as the poor publican of lifting up my eyes towards heaven and exclaiming, 'Lord be merciful to me a sinner.'"

Fifth Month, 1866. "The effusions of heart have been, this morning, make me a pillar in the temple of my God, that shall go no more out; for I am sensible that weakness and temptation press heavily upon me, and I am often made to feel that unless the Lord helps me to overcome, vain are my own efforts. May I never cast away the shield of faith in the Captain of salvation, or put my trust in any power beneath his."

Tenth Month 28th, 1867. "Fresh desires have arisen in my heart, that I may be preserved content in the will and ordering of the Lord concerning me; and that his arm of power may be stretched out for my preservation from the snares of Satan; that my strength and confidence may ever be in a Higher Power, and feeling that I have no might of my own, and if I am kept in true filial fear and trust to the end of my days, it will not be through any merit of mine."

Eleventh Month 6th, 1869. "On awaking this morning this language of Scripture arrested my mind, I will renew thy youth or strength as the eagle's, and a little encouragement seemed to be felt, still to struggle on, trusting in that Almighty Power which alone can renew our youth as the eagle's, which alone can quicken and make alive. May my soul live and not die; live in the sensible, heartfelt experience that I am not wholly forsaken, not cast off forever."

Near this time he wrote as follows to two of his children:

"Whilst children no doubt often feel anxious for the right getting along of their parents, parents are also very often deeply concerned for the best welfare of their children; and as each are endeavoring to move along in their proper spheres, they are mutually helpful to each other. May this be our experience not only now but in time to come, if we are spared a few more fleeting years. Our children all feel very near and dear to me, never more so than at the present, and my greatest desire for them is, as formerly, that they may be found walking in the path of the just, which shineth more and more unto the perfect day. Something may be required of thee more than simply literary instruction. Attend to every right opening to impress the tender minds of the children with their accountability for thoughts, words, and actions. I hope thou mayest be enabled to perform thy whole duty at that place, so long as it may be best for thee to remain; and what can be of more lasting benefit to those under thy care, than a bright and shining example."

FOR "THE FRIEND."

Form.

"Having the form of godliness, but denying the power thereof."

It is sad to see so many, who call themselves Christians, settling down into a form, or routine of observances, without showing the "life hid with Christ in God," knowing nothing of abiding in the true vine, that they may bring forth fruit, but leaving instead, in works, bring nothing but leaves, forgetting that, "not by works of righteousness, which we have done, but according to his mercy He saves us, by the washing of regeneration and the renewing of the Holy Ghost." Yet, while denying the form, without the life, we must needs take care, that we do not err on the other hand, in fearing a due observance of those things, which may be of use to us, for it is our Heavenly Father's way, often to use outward means to arouse us to a sense of our true condition.

I have been led into these reflections, by the ground some take in regard to the daily reading of the Holy Scriptures in our families; a practice, which, I believe George Fox and his contemporaries, were concerned to observe; but these objectors say it is only a form, or will degenerate into mere form; but this, if so, is the fault of the persons, not the practice. On that ground we might omit to gather together for worship, for fear it might degenerate into a form; and so be

led to reject all outward means of drawing near to the Father in spirit, and testifying in whom we do believe.

It feels to me that the gathering together of our families, once a day, at least, reading a portion of the Scriptures, and observing a solemn pause, having the children to understand why we sit thus silent, will be blessed to our souls. *As we feel the drawings of Divine love to pray for another and praise the Lord for his many mercies, let us obey, not only secretly, but vocally, that the children and others may know our travail of soul on their behalf, as well as our own.*

George Fox says, in one of his epistles, "We declare that we esteem it a duty, incumbent on us, to pray with and for, to teach, instruct and admonish those in and belonging to our families, as may be seen in Jeremiah 10th, 25, 'Pour out thy fury upon the heathen, that know thee not, and upon the families that call, not upon thy name.'" I have wondered whether in times past, there has not been a lack among us, of calling upon his name in our families, and I do not see that it is only to be laid upon those who are in the station of minister, but upon all really concerned heads of families; and I would ask, if there may not have been an unacknowledged unwillingness to consider whether the drawings to prayer have not been meant to be vocally offered? No one could more truly condemn a lifeless prayer than I do, and have cause to, from my own experience, having once, after offering vocal prayer, a feeling of such horror, for fear it was an unscriptured offering, as I never wish to experience again. Although it was afterwards shown me that the offering was accepted, I believe the suffering was permitted that I might learn a lesson ever after, to wait upon the true teachings of Christ my Saviour, and his teachings to vocal prayer, which, I believe, we will often feel, if we were entirely willing to give up thereunto. R. Barclay says: "Though we affirm that none ought to go about prayer without this motion, yet we do not deny but such sin as neglect prayer; but their sin is, in that they come not to that place where they may feel that which would lead them thereunto."

"And therefore we question not, but many, through neglect of this inward watchfulness and retiredness of mind, miss many precious opportunities to pray, and thereby are guilty in the sight of God; yet would they sin if they set about the act until they first felt the influence."

And is it not incumbent upon parents to teach their children to pray? (as our Saviour taught his Disciples to pray, and they were but as children in experience), not in any formal words, but to bring their childish wants, trials, and struggles to the Saviour, who hears them just as truly as the parents. And are not we commanded to come with the faith of the little child? My own darling boy, said to me, one night recently, when I sat beside his bed, after seeing him snugly tucked in, "Mother, don't thee see why the robbers don't break into our house? Why, I ask Heavenly Father every night not to let them, and don't thee see, He don't let them?" I suppose he had heard us talking about the recent robberies in the country. I believe we can hardly realize the comfort it is to little children to feel that the dear Saviour is watching and caring for them, and that they can speak to Him themselves. It has also, I believe, the effect of drawing parent and child together in a common love and acknowledgment of our dependence upon the same loving Father. So while we abhor the form without

godliness, let us be careful that we have the form with godliness, the spirit and the power, for "He giveth liberally and upbraideth not."

It is the letter alone that killeth, it is the spirit that gives it life. R.
Twelfth Month 13, 1888.

FOR "THE FRIEND."

Barclay of Ury.

(Concluded from page 164.)

If you ask me what led me to Aberdeen, I shall tell you Whittier and the Barclays—or, to put it more correctly, the Barclays and Whittier. I wanted to walk

"Up the street of Aberdeen,
By the kirk and college green,"

where that bravest of the early Friends, who probably made greater social sacrifices for his faith than any other of them, had lived, suffered and died.

And so, just so soon as I had brushed away the dust of travel, I asked my kind and attentive host of the "Imperial" if there were "any Quakers in Aberdeen." He could not tell me of one; thought they were all dead; but his good wife brought her wits to bear upon my question, and at last put me in the way of finding their meeting-house and its caretaker. It was a plain, comfortable house, on a side street. From its caretaker I learned that meetings were regularly held there, that next day would be their Monthly Meeting, that with a few exceptions most of their members lived out of the city. After this, I went to look for

"—the Tolbooth prison,

Where, thro' iron grates he heard
Meek disciples of the Word
Preach of Christ arisen."

I had a hard time to find it, the great town hall having lately been built on the site of its main building, though the old tower of the prison is left. I had a letter to the Chief of the Police, which my landlady had given me, and he took much trouble to find an old, old, disused key, and then, in the darkness, we climbed up into the old tower. The iron grated windows are still there, and in these rooms, doubtless, the Friends had been imprisoned. We were begrimed with dust when we came down, but we had seen the Tolbooth.

Next day I went to the meeting-house, where were about twenty Friends, and the meeting was a silent one. The Friends were very kind, and after meeting two of them went with me to several places of interest: the University, the ancient meeting-house of Friends—now much decayed—and to the stone-yards where granite is polished. For this city of Aberdeen is built almost entirely of granite, and here the art of polishing this stone is brought to great perfection. Queen Street, though not equal in beauty to Prince's Street, Edinburgh, is yet a handsome street, with many imposing structures in it. But the universal use of granite gives the city rather a cold, gloomy appearance. We passed by the old "kirk," which is a kirk no longer, and "the college green" is now an enclosure with but little that is green in it.

After I had parted from my kind friends, I took the train to Stonehaven, the station nearest Ury or Ury, as it is indifferently written. There was no difficulty whatever in learning where Ury was. It is as familiar to the people of Aberdeen now as it was two centuries ago. Indeed it is one of those great houses in which they take much pride. I took up the morning paper, and almost the first paragraph I saw was, "Floral fair at Stonehaven," at which the

laird of Ury had made some pleasing remarks, which were reported in full. But the laird of Ury is no longer a Barclay, but a gentleman of wealth, having large interests in iron and coal, by name Baird. The ride to Stonehaven is a beautiful one. It is alongside the sea-coast and so far as the eye can see is the great German Ocean, while the rocky coast is indented with little bays which give shelter to boats and are a pretty feature in the scenery. Fancy a railroad along the cliffs at Newport and you have some idea of this. I could but think how, in their young days at least, the Barclays must have enjoyed this grand old ocean. Ury is about two miles or less from Stonehaven. There was a lively stable close by the station, and I tried to get "a trap," but in vain—every one was out or engaged. This was most disappointing; to be so near and yet so far, was indeed tantalizing. There was an omnibus from one of the hotels in Stonehaven, which is some distance from the station, and in the opposite direction from Ury, and I hired it. I know the driver took advantage of my necessities, but I could not be penny wise and pound foolish, and so, mounted on top of this empty "bus, at a good pace, we started off for Ury. It was a beautiful, bright, sunny morning—one of the very few which the British people had during the past summer. Driving by a high stone wall, we soon reached the lodge, and were admitted without hesitation to the park. And here began a series of surprises. We entered by a handsome gateway into a magnificent park, through which we drove, as it seemed to me, for nearly two miles. To my great surprise, I found the hall of Ury to be not merely a handsome country house but almost palatial in its character, at least much more like a palace than anything I had seen in Scotland, excepting Dalmore. I drove up to the door of this palace, seated on top of the "bus, then rang the bell and sent in my card. The house seemed full of guests, and I own I was a little nervous while I waited in the library. Presently a gentleman came in who gave me his name and excused the laird of Ury, who was entertaining his friends at luncheon. I told him I was a Philadelphian, a Friend, and much interested in David and Robert Barclay. He was very kind and polite; told me that the Hall was modern, and though he kindly offered to show me through the house, because it was modern,* I declined. "But," said he, "you must see the grave of Robert Barclay, the Apologist," and so, calling a lad who was passing by, he gave him the key of the little house which has been built over the graves of the Barclays.

My coachman had galloped back to the station with his "bus, and there was nothing to do but to go on foot, which, with my young guide, I did. It was a long, long walk, through the park. We passed by the dove cotes, the kennels, even a bear house, with a bear in it, by pretty tenant houses, and other appointments of a grand estate. Then we had to climb a fence and walk a long distance through the fields before we reached the top of a high hill on which is built this house of the dead.† The

*It is nearly forty years since Ury ceased to belong to the family of Barclay. An engraving of the old hall and meeting house, by Wm. Miller of Edinburgh, is still extant, and it is said that these were taken down A. D. 1855.

†On the 12th of the month called October, 1688, David Barclay's body was borne to a new burial place, selected as such by himself, situated on a rising eminence, near a mile to the northwest of his house.—John Barclay, in Journal of Alex. Jaffray.

sun had now become very hot; I had to hurry for fear of being too late for my returning train, and was really almost exhausted when, at last, I reached the summit of the hill.

In an enclosure of considerable extent is a house, looking not unlike a Wesleyan chapel. The lad unlocked the door, and I entered the room, which, with its earth floor and stone walls, looked very bare and unattractive. The first half of the house is used as a place of burial for the family of Baird; then an inner door was opened, and I stood by the graves of David and of Robert Barclay. It is not a pleasant looking place; the floor is of earth and levelled. There are memorials telling of the antiquity of the house of Matthers and of Ury; but in the wall are two very plain and simple tablets which interested me much more. The inscriptions on these read thus:—

"The grave of Colonel David Barclay of Urie, son and heir of David Barclay of Matthers, and Elizabeth, daughter of Livingston of Dunsinny. He was born Anno 1610, bought the Barony of Urie 1648. Having Religiously abdicated the world, he joyed in 1666 the Quakers, and died 12th of October, 1686."

Close by this another tablet reads:—

"The grave of Robert Barclay of Urie, Author of the Apologie for the Quakers, son and heir of Colonel David Barclay of Urie, and Katherin, the daughter of the first Sir Robert Gordon. He was born Dec. 23, 1648, and died October 3, 1690. Also his wife Christian, daughter of Gilbert Mollison, merchant in Aberdeen. She was born Anno 1647 and died Feb. 14, 1723."

The hill commands a view of highly cultivated country, and in the distance were glimpses of the great North Sea. I had to hurry back, through the magnificent park, to the station, but I had seen where had lived and had died two of the bravest and noblest of the early Friends.

Lend a Helping Hand.—I shall never forget the feelings I had once when climbing one of the pyramids of Egypt. When half-way up, my strength failing, I feared I should never be able to reach the summit or get back again. I will remember the help given, by Arab hands, drawing me on farther; and the step I could not quite make myself, because too great for my wearied frame, the little help given me—sometimes more and sometimes less—enabled me to go up, step by step, step by step, until at last I reached the top, and breathed the pure air, and had a grand look out from that lofty height. And so, in life's journey, we are climbing. We are feeble. Every one of us, now and then, needs a little help; and if we have risen a step higher than some others, let us reach down for our brother's hand, and help him to stand beside us. And thus, joined hand in hand, we shall go on conquering, step by step, until the glorious eminence shall be gained.—*Bishop Simpson.*

AFTER the battle of Salamanca, Lord Hill observed a soldier leaning in a gloomy mood upon his firelock, while round him lay mangled thousands of French and English. "What are you thinking of, my man?" said his lordship. The soldier started, and after saluting his general, said, "I was thinking, my lord, how many widows and orphans I have this day made for one shilling."

A MAN must have some knowledge before he can see his own ignorance. One horn blind never knows what darkness means; one horn deaf never knows what silence means.

A LEGEND OF THE LAKE.

BY JOHN G. WHITTIER.

Should you go to Center Harbor,
As haply you sometimes may,
Sailing up the Winnepesaukee
From the hills of Alton Bay,—

Into the heart of the highlands,
Into the north wind free,
Through the rising and vanishing islands,
Over the mountain sea,—

To the little hamlet lying
White in its mountain fold,
Asleep by the lake, and dreaming
A dream that is never told,—

And in the Red Hill's shadow
Your pilgrim home you make,
Where the chambers open to sunrise,
The mountains and the lake,—

If the pleasant picture wearies,
As the fairest sometimes will,
And the weight of the hills lies on you,
And the water is all too still,—

If in vain the peaks of Gunstock
Redden with sunrise fire,
And the sky and the purple mountains
And the sunset islands tire,—

If you turn from in-door thrumming
And the clatter of bowls without,
And the folly that goes on its travels
Pearing the city about,—

And the cares you left behind you
Come hunting along your track,
As Blue Jay, in vicinan fable,
Boole on the traveller's pack,—

Let me tell you a tender story
Of one who is none so new,
A tale to haunt like a spirit
The Winnepesaukee shore,—

Of one who was brave and gentle,
And strong for many strife,
Riding with cheering and music
Into the journey of life.

Faltering and falling midway
In the Tempter's subtle snare,
The chains of an evil habit
He bowed himself to bear.

Over his fresh young manhood
The bestial veil was flung,—
The curse of the wine of Crete,
The spell her weavers sung.

Yearly did hill and lakeside
Their summer idyls frame;
Alone in his darkened dwelling
He hid his face for shame.

The music of life's great marches
Sounded for him in vain;
The voices of human duty
Smote on his ear like pain.

In vain over island and water
The curtains of sunset swung;
In vain on the beautiful mountains
The pictures of God were hung.

The wretched years crept onward,
Each sadder than the last;
All the bloom of life fell from him,
All the freshness and greenness past.

But deep in his heart forever
And unproven he kept
The love of his saintly mother
Who in the graveyard slept.

His house had no pleasant pictures;
Its comfortable walls were bare;
But the riches of earth and ocean,
Could not purchase his mother's chair.

The old chair, quaintly carved,
With oaken arms outspread,
Whereby, in long gone twilights,
His childish prayers were said.

For therein in his lone night watches,
By moon or starlight dim,
A tale full of love and pain
And tenderness looked on him.

And oft, as the grieving presence
Sat in his mother's chair,
The groan of his self-upbraiding
Grew into wordless prayer.

At last in the moonless midnight
The shuddering angel came,
Severe in his pity, touching
The house with fingers of flame.

The red light flashed from its windows
And flamed from its sinking roof;
And baffled and awed before it
The villagers stood aloof.

They shrank from the falling rafters,
They turned from the furnace glare;
But its tenet cried "God help me!
I must save my mother's chair."

Under the blazing portal,
Over the floor of fire,
He seemed, in the terrible splendor,
A martyr on his pyre!

In his face the mad flames smote him
And stung him on either side;
But he clung to the sacred relic,—
By his mother's chair he died!

O mother, with human yearnings!
O saint, by the altar stairs!
Shall not the dear God give thee
The child of thy many prayers!

O Christ! by whom the loving,
Though erring, are forgiven,
Hast thou for him no refuge,
No quiet place in Heaven?

Give palms to thy strong martyrs,
And crown thy saints with gold,
But let the mother welcome
Her lost one to thy fold!

FOR "THE FRIEND."

Syrian Notes.

BAALBEK, SYRIA.

Eleventh Month 12th, 1888.

My Dear Friend:—I hope thou wilt not think me unmindful of thy suggestion that I should sometimes report my movements to the readers of THE FRIEND; one ought not hastily to circulate impressions of new countries and people, however accurate they may be, until they have been verified by renewed observation and sifted by careful discrimination, and as yet we have been living so quietly in our new quarters, and moving about so little that I hardly am in a position for a traveller's stock-taking. However, I will not miss the opportunity of a fourth day of imprisonment by storm, during a journey in the Lebanon, to let thee know that all goes well, and nothing, I trust, comes amiss to us. The mention of the storm is somewhat longed, when one thinks of the way in which one longed and ached for the autumn rains three weeks or a month ago. Who would have believed that such rapid change of climate was possible in these latitudes? I remember driving out from Beyrout to the Dog River, to see the inscription left by the Egyptian and Assyrian kings on the rocks at the mouth of the river, a hot sirocco wind was blowing down from the mountains, and although it was not yet sunrise, and the wind had come right over the top of Lebanon, the thermometer stood at ninety-three degrees. Since then the early rain has come, the valleys in the Lebanon are green with the springing of freshly sown wheat, and the stony hillsides bright with crocuses of every color; and now, as I write this, the mountains which I crossed four days ago are clad in their first new snow, (there is always a rag or two of the old coat underneath), and if one wished to return by the way one came, there is no opportunity. And these sudden changes in the course of the year, have something of an analogy in the contrast

between the nightly chill and the daily heat when the sun shines clearly, no wonder that Jacob should have said that by day the heat consumed him and by night the frost, only, I am sure, that when the wind was sirocco, he must have been consumed both by day and by night. I think that I mentioned in writing to some of my friends recently, my conviction that this wind is what is referred to in the New Testament, where the Apostle James speaks of the sun rising along with the burning heat and withering the grass and its glory. Our revisers have certainly improved on the old version, which merely said with a burning heat, as though the heat spoken of were the heat of the sun; for they have inserted, if I remember rightly, the definite article, which makes it clear, especially to those who have been there, that the sirocco is meant; so that the sentence will now run something like this: "No sooner is the sun risen with the Sirocco, than the glory of its fair face passeth away." (I am translating the Greek words from memory.)

From heat to cold, is, as I said, an easy transition. I write these lines with my feet over a fire-pan of charcoal, and a few minutes ago my companion made the remark that it must be the very same kind of fire that Peter was warming himself at, when the frost was chilling his outer man and the spirit of denial, the inner. I was just at that very minute reading the passage in the Syrian New Testament, and a glance at the simple heating apparatus, (a plain hexagonal vessel of metal, standing in a dish), was enough to convince one that eighteen hundred years have made no change in this country in the art of getting warm. Nothing could be more simple, there was no room for any mis-jugling in the progressive development of the fire-pan and the stove. Here, as in almost every other point, one finds a people whose manners and customs, immigration long since ceased to affect, and progressive art and science have secretly begun to touch, a state of things especially bright and interesting to the student, because it appears that here archaeology is not merely monuments and inscriptions and old books, and tombstones, but life itself.

Happily, also, there are inscriptions too, of all sorts. During my recent visits to the Lebanon monasteries, I had many opportunities for picking up stray notes of this kind, and some of them are, I think, new; and one or two contain important historical information, although only in matters of detail. I will not burden thee with any notes of this kind at present. It is amusing to mark the interest which the native Syrian shows in these things; he suspects that these inscriptions conceal treasure, and that the Franks have found the secret. When we get a guide to take us to some place where there are letters in the rock he almost always opens this subject, and is much comforted by a promise to divide all that we find. One old man, who showed us some inscriptions of an early Roman Emperor, lurked about the spot for a long time after we had left, in the conviction that we were coming back to seize the hidden treasure for ourselves, from which it appears that the word of a Frank is not such a warrant of confidence as it is asserted to be, for we had promised him a dividend of thirty-three and one-half per cent. on the net proceeds. But I must not prolong this letter unduly, we ought not to be tedious in telling dear friends that they are not forgotten. The background is not left out of the picture. It will be fore-ground again, presently. Before me to-day are the magnificent ruins of Baalbek,

and through the driving mist and rain the snowy mountains show themselves to perfect the panorama; and beyond them all is the western world with all its hopes and fears. Here at hand are the ruined masses of extinct faith and ceremonial, but they do not eclipse by their greatness, but rather throw into relief the simple testimonies which God has given us grace to bear. My ritual and my buildings, said Paganism, pass away. My words, said Christ, shall not pass away. He had no ritual or buildings that time could touch. In his emancipating faith may we ever find our fellowship.

Thy Friend,

J. RENDEL HARRIS.

Moral Effect of Works Like Homer's Iliad.

What kind of predisposition will be formed toward Christianity in a young and animated spirit, that learns to glow with enthusiasm at the scenes created by Homer, and to indulge an ardent wish, which that enthusiasm will probably awaken, for the possibility of emulating some of the principal characters. Let this susceptible youth, after having mingled and burned in imagination among heroes, whose valor and anger flame like Vesuvius, who wade in blood, trample on dying foes, and hurl defiance against earth and heaven; let him be led into the company of Jesus Christ, and his disciples, as displayed by the evangelist, with whose narrative, I will suppose, he is but slightly acquainted before. What must he, what can he do with his feelings in this transition? He will find himself flung as far as "from the centre to the utmost pole," and one of these two opposite exhibitions of character will inevitably excite his aversion. Which of them is that likely to be, if he is become thoroughly possessed with the Homeric passions?

Or if, on the other hand, you will suppose a person to have become profoundly interested by the New Testament, and to have acquired the spirit of the saviour of the world, while studying the evangelical history, with what sentiments will he come forth from conversing with heavenly mildness, weeping benevolence, sacred purity and the eloquence of Divine wisdom, to enter into a scene of such actions and characters, and to hear such maxims of merit and glory as those of Homer? He would be still more confounded by the transition, had it been possible for him to have entirely escaped that deep deprivation of feeling which can think of crimes and miseries with little emotion, and which we have all acquired from viewing the whole history of the world composed of scarcely anything else. He would find the mightiest strain of poetry employed to represent ferocious courage as the greatest of virtues, and those who do not possess it as worthy of their fate, to be trodden in the dust. He will be taught, at least, it will not be the fault of the poet if he is not taught, to forgive a heroic spirit for finding the sweetest luxury in insulting dying pangs, and imagining the tears and despair of distant parent or wives. He will be necessarily called upon to worship revenge, the real divinity of the Iliad, in comparison of which the Thunderer of Olympus is but a despicable pretender to power. He will be taught that the most glorious and enviable life is that to which the greatest number of other lives are made a sacrifice; and that it is noble in a hero to prefer even a short life attended by this felicity, to a long one which should permit a longer life also to others. The dire Achilles, a being whom, if he really existed,

it had deserved a conspiracy of the tribes then called nations to chain or to suffocate, is rendered interesting even amidst the horrors of revenge and destruction, by the intensity of his affection for his friend, by the melancholy sublimity with which he appears in the funeral scene of that friend, by one momentary instance of compassion, and by his solemn reference to his own approaching death.

The actions and characters are presented in a manner which prevents their just impression, and empowers them to make an opposite one. A transforming magic of genius displays a number of atrocious savages in a hideous slaughter-house of men, as denizens in a temple of glory. No doubt an eloquent history might be so written as to give the same aspect to such men and such operations, but that history would deserve to be committed to the flames. A history that should present a perfect display of human miseries and slaughter, would incite no one, that had not attained the last possibility of depravation, to imitate the principal actors. It would give the same feeling as the sight of a field of dead and dying men after a battle is over; a sight at which the soul would shudder, and earnestly wish that this might be the last time the sun should behold such a spectacle, but the tendency of the Homeric poetry, and of a great part of epic poetry in general, is to insinuate the glory of repeating such a tragedy. I therefore ask again, how it would be possible for a man, whose mind was first completely assimilated to the spirit of Jesus Christ, to read such a work without a most vivid antipathy to what he perceived to be the moral spirit of the poet?

Yet the work of Homer is, notwithstanding, the book which christian poets have translated, which christian divines have edited and commented on with pride, at which christian ladies have been delighted to see their sons kindle into rapture, and which forms an essential part of the course of a liberal education, over all these countries on which the Gospel shines. And who can tell how much that passion for war, which, from the universality of its prevalence, might seem inseparable from the nature of man, may, in the civilized world, have been reinforced by the enthusiastic admiration with which young men have read Homer, and similar poets, whose genius transforms what is, and ought always to appear, purely horrid, into an aspect of grandeur?

If such works do really impart their own genuine spirit to the mind of an admiring reader, in proportion to the degree in which he admires, and if this spirit is totally hostile to that of Christianity, and if Christianity ought really, and in good faith, to be the supreme regent of all moral feelings, then it is evident that the Iliad, and all books which combine the same tendency with great poetical excellence, are among the most mischievous things on earth.—John Foster.

Natural History, Science, &c.

Researches in Palestine.—Dr. Hilprecht, of the American Expedition to Palestine, makes report of his studies at *Nahr el Kelt*, or Dug River, above Beyroot. On the rocks along the banks of that river, where a highway between the East and the West swept around a promontory above the sea, are important inscriptions made by sovereigns who passed there in their marches of conquest at various times adown the centuries. Those rocks might indeed be called the autograph album of the world rulers. Inscriptions are there from Rameses II, the foster-

brother of Moses; Sennacherib, whose invading army was destroyed in a night, before Jerusalem; Marcus Aurelius, the wise Roman emperor; Sultan Selim, and others. These inscriptions have been noted by eminent travellers from the days of Maundrell. Dr. Hilprecht has succeeded in photographing these inscriptions, including a portion of them hitherto deemed hopelessly out of reach. He has also discovered a Latin inscription unobserved by any of his predecessors. With the enthusiasm of a scientist, although he was suffering from fever, Dr. Hilprecht passed some eighteen hours in this work, most of the time on a ladder, with a sharp wind blowing fiercely upon him.—*Sunday School Times.*

The Penalty of Folly.—The custom of using artificial and unnatural means to produce physical beauty deserves to be severely condemned. Many constitutions have been broken down by it, and in some cases permanently. The *Youth's Companion* relates an instance in which six girls in a New England town undertook to improve their complexion by eating various articles. Four out of the six soon began to pay the penalty of their folly. "The coffee-ener became a victim to insomnia, and was so nervous and timid that little things made her either tremble or with terror. The clove-catcher had become a victim to hysteria, and was in a deplorable state. Those who had the starch habit, learned to the full extent the meaning of dyspepsia," and, after all, they failed to become beautiful. The freshness of youth and health faded from their cheeks, and the luster of real beauty departed from their eyes. Wholesome food, plenty of exercise, and fresh air are the means provided by the Creator for beautifying the human complexion. Other means invented by men may seem for a time to accomplish the desired end, but their vanity will be manifest at last.—*Christian Advocate.*

Electrical Phenomena on Pike's Peak.—A writer to the *Christian Advocate*, from the signal station on Pike's Peak, says:—

"An unpleasant feature of the summer ascents, though a very curious and interesting one, is the electrical storm, which is an almost daily occurrence during the rainy months. While a thunder-storm is passing over the Peak, the electricity seems to gather on every point of rock or iron, and a sharp buzzing sound is heard. This same peculiar sound is heard coming from the hand or finger if it is wet and held above the head, and it feels as if it were a small-sized pin-cushion stuck through and through with pins and needles.

"Sometimes when the storm is violent, the horses going up or down the trail are charged with the electricity, the hair snaps if touched, and a sharp shock may be felt if by chance the rider happens to touch an ear. His own hair actually crackles and stands on end; but no doubt the latter action is augmented by the fear of the noise.

"A little of such an adventure is enjoyed, but when it becomes too strange and the lightning plays in too close proximity, followed by exceedingly loud and startling claps of thunder, it is not at all pleasant. Several times the station has been struck by lightning, although no serious harm has resulted to either the building or its occupants. The large stove in the centre of the office offers a very convenient conductor, and, occasionally, during the phenomenon, if it is accidently touched, surprises the offender and gives him a heavy shock."

Benefits of Fungi.—Blights, rusts, mildews, and molds, often seem inveterate enemies of man, and yet it is becoming more and more evident that in many respects they are of the greatest blessing to our race. They are especially beneficial in keeping down the number and the injurious insects. The fly-fungus, a flossy organism, attacks the house-fly, and fastens it to a pane of glass, the wall, or anything the fly may be resting on. Innumerable flies are destroyed by it. To a much greater extent other fungi attack other species of insects, frequently to such an extent as to keep them wholly from being mischievous to man. Prof. Arthur has recently shown how the clover-leaf weevil is kept in check by one of these little vegetable parasites. The larvae appear in May. In the latter part of the month he found large numbers clinging to the leaves and upper part of the stem, apparently dying from the fungus attack. Soon after the 1st of June no living specimen could be found. The fungus induces the epidemic disease which carries off the larvae in great numbers.—*Selected.*

Explosion of a Petroleum Steamer at Calais, France.—The *Scientific American* gives a description of a remarkable explosion on board of a steamer at Calais, France, which had just discharged a cargo of petroleum. At the time of the explosion, water was being pumped into her ballast tanks. It is supposed the disaster was caused by one of the engineers going into the hold with a naked light to inspect the tanks. The vapor of the petroleum mingled with the air in the hold formed an explosive mixture, which was set on fire by the lamp.

The captain, with his wife and another woman, were in their cabin in the after part of the steamer, and this remained almost intact—the captain never imagining the disaster was so serious until he came on deck. The rest of the ship, with the exception of a small part of the fore-castle, was blown into the air, and scattered in all directions, while the sides of the vessel were blown clean away. Some heavy pieces of machinery were hurled three-quarters of a mile or more. Almost simultaneously with the explosion, a huge cloud of black smoke and debris rose into the air, and burst into a column of flame of great height—the hull becoming a mass of flame.

A Tamed Rabbit.—A correspondent of *Chambers's Journal* sends to it an account of a rabbit which was caught when a few days old—"My mother undertook to try and rear him, allowing him to live for a time in her pocket, and feeding him with milk from a teaspoon. He grew fast, and soon became quite friendly, being fed regularly on bran, fresh leaves, oats, and any pieces he could get given him; for he always knew the meal hours, and would come and beg sweetly by the side of every one round the table.

"Once he was missing for a long time, and we had given him up for lost, when he suddenly came scrambling down the chimney, none the worse, except for a little soot in his fur. He would always come at the call of 'Bun, bun, bun!' and would jump onto our laps, and, if allowed, would eat out of our plates. A favorite place for him was to sit on one of our shoulders, where he would sleep for hours, and sometimes gently nibble an ear!

"We used to bring him home the red berries off of briar-bushes; of these he was particularly fond, never, however, eating the seeds, but leaving them in neat little heaps on the ground,

Loaf-sugar, too, he greatly relished; and when he saw it on the table, he would jump up, with the help of a chair, stand on his hind paws and look into the basin—and if the tongs were in his way, take them in his mouth and lay them on the table, then look in again, take a piece of sugar, jump down with it, and crunch it up.

"He had a hundred pretty ways, but much as we loved him, we were a good deal tried by him. His destructiveness was serious; boots and shoes and bags, if left unguarded, would be nibbled round in a very short time.

"He was now about six months old; and, as we were leaving the place, and could not take him with us, we gave him away to some friends in town. His fate we have never heard—we have never liked to ask, fearing to hear of a sad end, such as comes in one way or another to most pets."

Buffalo Breeding.—The practical extermination of the great buffalo herds of the northwest, which furnished so large a part of the subsistence of the Indian tribes in those regions, has called attention to the desirability of preserving this breed of animals. In 1878, a band of Indian hunters brought into Winnipeg five living buffalo calves. They were allowed to ramble about the prairies in the vicinity of the town, in company with the ordinary cattle. They continued to thrive and multiply, until in 1882, they numbered twenty-three, including some hybrids with the domestic cattle.

The buffalo is a much hardier animal than the common ox, less liable to suffer from snow and starvation, disease and cold; and its hide, with its long coating of hair, is far more valuable. But owing to the large size of the forequarters, and the smallness of the hindquarters, it is less valuable for beef. As the two species will breed with each other, an effort has been made to procure a cross, which may take the place of the common cattle as ranch animals. Samuel L. Besdon, of Winnipeg, has succeeded in producing an animal of nearly the same shape as the common steer, but invested with a robe of long, soft, glossy fur, which retains the hardness of its wild progenitor.

The original herd has since been subdivided, and a portion of it, numbering about eighty, has recently been sent to a ranch at Garden City, Kansas.

Items.

A Delusion.—It is seldom that we meet with a more striking example of blind credulity than that exhibited in the following paragraph taken from *The Independent*.

"More millions have now again found their way into Heaven," exclaims the French Catholic paper, *Le Croix*, in commenting enthusiastically on the mass read by Leo XIII. in Rome, on the 30th September, and by his followers all over the world, for the deliverance of souls from purgatory. "By virtue of this extraordinary power of the keys," continues the same sheet, "Leo has decided that the blessings of his own jubilee shall be given also to those in purgatory, and, on the 30th of September, the Pope, together with the whole Church, descended down into the grave of St. Peter in order to pour the holy blood into the atoning fires. This incomparable mass is the most sacred deed which the papal authority has ever performed in order to release the prisoners from purgatory, who are tortured even worse than the slaves of Africa."

Working Men and War.—At a meeting of Working Men's Societies in Milan, Italy, one of the resolutions adopted was the following:—"Who furnish the chief proportion of the young men who, by serving in the army, have to offer themselves as food for cannon? It is we—always we. Therefore if we,

the working men, have to pay, with our money and our blood, for this iniquity of war, it devolves upon us also to cry out to the rulers of nations, 'We protest against war. We abhor the divisions which it creates between kindred peoples, peoples who only wish to live in peace with each other.' Our real enemies, those we are all called upon to fight against, are Ignorance, Injustice, and Misery."

Reformed Presbyterians.—Another effort has just been made to weld together two separate bodies of Presbyterians. As it is well known that there are two churches bearing the name of "Reformed Presbyterian," which have been drawing closer to each other in the years just past. The Synods which represent these bodies, at their late meetings appointed committees of conference, and these committees met in conference, at Beaver Falls, Pa., in the month of November. After very earnest discussions of the points in which the churches differ, it was found that all were reduced to one, and that was thoroughly canvassed. The point of difference is that one of these bodies refuses to "allow its members to incorporate, by voting, with the present organization" of the other. The Synod, however, does not grant this privilege to its members. In other words, the members of the churches in one denomination may vote at a national election, in the other they may not.—*The Presbyterian.*

Haddonfield Quarterly Meeting.—At Haddonfield Quarterly Meeting, held at Moorestown, N. J., on the 13th of Twelfth Month, there was exhibited in a marked degree that "harmonious labor" for the spread of the Redeemer's kingdom which is asked for in one of the Queries addressed to the members of the Meeting for Ministers and Elders.

Several of those who spoke were led to point out the way to experience that salvation which comes by Jesus Christ—which is by unreserved obedience to the leadings of his Spirit, which visits the hearts of the elect from time to time, and which, in translation into the condition of adopted children of our Father who is in Heaven. None who fully submit themselves to God, need fear that He will forsake them—the promise remains unchanged—"Blessed are they who hunger and thirst after righteousness, for they shall be filled."

This line of duty, continuing to those who in earnestness and sincerity were seeking to know their salvation effected through the workings of the Divine power; and who are often made to feel that they can do nothing without this help from on high.

There was also earnest exhortation to those who still held back from a full surrender of themselves into the Lord's hand.

The solemnity that overspread the large gathering was an evidence that the meeting was owned by the Head of the Church.

In the business meeting, a report was received from the Committee which had the oversight of the Meeting at Atlantic City, stating that meetings had been kept up throughout the past year—the attendance ranging from about 75 to 150 during the visiting season; and from 10 to 30 during that part of the year when few visitors are at the sea-shore. The meetings had been generally satisfactory in character. A new committee was appointed to have charge during the next year.

Friends Temperance Association.—The Temperance Association of Friends of Philadelphia Yearly Meeting, through its Executive Committee, still continues its oversight of two Coffee Stands at Front and Church Sts., and Front and Margaretta Sts. respectively. The men in charge sell an average of 60 cups of coffee per day.

A coffee cart, which has just been presented to the association by the liberality of a Friend en route on Front Street from Walnut to Christian; and on Second and Sixth-days, until 12 o'clock at night, the man in charge waits on the Boston steamer sleds to supply them with coffee.

The association has also under its care the Coffee House at Howard St., and on the Fifth and Powell. The woman and her husband in charge at 406 Haverford Street, are very satisfactory to the Committee, as they engage in the work in a Christian spirit, and with a strong desire to help the men who come within their reach. Quite lately they

have reported 8 men who seem to have really given up drinking, and have gone back to regular work and their families through the care extended to them at our Coffee House. The Reading Room seems to be appreciated, some men coming there every evening to read.

At Fifth and Powell, trade is not yet established, and it is a heavy expense to our Treasury.

At the last Annual Meeting, some Friends intimated that they would contribute toward the work if the Committee would see that it was suitably expended. The Committee have labored to carry on the good work, and the Treasury is empty.

Chairman.—Jabez Wood, 1315 Arch St.
Secretary.—Anna Woolman, 140 S. 16th St.
Treasurer.—Charles Matlack, 625 Walnut St.

FOR "THE FRIEND"

BIOGRAPHICAL CATALOGUE, being an account of the lives of Friends and others whose portraits are in the London Friends' Institute. Also descriptive notices of those of the Friends' Schools and Institutions of which the gallery contains illustrations, &c. London, 1888, pp. 878.

A few copies of this valuable work have reached America. The Memoirs are alphabetically arranged, and in most instances the year of birth and death of the person is given with the heading.

Perhaps the most interesting features of the book are the descriptions given of pictures of several Friends' meetings in England, as they appeared a century or more ago. In these pictures a number of well-known Friends are readily recognized. The meetings at Grace Church Street and the Ball and Month, are especially striking.

The account of Ackworth School also presents many points of interest. Founded in 1779, largely through the instrumentality of Dr. John Fothergill, within fifteen months of its opening upwards of three hundred children resided in the building. The children's clothing was supplied by the school, and the boys were required to wear "cocked hat, long tailed coat, leather breeches and buckled shoes." "The girls wore stuff gowns, white caps and neck handkerchiefs."

It is remarkable that for more than thirty years after its foundation, no direct Scriptural instruction was given in this school.

The whole article on Ackworth will amply repay perusal, as well as many other parts of the book. G. V.

Make the Best of It.—He who makes the best of everything that happens to him will always have the best that his circumstances will allow, and will surely be a much happier man than he whose habit of mind is to make the worst of everything.

THE FRIEND.

TWELFTH MONTH 29, 1888.

The account given by George Whitehead of his conviction of the truth of the doctrines held by the Society of Friends, of the exercises he passed through for his own conversion and settlement, of the manner in which the meetings of our Society were held in those early days, and of his call to the ministry, in which he labored about 68 years—having been called into that service in the year 1654, when not yet 18 years of age, furnishes an instructive illustration of the views held by our Society as to the true

ground of gospel ministry, and the manner in which it should be exercised.

When about 14 years of age, through the Lord's visitations, his heart was stirred to seek for the truth as it is in Christ Jesus, before he knew anything of the people called Quakers. Soon after this, he heard of them, and observed that they were reviled and reproached by base and wicked persons; "therefore," he says, "the Lord gave me to believe they were his people, before I was at a meeting of theirs, or heard any of them minister."

His home was in Westmoreland, in the north of England; and the first meeting he attended among Friends was at a place called Sunny Bank, near Grayrigg Chapel. At this meeting "there appeared a great work of the power of the Lord, breaking the hearts of divers into great sorrow, weeping and contrition of spirit, which I believed was a golly sorrow for sin, in order to unfeigned repentance."

It was sometime after he was fully convinced, and his mind turned to the light, that he first had the opportunity of listening to the ministry of George Fox. G. Whitehead says, "I was then very low, serious and intent in my mind, willing to see and taste for myself, for my own inward satisfaction; and I saw and felt that his testimony was weighty and deep; that it proceeded from life and experience, and did speak Divine revelation, and tended to bring to an inward feeling and sense of the life and power of Christ, and the sanctifying operation thereof in the heart. His speech was not with affected eloquence or oratory, or human wisdom, but in the simplicity of the gospel, to turn the mind to the light and life of Christ; and the Lord abundantly blessed his ministry to many."

The further account of his Christian Progress states: "I saw it was my place to retire inwardly to the Light, to the Grace of God, the immortal, incorruptible Seed, the ingrafted Word, which is our Divine principle, frequently testified of among the sad people, according to Holy Scripture, 'I had a spiritual warfare to go through, and a body of sin to put off and be destroyed.' I knew a real necessity of the work of sanctification, inward cleansing from sin, and being born again. That is the new birth which is born from above, which only is entitled to the kingdom of Christ and of God, which no unclean person can inherit."

In those days, the narrative says, "We had little preaching, but our meetings were kept much and often in silence, or but few words declared. The Lord was pleased sometimes by his power and word of life to tender and open my heart and understanding, so that He gave me, among some others, now and then a few words livingly to utter. It was out of these, and such frequently silent meetings, the Lord was pleased to raise up and bring forth living witnesses, faithful ministers, and true prophets, in early days in Westmoreland and other northern parts, in the years 1654 and 1655."

As to the manner in which the gift of the ministry must be exercised, G. W. says: "Keeping silence before the Lord, and drawing near to Him in a true silent frame of spirit, to hear first what the Lord speaks to us before we speak to others, is the way for renewing our strength, and to be his ministers, to speak to others only what He first speaks to us."

We believe it is reasonable to revive this narrative, and thus afford to call attention to the doctrine held by our Society on the subject of ministry, because there is reason to believe that in some places opinions and practices are

A Visit to the Nickel Mine in Lancaster Co., Pa.

(Concluded from page 170.)

We were kindly received by Captain Doble, the Superintendent of the mine, who selected for us specimens of the ores which we could not otherwise have obtained; showed us the machinery used in working the mine, and gave us much information.

The mines are situated in the belt of country lying south of the Gap Hills (or Mine Ridge), and north of Chester Valley. The general rock of the country is of a shelly or slaty structure, abounding in mica, and colored red with iron. At the mines there is a mass of dark colored rock, almost black, which is largely composed of *Hornblende*, a material which differs from mica in composition, color, and in the form of its crystals. It contains as its principal ingredients, Silica, Magnesia, Lime and Iron. The Granite and Gneiss rocks often contain *Hornblende* in place of mica, giving them a dark color and great toughness. The *Hornblende* Rock at the Nickel Mine is a comparatively narrow deposit, averaging about 300 feet in width. On its southern side a long and deep chasm has opened at some remote period, between it and the slaty rock which had joined it. This chasm has been filled with metallic ores, which have been brought there in solution in the water, and crystallized from it on the adjacent rocks, forming what is termed in mining a *vein*. Such chasms or long, narrow openings in the earth, are very common in volcanic countries; and may form whenever there is any disturbance of the earth's surface. They must have been numerous in former geological periods when the surface of the earth was being elevated in some parts and depressed in others. We find them along the whole chain of the Rocky Mountains and the Andes; and in them are contained the deposits of silver, gold and other metals which those mountains furnish to the miner, and which have been brought there in solution and there stored in the same manner as the Nickel in the Gap vein.

"When a bone in our bodies is broken," says T. Sterry Hunt, "nature goes to work to repair the fractured part, and gradually brings to it bony matter which fills up the little interval, and at length makes the severed parts one again. So when there are fractures in the earth's crust, the circulating waters deposit in the openings mineral matters, which unite the broken por-

tions, and thus make whole again the shattered rocks. Vein-stones are thus formed, and are the work of nature's conservative surgery."

The Gap Nickel vein has been traced for about 2000 feet in length; its thickness (the width of the original fissure) varies from 4 to about 30 feet, and some places reaches to 60 feet; its depth is unknown, as the deepest shaft yet sunk in it, which is 235 feet, failed to reach the bottom. The ore, as is nearly always the case in metallic veins, is a mixture of several metals, all combined with sulphur. On picking up a piece from the pile under the shed where it is sorted, I could see the bright lustre of the Copper Pyrites, (Copper and Sulphur) resembling in color polished brass; in another part of the same fragment the Nickel had taken the place of the Copper. It was of a redder tint than the Copper, though the color was not as conspicuous as the metallic lustre. Intermingled with these were the black crystals of the *Hornblende*. The Superintendent gave me an interesting specimen of pure Nickel Pyrites (Nickel and Sulphur) which consisted of delicate needle-shaped crystals compacted into a mass, with the free ends of the crystals projecting as fine points like the pile on a piece of velvet plush. In addition to the metals already named, iron and cobalt are present in small quantities.

After the ore is raised from the mine, the parts which consist principally of *Hornblende* are broken off, and the more valuable portions are put into large roasting kilns, each of which holds about 100 tons of ore, and a fire of wood kindled under it. The sulphur which is present in such abundance in combination with the metals, burns as it is liberated from them. When once set on fire, the kiln will burn for 4 or 5 weeks without other fuel. This roasting frees the ore from most of the sulphur it contains. The roasted ore is then mixed with limestone and quartz, which act as fluxes, melted in a smelting furnace and cast into bars, which contain nickel, cobalt and copper. This mixed metal is then sent to the refining works in Camden, New Jersey, where the different products are separated from each other.

The Gap Mine was first discovered about 170 years ago, and worked for copper, at intervals, by different companies for 80 or 90 years, but without obtaining enough metal to pay the expenses. In 1849, after it had been standing idle for 30 or 40 years, a stock company was formed, and mining operations resumed. The Nickel ore was thrown aside as useless, being supposed to be Sulphuret of Iron, a very plentiful mineral. In the beginning of 1852, the present superintendent came there to work as a miner, and discovered that what was supposed to be worthless refuse was not iron, but some other mineral. An analysis showed that it contained Nickel. In 1862, Joseph Wharton of Philadelphia, the present owner, purchased an interest in, and subsequently became entire owner of the property.

The ore as it leaves the mine contains only from one to three per cent. of Nickel, so that it is not surprising that previous attempts to work

the mine have not resulted in pecuniary success. That it has been profitable to the present owner is an evidence of the business skill with which it has been managed.

Nickel is found in many rocks, particularly in some of the serpentine beds—but seldom in such quantities that it can be mined to advantage. Until recently the Gap Mine was the only one in this country which was worked for the sake of this metal,—perhaps that is still the case. In New Caledonia, an island in the South Pacific, there is a mine owned by French capitalists, which contains a far richer ore. The company which controls it would have a practical monopoly of Nickel production, were it not for the competition of the Lancaster County Mine. In the mines of Germany and other parts of Europe, Nickel is found in considerable quantities combined with Arsenic.

In the neighborhood of the Lancaster County Mine, we met with some interesting traces of the existence of another fissure or dyke in the earth's surface. A mile or so before reaching it, we saw some large stones by the road-side, whose surface was weathered into a peculiar rusty brown hue, but whose freshly broken parts showed that they were composed of a hard, black or greenish-black rock of uniform texture. There was in their shape an approach to a crystalline form, as they had flat sides and regular angular edges, quite unlike the ordinary stones of that region. They were *trap* rocks, and came from a long and narrow cleft in the earth's surface, which has been filled with this material, perhaps pressed up from below in a melted state. This fissure, or *dyke* as it is termed, has been traced about 25 miles, running in a south-west direction from the Welsh Mountain to the Susquehanna River. Such *dykes* are found in many parts of the country, and some of them are of great width—such as that which forms the Orange Mountain in New Jersey. The crevice in Lancaster County appears to have been quite narrow, in some places perhaps not more than 40 feet wide. Others are known in which the trap is but a few feet in thickness.

The analysis of trap rocks shows that they contain a considerable variety of substances commingled together. Of these Silica forms about one-half of the whole. Alumina, Iron, Lime and Magnesia are also present in considerable quantities. J. W.

The love of the indecent in art and literature is so uniformly associated with social decay that we cannot but regard its increase as ominous of evil. It is a sure sign that a people has come into such a collision with that part of moral environment which consists of the eternal laws of purity and righteousness as must end in its destruction if there be no change for the better. As yet public opinion is on the side of decency and purity, but it will not long continue so, if writers of evil books continue to poison the minds of myriads of readers. Society must fight their influence for the sake of its own life.—*The American.*

FOR "THE FRIEND."

Concerning a Tract—with a Letter and a Narrative by the Receiver of the Tract.

The following letter, penned by one who is a writer of true and helpful narratives, and who lives in one of the New England States, is submitted for insertion in THE FRIEND, under the belief that its personal will afford some encouragement to the Book and Tract Committees in their useful work, and that it may incite our members generally (as lately recommended by E. M.) not to neglect any right opportunity for handing out or sending abroad the literature of our Religious Society:

"I have been very much interested in 'A Concise Account of the Religious Society of Friends,' finding in it a good many facts with which I was not familiar. It has made plain to me my mother's belief, that I always considered peculiar. She was a good Christian woman, fond of her Bible and of silent communion, not fond of church-going, of ministers, or of prayer meetings. She did not consider baptism, communion, or church membership necessary, and always said all those things were of the heart.

"When I was baptized, I asked her if she objected, and she said, 'Not if you think it necessary; but I think the Lord looks at the heart and not at any outward forms.' From her I have gained and kept many of these opinions, in regard to the Holy Spirit in particular; but I did not know that she had authority or sympathy for her ideas about the ordinances; and I find that I have been a good deal of a Quaker without knowing it.

"I remember when quite a child, hearing mother and her sister [the latter being named from an exemplary teacher of the Society of Friends] talking of these things, and they said if they lived where it was possible, they should join the Quaker Meeting, and bring up their children in that way. Mother used to tell me so much of what she was taught at that school, that it seems almost as real to me as if it was my own experience. She once dressed a doll for me, to show me the plain dress and bonnet of her early friends, but she would not even let me take it in my hand; but after I had looked at it as she held it from me, she ripped it in pieces—to my great disappointment—as something too sacred to be carelessly played with."

"The study of the little tract has brought my early life back to me with great vividness, and I can now understand mother's delight in getting us all off to church or prayer meeting, and saying: 'I shall be much happier and better satisfied here at home by myself,'—and I remember, too, how serene her lovely face would be on our return? It gives me a peculiar

"The feeling of the parent doubtless was, that as the simple attire of the Friends had commended itself to her, as being in accordance with what the Scriptures and the witness in her own heart had told her, became alike and unaltered, she bore her a repugnance to permitting the representation to be bandied about as something simply peculiar and mirth-provoking, and to that extent, as likely to have an effect in preventing her young friends from taking up the cross in the matter of their own apparel.

"It was undoubtedly a sentiment skin to this, which led F. E. Willard to treat, as she did, the subject of the teaching power of dolls in her recent tract on 'Dress and Vice.' She wisely advises that French dolls, filled with rags and tow, be not given to the little ones, if we would keep them from bestowing overmuch attention on their dress.

"I would probably judge wrongly were we to conclude that this mother was indifferent to the admission concerning the assembling of ourselves together. Was

satisfaction, that you will understand, when I tell you that it has been a trial to me ever since mother's death, that she was not baptized, and did not unite with any church. That feeling is now quite dispelled. I always felt that she had the inward assurance of her acceptance with Christ. Had she had some one to talk with who understood her, she would have been more free in her expressions of belief, but, as it was, 'P'—was always considered peculiar, and sometimes was almost persecuted by a severely orthodox near neighbor * * * for neglecting the means of grace, as they considered the revival meetings. She was at least consistent, never being moved from her life-long habit of silent communion, even when ——— was holding meetings only a few rods away."

The writer of the foregoing, in the current number of the *American Messenger*, repeats a story told by an elderly teacher and preacher among the Indians, who, many years before, had gone West with the expectation of serving as a colporteur among the white settlers. An open-air meeting had been appointed for the Indians on a certain First-day, to be held near the confluence of two rivers, where the tribes sometimes came together around their council fires. On the morning appointed, the colporteur was greatly disappointed "to find the rain falling as if the very windows of the clouds were open." He was quite ready to conclude that it would not be worth while to go through the beating storm the ten miles' distance to the meeting-place; but a friend with whom he sojourned, and who knew the character of the red men better, told him that if he was not faithful to the appointment, he would find that the Indians would not be. Thus encouraged, he set forward with his friend on horseback, fording two rivers; and, as they reached their destination, "tall, lank, dripping figures were seen moving swiftly to the place of meeting."

Instead of the expected dozen or score of attenders, more than 150 were present, some of them having come fifteen or twenty miles, some on horseback, many on foot. They gathered under a huge oak, at the foot of which a little mound of turf-covered roots made a natural elevation for the speaker. "A few could understand me," proceeded the latter; "an interpreter made my meaning clear to the rest. All listened eagerly, so eagerly that my heart was wrung with a great pity, and tears mingled with the raindrops that poured down my face. There these rapt listeners stood all day. A few of them had blankets; the preacher held the only umbrella in the company, to protect his Bible when he read it to them." The Indians were afterward supplied with tracts and copies of the New Testament; and though it might be questioned what good they could do if the recipients could not read them, yet, the Indians having learnt of the good tidings, would take occasion to ask the hunter or herdsmen or trader who came among them, to read the printed pages; and so the Indian and the white man—the latter perhaps a wanderer far from his home—would be instructed together. J. W. L.

It is not rather evident, that, having experienced the stated "church services" to be a burden to her spirit, she felt the requirement, and knew of the blessing of that communion with the Father and the Son which becomes the happy lot of those who seek Him in faith and with faithful lives? Who, if meetings are accessible, the faithfulness of many elders, though weighed down with years and many infirmities, has often been instructive and stimulating to those who are younger in years.

FOR "THE FRIEND."

Journal Kept by Martha Routh, on her Passage from London to America.

Martha Routh was a minister in the Society of Friends, who resided at Manchester, England. Some account of her life and travels is published in vol. M. of the Friends' Library. She twice came to America on religious visits. The Journal from which the following narrative is extracted records her experiences during the first of these voyages. It contains much that is instructive, and gives a pleasant insight into the life on shipboard of the company of congenial Friends, all or nearly all of whom we appear to have been members of the same religious Society. It also furnishes, in its description of the tedious delays occasioned by baffling winds, and its allusions to the danger of falling into the hands of wicked and evilly-disposed men, an interesting contrast with the ease, quickness and safety with which transatlantic voyages are made in these days of steam and of peace.

The manuscript volume from which this is taken is one that belonged to the late Martha Jeffers, who (then Martha Sharpless) was a teacher at Westtown Boarding School in 1803, and was connected with that institution in after years as a member of its Committee, and afterwards as Matron.

"On Second-day morning, 21st of the Seventh Month, 1794, I had a near and solemn parting with my dear husband and my sister North, at our kind friend's, Simon Baileys, in London, with divers other friends, amongst whom was my beloved brother in the bonds of the Gospel, Thomas Scattergood, who has lately arrived from America on a religious visit to Friends in Europe, and who had then to bear a deeply instructive, encouraging testimony to the sufficiency of the Lord's power, who called forth his servants and hand-maidens to go from land to land and sea to sea to preach the Gospel of his Son.

"They accompanied us to the river, when I went on board. The ship I embarked in was the *Bareley*, bound for Boston in New England; owned by the sons of my dear and justly valued friend, W. Rotch, who embarked for Gravesend

"Of this worthy minister of the Gospel a Journal was published in the 28th volume of Friends' Library. He was born in 1748, and died at his residence in Philadelphia in 1814.

"He spent six years in a religious visit in Great Britain, where he arrived about the middle of the sixth Month, 1794, a few days before Martha Routh left to perform a similar service in his own country.

"Joseph Kite, in his *Arm Chair*, describing the worthies who had rested in that ancient seat, thus speaks of T. Scattergood:—

"Here Scattergood, when evening came at length,
From the day's toil reposed his weary strength;
From his country sympathy that solace drew,
Which those can grant who heavenly joys pursue.
Mourful of spirit, he was ever found
In sympathy with souls by sorrow bound.
As fell his plaintive voice upon the ear,
The poor in spirit felt a friend was near.
He prompt in his duty at the house of prayer,
To plead with fervor for his Master there;
While crowds long trembling on that zealous tongue,
Which only woke as living waters spring.
He never once had himself—his every word
Directed to his slain and risen Lord.
He to the weary, consolation brought,
He for the burthened sweet deliverance wrought;
The' loath himself, the fettered set free—
"Who, I regret, his age was he."
[Wm. Rotch was a prominent Friend of Nantuxet, who took an active part, during the Revolutionary War, in obtaining protection for the inhabitants of the island and their vessels from both the British and

in company with his wife and daughters, and John Wigham from Swotland, and my valued friend and fellow-laborer in like religious prospect with myself, to visit Friends in America. We also had as passengers Elijah Waring, John Gilbert, Joseph Merfield and Henry Kendal, who were going to settle in business,—likewise two young women,—Elizabeth Pritchett of Dorsetshire, and Elizabeth Wood of Boston in Lancashire, all members of our Society. Having a fair wind, we got to Gravesend in about three hours, where we cast anchor, and for some time employed ourselves in setting our several matters in the cabin.

"In the afternoon several Friends came on board and drank tea, and on Third-day many more came from London to accompany our beloved elder brother in the truth. Samuel Emlen, who seemed peacefully set at liberty from the religious engagements he has been exercised in, in Ireland and England, particularly in London, where, there is cause to believe, he left many seals of his ministry, and when it's likely many would feel as those did, when

American commanders. After the close of the war, and the acknowledgment of the independence of the colonies, the duty imposed on foreign oils by the British and French Governments so crippled the whaling interests, that he and others obtained concessions from the French Government, and returned to Dunkirk, in France, where quite a colony of Friends were established for a time, who sent out many vessels in the whale fishery. An interesting account of these circumstances may be found in the 43th volume of *THE FRIEND*, page 349, &c.

"On the approach of war between France and England in 1793, William Rotch removed from Dunkirk, in order to save his vessels from being captured by English cruisers, and after spending a year in England, returned to America in 1794, in the same vessel with Mark Wigham. He soon afterwards settled in New Bedford, which became his home during the remainder of his long life. His history shows that he was a man of unusual energy and enterprise; and faithful in supporting the testimonies held by the Society of Friends. His benevolence was held in high esteem by his fellow-townsmen is shown by the notice of him given by Daniel Ricketson in his history of New Bedford, which speaks of "the venerable and patriarchal appearance" of William Rotch in the latter part of his life. "Tall and dignified in his person, his face expressive of benevolence, with his long, silvery locks, and the drab-colored suit of the style of the Society of Friends, combined with his noble and philanthropic character, rendered him an object of profound respect to his fellow-townsmen."

"Friend Rotch, as he was called, was a fine specimen of a merchant, a man of the strictest integrity; frank, generous, high-minded in its truest sense, but truly humble in his own self-estimation; of broad and liberal views, devoted to the principles of peace and good will; a friend of the oppressed and down-trodden; in fine, a more perfect character has never fallen to our lot to be known."

*Of this devoted minister, whose home was in Philadelphia, the *Arm Choir* says:—

"Here too has sat,—like him of stature, small,
Great, too, of heart,—a minister like Paul,—
One who, obedient to his Master's will,
Went forth to found his duty to the full;
Six times went EMLEN bound with Gospel chain,
On Christian errands o'er the Atlantic main;
And still, returning from his work of love,
Came with the olive-branch and peaceful dove.
The French Government, and on great occasions, the lamp of Truth still brightly burned with him, Showing distinctly in its searching light,
Deeds that the actors deemed were hid in night.
His Urin and his Thummin were with God,
And he obedient to his Master's nod.
A secret feeling told him of his feet's wear,
The sufferer's door-sill soon his foot would press.
Thus Mercy led,—and pleasantly he said,
That he, 'by jobbing earned his daily bread."

An interesting account of Samuel Emlen may be found in *Biographical Sketches of Friends of Philadelphia Yearly Meeting*.

parting with an apostle of Christ; weeping much because they expected to see him no more. He, with said Friends, came and drank tea with us in the ship that evening, at whose request I went on shore; lodged at an inn, and being poorly with the sick headache, I soon retired to bed, and by morning was much recruited: when, after breakfasting together, and our dear friend William Rotch being arrived, we went on board, and after another solid parting with friends, weighed anchor, and sailed to the Noire with a pretty fair wind, then cast anchor again with about eighty vessels more; among them was the *Ohio*, in which T. Scattergood had come from America, with John Jay, the ambassador who came to settle matters between the Court of England and their State.

"Fifth-day, Seventh Mo. 24th. Beat against wind and tide, which caused a great motion, and brought on sea-sickness to most of us, though I seemed to have a less portion than some; yet too much for writing, which my kind friend W. Rotch did for me, to my husband; which letter, with others, the pilot took on shore at Deal, where he left us at anchor.

"Sixth-day, Seventh Mo. 25th. Continued at anchor—the wind being against us, the sea rough, and sickness continued; but towards evening got more calm. I slept comfortably that night, and waking early in the morning felt much refreshed both in body and mind—the latter being humbled and contrited to silent weeping, in my little but commodious looking-room, under a fresh sense of the beautiful dealings of infinite wisdom towards me, even from my childish years; and great was the love that was renewed in my heart towards my fellow-passengers, and in a particular manner beyond the power of expression towards Wm. Rotch, who for some years hath been to me a brother beloved in the unchangeable Truth; and as our friendship did not commence on the surface of things, but in a heart-felt cement, flowing in a language as when deep uttereth unto deep; so it hath continued gaining ground on that Rock which cannot be shaken, nor against which the gates of hell shall be able to prevail, and under which humbling unting impression a trust was renewed, that our Heavenly Pilot would in his own time land us safely together at the desired port: for which fresh mark of Divine regard, my soul desired to render the tribute of praise unto God, who is worthy for ever.

"After rising, found myself so recruited I was able to lend a little help to my dear friend, E. Rotch, &c., in their domestic affairs. Though we were many in the cabin, and sometimes driven together in little nooks, I think it may be safely said we are a family of love, and desirous to accommodate one another. My little state-room proves the sweetest part of the ship; by being most in the centre of the cabin, is least subject to the small common to vessels. When in bed, can readily get at all I want about me; have room for my easy-chair, and at the bottom of my crib, another seat, that I can invite a friend to sit with me, which our beloved friend, S.

"John Jay was one of the most eminent and purest of American statesmen. He was the first Chief Justice of the United States, and was employed in various diplomatic missions. In 1794, the time when he crossed the ocean with Thomas Scattergood, he was sent to negotiate a commercial treaty with England, which he successfully performed. Appleton's Cyclopaedia of Biography says of him:—"Beloved by friends-respected by political opponents, honored by all, he died on the 17th of May, 1829; and it may truly be said that our country has no purer name inscribed on the list of her worthies than that of John Jay."

Emlen, is kind enough often to occupy; whose company is at all times very pleasant. His eyes being dim and mine not being very strong since I have been on board, L. and M. Rotch frequently read to us, much to our satisfaction; their father and mother, &c., being within hearing—thus we go on pleasantly when the vessel is moderately still, which continued so much so till late on Seventh-day evening, that I went on deck after dark, just to take a view of the water. It had a solemn appearance, and though nothing terrifying, my mind was touched with a feeling for those who had the care of the vessel, in thinking how trying it must be to such, in dark and stormy nights.

"About two o'clock on First-day morning, Seventh Month 28th, I heard the captain call to his men, telling them the wind had got more in our favor, who quickly were upon deck, weighed anchor and set sail; but the wind blowing hard and not quite fair, we had a tossing time, till we anchored again at Dungeness, when we retired quietly together in our cabin in the latter part of the afternoon. Though on sitting down I felt very feeble, both in body and mind, the latter became a little helped through the impression of a belief raised thereon, that many brothers and sisters from whom we were separated in body, had been caring for us, and breathing on our behalf, both in public and private, to the great Preserver of men; which felt humbling, and accompanied with secret desires on mine own account in a particular manner, that I might for one be watchful over myself; and feeling it spread towards others, I had liberty, though in weakness, to make some mention of it, which was followed with instructive addition from dear S. Emlen. In the evening, we sat together again, and some of our young men read to us, when, after a pause, dear J. Wigham had to revive again in our hearing, a passage that had been read—'It is not in man that walketh to direct his own steps,' &c.—from which he was led to drop several instructive remarks, in a particular manner, to the young men; followed by S. Emlen, in tender, emphatical expostulation; and I believe our minds according to our measures were bowed in thankfulness, for being owed together through the renewings of his Power, who in former years ordained a morning oblation, and an evening sacrifice."

(To be continued.)

FOR "THE FRIENDS."

We believe our meetings for worship are of Divine institution; for our Saviour said, "where two or three are met together in my name, there am I in the midst of them," to own and to bless; and He is the guide and teacher of his people—of all who are met in his name and power. And we believe our meetings for discipline are of Divine institution, to see that we keep our bodies in subjection, and that our outward appearance and our conversation, be in accordance with our high profession of being led and guided by the Spirit of Truth. And this is so much of an outward rule that it is thought best not to advert business meetings on First-day, lest it should divert the mind of some from the "one thing needful." Though, in business meetings we should wait to be guided by the same spirit, lest we may instead of forwarding the work.

George Fox was sent to establish Monthly and Quarterly Meetings. But he never held any Bible schools. He says, "The Lord opened to me, that to be bred at Oxford or Cambridge was not enough to fit and qualify; men to be

ministers of Christ; so that which opened in me, I saw struck at the priest's ministry." Now in our meetings for worship, when we attain to the object of meeting—feel something of the solemnizing sense of God's love—should we not try to carry some of this feeling home with us? and not too soon turn our attention to a study of the written law, lest it should dissipate the solemn thoughts of some young and exercised mind, and rather lead back to the outward law, than to the law of grace, and Spirit of Christ in the heart; and thereby cause some who are weak to look too much to those who are learned in the words of Scripture. "For the promise was not to Abraham or to his seed through the law, but through the righteousness of Faith; for it is by which are of the law be heirs, faith is made void and the promise of no effect." But they have not all obeyed the Gospel, for Esaias saith, Lord, who hath believed our report? So, then, faith cometh by hearing, and hearing by the word of God. But I say, "Have they not heard; ye foolishly, their sound went into all the earth, and their words unto the ends of the world."

It is not so much a want of knowledge that is needed, as it is a want of care, and a willingness to deny self: take up the cross, and obey in the little, and follow that light which leads away from the fashions and sins of the world into great simplicity, honesty, love and holiness, which will bring acceptable honor to God, and promote our present and eternal happiness. Did not George Fox, in his trouble, go to the most reputed as learned teachers in his day? but could find none that could speak to his condition, or give any relief; and he remained in great trouble until it was shown to him, "that Christ alone could speak to his condition." O! what a relief to be turned from men to the Saviour of the world—to Christ in his own heart. And verily, George Fox tried to turn all his hearers from the teachings of men to the Spirit of truth in their own hearts. He labored to bottom them on Christ within, as their teacher.

We have the Holy Scriptures, for which we should be thankful, and should read them carefully and often; but many parts are a sealed book until our understandings are opened by the Holy Spirit, which inspired the holy men who gave them forth. Even the disciples of Jesus needed to have their understanding opened by Him. "Without Him, we can do nothing" rightly. Without Him, we shall be blind leaders of the blind, and shall both fall into the ditch of thinking we have attained something by learning the words of Scripture, and teaching others in our own time and will; like some poor mother who thought her child had done a meritorious thing to say over a few words of prayer which she had taught him; and tried to make him think he merited a reward, though he felt no sense of need.

The Jews had the Scriptures and read them; yet they were enemies of Him of whom they so fully testify. They felt secure, and thought they had in them eternal life; and they were much taken up searching them; but they would not come to Christ that they might have life. The tendency of such teaching is to cause the hearers to depend too much on Scripture; and to lead them into too much liking to hear the best intellectual teachers, instead of watching and waiting in solemn silent exercise.

George Fox says, "I fasted much, walked abroad in solitary places many days, and often took my Bible and sat in hollow trees and lonesome places." His Bible reading was in private, a good example for us. He says, "I kept much

as a stranger, seeking heavenly wisdom, and getting knowledge from the Lord; and was brought off from earthly things, to rely on the Lord alone."

With the salutation of love to all who are seeking the right way of the Lord, I conclude,
ROBT. KNOWLES.
WEST BRANCH, IOWA, Twelfth Mo. 18th, 1888.

FOR "THE FRIEND."

Exhortation to the Young.

My mind has been brought under exercise, and a living concern felt for the dear youth, and those who are setting out in life, in our Society, that you may be so wise as to "choose the Lord for your portion, and the God of Jacob for the lot of your inheritance;" then you will have nothing to fear, save the fear of offending Almighty God in thought, word, or deed. Be willing, dear ones, to take up the cross and deny yourselves of every sin-pleasing pleasure,—the lusts of the flesh, the lusts of the eye, and the pride of life, which are not of the Father, but are of the world that lieth in wickedness; and follow a meek, and one crucified by now arisen, and glorified Saviour and Redeemer. May you be more and more weaned from the world, and the things of the world—its manners, its maxims, its fashions and its delusive pleasures; and your affections set on things above—on Heaven and heavenly things—where Christ our Redeemer "sitteth on the right hand of God."

The way to the crown is the same that ever it was; it is by the way of the cross. "Christ's cross is Christ's way to Christ's crown," says William Penn. You cannot keep yourselves; it is only as you are obedient unto the Spirit of Truth as made manifest unto you in the secret of your souls, that you can be preserved from the snares of the cruel enemy who goeth about not only as a roaring lion, seeking whom he may devour, but also as a cunning serpent, to beguile and draw away the mind after forbidden things. His baits are strewn thickly to catch the feet of the unwary. He holds up to them pleasing pictures, and tries to persuade them that there is no harm in this or in that indulgence, with which the Spirit of Christ would make them uneasy. It may be in fondness for dress, or in music and singing, or in attending places of diversion—and so he would keep the mind afloat on outward things, things that perish, above the cross of Christ, out of the true fear of God.

O! dear ones, such as do hearken to the insinuations of the enemy, and are drawn aside by him, will suffer loss and bring trouble upon themselves; and it will only be through unfeigned repentance towards God, that you can receive forgiveness and be brought into favor with Him, the Lord of life and of glory. O! hearken not unto the enemy, for he was a liar from the beginning, and abode not in the truth; but hearken unto the "still, small voice of Christ," who standeth at the door of your hearts, knocking for an entrance there. O! keep Him not out until his "head is wet with the dew, and his locks with the drops of the night," but open unto Him, and He will come in and sup with you, and you shall sup with Him.

Love retirement, and commune with your own hearts and be still; read daily a portion of the Holy Scriptures; with your minds turned inward to wait upon God; that you may know your spiritual strength to be renewed in Him, that you may run the way of his commandments and not be weary, walk and not faint. Read, also, the approved writings of Friends, make yourselves acquainted with them, and you will

find this to be not only a profitable but a pleasant employment. And do not give way to lightness or foolish talking and jesting, or go into unprofitable company, which will be a disadvantage to you, disqualify you for serious reflections, and beget a disrelish for good and profitable reading. O! you cannot be too careful on these points. I feel to encourage all our dear young Friends to be faithful unto Him who is calling to glory and to virtue—faithful in little things as well as in greater.

I will add a few extracts from the "Introductory Remarks" to volume I. of "Friends' Library":

"The records of the Society show a long list of worthies, whose dying hours and sayings bear ample testimony that the principles in which they had lived, and by which they endeavored to regulate their actions, did not fail them in the near prospect of death and eternity; but administered all that support, consolation and animating hope, which give to the death-bed of the Christian its peculiar interest.

It is especially obligatory on the members to be conversant in these matters. Ignorance of them, where the means of information are accessible, is discreditable, if not culpable.

"If the things which belong to our peace have a due place in our affections; we shall meditate with pleasure on the experience of those who have trodden the path of virtue before us. The fervor of our piety, the strength of our attachments to religious truth, will be promoted by frequently perusing their excellent writings, and dwelling in serious contemplation on the bright example they have left us, adorned with the Christian graces, and inviting us to follow in their footsteps.

"To whatever department of human pursuit we direct our attention, we perceive that men delight in the productions of congenial minds. He who finds that he has little relish for serious things, and that it is difficult to fix his attention upon them, may safely infer that his heart is not right in the sight of God, nor its aspirations directed towards the kingdom of heaven.

"The religious man delights to dwell on those things which concern the salvation of his soul. He feels a lively interest in the saints and holy men who have entered the celestial city before him; and as he contemplates their blameless walk, their faith and patience under trials, their simple obedience and dedication, and above all, the blessed animating hope of an eternal inheritance, which shed a bright radiance around their dying beds, his whole soul kindles with desire to arise and gird himself anew for the journey, and with increased diligence and ardor to press toward the mark for the prize of his high calling of God in Christ Jesus."

J.
WIXONA, Ohio, Twelfth Mo. 20th, 1888.

THE Christian life is a radically transformed life. It is not merely a life made better here and there, or now and then, while the vital principle, the ruling spirit, remains unchanged. An exceptionally affectionate child of four years, after gazing intently at his own miniature reflection in his father's eyes, naively asked, "Do you keep me in your eye when you are asleep?" As a true father is a true father at all times—a true Christian is a Christian at all times—sleeping or waking, resting or working, hearing or speaking, drinking or doing. The words of an unsophisticated child are often searchingly God-like. Do you keep Christ in your sight when you are asleep? "Whether we wake or sleep, we should live together with Him."

FOR "THE FRIEND"

Should almost any one of these so-called churches of the present time, cease to pay a regular salary to their hired minister, it would stop their preaching there and then; as was witnessed in a neighboring church only a few months ago. The services were opened as usual, and went on until the M. S. was laid on the desk, and then notice given by the minister that there would be no preaching until he received his pay. Then he quietly pocketed the sermon and went to his house, leaving the congregation to devise ways and means for raising the money; which was then done. Then the sermon was read in the evening. But should God withdraw his blessing through the power of the Holy Spirit, that would be little heeded by this class of preachers, so long as they could write a sermon and read it to the people, with the assurance that their pay was forthcoming.

Impress on our minds yet more forcibly, dear Lord, these words of Jesus, "Ye cannot serve God and mammon;" and also, "If any man love the world the love of the Father is not in him."

Friends, stand aloof from this hireling minister business. The writer knows from experience whereof he speaks, having in his younger years been in such communion, and held all offices therein, save the ministry (so-called), until the true light shined into his heart some years ago, convincing him that this ministerial gift cannot be bought and sold for money. J. D.

Banana Fibre.—Among the valuable products of the soil now largely suffered to go to waste, according to the United States Consul of San Salvador, is the fibre of the banana. This fibre which may be divided into threads of silken fineness, extends the length of the body of the tree, which grows without a branch from ten to fifteen feet high, and has a circumference at the base of two and a half to three feet. In Central America, the fibre, with no preparation except drying, is used for shoe-strings, lariats, and coils for all purposes. In its twelve months of existence, the banana tree bears only one bunch of fruit, but from two to four or ten trees spring from the roots of the one that has fallen. At home, the bunch of bananas is worth fifteen cents, and the deal tree nothing, though, if the supply were not inexhaustible, the latter would be worth ten times the value of the fruit to a corlage factory, paper mill, or coffee-sack maker. The banana leaf, with stems of the toughest and finest threads, is from two and a half to three feet wide and ten to fifteen feet long, and serves the native women of San Salvador as an umbrella in the rainy season, a carpet on which to sit, and a bed on which to rest.—*Exchange.*

A REBUKE, or a censure, may well follow a thoughtless or an otherwise improper act of a child, who had not had timely warning against such conduct; but specific punishment from a parent ought to be reserved for offenses where the risk of punishment was understandingly braved. Parents have a duty to warn their children against wrong-doing, and to instruct them in well-doing. Many a child receives punishment for a thoughtless offense, when it would be juster for the parent to be punished for having neglected to warn the child against that line of action. Wise parental control and discipline include a control and discipline of the parent's self, as well as of the child; and failure in this line is quite as common as failure in that.

WHITTIER.

[On his 81st Birth-day, TWELFTH MONTH 17TH, 1888.]

BY MARY H. LEONARD.

O noble Singer, who with amaranth crowned
Hast lingered 'mong us long;
Freedom's evangel and great Nature's pence
Are in thy song.
A nation's homage, and a nation's love
Rightly to thee belong.
Valiant for truth was thou, and bold to espouse
The rights of souls oppressed;
And yet, O gray-winged thrush, thy quiet strains
Delighted best
When thy unwandering heart its joy outpoured
From its sequestered nest.
No verse-wright thou, weaving with clever art
The complex coils of rhyme;
Nor thine, weak Passion's Muse that trails her robe
In Fairy's slum.
Thy simple measures lure us by the charm
Of thought and faith sublime.
Thou wast not understood by alien ears;
Thy strenuous music fell
Strange and uncouth on those who never felt
The mighty spell
Of freedom's force that rugged Nature casts
On those who woo her well.

But thy New England knew thee. All her moods
In bold simplicity
Hast thou portrayed. And now her sons dispersed
From sea to sea
Revere thy name, and cherish with delight
Thy noble poetry.

O Great Heart, weary with the futile strife
Of dogma and of creed,
How soon thou'lt rest thee free from thy fourscore years
Of God-like deed
In the Eternal Goodness which thy heart
Hath least interpreted!
—*The Independent.*

HER LIFE.

SELECTED.

She lived and labored till the lowliest things,
Walked at my side and talked, and oft did fill
The gracious hours that friendly twilight brings
With toil, naught questioning if good or ill
Were hers; soft lullabies she crooned at eve
Like poppies' breath falling down tenderly
On infant eyelids that gay sports would leave
To nestle close and sleep upon her knee.
Her life was colorless and commonplace,
Devoid of poetry—I thought it so,
For I was blind, and could not see the grace
That grew through common duties; now I know,
Since she is gone from me and all her cares,
I entertained an angel unaware.
—*Zetta Cooky, in "The American Magazine."*

THE TRANSFERRED SHEAVES.

SELECTED.

BY JAMES EVERHAM.

Two neighbors, blessed with a sufficient store
For winter's pressing need, and somewhat more,
Determined (each suspecting not his brother)
They'd make a gift of sheaves unto each other.

The first one said: "My neighbor John is poor—
No prattling children play about his door;
I'll take, then, these twelve sheaves for Christmas cheer,
And add them to his harvest of the year."

The second likewise said: "There's my poor neighbor,
With ten small months dependent on his labor,
I'll take these twelve full bundles, sheaf by sheaf,
And hide them with his own on Christmas Eve."
And so, when o'er the earth with radiance mild
The stars that shone upon the Saviour child
Shone once again, with the angels sang above,
Each neighbor paid his debt of Christmas love.

The morning broke; and each, as oft before,
Went forth for that day's portion of his store,
When lo! each saw the sheaves which he had given
Unto his brother, full restored by heaven!
—*Christian Advocate.*

FOR "THE FRIEND."

Some Account of Joseph Wilson.

(Continued from page 179.)

Fifth Month 13th, 1870. "My dear —, I thought perhaps thou would be willing to receive a few lines from thy often deeply tribulated father. The watch and warfare, the struggle of the spirit to be enabled to rise above the world, the flesh and the devil, admits of no abatement on my part. I do not know that I have much to communicate, but wish to remind thee that thou art not forgotten; no, none of our children are forgotten by their father, neither do I believe they are by their Heavenly Father; but they must do their part, the cross to the natural will and affections must be borne day by day, and self slain, if we are ever permitted to wear the crown immortal. I have had a sore conflict for months past, and am often brought to the acknowledgment that unless the Captain of salvation undertake for me it is vain to look for help elsewhere. I do not wish by thus writing to cast a gloom or discouragement over the mind of a dear child, but when thou art closely proven and neither sun, moon, nor stars appear for many days together, remember that others have trod the path before thee. I am not without hope that a brighter day will dawn, neither do I wish to be understood as complaining. No, not at all doubting but He, in whose hands are the times and seasons, knows best how to appportion to his creature man, the food most suitable and convenient for him.

Sixth Month 19th, 1870. "A few days ago, whilst travelling on the road, a fresh visitation of heavenly love seemed to be held out, and as I thought a nearer access to the throne of grace given me than has often been my experience; first on my own account for preservation and protection through the remaining days of my pilgrimage; and also for the beloved partner of my life, that the most High would be pleased to give her beauty for ashes, the oil of joy for mourning, and the garment of praise for the spirit of heaviness, and that she may in the winding up of her days be enabled to sing his praise on the banks of deliverance; and in an especial manner did my heart yearn for my only son, that the Lord would be pleased to turn his heart to love and serve Him, even as a man turneth the water courses in his field, that his life may be useful and his end crowned with a blessing which the world cannot give. And others not named were also brought livingly and sweetly before my view. It seemed right to make this record as an acknowledgment of the tender regard of a compassionate Saviour to a poor unworthy worm of the dust."

About the beginning of the year 1871, Joseph Wilson's health began to decline, previous to which it had generally been good. It was evident from some of his expressions (at an early period) that he entertained doubts of his recovery. On being queried with as to the cause of some conflict of mind which was sometimes apparent, he replied: "I feel that I have a very narrow path to walk in, and my fervent prayer has been that the preserving arm of Omnipotence may be round about." He spent most of the night for several weeks in his chair, his affliction enough preventing a reclining position. At one time remarking to one of the family—"the night has not been a tedious one to me." At one time he remarked, that the outward creation looked very beautiful; even the air seemed filled with fragrance. On being asked if the outward was all that appeared beautiful,

he replied: "I do not feel like complaining, I have been endeavoring to feel resigned, though my family and friends are very dear to me." At another time he said to one of his daughters: "I have been trying to number my blessings, and it seems to me that one of the greatest is, I have not much property to leave to my children."

On the 5th of Sixth Month, to a young Friend who bade him farewell, he said, "Thou art one of the younger ones, and from appearance may live many days. I want thee to give thyself up to the service of thy Heavenly Father, and not let worldly matters have too much place with thee;" and to another, "I want thee to devote with energy (in the strength that may be afforded) thy time and talents to the promotion of the good cause, and thou mayest be of much use in thy day and generation."

On the 6th, as — was about to leave (who had called to see him) Joseph thus addressed him: "Art thou endeavoring to make thy calling and election sure? Thou knows thou hast not always lived the life thou should have lived, and I feel a concern for thee that thou may so live as to know thy peace with God, while time and opportunity are afforded thee, for life is uncertain with all of us, even with the healthy and strong; the pale messenger may come in an unexpected moment, in an hour that thou thinkest not of, and my desire is that thou may be prepared for it. I know I have often erred myself, and come short of what I should have been, but I have been favored to feel that the Lord has not cast me off." In speaking of his sufferings, he said, that he appreciated few persons had experienced a greater change than he had; that previous to his being taken sick, he could lie down at night, without pain or restlessness, and sleep until morning; but after he was taken, his cough was so constant and his breathing so difficult that he could not rest or sleep much, which he found to be a trial; yet through all he did not remember murmuring but once, and added, I was very sorry afterward, and I believe the Lord forgave me for it.

(To be concluded.)

The greatest things in this world are but the outgrowth of little things, or at least the sum of many little things working together. The earth-worm cannot do the work of a great-plowed field of modern times, but many millions of insignificant earth-worms do vastly more plowing and fertilizing on the earth's surface than man can do with all his great inventions. The great forests come from small seeds, and the vast harvests reaped from the face of our prairies come from the handfuls of seeds broadcast into the ground. This vast universe is but the sum of millions of small operations of Nature. All God's greatest works are wrought by means of little movements which he has set going.

We can never know what the final result of a discouraging influence may be. When the Israelites were on the edge of the land of promise, ten men came back with a disheartening story of fierce warriors and great giants, and by their cowardly and unbelieving report they started a wild panic of terror among the people. The end of it all was forty years' wandering in the wilderness, and the death there of a whole generation. One discourager may always do immeasurable harm, turning courage to fear, hope to despair, strength to weakness, joy to sorrow, in many lives. One gloomy prophet of ill omens retards the progress and hinders the prosperity of a whole community.—N. N. Trues.

FOR "THE FRIEND."

WILLIAM PENN IN AMERICA, or an Account of his Life from the time he received the grant of Pennsylvania, in 1681, until his final return to England. By William J. Buck, pp. 416. Philadelphia, 1888.

The above is the title of an interesting historical contribution, compiled to some extent from original manuscripts not heretofore published. The author has, however, fallen into error in drawing conclusions which detract from William Penn's character in several important particulars. His qualifications as a statesman are rather grudgingly acknowledged, and whilst he is admitted to have been "naturally generous," there are intimations that he was both selfish and sincere; and he is distinctly charged with having been "unnecessarily severe and, perhaps, unthankful." None of these traits of character can be justly charged upon Penn, whatever his other faults may have been.

Disregarding the views of almost all of Penn's other biographers, our author says in his preface "We attribute most of his [Penn's] troubles, not so much to the opposition he encountered as to his own pecuniary mismanagement." And again, "It was his weakness—naturally generous, warm-hearted, and indulgent as a parent, he could not resist the strong appeals continually made to him, and hence his embarrassment." And in a later chapter he expresses surprise that other biographers have not "a word of reflection as to his capacity or abilities as a financier;" and asserts that being an "indulgent parent liable to credulosity, the chief cause of pecuniary distress arose directly or indirectly from its promoters indebtedness and extravagance."

It is safe to say that no sufficient evidence has been produced in support of these opinions. The author seems to find them on these circumstances. First: He thinks he saw somewhere in the Penn manuscripts that Letitia had an advancement of £2,000 upon her marriage to William Aubrey. Second: He surmises that William the younger had lost his father at least as much more. Third: That Judge Quarry, the Proprietor's "determined opponent" and enemy, made charges against him which, however, he admits in another place (page 288) that Penn ably (and we think successfully) answered.

Granting that he gave those sums to his children, the aggregate is small compared with what the colony had cost Penn. In 1703, which was after the Assembly had voted the money and excise mentioned by Quarry, and the subscription made by Friends referred to by the same writer, Penn tells us that his outlay on behalf of the colony was "above £30,000 more than he ever got." It must be manifest that the "chief cause" of his pecuniary embarrassment was his generosity to the colony and not his generosity to his children.

We are indebted to the author for furnishing some information from sources not heretofore accessible. N.

Twelfth Month 11th, 1888.

Many people still think that the best way to keep the peace among neighbors is to keep the fences high and tight between them. On the same general principle, some centuries ago, it was thought that safety could only be assured to those who had any thing to lose by living in strong castles upon high crags; in walled towns; in fortified and entrenched more private dwellings. In civilized countries all this careful isol-

tion has given place to the progress of better thought and sentiment. The fences are not yet all down; but where they have ceased to cut and cumber contiguous lawns, and even to fend off the traveled roads, it is sure to be taken as a token of improved tastes and lessened liabilities of injury to the abutters: a sign of increased confidence and right feeling between man and man—strangers though they may have been to each other.—Selected.

Natural History, Science, &c.

Ancient Monuments.—Among the remnants of antiquity to be found in Constantinople, is the Serpent Column—a copper column in the form of three immense serpents closely intertwined. The heads have disappeared and only the fragment of one of them is now in the museum, which Mahomet the Second, to prove the metal of his sword, is said to have cut off. On the summit of this column stood the tripod of Delphi, which the Greeks had consecrated to Apollo after the victory of Plataea. The column was brought from Delphi at a very early date, probably by Constantine the Great. On the coils near the base are inscribed the names of thirty-three Greek states which took part in the war against the Persians.

Honey.—The composition of honey varies somewhat with the flowers from which it is collected. The nectar of flowers contains cane sugar, but in the glands of the bees this is partly changed to glucose or grape sugar.

The most delicately flavored, and the whitest honey in America, is procured from the forests of Bass-wood, or Linden, and from the bloom of White Clover. The Buckwheat yields a larger supply but it is darker colored and of a more pungent taste.

Strained honey is often adulterated with glucose, and some samples of German commercial honey were found to consist wholly of this material. Of 79 samples examined in Massachusetts, 42 were found to be mixed with glucose. In 1887, the Dairy Commissioner of New Jersey examined 41 samples; of which only 16 were decided to be pure honey.

Astronomical Engineering.—At a meeting of the Engineers' Society of Western Pennsylvania, held on Eleventh Month 20th, J. A. Brashear gave an interesting account of his visit to some of the principal European manufacturers of optical and astronomical instruments. At most of their establishments but little machinery was used, but the accuracy attained was mainly due to the personal skill of the workmen attained by long training. "At the works in Paris, and at several other places, where they do a great deal of work that comes to America, you will find the workman standing turning a crank with one hand, and with the other working on his lens. And they work from early morning till late at night, grinding away, while the Yankee would be found with a machine doing it, the machine being obedient to his will. I was really much interested in their delicacy of touch. I suppose that the turning of that crank becomes automatic. They do not seem to know when they are turning the crank. The 'brain' is all put into the other hand, the left hand, with which they manipulate the lens." "I remember at one time being in great need of some one to help me. I hired a German who had been working on instruments of precision all his lifetime. In eight weeks I think I paid him something like \$125, and I got 8.45 for the work he did, and yet he worked as hard as he could all

the time. But he had been so used to working with foot lathes and the hand tools of the shops of Germany, that when he stood with the slide rest screwed up, getting along very nicely, he was still afraid it was going too fast, and his foot would be going all the time. That foot kept going all the time he was with me. He would never finish a piece of work by the slide rest without going over it two or three times and putting on the finishing touches by hand."

As an illustration of the accuracy required in astronomical instruments, J. A. Brashear mentions seeing a flat mirror of glass, 40 inches in diameter and 7 inches thick, in which the error on any part of the surface was less than one-hundred-thousandth of an inch. Such accuracy is needed in order that the image of a star or other heavenly body when reflected from the surface and magnified 400 or 500 times, should still show no error.

Alvan Clark, who made the glasses for the Lick Observatory, did most of his final work with the hand and the fingers. After grinding into shape and polishing his lenses, if testing showed any little error, instead of endeavoring to polish it out by the usual processes, he would gently run over it with the tip of his finger, until the error had been removed. "I," said Brashear, "have tried that process myself. After the rubbings the error looks larger, but you forget that the heat of your hand and the heat generated by the action of your finger has swelled it up, and many a time after work of this kind, on feeling dissatisfied with the appearance, I got up in the morning and found the glass all right, because the heat had let go."

Charming the Cobra.—Once a year, during the rainy season, the cobra lays from twelve to twenty eggs. In one specimen shown by Mr. Phipson, the young one is seen just as it is emerging from the egg. The tooth with which it cuts its way out is shed as soon as it has served its purpose. When born, the young cobras measured about seven and one half inches long, and were very fat; at the end of a few months, they were about nine inches in length, but had lost all their plumpness. It was very remarkable that the original nutriment got out of the egg should be able to sustain them so long. On account of its timidity and the great ease with which it can be tamed, it is the only snake with which the snake charmers will have anything to do. By attracting its attention with one hand, it may be easily seized round the body with the other; and so long as the hand or any other object is kept moving before its eyes it will never turn to bite the hand that holds it. This is the simple fact, the knowledge of which the charmers turn to such advantage in their well known performances. The snake is taken from its basket, and a slight stroke across the back brings it at once into a defensive attitude. The constant motion of the musical instrument before the snake keeps it watchful and erect, and not the music produced. As a matter of fact, snakes have no external ears, and it is extremely doubtful whether the cobra hears the music at all. The charmers say that the adder of the East, the Daboa, has no ear for music, because they cannot operate on it as they do on the cobra. It is rather interesting to note that this has been the belief since David's time at least,—like the deaf adder that stoppeth her ear, which will not hearken to the voice of charmers.—*Nature*.

Birds' Skins for Ornaments.—The *Animal World* [London], states that a dealer who was

interviewed, admitted that he had sold nearly two millions of small birds, for adorning ladies' bonnets and dresses. At a single auction 6,000 Birds of Paradise, 5,000 Impeyan Pheasants, 400,000 Humming Birds, with other birds from North and South America, and 360,000 feathered skins from India, were sold.

The Courage of Birds.—A year or two ago there was a fire in a German village, and a stork's nest built on a barn, and having two little storks in it, was caught by the flames. On seeing what had happened, the mother-bird quickly seized one of the little ones and bore it off to a safe place, followed by her mate, who stayed to guard it. Then back she flew to get the other young stork; but alas! she found that the nest had been burnt, and the little one had fallen through into the barn. The next moment she darted through the hole made by the fire and brought up the frightened birdie in her beak. The mother was thought to be unburt; but the next day she was picked up much wounded, but soon recovered.

A cat, having watched a fledgling blackbird escape from its nest, gave chase, rushing up the tree with the intention of getting on to the branch to obtain her prey. Meanwhile the parent birds had come upon the scene, and seeing the situation of their nestling, attacked the cat with the utmost bravery, alternately flying at her, using their beaks and wings incessantly with the utmost fury, and getting fearfully within range of the cat's claws; and while one was pouncing at her head, the other would execute a "flank" attack, both of them keeping up all the time that continuous, noisy, angry chatter which blackbirds so well know how to make on occasion. These bold, strategic movements confused the cat very much, as her position in the tree was not advantageous; but she kept snarling and striking out with her talons whenever an opportunity occurred. The interested observer tried to help the birds, but from the lower branches of the tree throwing missiles were not of much use. He was obliged to leave the exciting scene, but after a long absence returned, and found the combat still going on; and a person who had watched during the interval said the poor birds had kept up the attack without ceasing, forcing the enemy to keep on the defensive only; and this desperate struggle kept on for two hours, till the birds were exhausted, and sat "all in a heap," looking as though they had lost half their feathers. But they had kept the destroyer away from their little fledgling, and their friend at last managed to dislodge the cat.—*The Animal World*.

Artificial Bait.—In fishing for codfish on the Grand Banks, the Massachusetts fishermen usually take with them a supply of herring packed in ice for bait. If the supply becomes exhausted before they have caught a load of fish, they are obliged to return for more, at a great loss of time—because the Canadian law does not permit them to buy bait in the ports of that country. An experiment has recently been tried of using for bait a rubber imitation of the Squid, which is one of the sea animals on which the cod prey. Two rubber Squids were used, and eight codfish were taken—proving that they would bite at artificial bait.

Items.

Military Defences.—The endless expense involved in a system of military defences is shown in the experience of France. Ever since the Germans seized Alsace-Lorraine, France has strained every nerve to make for herself a new and impregnable frontier.

She has established three strongly entrenched camps connected by railways with each other, and she has erected an almost continuous line of forts, protected by armor plates, which are calculated to resist heavy artillery. Yet De Freycinet, himself an engineer, and the War Minister, has been obliged to place the eastern frontier of France in a proper state of defence, an additional expenditure of £40,000,000 is necessary. This announcement has proved an unpleasant surprise for the Budget Committee and the country generally. The year before the outbreak of the Franco-German War, France was spending not more than £15,000,000 annually on her armaments; at the present time she is spending the enormous sum of £25,000,000, and still she is defenceless. But this is not all. Of late the relations between France and Italy have been anything but cordial, and accordingly it has been resolved to erect a line of new fortifications on the Italian frontier also. It is said that recent discoveries of new explosives have made the iron armor-plates of the French forts almost useless, and that they must be replaced by a special coating of cement which possesses superior powers of resistance. No doubt when the cement is applied some new explosive will be discovered which will render it useless in the long run. So the heavy game of beggar-my-neighbor goes on, while it is as plain as daylight to everybody outside France, that if France would only forego her dream of the *Revanche* she would not need to trouble herself about a frontier at all.—*Echo*.

Observance of the First-day of the Week.—The Methodist Episcopal, Presbyterian (North and South), Baptist, and Reformed Churches, have appointed committees to co-operate in the formation of a national organization to promote the observance of the First-day of the week as a day set apart from ordinary labor. The *Christian Advocate* says, that at a recent meeting of the Union a petition was presented that contained the names of more than six millions of adult citizens of the United States, asking Congress to enact a law forbidding "Sunday" traffic and labor in the Government's mail and military service, and in inter-State commerce.

The Arab Slave Trade.—The attention of European nations has been much turned of late to the horrible atrocities of the African slave trade carried on by Arab traders; and military measures have been advocated to check in some degree this great evil. These are not likely to be very effective. So long as the demand for slaves exists among the Egyptians and Turks, means will be found to supply them, and the devastation of Africa will go on. The Society of Friends has long occupied a prominent position in opposing both slavery and war; and the *London Friend* of Twelfth Month, extends a salutary caution, that in supporting one of these testimonies the other should not be forgotten. It is to be regretted that the Society has not with one hand what He bids them set up with the other.

The Pennsylvania Institution for the Deaf and Dumb.—The Annual Report of this institution, for the year ending Ninth Month 29th, 1883, gives the number of pupils under instruction as 433, of whom 100 were in the oral department. The average cost of clothing, board and education of those was about \$251 per pupil.

Four hundred of the pupils are supported by the State.

Training in industrial handicrafts has been continued and developed; and many of those who leave the institution are enabled to obtain profitable employment in some trade learned within its walls. Of 51 new pupils admitted during the year, 23 were born deaf, and 15 of the remainder lost their hearing through some form of fever—mostly scarlet.

In the oral department the pupils are taught to articulate, and also to tell what is being said by watching the motions of the lips.

The pupils who enter the institution in most cases have their minds much less developed than children of the same age who can hear and speak. They must be taught to think, to reason, and to express their ideas in some intelligible manner. This requires patient, careful, unremitting labor.

A Year Behind the Times.—The governor of the Danish colony of Greenland receives by the ship which brings him his annual supplies copies of the daily papers of Copenhagen for the year preceding. He arranges these papers in order of their dates, and then quietly and calmly reads a paper each day, just as though it was fresh from the press. He is strongly tempted to peer into futurity by reading some papers ahead when he comes across interesting news; but he resists the temptation, no matter how anxious he is to know the fate of some measure. One day's paper for each day is his rule; and so at the end of the year he is thoroughly familiar with the news of the preceding year. He says he is just as happy as though he pulled each day's paper off the press.

THE FRIEND.

FIRST MONTH 5, 1889.

A letter, not designed for publication, recently received by the Editor from a friend in Kansas, relates a simple incident, which, with the comments thereon, seems to convey sufficient instruction to justify the insertion of a portion of it in THE FRIEND. The letter says:—

"A friend of mine from a distant neighborhood was at our house one or two nights lately, who is a non-professor of religion, and yet a man of a serious turn of mind—one who has given the subject of religion no little thought. During his stay in our family, we were drawn into conversation on the subject of experimental religion, and he remarked that he objected to very much of what was common in religious revivals, because it appeared to him that loud praying in such meetings had the appearance of a sensational effort, made for a present effect.

"Our practice is, and has been for many years, to read a portion of Scripture, with a season of silent waiting, or with such other vocal exercise as we may feel drawn into, at the breakfast table; and it was on this occasion that the above remark was made; and he added that what he had witnessed in our devotional session—silent, secret, thanksgiving and prayer—had afforded him solid satisfaction.

"To such persons, the commotion and noise of sensation and emotion are of no value—do not edify. It is easier to bring such persons to perceive the spirituality of the Gospel, than those who have been carried away by a misguided religious fervor or zeal; and such cases furnish the best evidence found anywhere, that the doctrines taught, and the practices resulting therefrom by our early Friends had their origin with the Lord Jesus Christ, and that the seal of the Father is upon their character."

Some persons are disposed to look upon an adherence to the ancient testimonies of the Society as an evidence of an undue attachment to what they regard as mere matters of form. It is very true that there can be no real religion without the experience of the life-giving presence and character operations of the Lord's Spirit; but the work of the Spirit leads its obedient followers into a simple, self-denying manner of life, and into many things which are disregarded by those under the government of the spirit of the world. The testimonies and "the practices resulting" from vital religion, may be looked upon as foolish by the wisdom

of this world, which cannot comprehend the things of the Spirit; but if they have their origin in the teachings of our Lord Jesus Christ, and in the operations of his grace, his children need not heed the criticisms of man.

SUMMARY OF EVENTS.

UNITED STATES.—For the year 1888, the exports of gold from New York were \$32,370,471 and the imports \$5,944,399; a net loss of \$26,426,072. In 1887, the exports were \$26,488,829, and the imports \$38,642,130; a gain of \$12,157,630.

The entire business portion of the town of Marblehead, Massachusetts, was destroyed by fire on the night of the 26th of last month. Thirty-seven buildings were burned, and the loss is estimated at not less than \$500,000.

The steamboat John H. Hanna was burned at Plaquemine, Louisiana, on the night of the 24th ultimo. There were one hundred persons on board, of whom about thirty perished.

The local steamboat inspectors at Memphis have nearly completed their investigation of the Kate Adams disaster. They find, from statements of the first clerk of the boat, that the Adams had 197 persons on board when she took fire. Of these 185 are known to have escaped, leaving 12 on the boat. The inspectors are satisfied that the fire originated in a sack of cottonseed forward of the boilers.

Thirty-one States and Territories now observe Arbor-Day.

The Wisconsin State Grant will ask the Legislature for \$2,000,000 to be expended in agricultural education.

The Chicago Times says, it is stated that farming land of Illinois has decreased 20 per cent. in value since 1880.

Deaths were unaccountably numerous in Maine, while deer abound in parts of the State where for years they were unknown. Caribou have also very greatly increased in number.

The High License law went into operation in Minneapolis, Minn., on the 1st of March, 1887. The number of arrests during the last six months of 1886, under the low license, was 1,022; the last six months of 1887, under the High License, 1,797, an increase of 705.

More than 30,000 children of school age, says the National U. S. Bulletin for January, 1889, are in the city of Chicago, are said to be addicted to the use of strong drink. In Chicago the license to sell liquor is \$300.

A bill has been drafted by the Philadelphia Milk Exchange, to be presented to the Legislature, "to prevent traffic in adulterated, impure and antiseptic milk." Receipts of milk at the different railroad stations this year indicate an increase of 15,000,000 gallons over those of 1887.

At the Coroner's office in this city last year, 2636 deaths were reported for investigation. Of this number 192 were unknown, 28 being males, 1 female, and the others were infants. The principal causes of death were: Alcoholism, 47; apoplexy, 67; burns and scalds, 70; heart diseases, 273; injuries on railroads, 166; accidental poisoning, 18; suffocation, 73; accidental drowning, 21; and sunstroke, 24; suicide, 19; homicide, 31. Of the railroad victims, 82 met their death on the Pennsylvania Railroad, 54 on the Reading and 9 on the Baltimore and Ohio. Ten were killed on the Traccon Company's lines.

In this city the number of deaths last week was 349, which is 18 less than the previous week, and 60 less than the corresponding week last year. Of the deceased 160 were males and 189 females; 47 died of consumption; 41 of pneumonia; 23 of diseases of the heart; 22 of old age; 14 of indigestion; 10 of the brain; 11 of convulsions; 11 of debility; 10 of typhoid fever, and 10 of paralysis.

Markets, &c.—U. S. 4's, 108; 4's, reg., 127; coupon, 128; currency 65, 118 & 128.

Flour and meal.—Western and Pennsylvania superfine, \$2.50 a \$3.75; do., do., extras, \$3.75 a \$4; No. 2 winter flour, \$1.00 a \$1.50; Pennsylvania family, \$1.75; do., do., extra, \$1.75; do., do., extra, \$2 a \$2.50; Ohio, clear, \$2.75 a \$3.00; do., straight, \$2.00 a \$2.50; Indiana, clear, \$1.75 a \$2.00; do., straight, \$2.00 a \$2.50; St. Louis and Southern Illinois, clear, \$1.75 a \$2.00; do., do., straight, \$2.00 a \$2.50; winter patent, fair to choice, \$3.50 a \$4.00; Minnesota, fair, \$2.25 a \$2.00; do., straight, \$3.25 a \$3.85; do., patent, \$4.00

a \$6.85. Rye flour was dull and weak; 100 barrels choice sold at \$5.20 per barrel.

Grain.—No. 2 red wheat, 96 a 96½ cts.
No. 2 Pennsylvania rye, 60 cts.
No. 2 mixed corn, 42 a 42½ cts.
No. 2 white oats, 34 a 34½ cts.

Beef cattle.—Extra, 51 a 51½ cts.; good, 5 a 5½ cts.; medium, 41 a 41½ cts.; common, 3 a 4 cts.; fat cows, 21 a 32 cts.

Sheep.—Extra, 51 a 51 cts.; good, 5 a 5½ cts.; medium, 41 a 41 cts.; common, 21 a 4 cts. Lambs, 4 a 7½ cts.

Hogs.—Westerns, 71 a 7½ cts.; State, 61 a 7 cts. Michigan, 40 a 45 cts.; 325 a 350.

FOREIGN.—The London *Tribut* says: "W. E. Gladstone, in a letter to the Marquis de Riso, says that the position of the Pope is important enough to merit intervention by International arbitration.

After remarking that he promoted the Alabama arbitration scheme, W. E. Gladstone adds, that this arbitration would possibly unlock a difficult question, and the project has his full and warm sympathy."

Edward Harrington, M. P., has been sentenced to six months imprisonment with hard labor for publishing in his paper, the *Kerry Sentinel*, reports concerning a suppressed branch of the National League. No appeal was taken.

Sheehy and Fineman, Nationalist members of Parliament, have been summoned to appear at Castlemeath Court on Saturday, to answer to the charge of inciting tenants to adopt a policy of intimidation.

The general impression in London appears to be that notwithstanding the telegrams which have been received, Emin Pasha is not with Stanley, and that having returned behind the Warden, he has fallen into the hands of the Mahdists.

On the 27th of last month, at a meeting held in Paris, of 4,000 bondholders of the Panama Canal Company, a resolution was unanimously adopted expressing confidence in the Government of France, and offering to Chicago the interest on coupons and the redemption of bonds until the canal is opened for traffic.

A despatch from Nice, received in Paris, Twelfth Month 26th, reports the death of General Louis Melloroff, the famous Russian officer. He was 64 years old. The Count de Lesseps was in the city of Calcutta, accompanied by great loss of life, in Manchuria. Indian advices say that cholera prevails in a virulent form at Quilon, on the Malabar coast. It is reported that 2000 Christians have succumbed to the disease. Italian missionaries are attending the plague-stricken people.

The Catholic Society is organizing associations throughout Italy which, conjointly with similar associations all over the world, will raise funds for a vigorous anti-slavery campaign.

According to the *Pittsburgh*, there are twenty cotton factories now in operation in Japan, with a total of 82,680 spindles. There are also twenty factories in process of establishment or extension, with an estimated capacity of 180,680 spindles.

NOTICES.

WEST-TOWN BOARDING SCHOOL.—The Committee who have charge of this institution, meet in Philadelphia on Sixth-day, the 11th of First Month, 1889, at 11 A. M.

The Committee on Instruction meet the same day, at 9 A. M., and the Committee on Admissions at 9.30.

WM. EVANS, Clerk.

WEST-TOWN BOARDING SCHOOL STAGE.—During the Winter term the stage will be at Westtown Station on the arrival of the 8.53 and 2.47 trains from Philadelphia, to convey our passengers to the school, and at other times on timely notice.

J. G. WILLIAMS, Supt.
Westtown, Pa.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting. Those of our members feeling their talents drawn towards the position, are desired to make early application to any of the undersigned.

Aaron Fenn, Barnesville, Belmont Co., Ohio.
Hannah Tatum,
Harrison, Ohio.
Sarah E. Holloway, Findling, Belmont Co., "

FOR "THE FRIEND."

Journal Kept by Martha Routh, on her Passage
from London to America.

(Continued from page 179.)

"On Second-day morning, Seventh Mo. 29th, we sailed again and were alike tossed; that in the afternoon I was again sick, but L. R. supplying me with warm water and camomile tea, I got some relief and slept pretty comfortably at night, considering what a rocking time it was until the wind lowered. At five this morning, Third-day, Seventh Mo. 30th, feeling myself a little feverish, I kept in bed till about 4 o'clock in the afternoon, being kindly supplied with gruel and broth suitable for me. After rising, found myself bravely, drank tea, and supped with as good an appetite as when on shore; having little wind, the vessel was very steady, and the sea looked beautifully serene, that most of the mariners and our young men bathed themselves in it. After supper we were favored to feel the gathering of quiet to come over us, and under the influence of our Heavenly Father's love, J. Wigham and S. Enlen had to communicate suitable counsel to us, expressing much affectionate solicitude, in a particular manner for some of the younger part of our family, that our lot being cast together in our floating habitation, might be an opportunity of present and lasting improvement to them.

"Fourth-day, Seventh Mo. 31st. The sea continues calm, we sat part of our time on deck till towards noon; while at dinner a fresh breeze springing up and causing a greater motion, I soon seemed to feel the effects, and to do so until bed time, when I got comfortably to sleep, remained so all the early part of the morning, but found most inclination to remain in bed, where I am favored to feel quiet peaceful poverty with contrition of spirit, and have been thinking about Friends being met together at Ackwold; and desires, though feeble, have been raised in me, that on the best ground they may come to feel of one heart and one mind in the well ordering of that institution, and that it might continue a blessing to the children of the present generation, and to those unborn. My soul hath often been led to supplicate the Father of mercies in a language that wanted not the medium of words. We have still rather head winds, or calms, seem to remain long in this channel, and I have thought such a situation may be sometimes try-

ing to mariners, but to us who are passengers, the watchword attendant on my mind hath been, 'In patience possess ye your souls.'

"About seven o'clock this morning, a part of France, called Bardreux, was seen by those on deck, who also discovered a French vessel, and W. Rotch thought it safest to make a tack and sail near the English shore, not being able to make much progress in the wished for course; but I thought dear S. Enlen made a just observation, that if we kept our places every course is in the way to an enduring habitation. He hath set about half an hour with me this morning, while W. Rotch read to us in the prophet Jeremiah, whose relation of things he seems to have a particular liking to, except that part in which he is lead to entreat the Lord to recompense evil to those who persecuted him, which, for the teaching of his beloved Son Christ Jesus, the servants in the present day are not permitted to do, but according to his blessed instructions, to render good for evil, and pray for them who may despitely use or persecute them.

"I rose towards evening, and with W. Rotch's assistance got up the stairs far enough to see the Isle of Wight. I have not been on deck since, the weather having been stormy, still attended with a head wind and frequent squalls, which has given the vessel so violent a motion, as much to affect my bodily frame. I can bear the pitching pretty well, but the rolling seems as if it moved the inside of my head and stomach out of their right places, and raises a strong disposition to loathe food, not only of the common kind, but the greatest delicacies the ship affords, which are often kindly proposed, and nothing is lacking in affectionate attention toward me.

"On sixth-day morning, Eighth Mo. 2nd, the wind being more in our favor, we got several leagues on our course, speedier than heretofore, when it returned to its former channel, which continues the vessel in a motion, that renews sickness to divers. First-day about noon, 3rd of the Eighth Mo. it became stiller, which gave an opportunity of sitting down quietly together and, through the renewing of our heavenly Father's love, it was rendered a contriding season; previous to which as I lay in bed, I had been tenderly looking towards my dear Friends at home gathered together in our meeting, of which number I hoped my husband was one, and my heart seemed to salute Zion's travellers, not without some apprehension their minds might be turned towards us, secretly breathing to the God and Father of all our mercies, that they with us and we with them, might witness the continuation of preservation; which desires, I have no doubt are acceptable to Him, who is the blessed author of all good, and who, in unspeakable loving kindness, hath been near to sustain my mind when outward strength and health have seemed much to fail; and I have thought even the reduction of bodily powers, or their being brought under suffering, is not without instruction, but leads into a consideration to try the foundation we are upon, and to know that it is a blessing there is one that standeth sure, hav-

ing that seal mentioned in the language of Scripture, 'The Lord knoweth those that are his,' and if this evidence be mercifully vouchsafed to me through the course of the passage, however attended with bodily trials, I humbly trust my soul will be enabled to say it is enough.

"Dear John Wigham says he thinks the rocking of the ship helps him to sleep, and that he has better health than while in London, of which I was glad for his sake, he being a man of tender constitution, and has given up much to follow his Lord. We have hitherto had little opportunity of conversing together; but my mind has felt near and sisterly sympathy with him. For my part, when up, I can scarcely get out of my room into the cabin without assistance, that I most-ly keep in it for safety, even when I can sit up a little.

"Last night we were near Ushant, of the French coast, a very squally night, with more motion than we have had before; got a little calmer towards morning. I got some sleep; and at breakfast took a little chocolate and half a small biscuit with more relief than I have done for three days. Dear Wm. Rotch is also very sickly, and loses his appetite. I heard him tell Samuel Enlen this morning, if he had any thing to boast of, it was his infirmities. Dear Samuel has often told us he was as well as when in Cheapside, London. Yet this morning was a little touched with sickness.

"Second-day, noon, Eighth Mo. 4th.—Are fifty miles from Ushant, about one hundred from Falmouth. We have two captains on board with us, who mess with us in the cabin, appear quiet, steady men, conduct themselves well in their station, setting a good example to the mariners, so that I have not heard of any unbecoming conduct, or expressions, proceeding from them, which I think well worthy of the observation of those exercised in the like trying occasion. Our steward or cook is a black man, named Quarea Baily, was brought young from Guinea, and received the latter name from the person to whom he was sold as a slave; a man of distinguished quietude and readiness to oblige all in his power. His bonds of slavery were broken through the interest of Wm. Rotch, junr. We have live stock on board, sheep, goats, pigs, geese, ducks and fowls, several of the latter having died, others appear rather sickly and don't thrive, that such poor things, seem to have their portion of sufferings as well as we; that I have thought if I was owner of a vessel, I should not bring many of them on board, but rather hams and tongues (of which we have great plenty), &c. that would, with puddings or dumplings, with preserves, which I think, in general, might suffice while in such a situation.

"6th of the month and 4th of the week.—Head winds and a rough sea are still our attendants, though at a time called a summer passage, so that we see 'times and seasons' are in his hands who ordereth all things well, and wisely, however contrary to the expectations of his creatures, or what we might even lawfully wish for. I was very poorly yesterday and thought

in the morning I had not been reduced so weak with any illness I had experienced these twenty years (in which time I have had a pretty large portion), I had much pain in my stomach, which I apprehended proceeded from bile, and in the evening a little food I tried to take, seemed like eating bitter herbs. Just at going to bed felt much relieved. Very great was the motion of the vessel at that time so that even the sofa, though cleated, had like to have rolled over when some were sitting upon it.

(To be continued.)

FROM FRIENDS' QUARTERLY EXAMINER (London).

The Grave of John Woolman.

Any one who has read the "Life of John Woolman," and finds himself or herself with an hour to spare in the ancient and historic city of York, should ask for the Friends' old burial-ground, Bishophill, and spend a short time in contemplation above the dust of that pure and saintly servant of God. There, against the old brick wall, evidently the same which marked out the burial-ground when he reached York on his Gospel mission in 1772, and laid down his life in the service of his Master, is a plain sandstone slab, with the following half-obliterated inscription:

"Near this Place,
John Woolman, of Mount Holly,
New Jersey, North America,
Died 7th of Tenth Month, 1772,
Aged 52 years."

Not a word of egotism; no record of his ministerial service; no tribute to the saintliness of his character; no mention of the shaft of death by which he fell. In close companionship with the remains of Lindley Murray, Hannah Murray, and the revered ancestors of the Tuke family,—almost in the heart of the ancient metropolis of the county,—lies the dust of one whose journal so touched Charles Lamb, that once in writing to a friend, he advised him whatever other books he read, to read John Woolman's journal.

The burial-ground, though within the city wall, has originally been in a much more open situation, but the arms of York during the last century have taken within the city proper many of the fields and suburban places. But though it is surrounded by houses, it is none the less a quiet resting-place; and any one who has read the journal in question, cannot fail while standing above his grave, to recall the circumstances of his last mission, and the sweet resignation and trust evinced in his last utterances.

He tells us in his journal, that having been for some time under a religious concern to visit Friends in the northern parts of England, and more particularly in Yorkshire, he obtained a certificate of the unity of his friends, at Burlington Meeting, dated 24th of Third Month, 1772, and embarked at Chester, in company with Samuel Enlen, for London. Being a steege passenger, from a desire to act in the spirit of simplicity, and seeing a good deal of the sailors, he was much shocked by their profanity; pitied their hard lot, thought they were not cared for as they should be, had frequent opportunities with them separately and in company, and condemned in his journal the spirit of aversion which made ship-owners indifferent to the comfort and moral condition of the seamen. After a voyage of rather over a month he arrived in London, attended the Yearly Meeting, and other meetings in Hertford, Warwick, Oxford, Nottingham, York, and Westmoreland, and retraced his steps to York, stating that he

did not feel at liberty to appoint meetings so freely as he had done.

Here, at the house of Thomas Priestman, on the 27th of Ninth Month, 1772, he was attacked with small-pox, which was of a virulent character, and ran its rapid course in ten days. We are told in a short account of his last illness which prefaces his journal, that he declined at first to see a doctor, signifying that he was wholly resigned to the Lord's will who gave him life; but subsequently, on a young apothecary coming in, he did not object to confer with him and other Friends, and take such remedies as they might consider best, provided "they did not come through defiled hands." In this expression we get a glimpse of his tender conscience, so careful was he not to be a participator in, or consumer of anything which had been slave-grown, or produced in an illegal or oppressive way. This was only in harmony with his previously expressed scruples against wearing dyed garments, "because real cleanness becomes a holy people, but hiding that which is not clean by coloring our garments, appears contrary to the sweetness of sincerity." Another example of his conscientious scruples was his refusal to send his letters in the ordinary way by the mails, or to ride in the stage-coaches, because of the over-driving of the horses, and the hardships of the post-boys. He had heard of the hard driving of the mails before reaching this country, and says he "cautioned Friends in the meeting of ministers and elders in Philadelphia, and in the Yearly Meeting of ministers and elders in London, not to send letters to him on any common occasion by post. "And though," he continues, "on this account, I may be likely to hear seldom from my family left behind, yet for righteousness' sake, I am, through Divine favor, made content." This same spirit of resignation was the covering of his mind to the end, for on one occasion when all the remedies seemed unavailing, and the Friend who was attending him asked in great distress, "What shall I do now?" He replied, "Rejoice evermore, and in everything give thanks;" but added a little after, "This is sometimes hard to come at."

Some of his remarks on the near approach of death are very touching. Thus, on one occasion during the night, he said to a young woman who had given him something to drink, "My child, thou seems very kind to me, a poor, helpless creature; the Lord will reward thee for it." Later on he said, as though he apprehended the fatal issue of his disorder, he had long had a view of visiting this nation; and sometime before he came, had a dream in which he saw himself in the northern parts of it, and that the spring of the Gospel was opened in him, much as in the beginning of Friends, such as George Fox and William Dewsbury; and he saw the different states of the people as clear as he had ever seen flowers in a garden; but in his going along he was suddenly stopped, though he could not see for what end; but looking towards home, fell into a flood of tears which waked him. How calm was his frame of mind may be further gathered from his remark to a woman Friend who was attending him, whom he saw weeping after he had given directions about wrapping his corpse. "I would rather thou wouldst guard against weeping for me, my sister. I sorrow not, though I have had some painful conflicts; but now they seem over and matters well settled, and I look at the face of my dear Redeemer, for sweet is his voice, and his countenance is comely." When the power

of speech failed him, he made signs for pen and ink, and wrote thus with much difficulty: "I believe my being here is in the wisdom of Christ; I know not as to life or death;" and about a quarter before six on the same morning (the Fourth-day of the week) he expired without sigh, groan, or struggle.

It is satisfactory to know that the piece of ground in question is walled round and kept in good order; the entrance to it is through the cottage of a decent and elderly woman, who is the caretaker. Doubtless, the remains of John Woolman have long since mouldered into dust; doubtless, when we lay these bodies down we shall no more require them; doubtless, time and the exigencies of city life will wrest this quiet burial-ground from our grasp; doubtless, also, there is much of sentiment in the feeling that hallows the spots where our loved ones are laid. But, all the same, the feeling is *there*; and if we believe the inspired declaration, "that the memory of the just is blessed," then the thoughts hallowed at the grave of a servant of God, who left a light behind him which reaches us at this later day, bring a quietness and calm to the soul, which comes as a precious balm and antidote to the spirit of unrest so characteristic of the present time.

J. LAYCHMORE.

FOR "THE FRIEND."

Walking in the Truth.

The apostle bears this testimony that he rejoices that the truth is in Galius, and that he walks in the truth. What is truth? Christ declares that He is the Way, the Truth and the Life; and no man cometh to the Father but by Him. Hence the importance of receiving Christ in the way of his coming, not only in his outward person, but in his inward appearance in the hearts of the children of men. As we are obedient to the inspeaking word of Divine grace, we are "walking in the Truth."

The tendency of the human mind is to drift into extremes. The enemy does not care which extreme we get into, so we deviate from the truth as it is in Jesus. The same apostle tells us that he is "not ashamed of the Gospel of Christ, for it is the power of God unto salvation, unto all them that believe: to the Jew first, and also to the Gentile;" that "we preach Jesus Christ, and Him crucified; to the Jews a stumbling-block, and to the Greeks foolishness; but to them that believe, the power of God and the wisdom of God; and that if we or an angel from heaven preach any other Gospel than what we have preached, let him be accursed; or if any man preach any other Gospel than that which we have received, let him be accursed."

In the general awakening that has swept over Christendom, there have been extremes gone into that have been against, rather than in favor of the spread of the Truth, and the building up of Christ's Kingdom in the hearts of the children of men. The Society of Friends have not been an exception to others. A living Church should ever be an evangelizing Church, gathering others into the true fold of Christ, the household of love and true faith. Christ had his immediate followers that if they would have all and follow Him, He would make them fishers of men—teaching them an instructive object lesson in the draft of fishes that were taken when they obeyed the Master by casting the net on the right side of the ship, at the command of the Master.

Let them that minister, do it with the ability that God giveth, being led and guided by the Holy Spirit, the true source of all true Gospel

ministry. If this be the case, the Truth will spread, and the Church of the living God will be found coming up out of the wilderness, leaning upon the arm of her beloved; bright as the sun, clear as the moon, and powerful as an army with banners.

GEORGE BRIGGS.

NEW SHARON, IOWA.

For "THE FRIEND."

Some Account of Joseph Wilson.

(Concluded from page 182.)

On allusion being made to the departure of several valuable Friends within a year or two, one after another dropping off and leaving an additional responsibility resting upon those who remained, he remarked that he had sometimes thought of it in the same way, and sometimes felt a desire to live awhile longer for the sake of his family, his friends, and society: said he was very desirous that the principles of our Society might be maintained, and that he believed they would be maintained, for the Lord could carry on his work by many or by few; and he could not believe that the principles and testimonies which had been given to us as a people to bear to the world, would ever be permitted to fall to the ground.

Some Friends from a neighboring Monthly Meeting being present, he spoke of the necessity of Friends being faithful in their endeavors to carry out the requisitions of the Discipline in a spirit of patience and forbearance towards those who had deviated from it. He also expressed a desire that Friends would endeavor to keep the vacancies in the Meeting for Sufferings filled, that he believed there were those qualified for a place in that body, and he hoped it would not be neglected and suffered to decline. To a friend he expressed himself as follows:—"In the forepart of my illness, I experienced great poverty and stripping; I was earnest in my endeavors to seek the Lord, but could not find Him; I sought Him in secret places and poured out my soul before Him in earnest supplications, that He would be pleased to forgive my sins and favor me with his good presence; and in his own time He descended to hear my petitions and favor me with an evidence of his love. But this was not the work of a day only, but of many days and nights. It was not obtained without labor, for I had to pass through many deep wadings and baptisms before I was favored with that assurance which my soul so much desired; and I do not know that I have felt much condemnation since that time; but it was necessary that I should first be humbled down, as one lying at the Master's feet, begging for mercy and forgiveness."

He then lay silent awhile, as though in deep thoughtfulness, when he said: "There is great value in inward secret prayer." The friend remarked, "An evidence of Divine approbation crowns all." To which he emphatically responded, "Yes, that crowns all."

On the 8th, a near relative from a distance being about to leave, addressed him in a very affectionate and comforting manner, after which Joseph spoke as follows: I feel that I have nothing to boast of; but the Master by his good Spirit has broken into my heart in an unexpected manner and put a word into my mouth to hand forth to his praise and to his honor, causing me at times to rejoice in the Lord and joy in the God of my salvation; yet I find it as necessary as ever to watch and pray to the end. Suffering of the body I expect during the remaining days of my pilgrimage here. The love

I feel for my friends, both far and near, exceeds what I have ever known before." The same day he addressed an individual, who called to see him, in a very tender and impressive manner, saying, "I love thee, I have always loved thee, and I believe the Lord loves thee, and if thou would give thyself up to his service, He would crown thee with glory and honor." Then, including her husband, he alluded to the necessity of a more regular attendance of religious meetings and the effect of their example in this respect upon their children. I have felt as though I could not give you up without being more devoted to the service of the "Great I Am;" there is a beauty in holiness, Oh! there is a beauty in holiness.

On the morning of the 11th, after reviving a little from a state of exhaustion, he looked round upon his family, saying, "You all feel very dear to me," and then addressed several of them separately in a very affectionate manner, to the tendering of all present. In the afternoon of the same day, he addressed a young man in public business in a feeling manner, counselling him above all things to choose the Lord for his portion and give himself up to his service, believing if he did so he might be of much use in the community in which he lived. His love, he said, extended to the whole human family, and was not confined to his own little Society, though he felt a deep interest in its welfare, yet those of every nation and kindred who serve and obey the Lord are accepted of Him.

Addressing those who were waiting upon him on the night of the 14th, said, "I have felt it in my heart to pray to Almighty God for this little company. Oh, that you may not turn your backs upon the Truth." He several times remarked, "the Lord has been very good to me." And to one of his daughters, said, "I sometimes feel that to pass away to my eternal home would be more desirable than anything else." He often spoke comfortably to his companion, whom he desired to have much with him, and at one time said he knew that his departure would be a heavy stroke upon her, but he believed that she would be supported.

The 15th was a day of much bodily suffering, yet he was favored to relieve his mind to those who visited him. At one time he looked around as though addressing all present, and said,—"Sometimes the Master waits long to do us good. Sometimes it is long before we are in a situation to receive good. Let us always be willing to receive Him in the way of his coming; though we at times despair of his coming at all, yet he will come if we wait for Him; He will not tarry."

On the 16th his sufferings at times were great, particularly during the forepart of the day. In the afternoon he seemed more comfortable, and slept most of the time, until towards evening, when his bodily distress much increased; yet his patience did not fail him, and his mind seemed centered upon the only sure foundation—"the Rock of Ages"—as appears from the following expressions, viz:—"The Lord Almighty hath shown me this night that my own soul shall be delivered, but that I must pray for the people, just to do as best I could. Oh! I do want to serve Him with my latest breath; He has shown me that if I would be faithful unto Him, my sufferings would be a little shortened." He then turned upon his left side—which he had seldom been able to do during his illness—and fell into a sleep from which he did not awaken until near 11 o'clock, when he seemed to be

sinking; yet he again revived a little, and not long after, reached out his hand to bid farewell, but said nothing. Some time after this one of his children asked him if he was not suffering considerably, to which he replied "not much." And about half-past six, on the morning of the 17th, his purified spirit was released from its clay tabernacle, we doubt not to join those whose robes have been washed and made white in the Blood of the Lamb.

Extracted from an address, written by THOMAS SHILLITON to Friends in Great Britain and Ireland.

I am afraid my dear sisters to close this subject without adding another hint as essential to our being the better able to keep our family expenditure within its proper bounds; having myself experienced its salutary effects, when I had a numerous family around me. It is, to determine to purchase with *really* money the various articles consumed for family use; and that we resolve to perform this, however mortifying it may prove, by depriving us of many things the nature of which position may crave in our minds and children. I believe great advantages will be found to result from such a practice, both to parents and children; more particularly to such as at times feel themselves strained to carry on their business respectably. For when these difficulties are felt by an honest mind, it becomes obligatory on such, if they get through them, closely to inspect the manner of their expenditure, and this will afford an opportunity of timely checking any unnecessary expense that may have crept into the family. But when things for family consumption are mostly, if not all, had upon credit, this opens a wide door, both for parents and children to greater indolence, both as respects expediency and cost, than Truth at all justifies; and the children of such parents are in danger of being brought up ignorant of the real use or value of property. When numbering my blessings, I esteem this as not one of the least that my Heavenly Father has bestowed upon me, that He kept me in a little way of business, and a care to keep my family expenses within proper bounds; and taught me the lesson of contentment with little things; because now I am advanced in life, I am satisfied I escaped manifold perplexities, which would at this time have been my attendants, had I sought after greater things as to this world. One of the diadems with which our first Friends were decked—one of the many jewels that shone in their character, and adorned their profession, was the care they manifested to have nothing but what they could well pay for; so that should reverses come, from the many perils they were in various ways liable to, none might be losers by them. This, in due time, with an uniform, consistent, upright conduct in other respects, procured for them that confidence in the minds of all ranks, and that respect, which they so long maintained.

WHEN the heart is given to Christ, and given without reserve or compromise, all other things will be quite sure to follow. "Holiness to the Lord" will be stamped on them as a merchant stamps his trade-mark on his wares. Such practical questions as, "What work shall I engage in?" "How much time shall I devote?" and "How much money shall I give?" will be controlled by a conscience of which Christ is king. Christ will get the best. The first fruits will not be locked up in the granary, or the fattest sheep killed for the table of selfishness.—*Selected.*

THE CLOSING YEAR.

'Tis midnight's holy hour, and silence now
Is brooding like a gentle spirit
O'er the pale pulses of the world. Hark! in the winds
The bells' deep notes are swelling. 'Tis the knell
Of the departed year.

No funeral train

Is sweeping past; yet, as the stream of red wood,
With melancholy light, the moon beams rest,
Like a pale, sp-ghost shroud; the air is stirred
As by a mourner's sigh; and on yon cloud
That floats so still and placidly through heaven,
The spirits of the seasons seem to stand
Yon Spring, bright, rosy, Avon's solemn form,
And Winter, with his aged locks—and breathe
In mournful cadences, that come abroad,
Like the far wind-harp's wild and touching wail,
A melancholy dirge o'er the dead year,
Gone from earth forever.

'Tis a time
For memory and for tears. Within the deep,
Still chambers of the heart a spectre dim,
Whose tones are like the wizard voice of Time
Heard from the tomb of ages, points its cold
And solemn finger at the beautiful
And holy visions that have passed away
And left no shadow of their loveliness
On the dead waste of life. That spectre lifts
The coffin-lid of hope, and joy, and love,
And, heaving momentarily above the gate,
Sweet forms that slumber there, scatters dead flowers
O'er what has passed to nothingness.

The Year
Has gone, and with it many a glorious throng
Of happy dreamers, its mark is on each brow,
Its shadow on each heart. In its swift course
It waded its sceptre o'er the beautiful,
And they are not. It laid its pallid hand
Upon the strong man, and the haughty form
Is fallen and the flashing eye is dim.

It trod the halls of revelry, when thronged
The bright and joyous, and the tearful wall
Of a sick one, who, as the song
And reckless shout resounded. It passed o'er
The battle plain, when sword and spear and shield
Flashed in the light of mid-day—and the strength
Of serried hosts is shivered, and the grass
Grows green, the soil a garden, and above
The crushed and moldering skeletons. It came
And faded like a wreath of mist at eve;
Yet, ere it melted in its viewless air,
It heralded its millions of their home
In the dim land of dreams.

Remorseless Time;

Fierce spirit of the glass and scythe! what power
Can stay him in his silent course, or melt
His iron heart to pity? Oh, still on,
He presses and forever. The proud bird,
The ruler of the Andes, that can soar
Through heaven's unmatchable depths, or brave
The fury of the northern hurricane

And bathe his plumage in the thunder's boom,
Fur's broad wings at nightfall and sinks down
To rest upon the mountain's crag—his Time
Knows not the weight of sleep or weariness,
And night's deep darkness has no chain to bind
His rushing pinion. Revolutions sweep
O'er earth like troubled visions o'er the breast
Of dreaming sorrow, cities rise and sink
Like bubbles on the water; fiery isles
Spring, blazing, from the ocean, and go back
To their mysterious caverns; mountains rear
To heaven their bold and blackened cliffs and bow
Their tall heads to the plain; new empires rise,
Greater and the more, and rise and crumble,
And rush down like the Alpine avalanche,
Startling the nations; and the very stars,
You bright and burning blaze of God,
Glitter awhile in their eternal spheres,
And, like the Pleiad, loveliest of their train,
Shout from their glorious spheres and pass away,
To dapple in the trackless void; yet Time,
Time, the tomb-builder, holds his fierce career,
Dark, stern, all pitiless, and passes not
And the night, when the world is his path,
To sit and muse, like other conquerors,
Upon the fearful ruin he has wrought.

George D. Peattie.

Waldth has ever been a snare, and the Saviour's word, "Woe unto you rich, for ye have received your consolation," is no idle utterance,

FOR "THE FRIEND."

"How shall we escape if we neglect so great a salvation?"

This exhortation of the apostle comes to us with double force, it seems to me, at the present day. We live in a Christian land; have been brought up under the direct teaching of Christian doctrine; our whole lives surrounded by Christian influences. How much more, therefore, are we accountable than those of the earlier days.

These found it hard to accept the simple message of the cross. It was to the Jews a stumbling-block, and to the Greeks foolishness. Are not we, in this "bright noon-day" of Gospel truth, far more responsible if we refuse to lay hold upon eternal life? We have "line upon line" and "precept upon precept," and yet with all of our advantages, we still in our day, the same as they did in the earlier days, refuse to list this same Jesus become unto us the power of God and the wisdom of God to the conversion and salvation of our souls. Surely unto us much has been given and much will be required. May the Lord by his Divine Spirit enable us to see our position and quicken those who are neglecting into life.

The apostle speaks of it as a great salvation; and it must indeed be a great salvation to have cost our Lord so much. In his love for immortal souls He left the throne of his glory and came to earth in humanity's garb to suffer—the just for the unjust—that He might open "a new and living way" by which we could come to God. In another sense it must be a great salvation which He by his Spirit works in the hearts of those who are made willing to abide under his will. Great, I mean, in efficacy and completeness: when we see it in the lives of those who have, in former days, been sinners of the deepest dye; in whom we see them under its influence brought from the very gutter and set among princes; when we see those who formerly blasphemed the name of their God now rejoicing in his love in their hearts, and from the same lips praising Him who hath led them out of darkness into his marvellous Light.

This is a great salvation,—this saving, keeping Grace,—to all those who accept it. God is no respecter of persons, but all who will come may come, and are accepted of Him if they but do his holy will. But to do this our own will must be slain, for, "to obey is better than sacrifice and to hearken unto the Lord than the fat of rams;" the sacrifice that He desires is a contrite and willing heart. This must be a great salvation when we realize the solace in sorrow it brings to those who possess it, the strength in weakness, the rest in trial, the joy and peace—blessed peace—that the world knows not, can never give, neither can it take away. Joined with this is the assuring belief that there awaits us a futurity of blessedness, where we shall enjoy that which our Lord has gone to prepare for those who love and honor Him here, yea, "a building not made with hands, eternal in the heavens."

Is not this salvation the pearl of great price, a gem of the highest value? and it is freely offered, "Ho, every one that thirsteth, come ye to the waters, come ye, buy and eat, yea, come buy wine and milk without money and without price;"—and yet how easy it is to lose it by simple neglect.

One says, "Time enough; I have many years to live; when I have enjoyed the pleasures of this life a little longer, then I will give thought to the future of my soul." Ah! delusive snare of Satan, how many, even how many, have gone down on this terribly evil rock—delay. How

knowest thou that thou hast another day or another hour to live? There was one of whom the holy record gives account who reasoned thus, and to him the answer came, "Thou fool, this night thy soul shall be required." Another was "almost persuaded." Of another it was said, "Thou art not far from the Kingdom." Let us remember that "almost is but to fail," and not far from may be without the Kingdom.

To neglect is simply to let it alone—to put off. It is to say, "There is time enough. I mean to attend to this matter sometime, but not now." God's mercy is extended to us in Christ Jesus, and He pleads with us by his speaking Spirit and by external ministry to come to Him and be saved. There are many who do not accept the free offer of mercy. They refuse—neglect—the only means whereby they can be saved. Oh! may it not be said of any of the readers of these lines in that last great day,—

"When I called, ye did not answer me; when I spoke, ye did not hear, but did evil before mine eyes, and did choose that wherein I delighted not;" therefore, "Behold, my servant shall sing for joy, but ye shall cry for sorrow of heart." My heart's earnest prayer is that when time shall be to us no longer here, we may be among those who did not neglect this great salvation, and that it may be our lot to hear the glad welcome,—

"Thou hast been faithful in a few things; I will make thee ruler over more. Enter thou into the joy of the Lord." J. H. Y.
New York City, Twelfth Month Ist, 1858.

Touches of Nature.

In the Abbott collection of Egyptian antiquities, in possession of the New York Historical Society, is a bundle of wax tablets, looking not unlike school-boys' slates of our day. They were the tablets (serving the same purposes with modern slates) of the school-boys in an Egyptian school in the Ptolemaic period. How they came to be placed in a tomb we have not time now to conjecture. Perhaps they were an offering to a dead schoolmate. They are the record of many interesting things; but I am writing now about the perpetuation of records of little things, of small thoughts, trifling and unimportant mental actions. One of the boys had a copy, a line of Greek, set by the master across the top of the tablet. (Young readers may need to be told that the tablet was wood, covered with a black waxen composition, in which the boy could make marks with a sharp stick, like a pencil; and he could erase a mark by smoothing down the wax with the blunt or flattened end of his stick.)

The boy had worked along just as modern boys work in their copy-books. Probably he got to be weary. At all events, he came to a point, as many a boy has done, when the pencil would go wrong in spite of him. He misspelled a word. He carefully erased it, smoothing down the wax, wrote it again, and it was again wrong. He smoothed the wax and wrote the word once more, and once more his wearied brain and his pencil went wrong. What did he do? Just what you, my boy, might have done. I fancy, "Some of you would exclaim, "Confound it!" The small Egyptian not only said, but with his pencil scratched, a Greek word (*phtharotho*, it seems to be) which means just about the same. And there it is today, the record of a school-boy's little quarrel with his own perverse brain, in the days before Cleopatra was born.

Many years ago, before crowds of travellers went to Egypt, there was (and I doubt not there

still is) away up among the Theban hills, in a ravine once crowded with temples and sculptured monuments, one tomb which the Arab resurrectionists for many years had used as a convenient place for breaking up mummies found in other tombs. In the course of these years, this tomb, consisting of two rock-hewn chambers in the side of the mountain, had become filled to within a few feet of the ceiling with fragments of mummies and masses of mummy cloth. I have, from time to time, spent hours in overhauling this accumulation, chiefly for the purpose of finding specimens of the cloth of ancient Egypt. Here I once found an old garment, a linen shirt, of coarse fabric and much worn. It had belonged to a poor man. How it came to be part of his burial dress could only be conjectured. As I first saw it in the dim light coming in from the top of the doorway, I was about to throw it down as worthless, when my eye fell on something which seemed to be an interesting relic of a poor man's home and home surroundings. A thin plate in the old shirt, where, indeed, it had once given way entirely, was carefully darned with coarse thread. You can read the record in what way you please. To me, it made the Egyptian hut of the ancient ages, to have very close similarity, in some respects, with the modern home of a poor man, in which you have doubtless seen, as I often have, the wifemending the ragged clothes of her husband.

Let me tell of one more little record which speaks of personal affections. I once opened an Egyptian coffin which contained the body of a woman who had lived somewhere about 1300 or 1400 B. C. The body was enveloped in the usual way, with linen bands. Wound around the head, and trailing down on the chest, was a wreath of leaves and flowers. It was simply made. Splinters of palm branch formed a continuous cord. The fresh green leaf of some Egyptian plant, a pointed leaf, was folded over this cord, point to stem, and pinned with a splinter through the folded leaf. Another leaf was folded and pinned, lapping a little over the first one. Then another and another; so that the cord, more than two yards long was covered with a continuous row of folded leaves, the points hanging downward. At the place where each leaf lapped over the next one was pinned a flower, making thus a row of flowers all along the wreath. All this was dead now, and leaves and flowers alike were of a dark brown color. When I was a boy, in the up country, I have a thousand times made baskets in which to gather raspberries and blackberries in just this way—by pinning leaves together with splinters, stiffening the rim by folding the points of the leaves over a flexible stem. In my younger days I can remember making wreaths closely like the Egyptian wreath, on which dandelions were pinned like great buttons.

I handed some of the brown flowers of the Egyptian wreath to that eminent and lamented man, Dr. John Torrey, not telling him where I obtained them. He examined them and found them to be the immortelle, the flower now in universal use for funeral wreaths in Europe and America. "They were the driest flowers I ever examined," he said; "where did they come from?"

Here was a flower which thirty centuries ago expressed, in the symbolism of flowers, the same thought which it still expresses—the thought of immortality. The wreath itself was eloquent of love, for none but loving hands had woven it for the forehead of the dead woman; sister, mother—which? For is it not likely it was a

woman's gift to the woman dead?—Wm. C. Prime, in *New York Journal of Commerce*.

The Grateful Soldier.

John Craig, a distinguished minister, and colleague of Knox, having gone to reside in Bologna, in a convent of Dominicans, found a copy of "Calvin's Institutes," which God made the means of his conversion to the reformed faith. He was seized as a heretic soon after, and carried to Rome, where he was condemned to be burnt; but on the evening preceding the day of execution, the reigning pontiff died, and, according to custom, the doors of all the prisons were thrown open. All others were released; but heretics, after being permitted to go outside the walls, were reconducted to their cells. That night, however, a tumult was excited, and Craig and his companions escaped.

They had entered a small inn, at some distance from Rome, when they were overtaken by a party of soldiers sent to apprehend them. On entering the house, the captain looked Craig steadfastly in the face, and asked him if he remembered having relieved a poor wounded soldier, in the neighborhood of Bologna; Craig had forgotten it. "But," said the captain, "I am the man; I shall requite your kindness; you are at liberty; your companions I must take away with me; but for your sake, I shall treat them with all possible lenity." He gave him all the money he had, and Craig escaped. But his money soon failed him; yet God, who feeds the ravens, did not. Lying at the side of a wood, full of gloomy apprehensions, a dog came running up to him with a purse in its teeth. Suspecting some evil, he attempted to drive the animal away, but in vain. He at length took the purse, and found in it a sum of money, which carried him to Vienna.—*Arcine's Cyclo-pedia*.

Royal Tents in the East.

It was quite in accord with Oriental ideas for the Royal Tent or the Tent of the Divine Commander, of the Hebrew host, to be a work of elegance and of costliness. Even to the present time the tent of an Eastern ruler is marked by its showy colors and its expensive finish, in its contrast with the tents of those who are under his authority. The writer of this note, while riding along the roads of Palestine, saw a showy green silk pavilion with a flag displayed in front of it, on a hillside at his right; and he was informed that it was the headquarters' tent of a Turkish pasha, who claimed to be a descendant of the Prophet, and therefore entitled to use the color of green. Again, the writer was on the summit of Mount Gertzim during the celebration of the Samaritan Passover; and there he saw the tent of the Samaritan high-priest standing out in brilliant prominence among the tents of the encampment about it. In the records of ancient Egypt there are descriptions of the royal tent of the kings of Egypt, in the days of Moses and earlier, which illustrates the naturalness of such a planning of elegance and expensiveness in the Tent which represented the dwelling-place of the Commander of the people of Israel.

Barber tells of the superb tent of Nadir Shah, in modern times, "covered on the outside with scarlet broadcloth, and lined within with violet-colored satin, ornamented with a great variety of animals, flowers, &c., formed entirely of pearls and precious stones." And Barber quotes from the travels of Van Egmont and Heyman

a description of tents of this character which they saw in the East. "Those belonging to the Grand Seigneur were exceedingly splendid, and covered entirely with silk; and one of them lined with a rich silk stuff, the right side of which was the apartment for the eunuchs. But even this was exceeded by another, which I was informed cost twenty-five thousand piastres; it was made in Persia, and intended as a present to the Grand Seigneur; and was not finished in less than three or four years. The outside of this tent was not, indeed, remarkable; but it was lined with a single piece made of camels' hair, and beautifully decorated with festoons, and sentences in the Turkish language."—S. S. Times.

Natural History, Science, &c.

London Fogs.—The *Journal of Gas Lighting* of sixth day of Eleventh Month says, that at that time London was literally gasping for breath under one of the blackest and most persistent fogs that ever visited the valley of the Thames. The thickness of the air makes the eyes smart and weep, chokes respiration and blurs the vision. Lights are almost powerless to penetrate this mixture of mist and smoke. Drivers of vehicles are compelled to lead their horses, and make sure their course by observations of the curb of the street pavement.

Fecundity of the Eel.—Fred. Mather, the well-known fish culturist, has been estimating the number of eggs in an eel, in what is known to fishermen as "eel fat," but which are really the ovaries. Taking the ovary of a six pound eel, he subdivided it by means of delicate scales into sections small enough to count the eggs under a microscope. The number in three of these sections was counted, and the average result made the total of eggs in the eel to be about 9,000,000.

Preserving Timber.—*Chambers's Journal* says that the ends of posts or timbers that are to be buried in the earth should first be charred, and then tarred, and that this is the only treatment which will really and effectually prevent their rotting. The charring dries up all the fungus juices of the wood and reduces the surface to somewhat the state of charcoal, the incorruptibility of which is attested by undoubted historical facts. The famous Temple of Ephesus, at its destruction, was found to have been erected on piles that had been charred; and the charcoal discovered in Herculaneum, after almost 2,000 years, was entire and undiminished. The application of coal tar to the charred ends while still hot, forms an air-tight and waterproof envelope.

Tall Chimney Engineering.—It often happens that tall chimneys settle a little on one side, and are thus thrown dangerously out of perpendicular. A chimney at Bingley, near Bradford, was found to be 4 feet 6 inches out of perpendicular. A gap, a foot high, was cut clear through one side of it. Screw jacks were inserted as fast as the cut progressed, and as fast as each was put in place it was screwed hard against iron plates placed above and below it. When about half the circumference of the chimney was cut through, the jacks were slowly turned down until the chimney was nearly straight. The jacks were then bricked up, and the jacks taken out one by one, and their place filled with masonry.

In another case the settling was remedied by removing a course of bricks on the higher side, and substituting bricks which were made slightly thinner.

Sometimes the mortar between two courses is sawed out on one side of the shaft and the perpendicular thus restored.

In taking down a high chimney in England an ingenious method was adopted of saving the bricks of which it was constructed. These were removed one by one from the top, and dropped into an air-tight tube leading to the bottom of the shaft, which was made about half an inch larger than a section of the brick. The resistance of the air in the tube so cushioned the fall of the bricks, that none of them were broken or injured in falling. The tight box which received them at the bottom was opened from time to time and its contents removed.—*Condensed from Scientific American.*

Earthquake in Hawaii in 1868.—On the 27th day of March, 1868, a series of earthquakes commenced: upwards of one thousand shocks were counted in five days. These continued in rapid succession until April the Second, when the most terrific earthquake known in the history of Hawaii occurred at about 4 P. M. The earth literally staggered like a drunken man. "First," said Mr. Coan, "it swayed to and fro, north and south, then east and west, then round and round, in every imaginable direction, for several minutes, everything crashing about us, the trees thrashing as if torn by a mighty rushing wind. It was impossible to stand—we had to sit on the ground, bracing with hands and feet to keep from rolling over. The ground itself rose and sank like waves. Horses and men were thrown to the ground—houses destroyed. Most of the Hilo people spent the night out of doors, fearing to remain indoors. Heavy furniture was tossed about, and crockery smashed wholesale as in a heavy gale at sea." In Mr. Coan's own study a large library table, loaded with heavy volumes, was thrown into the middle of the room and broken, two bookcases, strongly fastened to the wall, sharing the same fate.

Crevasse after crevasse opened everywhere; rocks were rent, stone buildings and stone walls were torn in pieces. In Ka-u-é every stone wall and almost every house was thrown down; immense rocks fell; billions of earth, boulders, trees, mud, &c., came down from the foot hills of Manna Loa with thundering uproar; and men and beasts were terror-stricken, finding nothing firm whereon to rest. Houses slid from their foundations and the inhabitants fled. Many lay upon the ground, holding on to shrubs, grasses or stones. In some places the ground was so rent as to be simply a network of fissures, from which sulphureous smoke exhaled. Some of these chasms were about twelve feet across.

On the Second of April occurred a terrific avalanche, variously described as a landslide and a mud-flow. Bursting from the mountain side in a torrent of mud half a mile wide and about twenty feet deep, it dashed over a precipice of five hundred feet, and rushing over a shining grassy lawn as such served as to make three miles in as many minutes, it overwhelmed ten houses, burying thirty-one men, women and children, and many hundred head of cattle and flocks of geese, not one of which has ever been disinterred. Mr. Reid told me that he almost lost one thousand cattle in the mud-flow, the poor beasts sticking in the tough clay. His theory of the outbreak is, that a stream of water flowed underground, and that the lava-stream struck the subterranean reservoir and generated steam in such volumes as to blow open the hill. Forest trees and stones all blew up.

At the same time an earthquake wave

twenty feet high, rolled in foaming fury along the eastern and southern shores of Hawaii, sweeping away one hundred and eight houses, and drowning forty-six people, while many houses in the interior were thrown down by the earthquake. Furthermore, during the same hour the whole coast of Ka-u-é and Puna, for a distance of eighty miles, subsided, and sank into the sea to the depth of six or eight feet, destroying houses and gardens, and leaving the palm and other trees standing seven feet deep in water.

All this, and a vast deal more, transpired on the Second day of April, 1868. For ten days the earth never ceased rocking like a rocking chair, and trembling as if ague-stricken. The quivering was continuous, and a sheet of iron suspended in the house never ceased vibrating like a pendulum. Meanwhile, the vast river of fiery fusion had started on its dark subterranean way from Kilauea, evidently causing these rapid and terrible earthquakes, and sending the earth in convulsed lengths. One of these fissures, thirteen miles in length, continues perpetually steaming to this day.

After four days the fiery stream burst out on a wooded hill at Kahuku in the district of Ka-u-é, at a height of 3,800 feet above the sea, where it rent a fissure nearly a mile in length, from which it poured in terrific fury, forming four vast fire-fountains, fluid as water and blood-red. Sometimes they flowed together so as to form but two fountains, and sometimes only one—a continuous fire-fountain, a mile in length! It boiled with terrific fury, throwing up enormous columns of crimson lava and red-hot rocks to a height of five hundred or six hundred feet. The lava was ejected with a rotary motion—always toward the south.

Hence the flood rushed on in spiral whirls, pouring over each lip of the crevice; spouting up fifty or sixty feet in the air; falling among trees and shrubs, scathing, charring, and consuming them; tossing, raging and roaring, like the rapids of Niagara. The stream rushed madly on towards the sea, sending off three lateral arms to the left, while the main body, nearly a mile wide, moved on to the brink of a precipice about five hundred feet high, over which it poured in a burning cataract half a mile wide.

At the foot of the precipice lay a fertile grassy plain. Here the flood divided, and flowed in two parallel streams to the sea, a distance of four miles, thus forming an island about three hundred feet wide, on which thirty head of cattle were imprisoned for ten days, till they were maddened with heat, smoke and thirst. The igneous streams, plunging into the ocean, created a fearful tumult and raging, forming clouds of steam, and throwing up two scoriatic cones, which towered above the waters.—*July Cunningham's Fire Fountains of Hawaii.*

When Faraday, the distinguished scientist, was asked if he had ever conceived of himself what would be his occupation in the future world, he hesitated awhile and then answered, "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him. I shall be with Christ; and that's enough."

Little Things.—Little things are often the hardest things. It is comparatively easy to do a momentary deed of daring that will startle everybody; it is not so easy to do little deeds of quiet courage from day to day, unheeded by all and unheeding all. Perhaps you are not called to do the great deed; but you are called every day to do the little deeds.—*Schofield.*

Items.

The Test Repository.—The publisher of this valuable sheet, David Heston, of Frankford, Pa., has issued his annual report, which states that owing to the numerous and earnest appeals for it, received early in last year, he had printed a much larger monthly edition than in 1887, averaging 13,150 copies, yet even this will meet many applicants unsatisfied. The Report says:

"This extension of the circulation to so considerable an extent has left the treasury without funds, and a little in debt; which, however much to be regretted, will render it prudent to reduce the circulation somewhat for 1889, unless from some unexpected source we receive aid, carrying on the work should be placed at my disposal."

As in former years letters continue to come to hand from colored people in various places, expressive of the high appreciation of *The Test Repository* still entertained by those who read it. Some of these are quite interesting, and afford evidences that our work has not been in vain. It is thought by some that unmi-takable fruits are now apparent, especially in localities where the paper has been freely and steadily circulated for a number of years successively; while in others, it is hoped that the little seed which has thus been sown will yet be blessed, spring up and grow, and in due time bring forth fruit to the glory of our Father in heaven.

There has been no marked difference in the proportion sent to different States since last Report, only a widening of the circulation somewhat in nearly all parts of the South.

The expenditures were \$920.25, leaving an amount due the publisher Twelfth Month 15th, 1888, of \$97.75.

It is desirable that the operations of this agency in disseminating instructive and elevating literature among the freedmen may not be curtailed by lack of funds.

Repeating the Lord's Prayer.—A correspondent of *The Presbyterian* gives some reasons which incline him to the belief that the form of prayer given by our Lord to his disciples was not one which He required us to repeat in public worship; and he makes the just remark, that "Scripture teaching is concerned more about the spirit and manner with which we come than the mere form." His reasons are fourfold:

"1. It was never so used by our Lord or his disciples so far as we have any record.

"2. The Doxology in Matthew which was the growth of liturgical ideas is now admitted to be spurious. It seems to have been added about the third century to give greater force to it as a form of prayer.

"3. The variations between the foras in Matthew and Luke show that a precise form of words was not intended. According to the Revised Version the prayer in Luke's gospel is: 'Father, Hallowed be thy name. Thy kingdom come. Give us thy day by day our daily bread. And forgive us our sins; for we ourselves also forgive every one that is indebted to us. And bring us not into temptation.'"

"4. Formal petition in prayer was the very thing against which Christ was arguing in the account given in Luke's gospel. He was warning us against a form of words no matter how perfect and complete, tends towards the same (tedious repetition) of which the heathen are guilty in repeating Amida Buddha, or the Romanist in using his rosary."

Sunday Newspapers.—Another correspondent of the same paper in speaking of the effect of what are called newspapers, says:

"The reader's good nature, and the character of the prizes of worldly vanity and crime, secularized in thought, morally weakened, and wholly unfitted for Christian worship. Any disposition there may have existed—by the force of early training, or the suggestion of natural conscience—gradually disappears, and the heart's good nature is almost established. Every channel of communication with heaven is dis-regarded, and all the currents of life flow toward that which is evil."

"It is perilous for our youth to read the records of crime as furnished us in the Sunday morning paper; reports of embezzlements, which familiarize their minds with fraud, and open the way to its commission; of impunity set forth in various cases

which attract to it all-consuming flame; of disorders of midnight haunts, of wretchedness in cellars and in attics, which reveal the way to them; of debaucheries, piracies and murders which produce a momentary shudder, then weaken abhorrence of them, and conduct on a down grade to the lowest levels of human depravity. This language may seem extravagant, but only to those, perhaps, who are themselves witnesses to what it denounces, which impairs moral discrimination, and was against the soul. It would be as impossible to live in a district notoriously malarious and not suffer physically, as to subsist on the pabulum of Sunday newspapers and not be morally poisoned. These remarks have a wider application to our modern journalism, but a special force as related to the question under consideration."

THE FRIEND.

FIRST MONTH 12, 1859.

A short time ago we were shown a letter received from a Friend residing in the State of New York, which mentioned that the writer had recently heard the statement made "That the majority of the Friends in Philadelphia Yearly Meeting have wine on their tables;" and "that many of the members were in the habit of using it and other stimulants."

In the same company, another person said, "It did not seem strange that such habits existed, when in our day there was a record placed upon the books of a Monthly Meeting of the same Yearly Meeting, of a committee having been appointed to see that the workmen were furnished with rum during harvest."

We felt satisfied that neither of the statements above italicized were true. Having frequently travelled through many parts of Philadelphia Yearly Meeting, and partaken of the hospitality of very many of its families, we do not remember to have ever seen wine on their tables, and it is highly improbable that it would have escaped notice, if it had been the habit of a majority of them to get it forth. Indeed the very strangeness of the current of the subject arrested the attention, if such an exhibition had been made. Inquiry has since been made of other well-informed Friends, particularly in the neighborhoods where such a practice would be most likely to exist, and thus far we have heard of but very few cases of such use of wine. So that we think it safe to adopt the language of Professor Sharpless, of Haverford College, who says in his reply, "I would have no hesitation in characterizing the report as a gross exaggeration."

If the person who made the remark had been speaking of the state of things that existed 100 years ago his statement would have shown a nearer approach to accuracy. For the use of wine and other stimulants in the community at large, and among Friends, also, was then much more common than in the present day. In accordance with the views that then prevailed, the moderate use of such articles was believed to be promotive of health; and it had the sanction of the example of our Saviour, who, because He partook of the good things of life was reproachfully called a "gluttonous man and a wine-bibber." But the attention of Friends was very early called to the danger that existed of persons becoming too frequent in the use of stimulants, and of being drawn into intemperate habits. The Minutes of Philadelphia Yearly Meeting contain frequent references to this subject. As early as 1706 a minute of advice to subordinate meetings advises against "sipping and tipping of drams and strong drinks."

A similar epistle in 1721, points out the danger of the taking of drams "insensibly stealing upon the unwary by wantonness in the young, and the false and deceitful heart it seems to supply the aged with; so that, by long habit, when the true warmth of nature becomes thereby weakened and supplanted, the stomach seems to crave these strong drinks even to supply what they have destroyed."

In 1736, after repeating the caution on this subject of the previous year, the meeting advises, "particularly to be cautious of giving them [drams] to children, and thereby accustoming them to the habit of drinking such strong liquors."

In 1738, "It was recommended to the several Quarterly and Monthly Meetings to caution Friends that they be exceedingly careful against the too frequent use of spirituous liquors, it being remarked to be a pernicious and growing evil; and to direct the overseers to deal with such as may drink to excess, although they may not drink to such a degree as to disguise themselves."

The subject continued to claim attention from time to time. Omitting several of the minutes on record, we find in 1766 the following advice, "Overseers and other concerned Friends are desired to excite their brethren to vigilance, to avoid the immoderate use of spirituous liquors at harvest and other times, which it is feared may, for want of care, increase to the great detriment of individuals and the dishonor of our religious profession; and a concern is revived in this meeting to advise against, and to excite Friends to discourage it on all occasions, both by example and precept."

It will be observed that these advices are all directed against the *unnecessary or excessive* use of spirits. But in the minutes of 1782, we find that the reports from the Quarterly Meetings state, that some Friends find their minds so impressed with a sense of the need of care in reference to this subject, "that they wholly forbore the use of spirituous liquors."

A minute adopted in 1784, refers to "the corrupting, debasing, and ruinous effects consequent on the importation and retailing large quantities of distilled spirits, whereby the intemperate use of them is greatly aided and encouraged, to the impoverishment of many, distemp'ring the constitutions and understandings of many more, and increasing all manner of vice and dissoluteness throughout the land." The minute further says, "It is the united sense of the meeting that well-concerned Friends in all quarters be earnestly excited to suffer the affecting importance of this mighty evil religiously to impress their minds and animate them with a lively concern to exert honest endeavors, both by example and loving entreaty, to caution and dissuade all our members from being concerned in the importation or retailing distilled spirits or giving countenance thereto."

A further step in this direction was taken in 1788, when a committee of the Yearly Meeting on this subject proposed "That the Quarterly and Monthly Meetings be excited and enjoined early to appoint committees unitedly to proceed in visiting and treating with our members individually, who are concerned in importing distilled spirituous liquors from the West India islands, or other places, either on their own account, or as agents for others; and those who purchase and retail such liquors in greater or less quantities; as also those members who are concerned in the distillation of these liquors from grain or other produce, either in their own families or encouraging or promoting it in

others. And we apprehend it is expedient to recommend and advise those who make use of spirituous liquors in their families in a medicinal way, that they be careful to keep within the bounds of true moderation in the use of them for such a purpose, and that our members in general refrain from using them in the time of harvest or otherwise."

From this time forward the use of spirits, except for medicinal purposes, by our members, was clearly a violation of the concern of the Yearly Meeting. And we find that earnest efforts were made for the enforcement of this testimony, as far of any other held by the Society. Thus in 1811 report was made to the Yearly Meeting that this subject had weightily claimed the care of nearly all the Monthly Meetings, and brotherly labor had been extended to most of those who did not faithfully support the testimony of the Society.

In advancing this testimony much patient labor was required and bestowed; and the work was a gradually progressive one, as it was in removing from the Society the reproach of any complicity with slavery. It may have been a task even more difficult to accomplish than that, because the use of such liquors is not necessarily wrong in itself; and doubtless some who were temperate themselves, felt it hard to be put under bonds because others had less self-restraint.

But the dangers which attended its use were so great, and the evils so deplorable, that there was ample reason for the Yearly Meeting to impose the restriction it did; and it became the duty of its members to co-operate in the concern. This has become more and more general among us, and has extended to other forms of intoxicating drinks than distilled spirits, as modern researches have shown that such liquors are not essential in maintaining physical health and vigor.

The traditional report that a committee had been appointed to supply poor Friends with rum in harvest time, is one of ancient date. Fifty or sixty years ago it was spoken of as one of the curious illustrations of the views that had prevailed in olden times. There is no abstract improbability that such committees may have been appointed in those times, when spirituous liquors were thought to be almost essential to enable men to endure the heavy labor involved in gathering the harvests, before the introduction of modern machinery. Those who so believed, might feel it to be an act of Christian charity thus to assist those who were too poor to provide what they regarded as the necessary refreshment for their workmen. If such a committee ever was appointed, we know of no evidence which would locate it in America rather than in England; or in the limits of Philadelphia Yearly Meeting, rather than in some other part of this continent. It is scarcely possible that any such committee was appointed within our limits during the last 100 years, for it is very improbable that any of the Monthly Meetings would have manifested such open contempt of the authority of the Yearly Meeting, which in 1788, distinctly advised its members to refrain from using [spirits] in the time of harvest, or otherwise."

Knowing that our friend Gilbert Cope, of West Chester, had made much research into the old Meeting Records of Philadelphia Yearly Meeting, we applied to him for definite information as to the existence of such committees, and have received the following reply:—"This is a story which I have heard at various times for twenty-five years past. I never heard of it as

applied to modern times, but always to the past. There need be no hesitation in pronouncing it false as to this century, and I have no reason to believe it true of the last."

"I think the story was at one time located in Chester Monthly Meeting records; and another time in Kennet; but having read all the minutes of those meetings down to recent times, I can say it is not there. The last accounts I located it in Bucks County, but I presume it will never be found."

Whether such a minute exists or not, it is very evident that it was not made "in our day" and that the person who made the statement had not been sufficiently careful to ascertain its correctness.

We have received from the publishers—Garrigues Brothers, No. 608 Arch street, Philadelphia—a copy of Selections from the Writings of Fenelon, with a short sketch prefixed of the life of the author. He has long been held in esteem by Christians as a devout and pious man, whose views were more deeply spiritual than those of many of his contemporaries. The present volume is in a small compass, so that it can readily be used as a pocket companion.

SUMMARY OF EVENTS.

UNITED STATES.—Congress reassembled on the 2nd instant. In the House a bill was passed providing that in case of omission of the sender to place the lawful postage on a special delivery letter, such postage shall be collected on delivery.

In the United States Senate on the 7th instant, the Panama Canal resolution was taken up, but no motion of Senator Edmunds the galleries were cleared and it was discussed in executive session. After five hours the doors were reopened, and it was found that the joint resolution had been adopted by a vote of 39 to 5, the yeas being Senators Blackbird, Hampton and Vance.

Among the suggestions received by the Senate Finance Committee concerning the tariff schedules, is one from the West, that a duty of one cent a dozen be laid upon all eggs imported into the United States. The writer says that there is just the same argument in favor of protecting eggs that there is for protecting wheat or corn. He also argues that if the tariff is laid upon eggs, it will satisfy the women of the agricultural districts, to whom the management of this industry is almost unanimously conceded by the other sex.

The weather maps in the House lobby in Washington showed that in the whole United States not a drop of rain nor a flake of snow fell on the 2nd instant.

The 12th statement shows a reduction of \$14,427,595. Total of the Treasury, \$291,078.

A despatch from Memphis, Tennessee, says the United States Inspectors who are investigating the burning of the steamer Kate Adams, have obtained evidence which satisfies them that 42 persons were lost in public life, as they reported several deaths. It appears that 18 children among the deck passengers and 10 of the boat's crew perished, in addition to the victims previously noted.

It is stated that the Electric Sign Etching Company had been duped to the extent of over a million dollars, and that the alleged "secret process" is a humbug. The "secret process" was the invention of Henry C. Friend. About a year ago he induced a number of English and American capitalists to organize a company and buy "secret" machinery. This was done, factories were built, but no one was allowed inside of them but Friend, his wife and a few ignorant workmen. The rooms were always sorely locked. Friend died suddenly, and a few days ago his widow and all who had been connected with the factory disappeared. When the owners and stockholders of the company entered the secret rooms they only found a number of machines used in breaking cube sugar into smaller particles and in granulating the coarser grades. There was no electrical apparatus. Not a pound of raw sugar had been refined. Quantities of refined sugar, chiefly cubes, had been purchased by the operators and prepared with colored liquid which eliminated the ordinary impurities found in all sugars. The chemical used crystallized the cubes to a large extent,

and when they were broken they had a finer appearance and quality than sugar was ever known to possess.

Governor Ames, of Massachusetts, was inaugurated on the 3d instant, and sent his annual message to the Legislature. He has proposed to the Legislature the people of a prohibition amendment, and advocates the increase of the penalties for the violation of the liquor laws. He thinks it would be wise to substitute imprisonment for fines in such cases.

The combined wealth of the Vanderbilt family, according to the New York Herald, is \$274,000,000, and the estimated income from it per annum, \$12,804,400. A large lump of anthracite coal has been discovered on the Crow Creek Reservation, near Chamberlain, Dakota. Experts pronounce it to be of a superior quality.

Deaths last week numbered 396, an increase of 17 over the previous week, and an increase of 16 as compared with those of the corresponding week of last year. Of the whole number 195 were males and 171 females; 54 died of consumption; 5 of pneumonia; 19 of convulsions; 19 of diseases of the heart; 17 of inflammation of the brain; 15 of old age; 14 of scarlet fever; 12 of Bright's disease; 12 of cancer; 10 of typhoid fever; 10 of bronchitis.

Market.—U. S. 4½s, 105½; 4s, 127; currency 6s, 118 and 128.

Cotton sold in a small way at 10 cts. per pound for middling uplands.

Flour and Meal.—Western and Pennsylvania super, \$8.00; do, do, do, extra, \$3.75; 2d, \$4; No. 2 winter patent, \$4.75; do, do, roller process, \$5 a \$5.50; Ohio, clear, \$4.75 a \$5.00; do, straight, \$5.00 a \$5.50; Indiana, clear, \$4.75 a \$5.00; do, straight, \$5.00 a \$5.50; St. Louis and Southern Illinois, clear, \$4.75 a \$5.00; do, do, do, \$5.00 a \$5.50; Minnesota, clear, \$125 a \$5.00; do, straight, \$121 a \$5.50; do, patent, \$6.00 a \$6.50. Rye flour was dull at \$3 a \$3.25 per barrel. Grain.—No. 2 red wheat, 95½ a 95½ cts. No. 2 white, 92½ a 94½ cts.

No. 2 white oats, 33½ a 34 cts. Beef cattle.—Extra, 5½ a 5½ cts.; good, 5 a 5½ cts.; medium, 4½ a 4½ cts.; common, 3 a 4 cts.; fat cows, 2½ a 2½ cts.

Sheep.—We quote extra, 5½ a 6 cts.; good, 5½ a 5½ cts.; medium, 5 a 5½ cts.; common, 4½ a 4½ cts.; 2½ a 2½ cts.; Lambs were active and higher, at 5½ a 7½ cts.

Hogs.—Extra Chicago, 7½ a 7½ cts.; good Western, 7 cts.; fair Western, 7 cts.; 2d, 6½ a 6½ cts.

The following are the Atlantic telegrams as follows from Naples: "The *Tribuna*'s version of my letter to the Marquis De Riso touching the position of the Pope is unworthy. The statement that I recommended international arbitration upon the Roman question is incorrect under the present circumstances."

Financiers M. P. was, on the 4th instant, sentenced at Castlemore to one month's imprisonment without hard labor on a charge under the Crimes act. He was accompanied to jail by the Mayor and crowds of citizens.

An explosion of fire dam has occurred in a colliery in the province of Oviedo, Spain. Twenty-seven persons were killed and many were injured.

The Cologne *Gazette* publishes a summary of two reports made to the government by Major Deines, who was on duty at the fort of S. Juan. Major Deines came into frequent contact with the late General Reine. According to these reports General Reine informed Major Deines that he (Buzaire) received the first news of the Prussians crossing the Moselle through the B. D. Morier.

The *Kölnische Zeitung*, which first published the original charges against Morier, intimates that the letter conveys the impression that it was written by an Englishman, and that only the signature is Italian. The *Vörsicher Zeitung* says: "This new accusation against Morier is one of such exceeding enormity that it can only fill German readers with a feeling of profound shame. Unless proof of its justness is immediately tendered, the charges can hardly fail to have an all too infatigating effect upon foreigners."

The *Wieser Zeitung* deplors the "palpable animosity" displayed in the publication of the charge, and says: "Such an odious accusation should only have been brought after a careful examination had furnished the necessary proofs, at least substantial grounds for suspicion."

Emperor William, in addressing a deputation to whom he gave audience on New Year's day predicted that the year 1889 would be peaceful.

Advices from Russia say that 175 persons were frozen to death in Ekaterinburg, in the district of Perm, on Twelfth Month, 27th. The Black, Azof and Caspian Seas are frozen. Railway disasters are reported at Baku and other places in the Caucasus.

Many persons have been killed and a large number of buildings destroyed by an earthquake in Russian Turkestan, extending from Khojend to Kaskates.

The public accounts of the Dominion of Canada for the fiscal year 1887-88 show that the gross debt increased during the year from \$274,587,626 to \$284,512,841; and that the net debt increased from \$227,314,775 in 1887 to \$234,513,358, on Sixth Month, 30, 1888. Receipts from other sources show an increase of nearly \$700,000, so that the total revenue for 1888 is \$539,470. An excess of that of 1887 of \$1,000,000. The expenditure increased from \$235,675,880 to \$367,718,490. There was an increase in cost of nearly every branch of public business.

RECEIPTS.

Received from Joseph Armfield, Agent, London, England, £28, being £2 10s. for himself, 5 copies, and 10s. each for Alice Alexander, Mary Ashby, John Ashworthy, John Bellows, Robert Bigland, John Richmond, Alfred M. Box, Philip H. Bracher, Richard B. Bowdler, David Burton, Robert H. Clark, James Cloak, John Chalk, Charles Elock, Sarah Gibbins, William Graham, Forster Green, James Green, William Green, Susanna Grub, Mary Halden, J. Barrett Haughton, James Holton, John Horniman, William Knowles, Joseph Lamb, William James La Tall, Jane Moorhouse, William R. Nash, Sarah Pearson, Daniel Pickard, George Pitt, John Sadler, Abraham Shield, George Smithson, Elizabeth Southall, John Sykes, Charles Wakefield, Robert Walker, Ellen Watkins, William Allen Watkins, Jacob Wichman, Susan Williams, John Wood, F. Ellington Wray, Lucy W. Walker, and Henry A. P. Urichard, for vol. 62; for Sarah Jane Williams, 10s., vol. 61; for Lydia M. Williams, £1, vols. 61 and 62; and for Lydia M. Thomson, 10s., to No. 26, vol. 62.

NOTICES.

WESTWON BOARDING SCHOOL.—The Committee who have charge of this institution, meet in Philadelphia on Sixth-day, the 11th of First Month, 1889, at 11 A. M.

The Committee on Instruction meet the same day, at 9 A. M., and the Committee on Admissions at 9.30.

WM. EVANS, Clerk.

WESTWON BOARDING SCHOOL STAGE.—During the Winter term the stage will be at Westwonton Station on the arrival of the 8.30 and 2.47 trains from Philadelphia, to convey passengers to the school, and at other times on timely notice to

J. G. WILLIAMS, Signl.
Westwonton, Pa.

WANTED.—A Superintendent and Matron for Friends' Boarding School of Ohio Yearly Meeting. Those of our members feeling their minds drawn towards this position, are desired to make early application to any of the undersigned:

Aaron Frame, Barnesville, Belmont Co., Ohio.
Hannah Tatum, " " " "
John W. Smith, Harrisville, Harrison Co., Ohio.
Sarah P. Holloway, Flushing, Belmont Co., "

DIED, on the 15th of Ninth Month, 1888, ANS WORTH, a member of Bradford Monthly Meeting, Pa., in the 84th year of her age. She was firmly attached to the principles of Friends, and a regular attendant of meetings both in public and private. Her long and lingering illness, with much patience, she quietly passed away, leaving the assurance that her end was peace.

Twelfth Month 24th, 1888, HANNAH C. WILLIAMS, in the 65th year of her age. An esteemed member of Ranocoes Preparative and Burlington Monthly Meeting of Friends. She was faithful to the attendance of meetings when health permitted, and was an example of integrity and uprightness; careful in department and conversation, thereby attracting many friends to her. We believe the language of Scripture, "Blessed are the pure in heart, for they shall see God."

Entered as second-class matter at Philadelphia P. O.

FOR "THE FRIEND."

Journal Kept by Martha Routh, on her Passage
from London to America.

(Continued from page 186.)

We had thought for some days it was time for our kind governor to have a seurer lodging place, so Mary came into my room, lodged on a sacking provided for her, and slept sweetly by my side all night, though I think the rolling of the ship never exceeded, nor, according to my apprehension, the sound of the wind and sea so high, that after getting one short sleep and finding myself very empty, was doubtful how I should hold out till morning, and just then remembered that when the prophet was sent to heal Hezekiah of his sickness he ordered a plaster of figs, and knowing I had some near, found them readily and ate one, which seemed grateful. Feeling also very thirsty I found a lemon and got a little cup with some sugar from the cupboard at the bottom of my berth (fearing it would be too sharp without) so was a little busy in answering my wants, which I am not prone to do, especially in the night, but method and order in times of refreshments in a situation like this are much out of tune. Though it was now very dark (for through some shake our lamp had gone out) I found the advantage of a small room, for had I been in a large one, I might not have had things so near as to reach them in bed, so being a little refreshed and sleep having departed from me, I had opportunity to contemplate the marvellous works of the Almighty, who hath his way in the sea and his path on the great deep, and how long we had been beating about, though not a great way past the mouth of the channel. I afresh remembered what my newly united brother in best fellowship, Thomas Scattergood, said in his farewell salutation, that if I should be tried with a state of reduction, both in body and mind, more than I had lately experienced, he wished me not to be dismayed at it, that he had been brought into a like state, and that the Lord tried even his dear children, and all for their good. And indeed, as William Rotch had before observed, it was a part of the suffering we had to fill up in the varied situations of life. I also, during the night, seemed to see many of my dear friends, whom I had left behind in divers places, with my nearest ties, according to nature, and felt those that loved truth to be near my

life, which I did not apprehend to be in any danger, either from the inward or outward situation, being favored in degree to witness that the voice of the "Lord on high was greater than the voice of many waters, or the mighty waves of the sea," that had not these disturbed my outward nan I could have slept easy.

On Fifth-day morning, 7th of the Month, several went out of the cabin, to see the mast of a French man-of-war, that was floating on the sea near us, the account of which seemed to make my heart sad, in consideration that many of our fellow-creatures had probably sunk with the wreck of the vessel, and how entirely repugnant the ground work of such desolation is to the nature of his kingdom, who came not to destroy men's lives, but to save them, that I got my attendant, L. Rotch, to read that most excellent day-sermon, preached by our blessed Lord on the Mount, whose doctrine astonished those that heard, in setting forth the nature of that peaceable government He was about to set up, but how few of the sons of men have been willing to understand his counsel or follow his example, who, consistent with his own testimony, when he was reviled, reviled not again, and, when led as a sheep to the slaughter, or as a lamb dumb before his shearers, opened not his mouth.

But oh! how widely different are the actions of the present day, even by many who profess to bear the Christian name, who can destroy one another, by every engine or artifice that fallen nature, through the suggestion of the enemy of souls, can invent. Well, while my mind, according to my measure, and the feelings of my nature, abhors such things and mourns on account of them, I feel cause of thankfulness in the consoling hope that the time will yet come when that desirable prophecy of the Lord's servant will be more accomplished, when nation shall not lift up sword against nation, neither the people learn war any more.

The afternoon of that day being fine, with William Rotch's assistance, I got on deck, sat more than an hour, which felt reviving; tried to walk a little, but could not well manage that even with assistance; while there, the wind turned two points in our favor, and I kept my seat on the hencoop while the vessel tacked about, when L. Rotch pleasantly told me it was encouragement for me to come on deck, seeing the wind was a little changed for us, which continued still more to favor us, till the vessel stood in the course wished for. We have sailed from three to five miles an hour, which causing only a very moderate motion, I have been favored to keep what nourishment I have received; but former irritations having brought on a little fever, I have no appetite for food, which keeps me weak and languid. And such is the kindness of my companions, that they have willingly spared a part of our little supply of milk for my use, that I have had for several days a saucer of hasty pudding mixed exceedingly nice, and cooked over a lamp which William Rotch has provided. S. Emien tells him he is governor

and head cook for the women, but he says the women are the cooks and he only provider and attendant of this accommodation. I was much pleased last night to see our young men who had been sickly, especially E. Waring, make a hearty supper of tongues, onions, bread and cheese, etc. I have been ready to wish, if it was right to do so, that I could enjoy the like mess, or any other, whereby I could regain strength, and cause less thoughtfulness to my friends, who are often enquiring what I can take.

The evening of the Seventh-day continuing fine, we sat on deck the greater part of the afternoon. On First-day 10th of Eighth Month, our captain, mates, etc., being at liberty to sit with us, we had a religious opportunity together, in the beginning of which my heart was much contrited, and through the course thereof, a humble trust was raised. Our Heavenly Father who waited to be gracious, was pleased to open counsel through his servant for the information and instruction of those who, in profession, were not of our fold; and indeed consoling it is at seasons, the belief that his design is to bring many who are afar off near to himself, and also to preserve his humble, depending children and the lambs of his flock, even as in days past, when his gracious promise was, "He would lead them like a Shepherd, take them in his arms, carry them in his bosom, and gently lead forward those that were with young." In the evening of the day, when in a more select gathering, some tender counsel and encouragement was offered for the acceptance of tried minds; and though I had no share in the expression, I think I was not void of feeling to whom it more particularly belonged, but have at times found in my mixed companies, though few in number, it is difficult to divide the word so as to hand the proved children their own portion. I think there is a saying somewhere, "Cast thy lot into the lap and the Lord will deliver it out," which I hoped would then be the case.

In the afternoon Captain Swain came into the cabin to inform William Rotch there were two vessels to be seen from the stern of ours about seven leagues distant, upon which most of us went on deck, and though scarcely at first discoverable they were soon more clearly seen, and a third also discovered; and from their progress towards us, were thought to be ships of war, or privateers of some kind coming after us. Though it did not at first seem to alarm any of the company, yet towards night, as they seemed to be but a few leagues from us, I was very apprehensive. Our valued friend, William Rotch, was brought under some anxiety respecting them, and indeed, when I looked towards him I thought his countenance visibly manifested the situation of his mind, which led me to inquire, when walking the deck, if he had any apprehensions, they might be Algerines.* He said it

*For several centuries the piratical depredations of the inhabitants of the Barbary States, especially of the Algerines, had been a grievous obstruction to peaceful commerce. About the middle of the Seventh Century the Sar-

was not improbable, as the wind had kept us more to the southward than would have been his choice; that his thoughtfulness was merely nothing on his own account, nor even his dear wife's, as their time, if permitted to be so tried, could not, by the course of nature, be of very long duration; but when he had reflected respecting his daughters, the consideration was heavier than nature or spirit seemed well able to support, as he had understood that they would never ransom women at any price whatever, if they did not belong to those powers who gave them bribes. I tried all the little that lay in my power to encourage him, in hope that no such harm would befall us, yet never did I witness my feelings so awakened to the emotions of such a father towards his children, and though I am well aware, when the evidence of things hoped for, the substance of things not seen, which sustains the inner man, is permitted to be removed from our secret feelings, 'tis scarcely in the power of any other to afford comfort; I thought I felt in my own particular sufficient warrant, at that season, to express a firm and unshaken belief that the father of the family hath for other designs respecting such plants in his garden, than to suffer them to fall into the hands of unreasoning men. And, indeed, when I have considered that some of the ruling powers on earth have so long helped to buy up those people in such grievous practices as robbery and the slavery of others, all that can feel in me, of nature or spirit, seems raised in indignation and protest against it. But, in the present case, respecting our situation, soon after going to bed, my mind was quiet and consoled with a fresh remembrance of the compassionate language from the Father of mercies to the children of Israel—"The enemies you have seen to-day, you shall see no more;" that I fully believed that those vessels

across overran much of the northern shores of Africa, and they soon became the acknowledged rulers of all the Mediterranean coast, from Egypt to the Atlantic coast, family hath for other designs respecting such plants in his garden, than to suffer them to fall into the hands of unreasoning men. And, indeed, when I have considered that some of the ruling powers on earth have so long helped to buy up those people in such grievous practices as robbery and the slavery of others, all that can feel in me, of nature or spirit, seems raised in indignation and protest against it. But, in the present case, respecting our situation, soon after going to bed, my mind was quiet and consoled with a fresh remembrance of the compassionate language from the Father of mercies to the children of Israel—"The enemies you have seen to-day, you shall see no more;" that I fully believed that those vessels
